It was the town of Kedoe, Puteh said. The place was thronged with despairing, panic-stricken Javanese who had flocked in from the surrounding mountainous districts.

They stood or sat in little family groups amidst the rubbish of the fallen houses, the men and women clutching packs and bundles of household articles, and the children clinging about them. Some of them appeared to be quite distracted with terror or grief.

We looked about in vain for any representatives of authority in the town. Both the native and Dutch police had decamped. Yet it was a time when there was far more need of the strong arm of municipal authority than one would have at first supposed, for the jails appeared to have been emptied of their criminals, and we learned that gangs of robbers, who ordinarily had their haunts among the mountains, had come forth to take advantage of the general confusion.

Our party had taken refuge inside the small front yard of a house the roof of which had fallen down. On the other side of the wattled fence fifteen or twenty natives were gathered, many of them holding packets or baskets containing their most valuable worldly goods.

A sudden outcry from this woebegone company attracted our attention. Glancing among them, we saw three savage-looking natives, with *krises*, or curved Javan daggers, in their hands, in the act of throttling a woman and dispossessing her of her ear-rings. The deed at such a moment seemed so extraordinary to me that I was at a loss to understand it at first.

"What's the trouble over there?" I said to Natt. "A family quarrel, is it, in the midst of their other afflictions?"

"I'm sure I don't know," replied my companion.

The other natives of the group drew back, uttering cries, but not one of them advanced to the assistance of the woman. Still we did not quite know what the circumstances were, and looked on with more curiosity than sympathy.

A minute later, having thrown the woman aside, the ill-looking natives advanced upon a man of the party, assassinated him before our eyes, and rifled his clothing afterward.

"Look here!" exclaimed Natt in great excitement to me. "Are we going to stand here and see such work as that go on? Where is that gun?"

He snatched up the carbine, exclaiming, "Stand by me, will you?" and leaped over the fence. I followed, and drew my revolver.

Seeing two white men advancing on them with fire-arms, the three miscreants drew back a few yards, but stood with their knives ready for use, and their evil eyes fixed sullenly on our faces. They were evidently desperate characters.

"Leave! Clear out!" shouted Natt, raising his piece. "Be off, you scoundrels!"

It is not likely that they understood a word of English, but they understood what the muzzle of a loaded gun meant, and slunk aside, sliding away into the throng of people like so many serpents.

"They are worse than beasts of prey!" muttered my friend. "Tigers at such a time lie by the road as harmless as dogs. But here are creatures in human form who improve the chance which this terrible catastrophe affords to murder and rob their fellow-men!

"They shall not keep up this fiendish business if I can help it!" he suddenly added. "I'm going after those rascals, and if I see them commit further outrages, I'll open fire on them. If the world is coming to an end, I will at least do one good deed beforehand."

He set off through the town, and I could do no less than follow him, leaving the two Chinamen in charge of our property. We threaded our way

A Panic among the Natives.

among the groups of natives, following first one narrow, obstructed street, and then another.

Presently screams attracted our attention to a low structure, apparently a market-place, adjoining which was another, more pretentious, which I supposed to be a temple. Here we got into a very dense crowd, but, pressing through it, passed the low building and came to a large, open square, or yard, inclosed by it.

Within this yard a fight was raging. We pushed our way through, and saw that twenty or thirty natives, having in their hands sticks, choppers and anything which they had been able to seize for weapons, were resisting ten or twelve ruffians of ferocious appearance, armed with daggers and evidently of the same gang as the three we had previously seen.

We had scarcely entered when the hard-pressed natives, who were getting the worst of the encounter, fell back toward the market building, and we were suddenly involved in a frantic backward rush.

It was with great difficulty that we kept our feet. Many natives went down and were trodden under foot. Above the screams of the people rose the savage yells of the ruffians, and the tumult was terrific.

We were crowded into a sort of stall or booth, near the wall of the building. In a moment more, the struggling crowd had swept past us, and we were left face to face with the ruffian gang, and not more than three yards from them. They rushed upon us, and we were forced to fire in self-defence.

Both Natt and I fired as quickly and with as good aim as we could. Twice they approached so closely that their long knives flashed before our very eyes; but our point-blank shots were too much for them. I emptied my revolver, and Natt fired seven times with the carbine.

Those of our assailants who were not disabled fled, and we saw parties of enraged townspeople pursuing them with clubs and stones.

"Reload, quick!" cried my young companion. "They may get reinforcements, and return any minute. But we are good for 'em. Let 'em come!"

As we were putting in fresh cartridges, I saw Wah Lee worming his way in our direction, through the press of wondering natives in front of the market-place. He had our large carving-knife in his hand, and looked the picture of determination. He had heard the firing, and with true grit, had come running to our assistance.

Seeing that the multitude of Javanese were regarding us with perplexity and astonishment, Natt bade Wah Lee assure them in their native tongue that we desired only to protect them from robbers, and request as many as had arms, or could procure them, to come to the square inside the market-place as fast as they could.

In an hour several hundred presented themselves. We selected from them enough to make several parties of twenty men each. To each squad we gave as promising a man as could be picked out as leader or captain. As fast as a squad was organized, we sent it out to make a circuit through the city, and return to the square to report.

Comparative quiet seemed to have been restored, but our army of police soon began to grow hungry. In order to keep them from disbanding to go in quest of food, we were compelled to seek something for them to eat.

A store of rice in a fallen warehouse was at last discovered. The owner of it had either lost his life or gone away. Thirty sacks of this stock were confiscated for the public use. Rice we must have, or we could not keep order in Kedoe.

Kettles were set boiling in the open square by the market-house, and Wah Lee went to fetch Eng Kee to superintend the cooking. He soon returned, saying that Eng Kee had gone, no one knew where, and also that Puteh, Enda-a and little Minek had disappeared, taking with them our property in kitchen ware, food and blankets.

We were not surprised that Eng Kee had gone about his business; but we were troubled as to the fate of our Javanese servants. They had never shown themselves otherwise than honest. I believe they were throttled and robbed.

We sent out a squad of our police to search for them throughout the entire quarter, and shout their names, but were unable to learn anything of their fate.

Native cooks were persuaded to attend the kettles, and rations of rice and sugar were served out in the market building, not only to our "army," but to such others as were hungry, as far as our supplies would extend.

The throng was enormous. I almost hesitate to say how many people we estimated were gathered at this place, but it could not have been much less than a hundred thousand.

Throughout the night the squads of armed natives were kept patrolling the town. There were many fires, and at times shouting, screams and a great clamor would arise. Wherever a disturbance was heard or reported, thither we despatched a force to restore order.

There had been but one severe shock of earthquake during the night, and the lava fires on the mountains were not as terrifying as before. The air was somewhat less oppressive, and less dust fell. The sky still remained dark with smoke, but the shower of ashes had ceased in great part.

I had been making inquiries, meantime, of many natives, for tidings from Samarang. Some had heard and believed that the town was destroyed, but I at last found a man who had come up from the coast during the night, and who declared that very little damage had been done there.

Though the city was about ten leagues distant, my anxiety was so great that I proposed that we set out for Samarang at once. Somewhat to my surprise, Natt refused to do so.

"We ought to see this thing through," he urged. "We've undertaken to govern this town—we have usurped the government, I may say—and now it's our duty to maintain order. It would be cowardly to slip away and leave it now."

"But I must go," I said. "My relatives have stronger claims on me than these natives."

"It is a matter of conscience with me," Natt replied, "to stand by these poor people, and do the best I can for them."

"Very well," I said. "Stay if you will, but I must go." We shook hands and parted.

Taking Wah Lee with me, I set off on foot for Samarang, having now nothing left of all my outfit save my revolver. The carbine I had given to Natt, who was likely to need it more than I.

We walked fast, and had proceeded for about ten miles along the government road, when we came to a junction with another branch of the highway, leading down from Sourabaya to Samarang. Here we sat down for a few moments to take breath.

As we sat here, I saw a cloud of dust approaching along the road from the direction of Samarang. The dust cloud concealed a post-coach, and was raised by the horses' feet, stirring up the ashes which lay in a thick coat on the road.

As they came up, I hailed the driver, and asked what news he bore from Samarang. I had hardly spoken, when I heard a cry from within the coach. Next moment the door flew open, and my sister sprang out. My father quickly followed her.

"Thank Heaven, my boy," he exclaimed, "that you have come through this awful catastrophe alive!"

They had started at the earliest moment that it was possible to procure a coach, to go to Jokjokarta in quest of me. If Wah Lee and I had arrived at the junction of the two roads five minutes later, I should not have fallen in with them, for they would have taken the other branch.

After such a remarkable piece of good fortune, I had no longer any great apprehension that we should not escape from the island in safety. The coach was turned short about on the road, and we drove back to the seaport.

From my father and sister, I learned of the terrific eruption and subsidence of the volcano of Krakatoa in the Straits of Sunda, the destruction of Anjer, and the overthrow of a large part of Batavia, Buitenzorg, Cheribon, and many other towns. Samarang had escaped serious damage; and telegraphic communication had been maintained in a wonderful manner, considering the nature and extent of the disaster.

We had had enough of Java, and we sailed from Samarang within a few days, taking Wah Lee with us. The young Chinaman remained in our service for nearly three years.

Natt remained in Kedoe, and governed that terror-stricken town much after his own fashion, for a week or more, till the Dutch Government resumed sway. In consideration of his services and the summary manner in which he rid the place of numbers of *ladrones*, he has been given a profitable official position by the authorities at Batavia.

For the Companion.

RIBBON AND CROSS.

The French Revolution abolished, with other institutions belonging to monarchy, all the existing orders of chivalry in France; but in 1802 Bonaparte, then First Consul, proposed the founding of a new order for the encouragement of merit in all classes of society.

Although the project was opposed as undemocratic, Bonaparte had his own way, and the "Order of the Eagle," as it was then called, was definitely established.

The Chief of the State was its Grand Master. All soldiers who had previously been given swords of honor were its original members, and civilians who had earned decoration by exceptional merit were admitted to its ranks.

The order gained at once a great political and social influence. Its effect upon the army was undoubtedly stimulating. It helped Bonaparte to increase his hold upon the brave but ill-disciplined troops of the Convention and Directory. They soon became the best-disciplined army in Europe. Every soldier saw within his reach the Cross of the Legion of Honor, as it was finally called, and was determined to obtain it.

Courage alone could not earn it; good conduct was also required. The man who wore the cross refrained from intemperance and foul language to avoid bringing disgrace upon his order, and he who longed for the decoration sought to buy it by sobriety and subordination as well as bravery.

Many incidents showed how highly the cross was valued. A native of Nazareth, Syria, a member of the Guard, had been decorated at Austerlitz, and at Eylau, just as he pierced the ranks of Russian infantry, he was killed by a bullet through the head. His brother, fighting at his side, leaped from his horse at a moment when delay promised destruction, and took the cross from the dead man's breast, that he might carry it home to his family in Syria.

Napoleon's manner of bestowing the decoration so heightened the enthusiasm of his soldiers that they believed his recognition of heroism to be unerring as well as generous.

After the battle of Ratisbon the Emperor noticed a corporal who, though wounded in several places, had remained in the ranks.

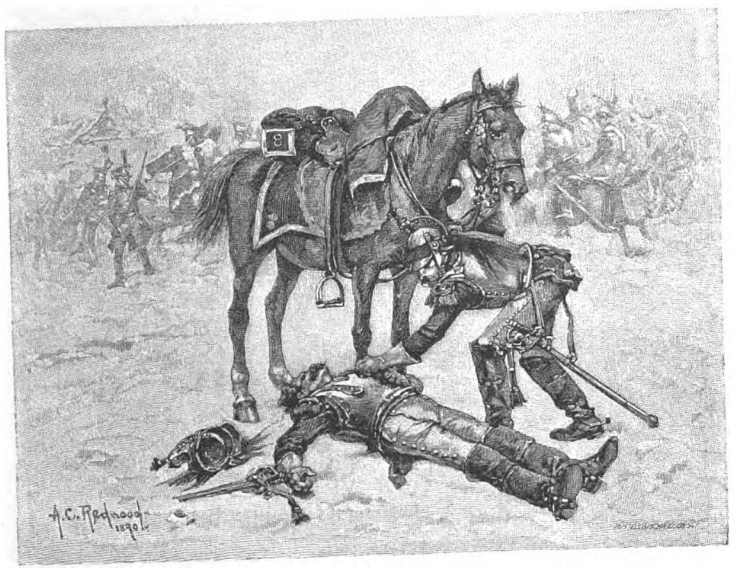
"Here is something which will heal your wounds," said the great commander. Stooping over the lad, he pinned his own decoration upon his breast.

Literary and scientific men had reason to feel that the Emperor and nation delighted to honor them, and those who furthered the industrial arts were by no means forgotten.

At one time the price of sugar was greatly increased by the English blockade, and the cost of cotton goods also became very high. A French gentleman devoted himself to experiments for making sugar from beet-root, and another established a calico manufactory. Both were decorated; and Napoleon said to the cotton manufacturer:

"You are making a formidable war against England, and thus you are allied to the brave of my army. You must bear the sign which distinguishes them."

At the downfall of the Empire and the accession of Louis XVIII., the monarchical orders of chivalry were revived, but the Legion of Honor was so highly regarded that it was retained, although the effigy of Henry IV. replaced that of Napoleon in the centre of the decoration, and the *fleur-de-lis* was substituted for the imperial eagle. The King became its Grand Master. All the older decorations took precedence of it in point of honor.



These latter, however, were abolished, in their turn, by Louis Philippe, the "Citizen King," who distributed the Legion of Honor with the greatest prodigality; and though, after his flight, it was suppressed by the Republican Government, it was revived by Napoleon III., who spread it broadcast, and increased his own popularity at the expense of its dignity.

The Legion of Honor is now the only order of merit surviving in France. In its ideal it is a democratic institution, intended to distinguish the brave, wise and virtuous, without regard to their position in society.

Even a rag-picker has been known to wear the cross, concealed beneath his shabby blouse; and he, as much as any dignitary thus decorated, would be entitled to military honors at his burial.

Digitized by Google

It is not uncommon among European nations to find that an order has been created for the decoration of women alone; but France admits them, though sparingly, to her Legion of Honor. More than thirty women have already been made "chevaliers." The majority of them are nuns who have nursed wounded soldiers, and encountered danger on the field of battle.

Saving the Ribbon.

Under the First Empire, two women were decorated for military achievements. One of them, dressed as a man, took her brother's place in the ranks, because he was delicate, and unfit for the hardships of war. The other enlisted from a love of military life, and both could show a record of battles and sabre-cuts quite equal to that of their fellow-soldiers.

Among French army nurses of the present time, Sister Maria Theresa, Superior of the Sisters of Mercy in Tonkin, might serve as a type of heroism and devotion. She has identified herself with the French army for more than thirty years. During the war with Germany, she seized a smoking shell, which had fallen into the midst of a field-hospital, and ran with it into an adjoining meadow. The shell burst as she dropped it, and she was severely injured.

In Syria, China and Mexico she has worked where the fire was hottest, and has been three times wounded.

Two or three years ago the French Governor of Tonkin decorated her with the cross, in the presence of all the troops. The prominence which she was forced to accept was evidently not at all to her liking, for when the imposing ceremony was over, the Sister, who thought less of glory than her duties, said, modestly:

"And now may I return to my wounded soldiers?"

Sister Rosalie, decorated about thirty years ago, was well named the "Mother of the Poor." Through war and pestilence she nursed the sick of Paris, and founded there many charitable institutions which are still in flourishing existence.

In 1864 the Empress Eugénie made the personal acquaintance of the celebrated painter of animals, Rosa Bonheur, and was so delighted with her and her work that she begged the Emperor to confer upon her the Cross of Honor. As it had never been awarded to women except for acts of bravery and charity, the Emperor hesitated; but when Eugénie was acting as regent, the next year, during Napoleon's absence in Algeria, she seized the opportunity to bestow the decoration upon the artist.

The Empress visited Rosa Bonheur at her studio near Fontainebleau, and surprised her by pinning the cross on the breast of her working blouse.

There are five classes, or grades, belonging to the Legion of Honor: chevaliers, officers, commanders, grand officers, and, highest of all, the grand cordons or crosses. All these, when in full dress, wear the cross suspended from a red watered ribbon.

The chevaliers wear an enamelled silver cross and a simple ribbon, and the grades above a gold cross, with some slight modification or elaboration of the ribbon, which, for the grand cross, becomes a broad sash, extended from shoulder to hip.

In addition to the cross, the two highest grades wear also the badge, which consists of a jewelled star of five double rays, resting on and surmounted by a wreath, half-oak and half-laurel. On one side is the head, symbolizing the Republic, with the words, "*République Française*," and on the other two tricolor standards, with the device, "*Honneur et Patrie*" (Honor and Country). The star is similar to the badge, with rays issuing from every angle, and is destitute of the wreaths.

The President of the Republic is Grand Master of the Legion; it has its Grand Chancellor, its laws, revenues and festival days, and not only reward the deserving, but can inflict public disgrace by removing from its ranks those who have in any way forfeited the rights of citizenship.

Thousands of foreigners wear the cross of the Legion of Honor, though they share none of the privileges belonging to the order. During the late universal exhibition in Paris, it was distributed with the utmost generosity, and perhaps the American whom France took most delight in decorating was Thomas Edison, whose inventions excited such enthusiasm there.

A HURRYING LIFE.

A little while to pause and rest,
A little space to draw full breath—
Ah me! we are too sorely pressed
Who run for life and death!

—*Argosy.*

THE BONAPARTES.

Time was when the death of Prince Napoleon Joseph Charles Bonaparte, who passed away at Rome on the Seventeenth of March, would have created not a little excitement and discussion in Europe, and especially in France.

For this Prince Napoleon—as he was usually called—was a nephew of the great Napoleon, being the son of the great Napoleon's youngest brother, Jerome, and for a while, at least, was recognized as the chief of the Bonapartist party in France, who, if the Empire were restored, would succeed to the throne.

The great Napoleon settled the line of descent in his family, so that the children of his brother Lucien should be excluded from the throne, and so that, if his own issue failed, the children of his two younger brothers, Louis and Jerome, should in turn be the heirs.

As a matter of fact, Louis Napoleon, the son of his brother Louis, did attain the imperial throne; but he lost it again, and died in exile in 1873, leaving the right of succession to his only son, Louis, the Prince Imperial, then a lad of seventeen years.

Louis was accepted by the Bonapartists as their candidate for the throne in case the Empire should be restored.

But the Prince Imperial was killed by the Zulus in South Africa, whither he had gone with the British Army, in 1879; and thus the line of the great Napoleon's brother Louis became extinct.

Then came the turn of the line of the youngest brother, Jerome, in the person of the Prince Napoleon who has just died at Rome, and who was at first recognized by the Bonapartists as the legitimate heir to the throne.

But the career and character of Prince Napoleon had been such that a large section of Bonapartists were unwilling to accept him as their chief. He had been the enemy of the Empress Eugénie; had sometimes opposed the policy of his cousin Louis Napoleon; had been at times an outspoken Republican; was suspected of cowardice, and had lost, by his untrustworthiness, the confidence of large numbers of Frenchmen.

The Bonapartists who were opposed to him chose his eldest son, Prince Victor, as their chief, and this caused a breach between the father and son. The party was divided into two factions, and its prospects of restoring the Empire thus became more hopeless than ever.

When Prince Napoleon died the other day, he ignored his eldest son, Victor, and declared his second son, Louis, to be his heir. But the Bonapartists, with the ex-Empress Eugénie at their head, adhere to Prince Victor as their chief.

The late Prince Napoleon, besides bearing a very striking personal resemblance to his famous uncle, was a man of great ability, an accomplished scholar, and a brilliant orator. But he was never popular in France, in spite of his great attainments and his family relationships.

The fact of his death is rather interesting on account of his personal traits and career, than important as a political event. The Bonapartes and their adherents have seemingly ceased to be formidable enough to imperil the safety of the French Republic. Divided among themselves, and repeatedly rejected by the people, they seem powerless ever to revive the Empire.

The French Republic, as has been well said, "has got into the groove of life." It has withstood the hostility and strain of twenty years. It has now received the support of a large body of the priesthood and the peasantry, the most conservative and once the most monarchical elements of French society; and it is apparently stronger, more orderly, and more firmly established in the confidence and good-will of the people than ever before.

It has, therefore, little to fear from Bonapartes or Bonapartists, and may witness with indifference the death of one Bonaparte prince, and the leadership of another.

APRIL.

April, young April,
Ever fresh and dear,
"Sweet sixteen" among the months,
Darling of the year!
Ere your smile can flash and die
Lo! a tear o'ertakes it;
Ere the tear is fully globed,
Dainty laughter shakes it.
Loose your curls upon the wind—
That shall 'tice the swallow;
Press your lips upon the spray,
And the rose shall follow!

Spectator. —*Frederick Langbridge.*

ROTATION IN OFFICE.

On the same day, during the present month, that the resignation of Senator Edmunds, of Vermont, was made public, we read in the "City Hall Gossip" of a newspaper published in one of the largest cities of the country a statement something like this:

"Alderman Billy Nims says that the Mayor's nomination of Mr. Tucker for the City Weigherships was rejected partly because the boys wanted to have a little fun, and partly because Tucker has been in office too long, and is a —" naming one of the two parties.

Of course we have changed names and the title of the office to be filled.

On that same day, as we have said, Mr. Edmunds made public his retirement from the position of United States Senator from Vermont, after a service of twenty-five years, and with two years of his term unexpired.

The two incidents illustrate admirably two opposed views of the question of office-filling and office-holding. In the one case a competent and faithful officer is rejected partly because a board of Aldermen takes a frivolous view of its duty; partly because, in the city where the incident took place, offices are "spoils of victory," and partly because one man having had his turn at the "public crib," it is thought to be time for another man to be fed there.

In the other case a gentleman, chosen to a position because he is able to give valuable service to his State and country, is kept in it because the longer he stays the more valuable that service becomes, and retires of his own will while his constituents are still desirous of retaining him in the position.

Both of these views cannot be right. Which of them is correct?

It is quite unnecessary for us to say that we regard that view of office-filling which implies that public positions are favors to be bestowed as wholly erroneous and mischievous. The object of government is good government, and only that.

Just so far as the machinery and the revenues of any government, great or small, are devoted to giving employment and an income to those who have obtained the control of the government, rather than to procuring the best service the public money will provide, so far the machinery and revenues are diverted from their proper objects.

The practical wisdom of a system that rejects the old doctrine of "rotation in office," that is, the doctrine that each man shall have his turn and give way to another, is illustrated by the experience of those States which, like Vermont, have been accustomed to seek out their best men, and then keep them in Congress as long as possible.

We find, upon examining the list of Vermont senators, that since Dudley Chase became a senator in 1813, and Isaac Tichenor in 1815, only sixteen different persons have represented the State in the Senate. Three of them have died in office, and three, including Mr. Edmunds, have resigned.

In spite of the fact that four of the sixteen senators were appointed by the governor for short terms to fill vacancies thus caused, the average length of service of all who have filled the position during the last seventy-five years is almost ten years. And Mr. Edmunds's resignation makes the first change in the delegation in twenty-four years.

Maine has been represented by only nine senators since 1848; and this, too, means an average length of nearly ten years' service.

The position and influence of senators who have been long members of the body in which they sit, is markedly greater than that of men who serve a single term only, or a part of a term, and are then displaced. The fact deserves not only to be noticed as a general law in politics, but to be acted upon by those who have the duty of choosing senators.

POINTS OR CULLINS?

Mr. A——, a colored man who died last winter in a Northern city, was accounted one of its most respected citizens. He had accumulated a fortune, had helped to found one or two charitable institutions which greatly benefited the community, and had devoted much of his strength and energies to the education and elevation of his race.

As his funeral passed through the street, an old citizen said to his companion, "Did you ever hear how A—— was started on the road to success?"

"No."

"He was a poor lad who kept a little oyster cart on the street, moving from corner to corner. One evening Mr. B——" (naming a prominent citizen) "was standing near the cart, waiting for a friend, when an order came to A—— from a neighboring house for forty Blue Point oysters on the half-shell.

"'I have no Points left,' said A——.

"'Serve 'em Cullins,' urged the messenger. 'They'll never know. I don't want to go any farther.'

"'No,' said A——.

"'All the dealers do it,' said the boy.

"'I never do,' replied the mulatto.

"Mr. B——, unseen in the twilight, had heard the colloquy. He knew that an order for forty oysters was a serious item in the day's sales of so small a dealer.

"He walked on to his club. He happened to be one of the committee who overlooked the commissary department.

"That evening he summoned the *chef*, and asked him why he so often served inferior oysters on the shell.

"'Because the dealer cheats me,' was the prompt reply. 'The "Cullins," or small refuse oysters left after the best are chosen, or culled out, look very much like the fine Blue Points. He makes a tremendous profit by pushing them off on me.'

"'I can send you to a dealer who will not do it,' said B——.

"A——'s success in business commenced from that day. The custom of the X Club was very large, and it brought him orders from all of the members. His trade increased until he became a rich man. He was always an honest one."

"It was lucky that Mr. B—— happened to stand near the cart," said the listener.

"The luck, I think," said the story-teller, "was in the habit which A—— had formed of selling Points, and not Cullins at Point prices. I have a theory that honest dealing in trade always, in the long run, comes to the knowledge of the public."

A lucky accident may bring a trader custom, but custom does not stay with the tricky dealer. A Power higher than luck backs the man, though he be but a poor negro, who, against all odds, is inflexibly honest.

EATING.

There has never been a time when so much attention was paid to the art of cookery as at present. The society of New York cooks some time ago gave their annual exhibition, at which they displayed steamships, villas, Eiffel towers and groups of statuary, which, beside looking very pretty, were all good to eat, being composed of meat and vegetables ingeniously disguised.

A man could devour the chimney of a cottage, the mainsail of a favorite yacht, a man-of-war's boat, a celebrated trotting horse, or the coachman of a coach-and-four, and find them all delicate and digestible.

About the same time, the noble society of cooks in Paris held a similar exhibition, where were seen a gigantic windmill, a castle of the Middle Ages, Swiss chalets, a full-sized Grecian helmet, and a large green lion, all good to eat and pleasing to behold.

The French cooks invited to their show a number of artists, authors, statesmen and other notable persons, one of whom pronounced a fine eulogium upon the art of cooking as practised in France with brilliant success for many centuries.

The orator, who was M. Jules Simon, made one remark of much importance. He maintained that the special excellence of French cookery is that it delights the palate without overtasking the digestive powers. Then he made the following observation:

"To know how to eat is to give one's-self good digestion, sound sleep, a receptive mind and muscular strength."

We can all agree with the venerable statesman, that to know how to eat goes a long way toward securing "good digestion, sound sleep, a receptive mind and muscular strength." This would be an excellent motto to place over the door of the Memorial Hall at Harvard, where several hundred students take nourishment every day, while commenting with great freedom upon the manner in which the cook performs his duty.

What we need as a people is not the fine-art cookery displayed by the artists of New York and Paris, nor the luxurious banquets described in the volume of Ward McAllister, who expatiates upon the singular cheapness of a dinner which only cost ten dollars a plate. Nor do we desire terrapins at three dollars a mouthful, and can dispense with champagne that has been kept at the vineyard for seven years.

Our great need is better cooking of the plain, nutritious food that the people can afford to buy, the right kind of bread, well-cooked vegetables and meat, and a leisurely, cheerful habit of eating them.

"We are always hungry at our college," said a young lady the other day. The reason appeared to be that no great importance was attached by the governing powers to the proper nourishment of the students.

There were competent persons employed to teach Greek, Latin and chemistry; but the great and

Digitized by Google

difficult art of supplying a great throng of eager students with "good digestion, sound sleep, receptive minds and muscular strength" was left to anybody that would undertake to supply them at four dollars and a half a week.

The food of students should be like that described by M. Simon. It should please their pleasure-loving palates, and not overtask their digestive powers.

LINCOLN'S SHOOTING.

When President Lincoln was a captain of militia in the Black Hawk War, he had to wear a wooden sword a whole day. Orders had been given forbidding all firing within or near the camp. Captain Lincoln went out and fired his pistols too near the camp. The colonel punished him.

During the Civil War, an order was issued forbidding the discharge of fire-arms within the limits of Washington. All sorts of magazine and breech-loading rifles had been sent to the White House for the President's inspection. He had studied them, and one afternoon he said to Mr. Stoddard, one of his private secretaries:

"They say you're a pretty good marksman. At half-past six to-morrow morning we'll go out on the mall and try some of these guns."

In the morning the President said to his secretary, who tells the story in his book, "Inside the White House," "You take that thing, and I'll take this, and we'll go right along."

"That thing" was an old Springfield musket, filled with a cartridge chamber that went on and came off with a screw twist. Mr. Lincoln selected a Spencer rifle.

The secretary fired and made a good shot, though the Springfield kicked him. President Lincoln crouched, that he might hold his Spencer with an elbow resting on his knee, and squinted along the blue barrel.

A short sergeant and four or five men on guard-duty, hearing the firing, had run up to the two marksmen.

"Stop that firing! Stop that firing!" exclaimed the sergeant.

Bang went the rifle, and the President's tall, gaunt form shot up to its height. He smiled upon the shouting sergeant, who, recognizing him, stood still, and was silent. Then the squad, without uttering a word, executed a "Right-about, face," and with a double-quick, raced to the guard-house.

"Well, they might have stayed and seen the shooting," said the President, with a laugh.

VOTERS WHO KNOW SOMETHING.

The Legislature of Maine, at its recent session, proposed to the people of the State an amendment of the Constitution, providing that no one shall be allowed to vote or be chosen to office in Maine who cannot read the Constitution in English, and write his name. The amendment is to be voted upon in 1892, and if a majority of the people favor it, it then becomes a part of the Constitution.

Three classes of persons are excepted, by its terms, from the operation of this amendment. Those whom physical disability renders unable to read or write; those who are already voters; and those who are more than sixty years old at the time the amendment is adopted.

By means of these exceptions the new constitutional provision is prevented from depriving any man of rights which he now possesses, and also from bearing harshly upon aged and disabled persons who cannot read and write. Both in its positive requirements and in its exceptions the proposed amendment is similar to the Massachusetts Constitution.

This idea of restricting the suffrage to those who are capable of exercising the right intelligently is one heartily to be commended. So long as the national law permits the countries of Europe to spill the overflow of their population on our shores, and allows new-comers to become citizens before they know anything about the national institutions, so long should the States protect themselves against the rule of ignorance.

Self-preservation is the first law of States; but to invite ignorance to accept as great a share in the government as is conferred upon intelligence, is an act of self-destruction.

No doubt there is an idea that it is not "liberal" to restrict the suffrage even to those who have the rudiments of education. But it is better to be safe than to be liberal.

IMPORTANT.

A high opinion of himself and his importance to the rest of the world is undoubtedly a most comfortable thing for a man to possess, but it is sometimes amusing to those who do not rate him so high as he rates himself.

Eli Saunders was a tall, thin, gawky man who had always lived in a little village, and had never accomplished anything worth mentioning; but he had a little money, more than most of his neighbors, and considered himself a very valuable member of society.

He was decidedly eccentric, and there were people who contended that his "head wasn't right." However this might be, he went his way, regardless of criticism. He was fond of music, and insisted on "pumping" the little organ in the church, Sunday after Sunday, year in and year out, "just for love," as he said.

"What's the use of hirin' a flighty boy that most likely won't pump even strokes," he inquired, "when here I be, ready an' willin'?"

As he grew older he became more and more convinced that his part in the music on Sundays was one of great importance, and often spoke of the skill it required to pump an organ as it should be done, neither too fast nor too slow.

One day a fine organist from a distant city came to the little place, and played on the organ on Sunday. He held a short conversation after church with Eli, who went home much elated.

"He said I pumped stiddy an' sure as anybody he'd ever had;" announced Eli in triumph to his meek, admiring wife.

"S'posin' I had give up pumpin', as some of 'em have sujested, I'd like to know how you think that hop-skippin' Mason boy's manner of pumpin' would have struck this city man? Throwed him all off his base, more'n likely.

"But I let him see I knew I pumped better'n common. So when he'd passed me a few compliments, I jest said:

"'I'm used to it, an' there can't nobody beat me at it, I presume to say. Jest let me git my bearin's, an' a little insight into the tune, an' I can pump any piece you've a mind to play.'

"An' he said," added Eli, "that was more'n he could say, fer no doubt there was any number of pieces I could pump that he couldn't play. So what d' you think of that, Sarah?"

ELECTION DAY IN GREECE.

"'Election day' is an exciting one in Greece," writes a correspondent of *The Companion*. "The last one was especially so in Athens. The people were to vote for members of Parliament. The election occurs every four years. For a week previous to the polling, all the men and boys were parading the streets, headed by a band. The Greeks are blessed with most powerful lungs, and their shouts of '*Viva!*' fairly drowned the braying of the donkeys. The interest was so intense that the young children shared it, and an American lady, passing a 'mite of a boy' on the street who was escorting a little girl home from school, gallantly carrying her books, heard him ask her if she had a vote!

"The voting takes place in the churches on Sunday, consequently the customary service is dispensed with. In the church to which an American gentleman succeeded in finding access, there were ranged round the church forty-two boxes, that being the number of the candidates.

"These boxes were something the shape of a tea-box, one-half painted white, with 'Yes' on it, and the other half black, with 'No' on it.

"Tin tubes projected from the front outward. Looking through these tubes, one could see that the boxes were divided into two compartments. Beside each box stood a representative of the candidate, and over the box appeared the candidate's picture. Each voter, as he entered the church, had his name and address registered, and a check given him. The above-mentioned representative then gave the voter a bullet, or vote, made of lead.

"Formerly the dishonest voter would slip another bullet up his coat-sleeve, and as he raised his arm to the tube the bullet would roll down, and two votes instead of one be cast; but the representative now watches to prevent cheating. Negative votes as well as affirmative must also be cast; that is, if a voter objects to a candidate, he must cast a negative bullet. The voter, of course, casts one vote at each box, or forty-two in all."

FAME AND A SYLLABLE.

A gentleman in Washington who devotes his time to hunting up all sorts of information, says he can prove that the greatest men and women in the world's history had names that ended in "on." He gives the following list of famous men, to which the reader can add at his leisure:

Samsen, Solomon, Napoleon, Washington, Wellington, Newton, Bacon, Johnson, Nelson, Hamilton, Milton, Byron, Jefferson, Jackson, Emerson, Edison, Harrison, Clinton, Madison, Hudson, Gibbon, Addison, Walton, Whittington, Wilson, Farjeon, Morton, Audubon, Chatterton, Tennyson and Lytton.

That is all very well if the greatest men of the world have been Englishmen and Americans of English descent, whose names so frequently end in *ton* or *son*; but to say nothing of the fact that some, at least, of the names given are not those of the greatest men who have ever lived what a mistake it was that Abraham, Moses, David, Xerxes, Demosthenes, Cicero, Cæsar, Pompey, Charlemagne, Shakespeare, Dante, Gladstone, Bismarck, Lincoln, and some thousands of others who might be mentioned, had names that did not end with *on*.

Moreover, a pretty good case can be made out for *er* as a rival termination. Here are a few names that suggest themselves at once: Alexander, Peter, Luther, Spenser, Hunter, Webster, Turner, Bulwer, Wagner. It would be a pretty good mental exercise to extend both these lists, and see which will come out ahead.

TESTING THE SCHOOL-MASTER.

In the town records of the city of Boston there is a curious passage which records how a school-master was examined, and what happened. The manner in which the visit of inspection is recorded makes one incline to the view that the unlucky school-master may not have had fair play, although if he was really inefficient, he may be said to have been judged by his peers.

In the record for the Twenty-second of May, 1722, it is set forth that:

"Coll Pen Townsend, Jeramiah Allen Esqr, & John Edwards together with the Select men. Visitted the wrighting School at the Southerly End of Boston on Thirsday the 24th apll 1722. and Examined the Scholars under mr Ames Angers tuition as to their proficiency in Reading writing Scyphering & the masters ability of teaching & Instructing youth his rules & methods therefore And are of Opinion That it will be no Service to the Town to Continue, mr anger in that Employ."

Whereupon it was voted that the said Mr. Ames Anger should not continue master of the "Said South School."

It is true that nothing is said of the methods of spelling inculcated at the "wrighting School," and it is also possible that a clerk rather than the committee was responsible for the errors of the record; but there is certainly something absurd in the passage as it stands.

"BULLS."

Grave historical writers are occasionally guilty of what are called "Hibernicisms." The following passage occurs in a popular history of France:

"It is extremely doubtful whether this prince, Merovæus, ever existed at all; but he had a son, Childeric, whose existence is well authenticated."

The following is also from a historical work:

"— Like Samson of old, who, armed only with the jawbone of an ass, put eleven hundred Philistines *to the sword*."

ACCORDING to the Bangor *Commercial*, a Maine school-girl compared the adjective "ill" after this original fashion: "Nominative, ill; comparative, worse; superlative, dead."

"Brown's Vermifuge Comfits," or worm lozenges, will be found a very beneficial medicine. They are pleasant to the taste, free from coloring matter, and no child will refuse to take them. 25 cents a box. [*Adv.*

Cotton Dress Goods.

We carry the largest assortment in the United States of FINE Cotton Dress Goods.

Send a postal card asking for our BOOK OF INFORMATION.

Mention this paper.

R. H. STEARNS & CO.,
BOSTON, MASS.

MERE VARNISH.

Do you happen to know of another dress in which money does a tenth so much?

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.

The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.

MURPHY VARNISH COMPANY,
FRANKLIN MURPHY, President.
Head Office: Newark, N. J.
Other Offices: Boston, Cleveland, St. Louis and Chicago.
Factories: Newark and Chicago.

BARBOUR'S LINEN THREAD

ADAPTED TO ALL KINDS OF

HAND & MACHINE WORK.

LACE AND EMBROIDERY, now of so much interest to the Ladies, especially considered.

SOLD BY ALL RESPECTABLE DEALERS IN THE COUNTRY.

Victor Cloth

12½ cts. per yard.

31-inch width.

The finest fabric and best value ever offered in printed goods. Equal in every respect to French Importations, sold at 25 and 37½ cents per yard. Printed at the works of the famous MERRIMACK CO., established since 1822. Over 200 Patterns and colorings to select from. SECURE SUPPLY NOW. Ten to twelve yards sufficient for a dress pattern. Postage 30 cents extra. Send for samples or goods, FREE.

R. H. White & Co., Boston, Mass.
Or MERRIMACK MFG. CO., Lowell, Mass.

PRACTICAL SUGGESTIONS ABOUT CORSETS.

The Corset is the basis of a well-fitting dress. What are the essentials of a good Corset?

1st. It must fit the form. There are tall and short women; stout and thin; full figure and slight. They can no more all wear the same pattern of corset than the same pattern of dress, but each must select a style best adapted to her own figure. **Dr. Warner's Coraline Corsets** are made in 12 different patterns and 24 different styles to suit every form and taste.

2d. A good Corset must be stiffened with a material which gives a firm and flexible support, but does not wrinkle, break, or become stiff and uncomfortable. These conditions are better met by Coraline than any other known substance. It is not brittle like horn or reed; it does not become bent and distorted with use like whalebone, and it does not permit the corset to wrinkle like cord. Coraline is used in all of Dr. Warner's Corsets and in no others. During the past 12 years over 18,000,000 have been sold in this country alone.

Coraline has the same advantages over whalebone for stiffening dresses as for corsets, and Dr. Warner's Coraline Dress Stays are now used by leading dressmakers of Europe and America.

Dr. Warner's Coraline Corsets are made in black, white, drab and écru at prices ranging from one to five dollars each, and are sold by leading merchants throughout the world.

WARNER BROS.,
New York, Chicago, London, Paris and Berlin.

"Silk Sponge" Underwear Fabric.
Of pure silk, referred to by "Shirley Dare" in New York *"Herald."* Sample and catalogue for 5-cents stamp.

Why Suffer One Moment

From Torturing Skin Diseases

When a single application of the **Cuticura Remedies** will, in the great majority of cases, instantly relieve the most agonizing of itching, burning, scaly, crusted, pimply, and blotchy skin and scalp diseases, and point to a permanent and economical (because so speedy) cure, when the best physicians and all other remedies fail? **Cuticura Remedies** are the greatest skin cures, blood purifiers, and humor remedies of modern times, are absolutely pure and agreeable to the most sensitive, and may be used by the youngest and most delicate with perfect success.

CUTICURA

the great skin cure, instantly allays the most intense itching, burning, and inflammation, permits rest and sleep, speedily heals the skin, and restores the hair. CUTICURA SOAP, an exquisite skin beautifier, is indispensable in cleansing diseased surfaces. CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, cleanses the blood of all impurities and poisonous elements, and thus removes the cause. Hence the **Cuticura Remedies** cure every disease and humor of the skin, scalp, and blood, with loss of hair, from infancy to age, from pimples to scrofula.

☞ "ALL ABOUT THE BLOOD, SKIN, SCALP, AND HAIR" mailed free to any address, 64 pages, 300 Diseases, 50 Illustrations, and 100 Testimonials. A book of priceless value to every sufferer.

CUTICURA REMEDIES are sold everywhere. Price, CUTICURA, the Great Skin Cure, 50c.; CUTICURA SOAP, an Exquisite Skin Purifier and Beautifier, 25c.; CUTICURA RESOLVENT, the greatest of Blood Purifiers and Humor Remedies, $1. Prepared by POTTER DRUG AND CHEMICAL CORPORATION, Boston.

Bad Complexions, pimples, blackheads, red, rough, and oily skin and hands are prevented and cured by that greatest of all Skin Purifiers and Beautifiers, the celebrated **Cuticura Soap.** Incomparably superior to all other skin and complexion soaps, while rivalling in delicacy and surpassing in purity the most expensive of toilet and nursery soaps. *The only medicated toilet soap, and the only preventive of inflammation and clogging of the pores, the cause of most complexional disfigurations.* Sale greater than the combined sale of all other skin soaps. Sold throughout the civilized world. Price, 25c.

MEDICINE AS A PROFESSION.

By Sir Morell Mackenzie, M. D.

FACTS.—First Paper.

How is it, that, in spite of the ceaseless lamentations of medical Jeremiahs over the hard work, scanty pay and general unpleasantness of their profession, the number of young men who seek admission into it grows larger every year? In Europe, and, I believe, in America also, doctors increase and multiply out of all reasonable proportion to the number of their prospective patients. What is the subtle attraction that induces so many parents to put into the medical profession lads who might easily find more profitable scope for their talents in other walks of life?

The profession is, of course, a high and noble one, and great in its aims, at any rate, if not always in its achievements.

"It may be said of our profession," says Sir Benjamin Brodie, "that, unlike most others, it has for its constant and sole object to confer benefit on others. The advocate at one time pleads for the guilty, and at another endeavors to convict the innocent. The soldier engages to go wherever he is sent, that he may destroy the lives of those from whom he never received an injury; but the physician and surgeon are engaged only in lessening the afflictions and prolonging the existence of their fellow-creatures."

But these considerations are hardly likely to have weight with many parents and guardians. I am rather disposed to think that the attraction in the eyes of those estimable persons is the facility with which, as they imagine, a fortune can be made by the practice of the healing art.

They have been, perhaps, to some great medical luminary, and have had to pay two or three guineas for a few minutes' interview with the oracle and a cabalistic-looking scrawl from his pen, the inditing of which did not appear to tax his intellectual resources to any great extent. They may also have heard from time to time of large fees paid by wealthy patients, and of a vast fortune left by a successful physician.

No capital seems to be needed for the business, and under these circumstances, it can scarcely be wondered at if many fathers think it just the thing for their sons.

Touching this question of capital, however, I may quote the well-known story of Northcote, the painter, who, on being asked what he mixed his colors with, replied, "With brains." Without a certain amount of capital of the same commodity, a doctor's chances of making enough to pay his washing bills are a negative quantity; and it is well to bear in mind that in medicine, as in every other career, many are called, but few chosen.

Occasionally a sensational fee may come to an exceptionally lucky doctor, as in the case of the medical attendants of Mr. Hyatt, the West Indian millionnaire, who, after being operated on by Sir Astley Cooper, gave three hundred pounds to each of his physicians—Doctors Lettsom and Nelson—but threw his nightcap in the surgeon's face, saying, "That is for you!" Sir Astley replied, "I will pocket the insult," and on opening the nightcap, he found it contained a thousand guineas.

Occasionally, also, doctors both in ancient and in modern times have left large fortunes. Alcon, a surgeon in the time of the Emperor Claudius, was fined and sent into banishment, probably to punish him, for being too rich—a crime looked upon in those days with some severity by rulers, who were always ready to appropriate the large fines inflicted on the wealthy. But on Alcon's return to Rome, the illustrious physician speedily recovered his practice and made good his losses.

Thessalus rebuilt his native city, and was very extravagant in his mode of life, and yet managed to leave a great fortune.

The famous Doctor Radcliffe, who lost the post of physician to Queen Anne by rudely telling Her Most Gracious Majesty that she was suffering from the "vapors,"—the eighteenth century equivalent for hysteria,—left a vast sum behind him, part of which he bequeathed to the University of Oxford for the foundation of a noble library and for the establishment of travelling scholarships for young physicians.

In our day Sir Erasmus Wilson and Sir William Gull have left very large amounts; but in these last two cases it is well known that the great bulk of the money was not made in the practice of medicine, but in fortunate speculation.

Some patients, too, are so grateful for benefits obtained from a doctor's advice that they are not content with giving merely the proper fee, but add handsome presents.

Occasionally, physicians of Spartan virtue decline all gifts except the strict honorarium, and the famous French physician Trousseau was one of these. The mother of a child whose life he had saved once offered him a purse which she had worked for him, but he told her of the resolution he had taken, and added that his fees came to five hundred francs. The lady took back the purse and counted out the exact amount asked for, saying that she was sorry he could not accept her little present, which contained four thousand francs.

Thus was the physician a martyr to principle after a novel and unexpected fashion.

Until we reach that millennium of social equality, prosperity and happiness depicted by Mr. Edward Bellamy in his "Looking Backward," every man who has to earn his livelihood must struggle for existence with hundreds and thousands of fellow-workers who have chosen the same profession as a means of subsistence.

The question of how to gain a living has become a very serious one, and it is intensified for men, nowadays, by their having to compete with women in so many fields of labor. It is true that, at present, women doctors are the exception and not the rule; but, as Professor Case said to the Vice-Chancellor of Oxford the other day on the occasion of the decision by the Congregation to admit women to the examination for the degree of Bachelor of Medicine, "Remember, sir, the pertinacity of women."

Those who enter the medical profession with the hope of making large fortunes will most likely be disappointed. Professional work does not lend itself to the amassing of wealth, and every one who has given attention to the subject feels certain that, if the leading practitioners of London, New York, Boston and Philadelphia or other large cities had been the employers of other people's labor instead of their own brains, they would in most instances have been ten times as wealthy as they are.

In the case of a professional man, whether he is a lawyer or a doctor, the clients always wish to see the man himself, and are rarely or never satisfied with the advice of a substitute, however skilled he may be.

A manufacturer, or a man engaged in commerce, can have all the details of his business carried out by subordinates, while he has only to superintend and advise; but the more famous a physician becomes the more anxious the patient is to see him personally. Hence, it happens that, at a time of life when the tradesman is able to retire into the country, leaving a number of clerks and assistants to make money for him, the poor physician is called upon to work harder and harder.

The ideal method of dealing with a large income is that followed by the late Doctor Agnew of New York. So far from believing it a merit to die rich, he considered that the accumulation of wealth was no evidence that time and opportunity had been judiciously employed. Though for years Doctor Agnew obtained one of the largest incomes in New York, he left a very small fortune behind him, having devoted nearly all he gained to works of charity.

I have endeavored to show from a practical point of view, that those who become doctors with the object of making money by it are likely to be disappointed. But a more weighty consideration than that of profit and loss should deter a young man from such a step, and that is the degradation, not of the profession, but of his own intellectual and moral nature which such a course would inevitably entail.

Bacon, when pleading the cause of the cultivation of learning for its own sake, says, "No kind of men love business for itself but those that are learned, for other persons love it for profit, as an hireling that loves the work for the wages. . . . Of all men, they (the learned) are the most indefatigable, if it be towards any business which can hold or detain their mind. . . . I do not mean when I speak of use and action (of learning) that end before mentioned of the applying of knowledge to lucre and profession, for I am not ignorant how much that diverteth and interrupteth the prosecution and advancement of knowledge, like unto the golden apple thrown before Atalanta, which while she goeth aside and stoopeth to take up, the race is hindered."

STEERING AN ARMY.

When General Wolseley decided to attack the Egyptians' stronghold at Tel-el-Kebir, he marched his army, at night, across seven miles of sandy desert. It was a dark, clear night; there was no moon, but the stars shone out.

A naval lieutenant, Wyatt Rawson, had been detailed, because used to navigating by the stars, to guide the army across the desert to the enemy's entrenchments. With his eye on the stars he steered the force as he would have steered his ship. So accurately did he lead that the first gleam of the breaking day revealed to the British troops the long line of solid earthworks, three hundred yards ahead.

The assault, within half an hour, put the earthworks and the Egyptian army into the possession of Wolseley's troops. The skilful "steerer," charging with the men he had led, went across the ditch, up the embankment, and over the first line of earthworks. Then he fell, shot through the body.

"Didn't I lead them straight, general?" he asked, as the commander-in-chief bent over him.

"Those words should find an echo in the hearts of all true Englishmen," writes Chaplain Male, in "Scenes Through Battle Smoke." "Every man is a soldier if he live truly," adds the chaplain, "and before each stern duty stands to lead him forward to things higher and nobler."

For the Companion.

CHIMÉ.

A Boy Patagonian Giant.

IT was while we were "levelling" in the Picunche Pass that we first fell in with Patagonians. We had surveyed our way through the Pass from the west, or Chilean side.

Arthur Allen, a young "tech" from the United States, and I, were working in behalf of an Argentine railway company. We were accompanied by an old Chilean surveyor named José Juarez, and his son Ramon. These two represented the Chilean government, the territory under survey being on the boundary between Chile and Argentina.

Our four servants were Chileans from the large island of Chiloe, which lies in the gulf to the westward of the Pass.

After spending three weeks among the stupendous gorges of the Andes, we had emerged into the foot-hills of the eastern slope, and on the Fourteenth of April we had encamped a few miles to the southwest of Lake Nahuel Huapi, amidst pleasant groves of beech and wild-apple trees.

April, it is hardly necessary to explain, is an autumn month in this half of the world. There was a late September chill in the air, and the beeches rustled in the wind the following evening, as we tramped home to camp, after a hard day's work in the Pass.

In the distant east the darkened heavens were piled with broken clouds; the goat-like bleat of a guanaco came faintly from the dusky hillside across a ravine. Flocks of grouse rose here and there, and we startled some odd-looking squirrels, which, unlike their northern congeners, appeared to be very busy in the twilight.

As we came in sight of our three tents, and saw the gleam of the camp-fire, Ramon Juarez, who was a few steps in advance, stopped short.

"What in the world," he exclaimed, in Spanish, "is up now? Our camp has been taken by Indians!"

A blithe fire was burning at the camp, before which we could see four sides of guanaco roasting; while lying on the ground, or moving around the fire and the tents, was a large party of men, who seemed from their dress and mien to be savages.

Not one of our Chilotes, whom we had left at the camp, could be seen among the throng; and the disagreeable thought occurred that they had been murdered or otherwise put out of the way.

There was a hasty mustering of such fire-arms as we carried, as we watched the camp from the shelter of the beeches. Old José said that the interlopers were Tehuelches, a tribe of Patagonians whose reputation has never been good. But as we saw among the Indians a few women and children, we hoped that the foray was not a hostile one.

It was agreed that José and I should advance and accost them, while Ramon and Allen remained a little in the rear, ready to shoot if the natives attacked us. We went forward, quite ill at ease, and when within fifty or sixty yards, José called out, "*Hola!* What's this? What are you doing here, Tehuelches?"

I confess to gripping the handle of my revolver rather nervously, in my blouse pocket, when ten or a dozen great fellows started up, with deep, guttural grunts, and stared at us. My nervousness was increased at hearing a rapid clicking of carbine locks in the shade behind us, for I did not know how much discretion Ramon and Allen might use.

But the Patagonians were merely surprised by the suddenness of Señor José's salutation. Their faces relaxed immediately into friendly grins, and in a moment we were surrounded by gigantic men, among whom we felt like little boys. Their brawny, brown hands were outstretched for a shake, and good-nature was written all over their big, ugly faces.

Our Chilotes now made their appearance from a little to one side, and informed us that this party of Tehuelches had come along shortly after noon, and could not be persuaded to go away before they had seen the white men. They had plenty of guanaco and ostrich meat with them, and had proceeded to make themselves comfortable at our camp.

Their chief man, as we learned through the Chilote, Fenchel, who partly understood their language, was named Jock-Ketchem, or something which sounded like that. This personage grinned complacently to us when his name was mentioned, and, striking his brawny breast with his fist, exclaimed in Spanish, "*Yo amigo.*" (I am a friend.)

Jock-Ketchem was certainly not much below seven feet in height, and so broad and muscular that I should estimate his weight at three hundred pounds. His wife, who had set up her *toldo* or tent of skins beside ours, was a very stout woman with a face not unlike one of those great, broad, smiling masks which we sometimes see in the toy-shop windows.

Though they were an interesting study, it was not wholly pleasant to entertain them. They were intensely curious, and the younger ones of the party showed a disposition to be light-fingered in the matter of such small articles as case-knives, spoons and tin dippers.

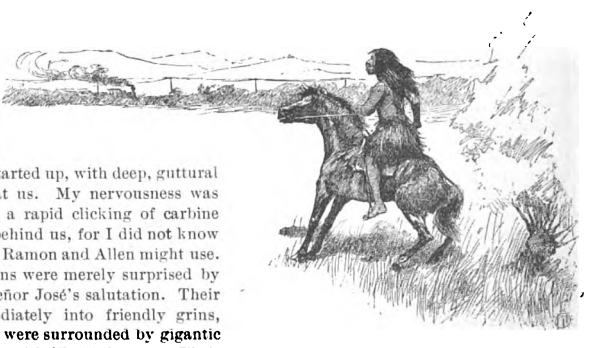
The older ones begged for "wiskee," but we had none for them, and treated them only to a cup of coffee all round, receiving as an offset all the roast guanaco we desired for our dinner.

Jock-Ketchem was the possessor of an old revolver and a percussion-cap gun. Several of the other Indians also possessed guns, and they had a troop of fifty or sixty very good horses.

In addition to their fire-arms each adult Indian and every boy possessed a *bolas*, and some of them carried lances ten or twelve feet in length.

The *bolas* consisted of stone or iron balls plaited into the ends of a green hide line about six feet long, one at each end of it, with sometimes a third line and ball attached to the middle of the first line. The balls are from two to four pounds' weight each, so that the entire weapon weighs from seven to ten pounds.

A stalwart Patagonian will seize the *bolas* by one ball and will hurl it with tremendous force at a guanaco, an ostrich, or an enemy. The balls rotate in the air as the missile flies, and, striking round either the body, the neck or the legs of the game, trip it up and disable it.



Much against my wish—though fortunately no harm grew out of it—Allen wrestled during the evening with two or three of the Tehuelche youths of about his age. They easily lifted him about, but he understood a few Yankee tricks in tripping and leg-locking which enabled him to throw them, not a little to their astonishment. They took it very good-naturedly, and bestowed on him the broadest of admiring grins, with certain complimentary exclamations which Fenchel translated as "*Chiquito, pero muy pronto!*" (Little, but very active!)

We had very little sleep that night. The next day Señor Juarez asked of Allen and me a dollar each to present to Jock-Ketchem. We gave it, and Juarez and his son each added a silver dollar. The four bright coins were then given to the old chief.

In less than an hour after receiving the money, the Indians began to show signs of uneasiness, and before noon all set off for the trading-post, forty or fifty miles down the river Limay, the outlet of Lake Nahuel Huapi. It was only then that we realized that the present had been a ruse to get rid of the Indians; and it gave us no little distress to reflect that the Indians would probably spend all the money for "wiskee."

"Fire-water" is the bane of the Tehuelches as of almost every other Indian tribe on this continent. It is the white man's gift of death to the aborigines; and as for the white man himself, it does not often spare him.

Our Tehuelche visitors had been gone for about an hour, when we were surprised to see one of

them returning, at a hard gallop. He was a boy, about thirteen years old, whom we had been led to notice particularly, while the party was with us, on account of his size and his intense curiosity to see and examine everything belonging to us.

The boy now rode up, tied his horse to a tree, took off the saddle, and, bringing it to our tent,

Digitized by Google

placed it inside. Then he sat down by the fire, with the general air of one who had come to stay; and when Fenchel asked him why he had come back, he said that he had come to go across the salt water with the white men, and that hereafter he should always live with them.

He told Fenchel that he had given his companions the slip while going through the copses.

Though manifestly little more than a child in years, he was about five feet, eight inches in height, and would have weighed at least a hundred and sixty-five pounds. He had the "making" of a three-hundred-pound savage, when fully grown. Fenchel advised him to return, but he gave us to understand that his mind was fully made up to spend his days with the white men.

His name, he told us, was Chimé. In earnest of his honesty of purpose, he produced two spoons, a fork and a glass bottle, which he or some of the other children had stolen from us while the party was with us.

In the morning Ramon and Allen, thinking to frighten him out of his design, intimated to him, in certain dark hints and pantomime, that in the white man's country boys had to suffer horrible things; that they were compelled to sit all day in a fearful instrument of torture called a school-desk, with their eyes fastened down to another instrument of torture, called a book; that they were shut up all the while in a great *toldo*, made of stones and bricks, named a school-house.

Chimé observed most attentively, but the grin on his face showed that he placed no great confidence in the story. He even asked, through Fenchel, how, if that were the case, white boys came to be out, going around the country. Breakfast, too, was now the object of his keenest regard, and he verified his fondness for civilization by drinking two pint dipperfuls of coffee.

During the forenoon he was as happy a boy as can well be imagined. He mounted his horse and gave us some exhibitions of his skill as a rider; and he began to instruct Allen, to whom he took a great liking, in the use of the *bolas*.

Shortly before noon two Indians were seen approaching at a gallop. They proved to be Chimé's parents.

"Look, Chimé!" Ramon exclaimed. "You will catch it now!" Chimé watched their approach with a countenance in which the usual stolidity of the savage blended curiously with disdain and disgust.

Dismounting, the Indian and his squaw rushed toward the prodigal, and, much to our surprise, embraced and fondled him after the most endearing fashion. We had already noticed that the Tehuelches were excessively indulgent to their children, but this appeared to us to be carrying parental fondness too far, especially as Chimé seemed not much affected by it.

His parents had, as they told Fenchel, been searching for him all night long. That they should feel no resentment toward him was almost incredible, yet they showed none at all. At last, after fully an hour of coaxing, they succeeded in persuading him to go back with them.

Chimé's reclamation was a great relief to us, and we thanked fortune as we said good-by.

Judge, then, of our dismay, when, two days later, while at supper, we espied a horseman of unmistakably familiar aspect, riding hard, in the dusk, to reach our camp.

"It's Chimé again!" exclaimed Allen, with a groan.

It was Chimé; he again threw his saddle into our tent and informed us that he was very hungry, and that he had given his family the slip for good this time, since they were now all at the trading-post, and helplessly intoxicated.

We were now on the very eve of departure, having finished our work in the Pass. Señor Juarez, Ramon and the Chilotes were to return into their own country, while Allen and I had before us a ride of several days to the westerly terminus of the railway, on our way to Buenos Ayres.

In despair what else to do with him, I at length decided to let Chimé go with us and the two Gaucho guides who had come to escort us across the plains, and turn him over to the Argentine authorities.

During those days on horseback across the pampas, Chimé was quite in his element. He boasted, rode races, threw his *bolas* at stray cattle, and in general disported himself as a lad will who anticipates great things not far ahead.

His expectations received an untimely shock. We came in sight of the terminal station of the railroad just at nightfall. Between us and the station there was a small river. As we rode across the half-dry channel and emerged from the willows, I heard a train moving out, and presently we came out in plain view of it, steaming noisily away in the twilight.

Chimé had never seen and probably never heard of such a thing as a locomotive before, and though it was a pleasant object to our eyes, it was far otherwise to this young Tehuelche.

We had stopped to watch it for a moment. Chancing to think of Chimé, I turned to see what he thought of it, and was at once struck by his amazed and terrified expression of countenance.

The locomotive, like all those in use on the *pampas*, was fitted with a peculiarly wild, discordant whistle, to be used in frightening cattle off the line. While we stood there, we heard it several times, at a point below, and I never saw a person exhibit more genuine evidences of terror than Chimé. His swarthy face looked quite pallid, and he fairly trembled in his saddle from fear and excitement.

In such words as he could command, he asked what it was. Out of mischief, Allen shook his head mysteriously and gave him to understand that it was a thing peculiar to the white man's country, and that it killed many people every year and carried off thousands!

We lodged that night, ourselves and horses, at a miserable little *fonda*, not far from the station. It was plain to see that Chimé's high spirits had deserted him. Moreover, he kept close to either Allen or me all the evening, and when we retired, he lay down on the floor of the same small room where we slept.

No more locomotives were heard that night, but at about daybreak next morning I heard one whistle several times, at the station-house near us, in what, half-awake as I was, I deemed a particularly exasperating manner.

The emotions which it roused in the mind of Chimé must be left entirely to conjecture, for when we rose, an hour or two later, he was missing. The *gauchos* about the *fonda* informed us that he had got his horse and left in great haste before it had grown light.

We never saw him again. I have little doubt that he took the trail back, and rode hard and fast for his own country. As he had his *bolas* and was accustomed to hunt, he probably obtained food on the way and reached his people in safety.

No doubt he had fearful stories to tell of his brief excursion into the white man's land.

ANSON BURRILL, C. E.

For the Companion.

IN A STATE PRISON.

Life in a State Prison! What is it like? Perhaps no one has lived it, under conditions which prevail nowadays, who has had at once the ability and the disposition to describe it as it is.

The sufferings in the old traditional kind of prison life—the solitary confinement in a dungeon

The "Swallow Holes" from the Rotunda

cell, in chains and darkness—have been described by men whose pens have made their readers feel something of what they felt in such captivity.

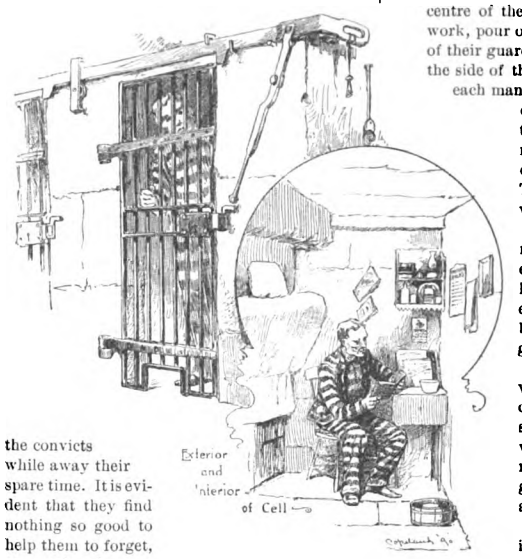
That kind of imprisonment, the purpose underlying which was punishment, retribution, has practically passed away, under the influence of the growth of humane feeling. A form of imprisonment, often called "detention" rather than punishment, and which is outwardly much less terrible, has taken its place.

Now, prison convicts, through a good part of the day, are ordinarily in one another's company under guard, outside their cells; they have the blessing of work to engage their bodies, and good books and journals to occupy their minds; they are fed with good food, and their health is looked after.

Has this bettering of the external condition of prisoners rendered their confinement something no longer to be dreaded and feared?

Perhaps some people who know little or nothing of a convict's life may have thought so. Let us look into a great State Prison, and see what life there is like.

We are in a central rotunda, or great open room, from which the wings of the prison radiate in three directions, the offices and the residence of the warden and his deputy making a fourth wing. The air of the prison seems to fill this rotunda. One looks from it, through a partition of heavy vertical bars, closely placed, out upon rows of cell-doors, which are like great stacks of swallow-holes rising one tier above another.



These cell-doors do not look out upon the daylight, but on the inside light of a corridor. The cells constitute a building of themselves, built up within another building.

If we look into these cells, it is likely that we shall find them empty. The convicts are at work in the shops—the long, plain, two-storied brick buildings that we may also see from the central rotunda, across an empty yard.

In the narrow cells are bunks, coarse blankets, plain bedding, a chair—perhaps a rocking-chair—and upon the thick, whitewashed walls are almost always to be found knicknacks and cheap colored pictures and advertisements, put up in a melancholy attempt to make things look "cheerful."

But a few of the cells are absolutely without an attempt at anything to brighten them. Their occupants have lost all thought of anything cheerful. They live on squalidly and miserably—not living really, but barely existing, and doing only what they are forced to do.

Here and there one finds in the cells a few mechanical tools and bits of wood-work, upon which

the convicts while away their spare time. It is evident that they find nothing so good to help them to forget, as work of some kind; for to do work which they are not compelled to do is something like being free.

Here is a very pathetic sight. It is the cell of a man of education and cultivation. The desire to be quickly rich, which has ruined so many men and women, led him to become a forger, and now he is a convict.

He had, in his youth, learned to paint and was a somewhat skilful artist; and here is a canvas, on a rude easel, upon which he has been occupying his spare time in prison. It is a landscape, with a river bank, a copse of trees, a meadow, and beyond, a village with the church-spire rising high. The man is reproducing from memory a long-remembered scene of his boyhood, and, in a narrow cell of a great prison, where nothing green or growing is to be seen, and where he lives among felons, he spends his time in picturing a landscape which breathes innocence and freedom and godliness. Could anything be more sad?

But let us look at the convicts themselves. We find them in their workshops, with guards overlooking them. They are in a dress of dull, coarse cloth marked with stripes. Their caps and short jackets or "spencers" have a dismal jauntiness about them, which their loose, straight trousers do not possess.

These clothes bring the convicts down to a certain resemblance to a moth miller or some grotesque and gigantic insect. They seem to reduce the man to his lowest terms, concealing any beauty or grace his body may have, and rendering his appearance hateful to the man himself.

Nearly all the men have an air as if they despised these clothes and suffered within them. Besides being a badge of their servitude and a mark of their crime, they have a distinct unpleasantness and even repulsiveness of their own. Some of the men are at work at harness-making, some at cabinet-making, some at gilding; the occupations are various. Most of them appear listless and melancholy, and work in a dull, spiritless way.

A few others work nervously and hurriedly, as if they killed the time better in that way. But there is no cheerfulness in the work of either kind.

If you may speak with them, you find them talking of little else than the time of their release, if they have release to look forward to. One man who has the greater part of a twenty-years' sentence before him, knows exactly how many years, months and days he has still to serve, making allowance for the deduction for good conduct.

The great majority are eager to get out of prison. They certainly do not like the life so well that they prefer it to freedom, no matter what hardships, privations or humiliations there may be in the free life outside.

"The great majority," I have said. But here is a man who, the keepers declare, would not escape if he were left on the street, but would come back into the prison.

Why? Because the prison life has stamped out all the manhood that was in him. It has dulled his senses and extinguished his normal desires. Shut up here so long, seeing nothing of the outside world except, now and then, from an upper window of the workshop, the topmast of a tall ship being towed by in the river near, his mind has preyed upon itself until little of it is left.

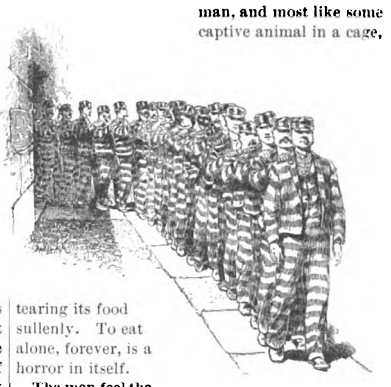
"He is an imbecile," the keepers say, "and ought to be transferred to the insane asylum." There are many such as he in the prisons of the country.

There is nothing more melancholy, in a great prison, than the way in which the convicts come to their meals, and eat their food.

At twelve o'clock a great bell is rung in the centre of the prison. The men leave their work, pour out of the shops under the eyes of their guards, and form in single file along the side of the building. They stand there, each man close behind his neighbor,—so close that their bodies often touch,—the right hand of each resting upon the right shoulder of the man in front of him. Then, at command, they advance, in step.

This is the "lock step." The men march in snaky movement entirely around the yard, their legs moving all together, and each man's so close to his neighbor's that the line looks like a great, many-legged reptile.

This march is peculiar to convicts, and is another reminder of their condition. In it they seem to heave themselves forward rather than to walk. The resemblance of the line to some great serpent is most striking, and even revolting.



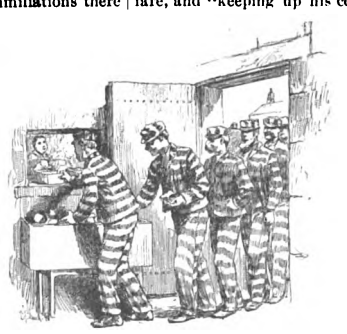
The men enter the main prison in this way. Here the lines separate, the men dividing according to the wings of the building where they are confined; and, stopping before apertures in the kitchen wall, beneath the rotunda, they receive, upon a tin dish, their allowance of food. Each man, with this dish in hand, goes up the iron stairs to his cell,—to his solitary swallow-hole among the rest,—shutting his iron-barred door behind him with a bang. The constant "clack" of these doors echoes loudly through the prison.

When all the men are in, the guard, standing at the end of the corridor, moves a great lever which fastens all the cell-doors upon one tier at once. This lever itself is locked down, and the men are closed in.

There, in solitude, the food is eaten. If you pass down the corridor, you see face after face, in the dim light within the cells, looking out toward the broader light outside.

Each man munches in silence, looking outward, and the eager, unsatisfied eyes tell most plainly that, though the hunger of the body may be satisfied thus, there is no food here for hungry eyes, hungry affections and hungry souls.

It is at this time that the convict seems least a man, and most like some captive animal in a cage,



tearing its food sullenly. To eat alone, forever, is a horror in itself.

The men feel the pressure of all upon their minds and moral natures. One man who has two years longer to serve remains in his cell during a severe illness, declining to go to the more comfortable infirmary, or to take the more delicate hospital food.

"No," he says, "I must keep up my courage, for if I do not I shall be lost! I am saving myself up for freedom. If I let go my grip upon myself, and go to the hospital, I shall fall into a decline of body and mind which will be fatal to me when I come back to the ordinary prison life."

So he lies for months on his mattress in his cell, alone, miserable, tortured with his thoughts, suffering acute pain, but clinging to the prison fare, and "keeping up his courage for freedom."

Few convicts have this courage to begin with. It is possible that this man himself will find, when free at last, that what moral stamina he had left is gone. But when that longed-for time comes, he, like all other convicts whom years of separation from the light and beauty of the world have not reduced to a condition bordering upon imbecility, can only look upon prison life, after experiencing it, as a weariness, a sorrow, a horror.

SUGGESTIONS

BIRDS ON THE GROUND.

What birds do you often see on the ground?
What ones are seldom, if ever, seen there?
Which get their food on the ground?
What do the others do there?
Which birds walk or run?
Which hop?
Are there any that both walk and hop?

For the Companion.

TWINS.

"The one so like the other, as could not be distinguished."

Through the snow and through the rain,
There go now the sister twain!
"Must breathe clean air every day;
Can't live on other terms," they say:
The stout old twins.

Short gray dresses, boots abused,
And their hats not too well used,
With strange flowers trimmed you see;
Just as like as like can be,
The mated twins.

Dark bright eyes and curls of gray,
They have both a downright way;
Both together speak their mind,
Lips of both are kith and *kind*;
Their thoughts are twins.

One begins, one ends a speech,
Each one quickly capping each:
Each one wears the other's clothes.
Neither cares and neither knows:
Shoes are quadrins.

One for other blame will take,
No word said of such mistake.
Neither owns that thanks are due:
"They're not meant for me but you,
You best of twins!"

Was't their very sturdy selves
Once were lightsome fairy elves,
Dressed alike by mother hands,
Coming side by side from lands
Where life begins?

W. HENRY WINSLOW.

PRACTICAL CHRISTIANITY.

Probably every boy or man who reads *The Companion* has at some time heard the parable of the Prodigal Son, and heard it as a pathetic story with which he had nothing to do. He is no prodigal. His living has never been riotous. He is at home, well-behaved, comfortable and beloved.

Does it not occur to him that he is the fortunate elder son, and that somewhere he has a brother who has sinned and is in want, and whom he may help to bring back to his Father's house?

There are thousands of such prodigals; boys who, a short time ago, were innocent children, but who are now embryo thieves, drunkards and murderers. They can be found in the slums of our cities, in jails, in Houses of Refuge and reformatories.

In such penal institutions they are too often thrown into the companionship of criminals more hardened than themselves, who only teach them vice.

Two or three years ago a man who believed that these unfortunate boys, if properly treated, could be brought back to health and cleanliness in mind and soul, gave a farm of six hundred acres, situated in New York, on the banks of Lake Queechy, with all the buildings, stock and tools necessary for a Reform School.

Boys under sixteen are received by the trustees of the school at their discretion, either from penal institutions, by committal of magistrates, or by surrender of parents' and guardians' rights. They are divided into families of twelve or fifteen, each of which occupies a separate cottage under the control of a manager.

For seven months of the year the boys are kept at work on the farm, in which time all the simple, healthful influences of country life are brought to bear upon them. During the other five months they are busy in school and in learning trades.

The peculiarity of this effort to reform vicious boys is that a direct, paternal influence is exerted upon each individual. The directors and the teachers of farming, carpentering, cobbling and painting are not paid instructors, but men who "for the love of Christ and of human souls" are willing to sacrifice their lives; to work hard and live poorly; in order that they may make useful citizens and Christian men out of these friendless children.

They are the "house-fathers," who not only give instruction, but study the character of each boy, care for him when sick, and encourage and reward each feeble step which he makes toward a good life.

This method of reforming boy criminals, though new in this country, has been tried with complete success in Europe.

More than fifty years ago a zealous German philanthropist, named Wichern, founded the "Rough House," a family school near Hamburg. Later, M. Auguste Demetz, a wealthy French judge, gave up his profession and his fortune to "try to save the children." He established the farm school at Mettray, near Tours, in which eight hundred boys are taught, and trained in small families.

But three per cent. of the boys at Mettray have returned to a vicious life after dismissal. M. Sauvestre says of them:

"These children are strictly guarded and trained; but great care is taken not to bruise the poor young hearts frozen by neglect, or withered by vice before they knew anything of life; they are led to goodness by fatherly tenderness and trust."

PRINCE WILLIAM.

A contributor to the *Sunday School Visitor* relates the following characteristic incident of Frederick William, Crown Prince at the time the incident occurred, and afterwards Emperor of Germany. It was during the war of 1870, when the German troops were marching on Paris, Filippe Lerouge, a young French girl living not far from the city, had a pet cow, Fauchette, which was almost the only support of her family. To save the animal from the Germans she was taken out to graze only at night, and kept hidden in the daytime.

It was Filippe's task, as soon as she had cleared away the supper things, to take Fauchette to the meadow where she grazed, and stand guard over her for the hours necessary to give her sufficient time for her meal. It was a lonely and dreary vigil, and many times Filippe felt her heart sink while undergoing it.

One night, when the new moon gave just enough light to make out objects clearly, Filippe was suddenly startled by the sound of horses' feet coming along the road. It needed no glance in that direction to know that a body of horsemen were approaching at a slow gallop.

With the swiftness of the wind she flew to Fauchette's side, and, with her hand on the gentle creature's shoulder, was about to push her away toward a clump of tall bushes. But through some carelessness the bell had not been removed, and either it gave out a tinkling sound or Filippe's swift running had drawn attention to herself. At any rate, before she could move the cow, a gruff voice called to her in her own tongue:

"Hold on there! We see you! Don't take that cow away!"

Overcome with terror, Filippe could only stand with her hand against the cow's shoulder, looking in the direction whence the gruff voice had come.

The soldiers had halted. Some had already dismounted, and were climbing the fence. Others tore a wide gap and entered through it on their horses. How their guns and sabres glittered in the moonlight!

"O Fauchette!" exclaimed Filippe with a burst of tears, as she threw her arms around her dear cow's neck, "I am afraid they are going to kill you!" Then with a sudden determination she cried, "But if they do, they shall kill me first!"

"Let go that cow, girl!" said the same harsh voice, now unpleasantly near to her. "We must have her."

"What do you want of her?" asked Filippe, raising her head and wondering at her own bravery.

"To eat!" was the gruff response.

At these words Filippe burst into tears. To eat! Her beautiful Fauchette? No, no, no!

"Are you going to get away or not?" the man asked again. "If you do not, I shall take you away by force. Come!"

She did not move, but stood with her arms firmly clasped about the neck of Fauchette. The officer turned to two of the men who had dismounted and were standing near.

"Seize her!" he said.

They started to obey orders. Filippe saw them coming, and her screams rung far and near. They were echoed by an angry exclamation from the direction of the road, and the next moment a horseman on a powerful horse came galloping through the gap into the field.

He was a man in the prime of life, with an air that bespoke the commander. When they saw him the men who had been about to seize Filippe moved away. Only the officer held his ground, looking confused.

"What does this mean?" sternly demanded the new-comer. But he didn't wait for an answer; he seemed to comprehend the situation at a glance.

"There, little girl, do not cry!" he said in the kindest tones. "They shall not take your cow. Go home with her. It is late for a little girl like you to be out."

Then while Filippe, smiling through her tears and courtesying, drew Fauchette away, the commander turned and she could hear him, after she had gone some distance, angrily reprimanding the soldiers.

Filippe did not know until long afterward that the noble-looking horseman who had come just in time to save her dear Fauchette was no less a personage than Frederick William, Crown Prince of Germany—the good "Unser Fritz," as he was called, who died nearly three years ago, so universally loved and regretted.

COLONIAL SUMPTUARY LEGISLATION.

The founders of Boston were thoroughly English in their social traditions. They believed in distinctions of rank. Only a few persons of unquestioned eminence, including ministers and their wives, received the title of Mr. or Mrs. The higher magistrates also took the title, but deputies to the General Court were not honored with it. They, along with the great body of citizens, were dubbed Goodman, and their wives Goodwife.

If a Mr. lost his reputation—in those days that followed immediately upon his loss of character—he was degraded to the rank of Goodman. Officers of the church and of the militia received the titles of their rank or office. Servants were not honored by any prefix to their names. They were plain John or James.

The distinctions of rank were also preserved by differences in the style and material of dress. But a democratic leaven and a desire for fine clothes were both at work. They soon told upon the manners of the settlers.

Within fifteen years of the settlement of the town, men in humble station began to dress as their betters. Doubtless they felt as Pat did, who gave it as his opinion that "every man was as good as any other man, and a great deal better."

The statute-book shows that the magistrates were sorely troubled, both to preserve the traditional distinctions in dress and to keep fashion within the bounds of decorum.

A man not worth two hundred pounds was forbidden to wear gold or silver lace, or buttons, or points at the knees. Women whose property did not reach two hundred pounds in value were ordered not to wear silk, or tiffany hoods, or scarfs, or any apparel with any lace on it, gold, silver, or thread.

The General Court was plain-spoken in giving its reasons for enacting this law. It records "its utter detestation and dislike that men . . . of mean condition should take upon them the garb of gentlemen."

The court's "detestation and dislike" also extends to "women of the same rank," who wear the garments "allowable to persons of greater estates or more liberal education." Such practices, "in persons of such condition," the court judges "intolerable."

One cannot help but ask, what would the General Court have done with the servants of these days, who not only imitate their mistresses' dresses, but sometimes wear them?

But though "intolerable," the court had to endure not only this levelling spirit, but the desire for display. They passed laws against "slashed clothes," which showed the linen underneath, and against "short sleeves, whereby the nakedness of the arm may be discovered."

But the democratic spirit, aided by the women's fondness for dress, was too strong for the legislators to master it.

They reluctantly acknowledged that the colony had outgrown its minority, and was not to be retained in leading strings, by abolishing these sumptuary laws. The fops and coquettes thenceforth were allowed to dress as their want of taste should dictate.

For the Companion.

SUNSET.

The lurid sun steals down the solemn sky,
And tints with living red the burning west,
Like some lone warrior creeping home to die,
The lifeblood ebbing slowly from his breast.

A mist floats up and hides the glorious flame
Transfused in clouds of darkness, solemn, dread;
As time shall hide in night the warrior's name,
And steal away the fame for which he bled.

But sleeping on the murky vapor's breast,
Behold the crescent of the moon appear!
As tho' the soldier's spirit from his rest
Smiled at the frail renown he toiled for here.

MARGARET THOMAS.

WHITE SQUAW VERY BRAVE.

The early annals of the West abound in anecdotes of fortitude under suffering and heroism in circumstances of peril among the wives and mothers of the early pioneers. Many were the instances in which, when their cabins were attacked by the savages, these brave women displayed wonderful courage and presence of mind. In December, 1791, a small party of Indians attacked the dwelling-house of Mr. John Merrill in Nelson County, Kentucky.

Mr. Merrill was alarmed by the barking of his dog, and opened the door to see what was the matter, when he received the fire of seven or eight Indians, by which his leg and arm were broken.

The Indians at once attempted to enter the house, but Mrs. Merrill and her daughter shut the door against them. Then they hewed away a piece of the door, and one of them wedged himself part way through the opening. The heroic mother dealt him a fatal blow with an axe, and hauled him through the passage into the house.

The other savages, unaware of the fate of their companion, and supposing that they had now nearly succeeded in their object, rushed forward. One by one they pushed themselves through the door, and were despatched and drawn inside by Mrs. Merrill, till five dead Indians were in the house. Then the others outside discovered what was going on.

They retired for a few minutes, but soon returned and renewed their efforts to force an entrance. Despairing of succeeding at the door, they attempted to descend the chimney. Mr. Merrill heard them, and anticipating their design, ordered his small son to cut open a feather bed, and throw the feathers on the fire.

Two of the Indians were already descending the wide-mouthed chimney. The smoke and heat from the burning feathers greeted them most unpleasantly. Choking, coughing and well-nigh suffocated, they came tumbling down into the room!

Mr. Merrill seized a billet of wood and despatched the half-smothered redskins, and Mrs. Merrill in the meantime was defending the door against the efforts of a single savage. Finally he, being wounded, retired, and the family were not disturbed again that night.

A prisoner who escaped from the Indians soon afterward stated that the wounded savage was the only one of his party of eight braves that escaped. When he returned and was asked, "What news?" he answered:

"Bad news for Indian; me lose son, me lose broder. White squaw very brave; she fight better than 'Long-Knives'"—the name given to the white men by the Indians because of their long swords.

CAUGHT.

A man was on trial for stealing a gold watch, says the *Continent*. A pawn ticket had been found upon him, and the watch was identified by a gentleman as one that had recently been stolen from him. The prisoner's lawyer set up the defence that the case was one of mistaken identity, that the watch was really the property of the accused man, but that he had fallen into difficulties and was obliged to pawn it.

Several witnesses testified that they had seen the prisoner have such a watch before the date of the robbery, and matters seemed to be progressing smoothly for the defence. At last the accused took the witness-stand on his own behalf.

He stoutly denied his guilt, and declared that he had owned the watch for at least five years.

On the cross-examination the prosecuting attorney drew the prisoner's mind away from the watch for a time, and then suddenly asked him how often he had been in the habit of winding it. He answered promptly: "Every night, just before going to bed."

"And that has been your custom for the last five years."

"Yes, sir!"

"Well, how would you wind it—from right to left?"

The fellow grinned at the idea. "No, sir, from left to right."

"Well, now," said the attorney, handing him the watch and a key, "please show the jury how you wound it up."

Unsuspectingly the witness took the watch and key, turned to the jury with a confident smile, opened the back case, and sought to fit the key into the hole—but the watch was a stem-winder.

A FASHION SPOILED.

A curious instance of a fashion nipped in the bud took place in New York during the early part of this century, as related by the *Clothier and Furnisher*. A party of young men—possibly the advance guard of the present army of Anglomaniacs—one day rigged up a coach-and-six, and drove around town in style.

This incited another clique of young men, who, not to be outdone at this sort of thing, immediately fitted out a coach-and-eight, and appeared upon the principal streets in great splendor. So amusing was this to the workmen of the town, that a party of sixteen carmen determined to burlesque the whole affair.

They dressed themselves in clean, white frocks, and appeared in the most fashionable parts of the town in a new coach, which was driven by no less than sixteen horses tandem. Each man had his hair powdered. Thirteen of them acted as postilions, and their extraordinary appearance sent a laugh from one end of the town to the other.

So ridiculous did the carmen make the new custom appear that no further attempt was made to introduce it on the part of the young swells, who, however, took the affair in such good part that one of them wrote an ode which, by a happy Latin pun, he entitled "Carmen Triumphe."

RATTLESNAKE MILK.

In Florida rattlesnakes have all seasons for their own. One day in February Doctor White, the black rabbit-hunter of St. Augustine, went over to the island after rabbits, and came back with a rattlesnake. With pleasant pride he displayed his trophy to the admiring crowd of tourists and negroes. Some one measured the ugly beast. From the tip of its unlovely nose to the button on its musical tail there was an interval of six feet nine and a half inches. As a finish there were fifteen rattles and a button.

A fine specimen, everybody declared; but Doctor White was doleful.

"I gwine lose money on dat ar snake!" he sadly declared. "All I git outen um now am de oil. I try um out 'nd git right smart roomatiz oil; but I gwine lose money. Ef I had de skin now! But I jist was impelled ter shoot um, 'nd spile de skin. Ef he ben cut in de open, I cud switch um ter deff, 'nd save de skin. But he 'guile hisself unner de bushes whar I hab ter shoot um. I gwine lose money on dat ar snake!"

"I'll give you fifty cents for the rattles," said a tourist. "That will help out."

"Mek it an even dollah, sah. Dem rattles am wuff an even dollah!"

"Brer White, doan' yo' do it! Doan' yo' cut off dem rattles!"

The protest came from a white-wooled old negro on the outer edge of the little crowd.

"Wharfo' won't I cut off dem rattles, ef I kin git an even dollah fur um?" Doctor White demanded.

"Doan' yo' cut off dem rattles, I tole yo'! Doan' yo' do it, not fur ten even dollahs. I'se a-talkin' ter yo'. Now yo' mind!"

"Wharfo'?"

"Dis yer wharfo'. Yo' cut off dem rattles 'nd yo' go blind! No even dollah gwine pay yo' fur dat!"

Doctor White did not believe this, and said so.

"It am de troof!" asserted the croaker. "De milk fum a daid snake's rattles gwine mek yo' blind ebery time. Yo' cut off dem rattles, 'nd de milk fly up in yo' eyes, 'nd yo' go blind. Shuah! No doctah kin holp yo'. Doan' do it! Doan' do it, Brer White!"

Brer White pondered a moment. Then, with a cheerful chuckle, he announced his decision:

"Ef any gen'lemum gib me an even dollah fur dem rattles, he kin have um! I gwine cut um off 'nd *go* blind! I'se seen ernuff, anyhow!"

HOW FISHES BREATHE.

The severe frost of last winter froze many rivers and lakes in England that are usually open all the year round, and a gentleman who found small fishes dead wrote to *Nature* to ask, "How is it with the fish in countries like Siberia? Do they desert those parts of the rivers which are frozen over, or are the currents more rapid, so as to transfer air beneath the ice from unfrozen parts, or, as in some glacier streams, are fish altogether absent?"

Any one who has caught fish through ice three feet thick on Maine ponds will understand that fish live very comfortably so long as any part of the pond remains liquid. The waters of Siberia are likely to be abundantly stocked with fish, which will be found in the best condition when their house is sealed with frost.

It is not necessary to suppose that air is carried under the ice from open places in the brooks. There is air enough in the water at all times to answer the purposes of the fish. The presence of the air is best discovered by allowing water slowly to become warm in a vessel of tin or iron. The air, which is held in the water very much as water is held in a sponge, is expanded by the heat, and may be seen gathering in small bubbles attached to the surface of the vessel. This must be a matter of common observation.

It is this air that supplies the fishes with breath. It may be thought by some persons that fishes breathe water, for the writer has heard this statement made; but such a view is not correct. The fish has no power to decompose water and get the needed oxygen from that source.

As he is constituted he needs very little air. He is furnished with but little blood, and this is sufficiently oxidized by coming in contact with air in the water forced through his gills, which are his breathing apparatus.

The effect of the air is seen when the fish is taken from the water. The gills suddenly redden. This is due to the rapid oxidation of the blood. The fish is killed by the excess of air. In the water he gets only the proportion that he needs. Altogether the fish must be very comfortable under the ice during our hard winter.

THE CHINAMAN'S PURCHASE.

The Chinese are not supposed to have much talent or liking for humor, but a little story related by the author of "Three Years in Western China" shows that they are not altogether deficient in that respect. It may be taken also as an illustration of the truth that a man may be given to some form of wickedness and folly, and yet be capable of wise conduct in other directions.

Several of my followers were opium-smokers, and one of my bearers had contracted a great craving for the drug. He was somewhat disreputable in appearance, but a willing worker. His baggage consisted of the clothes on his back, and a small bundle containing his opium pipe and the necessary paraphernalia for smoking.

On leaving a certain village I noticed that the bundle had assumed larger dimensions, but my speculations as to its contents proved to be wide of the mark.

A few miles to the west of Yang-lin a halt was called for rest, and the cakes on the roadside stall were quickly bought and devoured. The opium-smoker, meanwhile, sat apart on the edge of the stone road.

"How is it that you are all eating and drinking," said he to one of his comrades, "and I haven't a single cash to follow your example?"

The other man put his thumb to his mouth, and pretending to inhale, pronounced the single word, "Opium," at which the smoker smiled and was silent.

On the following day we were suddenly overtaken by a sharp rain-storm, and when the other bearers were searching for shelter, the smoker solemnly produced his bundle, gravely undid the cover, and proceeded to unfold and put on a first-class water-proof coat which he had wisely purchased in the village to which we have referred. The astonishment on the other men's faces, and the look of triumph in which the smoker indulged, were a study.

For the Companion.

LOST: A LITTLE GIRL.

With laughter and song
She was tripping along,
With bonny blue eyes and with hair all acurl.
With merriest play
The long summer day—
O where has she wandered,
our precious wee girl?

A maiden has come
Straight into our home,
And taken the place of the
little one gone.
As sweet and as fair,
With braids in her hair,
And sweeter and fairer with
time growing on.

She is filling her place
With daintiest grace,
But, thinking of days which
are faded forever,
The mother heart sighs
With tears in her eyes,
That the dear little girl will
come back to us—never.

S. D.

For the Companion.

BACK-YARD MANNERS.

The twins were in a bad humor that morning. Fred snatched a piece of buttered toast from Ted's plate, and the latter hit his head with the syrup-spoon. The butter-knife fell on the floor and made a big grease-spot, both mugs of milk were upset, and there was general confusion.

"Tut! tut!" quoth grandma, as she wiped the syrup from Fred's matted locks. "The idea of young men six years old having back-yard manners!"

"Wha-what do you mean?" asked Ted, stopping his howling, while Fred, too, paused to listen.

"Back-yard manners, don't you know what they are?" said grandma. "Well, then, you just carry out this pan of food for the hens, and if you'll stand there awhile and watch, I think you'll know what I mean."

Considerably mystified, the twins carried out the big pan, full of scrapings from the table, together with a generous sprinkling of corn.

Now grandma's hens were very tame, and as soon as they saw the pan, they ran to it as fast as they could. First came the rooster, "Robinson." If you were to ask grandma why she gave him such a name, she would say, with a twinkle in her eye, "Why, because he *crew so!*"

Well, there was "Snowball," the white Leghorn; "Nugget," a cute little yellow hen; "Donna Inez," a shining Black Spanish; "Crosspatch," a big brown hen, who was always scolding and pecking; "Jenny Lind," who had a happy, contented way of singing as she wandered around the yard. Then there were "Rose" and "Priscilla Standish," the two plump Plymouth Rocks, and—but dear me! I can't begin to tell all the names! Ted and Fred put the pan on the ground, and there was a great fluttering and scrambling.

Nugget seized a long stem of macaroni; Donna Inez caught hold of the other end, and both pulled till the piece was divided. Rose Standish pecked away industriously at a big crust of graham bread. Snowball showed a fondness for stray bits of meat, while Jenny Lind made a raid on cold potatoes. Priscilla worked at a lump of bread-pudding, and seemed quite as delighted as Jack Horner when she found a raisin in it, and when she held it up on her beak all the other hens jumped for it so that she only saved it by eating it with one big gulp.

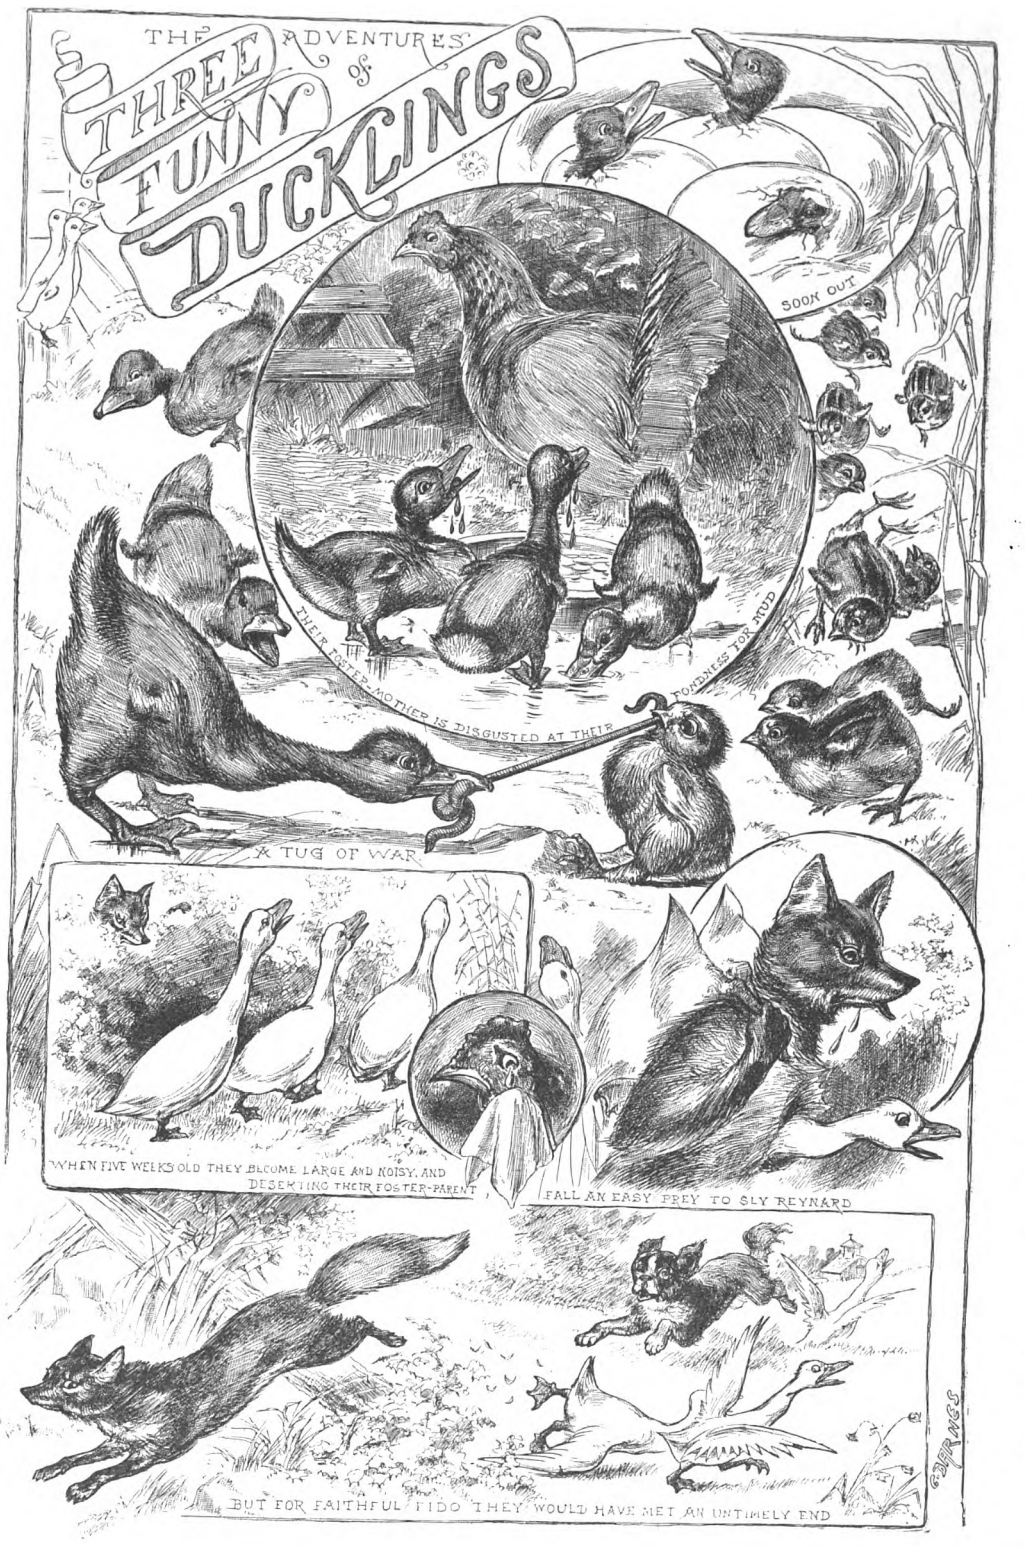
As for Robinson, he stood quietly helping himself to the corn, swallowing kernel after kernel down his long throat like a miser putting gold-pieces in his bag.

They all crowded, jostled, pecked at and scolded each other with many a prolonged "*Ker-r-r-r!*" until both Ted and Fred were quite disgusted.

Pretty soon, the hens had finished it all. Every scrap of food was pecked from the tin, every kernel of corn scratched out of the dirt, and beaks were briskly cleaned off by scraping them on the edge of the walk.

Nugget and Donna Inez strolled down to the brook for a drink; Snowball took a dust bath; Robinson jumped up on the fence, flapped his wings and gave an exultant crow; the rest of the fowls stood with necks awry, sleepily rolling their eyes—that is, all except Priscilla and Rose Standish, who were pulling and tugging and quarrelling over a bit of gristle.

"Hens *are* greedy things!" said Ted.



"*Awfully* selfish!" added Fred, sorrowfully.

"Well, you see how it is," observed grandma, coming to the door to hang out her dishtowel. "Back-yard manners *aren't* very nice, are they?"

The twins looked at each other, and grinned sheepishly as they thought of their fuss at the breakfast table, then they answered grandma's question by a low, but very decided, "*No'm!*"

Mary E. Brush.

A LITTLE tot came to her mamma with her fluffy yellow hair all unbraided, saying: "Mamma, my hair's all unlaced." Big brother Ray laughed at her, but, boy-like, did not correct her, so she said, "Then it's all unravelled."

For the Companion.

SORE EYES.

The baby had sore eyes, and nothing seemed to help them. Goldie was afraid he would be blind.

"The dust from an honest miller's hat will cure sore eyes," Goldie heard a man in the street say one day.

Her heart gave a great bound. She was so very anxious to have the baby's eyes well, that she would go to the grist-mill this very minute, and get some dust from Mr. Chase's hat.

People didn't call Mr. Chase an honest miller, but Goldie didn't know that. They said he would call to his big boy that helped in the mill:

"John, have you tolled this grain?"

Then, without waiting for John to answer, he would go on:

"Of course you haven't, you lazy boy! You never do anything."

Then he would toll the grain over again, we are sorry to say.

When Goldie went into the noisy mill and saw Mr. Chase, she said, timidly:

"Please, will you give me a little dust off your hat?"

"Eh! what for?"

"To cure the baby's eyes. I heard a man say it would cure sore eyes, and his are dreadful bad."

Mr. Chase looked queer. He must have heard the old proverb, and he knew he wasn't an honest man.

"I'm sorry," he said, "but I shook my hat a little while ago, and there's no dust on it now. I'm afraid it wouldn't help him any if there was. But you're a good little girl."

Baby's eyes got better, after all.

And, somehow, people called Mr. Chase more honest after that.

Enigmas, Charades, Puzzles, etc.

1.

CURIOUS COMPARISON.

Positive.

I'm the manner of performing—
By some I'm called the mode;
Again, I'm a direction,
Another time a road.

Comparative.

I balance and consider,
Sometimes add and oft subtract,
But my work amounts to nothing
If I am not exact.

Superlative.

I'm anything that's worthless,
A foolish, vain excess,
Yet I form a quite important part
Of every lady's dress.

Cleveland.

2.

NOVEL ACROSTIC.

Define each of the italicized groups of words by one word. When rightly guessed and placed one below the other, the primals will spell the name of a strange land we often visit.

All the *dukes, marquises, earls, viscounts and barons* of England carry silk umbrellas when it rains.

'Tis a sad fate when a child is *bereft of parents.*

The lady wore a necklace of *precious stones* that sparkled like dewdrops in the sun.

3.

ENIGMA.

I live in the country of 1, 2, 3, 4, 5, 6, though I am not a 1, 2, 3, 4, 5 by birth. I love a beautiful girl, and 2, 3 shall soon 2, 3, 4. Now my home is more like a 4, 5, 6 than a decent habitation; but I have laid by some money, thinking I should 6, 5, 3, 4 it when I married, and when Barbara is my wife we will try to make our home a little 3, 4, 5, 6.

4.

HIDDEN NAMES.

In the following sentence there are eight names, six males and two females, which you are required to discover. Cordelia, Miranda and Cleopatra are names found in Shakespeare's plays. We think Leonidas is also one of Shakespeare's characters; but we cannot say, certainly.

5.

ANAGRAM.

Milmon's pies.

Tho' I'm not as wise as Solomon,
I'm thoughtful, if you please,
For instance—I have noticed
Fish do not grow on trees.

When cravings of my appetite
With dainties I would stay,
Like many folk I cannot eat
Because I cannot pay.

6.

DROP-LETTER PROVERBS.

E-a-p-e -s -e-t-r -h-n -r-c-p-.
F-n- f-a-h-r- m-k- f-n- b-r-s.
A -o-t-n-e- m-n- i- a -o-t-n-a- f-a-t.
H-n-e- i- t-e -e-t -a-c-.
I- n-v-r -a-n- b-t -t -o-r-.

7.

CHARADE.

My *first* ought to interest somebody besides the maker, or it has no excuse for being. My *second* is a despised creature. My *whole* is a curious person, who is apt to be entertaining if you can make him talk; but he is inclined to be unsociable.

Conundrums.

When are little children heaviest? When they are Christmas waits (weights).

When is a cook unkind? When she beats eggs and whips cream.

What letter will turn a white rose-bush into a pink one? I, for it will make it blush.

When does a chicken talk by proxy? When you speak for one.

What is the difference between a doll and our dog Rover? One is a puppet and the other a pet pup.

Why is a violent man under arrest like the Monday's wash? He must be ironed.

Answers to Puzzles in Last Number.

1. Arbor Day.

2. Plant trees on Arbor Day. Parrot, beans, lady, tenor.

3. Hickory-tree, orange-tree, sugar maple, magnolia, pomegranate, European larch, Norway spruce.

HOPTON'S COMPROMISE.

There is a familiar story, said to have its basis in truth, which tells of an impecunious debtor, upon whom persistent dunning had not the slightest effect. As a last resort the creditor sought a personal interview, and in consideration of prompt payment offered to throw off half the debt. "Very well," assented the debtor, "and not to be outdone in generosity, I'll throw off the other half!" This absurdity is equalled, if not surpassed, by a tale from Georgia.

Near a town in the southern part of the State lived Mr. Branscombe, a wealthy fruit-grower, who was embroiled in a perpetual feud with a poor trucker named Hopton. The feud was based on Hopton's hog, which committed havoc in Branscombe's garden, and Branscombe finally shot the animal.

War was at once declared by Hopton, not against Branscombe personally, but against all his belongings. He tore down fences, wrung the necks of chickens, smeared Branscombe's front steps with paint, and continued this petty persecution until the fruit-grower was exasperated beyond endurance.

He set a watch on Hopton, and finally caught him in the act of pouring turpentine into the pump. The next day Branscombe swore out a warrant for Hopton's arrest for malicious mischief, and it was served that afternoon.

Hopton resisted violently, but finally calmed down, and while on his way to the office of the justice of the peace expressed a wish to see Mr. Branscombe and "settle the whole affair." The constable was an obliging fellow, and acceded to this request.

"Kunnel," said Hopton, when brought before Branscombe, "let's compromise this matter."

"Very well," assented Branscombe, readily. "During the past six months you have committed damages to the extent of two hundred dollars. What is your proposition?"

"It's this, Kunnel," drawled Hopton. "You drop this prosecuting me, and I'll let ye off."

IMPOSING, NOT JOLLY.

After the marriage of Napoleon and Maria Louisa the city of Paris gave them a splendid banquet, which Captain Coignet describes in his "Narrative." He was on duty at the Hotel de Ville, where the banquet was served, with a squad of twenty grenadiers.

The table was horseshoe-shaped, and around it were placed arm-chairs. The dishes were of solid gold. When the master of ceremonies announced "The Emperor," Bonaparte entered, followed by his wife and five kings. Having seated himself at the table, the Emperor made a sign to the guests to take their places.

As soon as all were seated the table was cleared, as is usual at great dinners, and every dish was carried into an adjoining room where the carvers did their work. Behind each king there were three footmen about a step from one another. Other footmen communicated with carvers, and passed the plates without turning more than half-way round to get them.

When a plate came within reach of a king, the head footman presented it to him, and if he shook his head the plate was withdrawn and another brought immediately. If the head did not move the footman placed the plate in front of his master. Not a word was spoken.

Each napkin, as soon as once used, disappeared, the footman slipping in another. When the banquet was over, a pile of napkins lay behind each chair.

No one was permitted to speak except when the Emperor addressed him.

"That may be imposing, but it is not at all jolly," is the Captain's comment.

AHEAD OF TIME.

Thousands of every-day things would be mysteries to us, only that we happen to be in the secret of them. Now and then something happens, either to us or to our neighbors, to make us aware of this fact.

A lady went to a photographer in Birmingham, Ct., according to the New Haven *Palladium*, and sat for her picture. The next day she appeared again for the proof, which was given her in the photographer's business envelope, in the corner of which was printed, "Return after five days to ——, Birmingham, Ct."

She kept the proof much longer than customers usually do, and the photographer remarked the fact, because she had told him that she was in special haste.

On the fourth day she came to the studio, and apologized for being one day ahead of time. She had business in town that day, she explained, and so ventured to anticipate his appointment.

It took the photographer twenty-four hours to see that she had taken the five-day return notice as fixing the date when the pictures would be done—which shows that he was as dull as his customer.

JANE.

A mayor's wife is no doubt entitled to due deference, and in her own opinion, perhaps, is not so very far removed from the privileges belonging to the great ones of the earth.

At a recent exhibition in an English town, the Queen was present, with the Princess Henry of Battenberg. The local mayor, a highly respected tradesman, accompanied by his wife, was of the royal party.

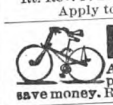
As usual, the Queen placed her name in the visitors' book as "Victoria," the Princess following with "Beatrice." Then came the mayor's wife, who, seeing what had gone before, wrote with a bold, steady hand, "Jane."

GETTING PARTICULAR.

All in all, it is generally well to say an unpleasant thing outright rather than to hint it.

"Here, Bill, take this chair," said the grocer.

"An' let you stand?" answered the customer. "I don't want you to stand on my account, not a minute."



"Gittin' dreffle particular all at once, aint ye?" said the grocer. "I've knowed things ter stand on your account over a year."

The outcome of the matter was the transfer of Bill's account to the other store.—*Exchange.*

WHAT HE REQUIRED.

There are some public speakers whose appearance is so impressive, so indicative of intellectual power, that their audiences, almost of necessity, expect too much from them. And the same is true of certain men in other departments. It is impossible for them not to excite great expectations. They have an air about them—not to say airs—which forbids the beholder to imagine that they could ever say or do anything petty or commonplace. Here, for example, is a story from the *Upholsterer:*

"By the great guns, sir," said a stout man in an ulster and white necktie, looking down from the balcony skirting the upholstery department of a well-known dry goods store; "this is an immense place—huge, simply stupendous."

"Oh, yes; nice store," said the clerk, obligingly.

"The Bon-Marché isn't a comparison. No, sir; not a comparison, sir. How much of a stock do you carry?"

"About two hundred thousand dollars' worth."

"Good! First-rate! And furniture—how about furniture?"

"Over one hundred thousand dollars."

"Admirable! Take a house and go right through it, I s'pose,—furnish it complete, could you,—from top to bottom, eh?"

"Yes; everything from carpets to bric-à-brac."

"And lace curtains and tapestries, you keep them?"

"Keep everything."

"And you know what style is, too—renaissance, Pompadour, Henry II. and the Louis?"

"No one better posted than our manager. P'r'aps you'd better see him. Mr. X——, here one moment," and the manager came up with a smile on him like a half-moon.

"No idea of it," mused the ulster. "No idea. Had an impression you had to go to Europe for such things. Good taste—everything correct, surprising, really."

"If you could give me an idea," ventured the manager, "of about what you required, you know——"

"Ah, yes, I forgot. I want two and a half yards of green shade fringe. Magnificent establishment!"

CRISPI'S TACT.

A dramatic incident related by Félix Narjoux, the biographer of Francesco Crispi, lately prime minister of Italy, illustrates how slight a thing may alter the current of emotion, and change the plan of action of men who have in their hands the making of political history. A moment of right feeling may serve where argument has failed to set forth a questionable policy in its true light. The King of Italy, and Crispi, who was then at the head of the Cabinet, had been passing a few days in Berlin, as guests of the German Emperor.

The King was inclined to return to Italy by way of Strasburg, accompanied by the Emperor. Crispi protested that to go to Strasburg, under the circumstances, would be considered an affront by France, and that if the purpose were persisted in he should feel it to be his duty to resign.

Soon after the Emperor, the King, Bismarck and Crispi were driven in a carriage to the tomb of William I., on which they placed a wreath.

As they were driving through Unter den Linden, Crispi saw at his left an immense flag which hung from a balcony. The wind blew it in great folds, and he watched it for a moment with deep emotion. Then with characteristic daring, and true to his motto, "the Friend of the King, not his Valet," he jumped to his feet, and took off his hat.

The flag which he had saluted was that of France, floating from the balcony of the embassy. King Humbert had watched the movement and the eloquent gesture of his minister. Probably in that moment he recalled Magenta and Solferino, and remembered fighting at his father's side, under the shadow of that flag, for the independence and unity of Italy. He, too, saluted the flag of France.

The Emperor had not observed what was passing, Bismarck appeared to have seen nothing. And, concludes M. Narjoux, there was no further mention of a journey to Strasburg.

COMPANIONS.

When a good and respectable man has been frivolous, it is no doubt a comfort to him to find that some worthy friend has been frivolous also. An English clergyman writes:

I was at Innsbruck with a friend, and as we sauntered about one afternoon, not quite knowing what to do with ourselves, we came upon a *carrousel*, or merry-go-round. We walked on, and then I said:

"Let us go back and see the Xaverianum," a public collection of paintings.

"No," said my companion. "I don't feel inclined for the Xaverianum. I'll go down by the river."

So we parted. Now I had not gone far along my way to the Xaverianum before I said to myself:

"I don't want to see pictures either, but as my friend is away—upon my word—I am unknown here! I'll—yes, I *will*—I'll go and have a round on the whirligig!"

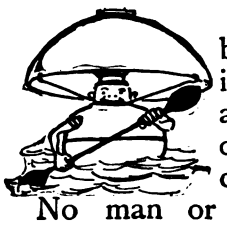
So I retraced my steps, and on reaching the merry-go-round, what should I behold but my friend seated on a piebald horse, with a short sword in his hand, aiming at the targets he passed in his revolution. He was a bald-headed man, with a long gray beard, and his face and head became like a beet-root when he saw me. It was not long, however, before I offered him the consolation of companionship.

WHOA.

A little Indian boy who attends school at Oldtown, Me., takes an intelligent interest in his lessons, and does not simply learn them by rote.

The teacher had been giving instruction in punctuation, and closed by saying, emphatically:

"Now when you come to a period, you must stop!"



A little black-eyed girl then got up to read, and went on in a reckless manner, paying no attention to the periods, whereupon the bright little Indian boy poked her in the side, and called out, lustily:

"Whoa!"

SOME one said that there was no difference between occupation and business. "Why," replied Lord Palmerston, "the French are in occupation of Ancona, but they have no business there."

The Throat.—"*Brown's Bronchial Troches*" relieve all Throat troubles, and are not injurious. Sold everywhere, and only in boxes. Price, 25 cents. [*Adv.*

Premature Loss of the Hair, which is so common nowadays, may be entirely prevented by the use of *Burnett's Cocoaine.* It has been used in thousands of cases where the hair was coming out in handfuls, and has never failed to arrest its decay, and to promote a healthy and vigorous growth. It is at the same time unrivalled as a dressing for the hair. [*Adv.*

The "Pittsburgh" lamp is abundantly able to "paddle its own canoe."

No man or woman that sees it will buy any other kind of central-draft lamp at any price.

A primer tells all about it.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

The Second Summer is the most critical period of a child's life, because the

Pains of Teething

increase the susceptibility to disease and lessen the resistive power. A catarrhal attack, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to combat injurious influences.

"Tooth-Food"

will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger. This remedy is made of the nutrient elements necessary to bone growth, and is absolutely harmless. A bottle, with full description of the remedy and directions for its use, will be sent free to any address on receipt of one dollar.

DONALD KENNEDY

Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Price, $1.50. Sold by every druggist in United States and Canada.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,

For the Companion.

BICYCLING.

The bicycle has come to stay. It is not a craze, one of the many that sweep through the land like the latest fashion. It has established itself among the permanent utilities. Of course, it is not equally adapted to every country, nor to every portion of any country; but wherever the roads are good and not too steep, it will more and more come into practical use.

Already bicycles and tricycles are extensively used in England as economical substitutes for horses, needing no barn, no feed, no grooming, and no medical care.

With such a machine, the pastor easily makes his calls in the most distant parts of his parish. The country doctor finds it still better suited to his needs, ready at the most sudden and urgent call, and able to wait at the patient's door with no risk from cold, however long the visit.

With its aid, too, the traveller explores the country on roads far removed from railways, and in its most picturesque parts. The bicycle must have a great future in the level West. The relation of good roads to its use is seen at Washington, where many thousand bicycles noiselessly roll over the smoothly cemented streets.

But the utility of the bicycle is not confined to the more practical ends of locomotion. It furnishes a new means of valuable exercise. This exercise is exhilarating. It is in the open air, and the rider is not forced to it for his health, but drawn to it by anticipations of pleasure.

The various modifications of the bicycle adapt it to both sexes, and in many cases invalids might be pleasantly helped by it to health again. Pure air and a cheery state are often more effective than exercise or the most potent drugs.

As a rule, bicycling is less desirable than horseback-riding; but many persons need the more quiet exercise, and many others can afford neither to keep nor to hire a horse. As for carriage-riding, it is much too passive an exercise for the needs of most, while the constrained posture is a great drawback in any case.

As compared with bicycling, walking is better for some persons, and not so good for others. Walking is far less violent exercise, but the movement in either case brings into active use the muscles of the arms, chest and back.

Most people who can have the use of a bicycle find walking too slow and irksome, and the mental state is an important factor in all physical exercise.

For the Companion.

SATURN.

An observer on starlit nights during the first week in May, looking toward the meridian about eight o'clock, will see a bright star, which is the planet Saturn. He may be easily recognized by the absence of large stars from his immediate vicinity, by his serene and steady light, and by his forming an irregular triangle with Regulus, a first magnitude star in the handle of the Sickle on the northwest, and Denebola, a second magnitude star on the northeast.

He is the only one of the larger planets visible in the evening, for Venus and Jupiter now shine in the morning sky, and Mars has dwindled into invisibility.

Such is the appearance of Saturn to the unaided eye, but if the observer has access to a powerful telescope, he beholds the most magnificent object which the heavens present. The planet is transformed into a glowing sphere, nearly as large as the moon, crossed by bands of delicate tint, cradled in encircling rings, while moons, like tiny points of light, appear in the field of view, and increase the loveliness of the picture.

The present aspect of the rings forms a study of exceeding interest. These curious appendages take on constantly varying appearances during the revolution of Saturn around the sun—a period of nearly thirty years. Sometimes they are open to their widest extent, then gradually close until they disappear, seven or eight years later, the edge of the ring being turned nearly to the earth. Again, they open wide, exhibiting a different face, close for the second time, and finally, the circuit completed, open as when first seen.

The last epoch of greatest opening occurred in 1885. The rings have been closing around the planet since that time, and will disappear on September Twenty-second.

When Galileo with his imperfect telescope first examined the planet, he imagined that he saw a large globe between two smaller ones. A year or two later, observing again, he found but one planet instead of three. "I have seen it triple, and now I see it single!" was his perplexed exclamation. Nearly forty years passed before Huyghens, in 1655, proved that Saturn was surrounded by a ring.

Telescopes rapidly improved after this time, and practised observers were more numerous. The division between the two rings was discovered, and a third or crape ring became one of the great marvels of the day. Satellite after satellite has been found, until the list now numbers eight. The result is the complex Saturnian system with its three rings and eight moons, unparalleled in the sun's family, and invisible elsewhere.

HUNTER AND BUCK.

An exchange prints an adventure narrated by an old trapper living among the Pennsylvania mountains. It took place, almost fifty years ago, on Pine Hill, when the ground was covered with deep snow. The snow was new. There was no crust or anything that made a noise under his feet, and he was still-hunting for deer when he discovered a big buck not twenty yards away.

I fired the instant I saw him throw up his head, and down he went as suddenly as though the bullet had gone through his brain.

I stood my gun against a tree, snatched my knife out of my belt, and hurried toward him. As I reached down to pull up his head, he struck out with one of his forefeet and knocked the knife out of my hand.

He was on all fours in an instant, and the only thing I could do was to grab his antlers. I never saw a madder animal. He snorted, bucked, struck with his feet, and tried his best to kill me. At that time I was a strong man, but for fifteen or twenty minutes I thought my time had come.

My only hope was in clinging to his horns. Several times he doubled himself up and made great efforts to tear me with his hind hoofs, but I managed to keep out of their way.

By and by the buck began to weaken, and I myself was about exhausted. Finally I let go one horn, got out my pocket-knife, and finished him with it. On examining his head afterward, I discovered that my bullet had struck the root of his left antler, and temporarily stunned him.

CRUEL.

There is a general opinion that the American Indians have not been honestly dealt with in times past by the agents of the United States Government, and now the Detroit *Free Press* narrates the experience of a youthful brave of that city which goes to show that unfair treatment is not confined to government officials.

A boy eight or nine years old stood on a street corner the other day, with head up and arms folded. He had three hen's feathers stuck in his cap. He had a bow slung to his back, and in a quiver made of buffalo hide he had three or four arrows.

In his belt was the family bread-knife, and in his right hand was a war-club. As he thus stood, casting his eagle eye about him, a telegraph-boy came along, and stopped and looked him over. The inspection lasted a full minute, and then he asked:

"Playing Injun?"
"Yes."
"Got a name?"
"Red Cloud."
"Humph! No go."
"What's the matter?"
"You've been eating bread and butter with syrup on it, and forgot to wipe off your mouth. Better stay in the back yard and scare the baby. You're no big Injun."

BETTER AT HOME.

New England people, like all serious, tenacious bodies, are apt to be rather "set" in their ways. "What should we do if the sun rose in the west?" said one good old dame of Puritan stock, who was much given to like reflections. "I expect 'twould make us awful homesick, it's such a nat'ral place to look for it in the east."

Another good woman was listening one day with intense interest to her daughter's account of a long stay in Italy. The different customs of life were touched upon, and when the narrator paused, Aunt Hetty drew a long breath and said, "Well, I'm thankful I've been called to end my days in New Hampshire!"

"So you don't think you'd like Italy, mother?"

"No, not a mite."

"Not the pictures and churches and wonderful climate —"

"I might put up with them," interrupted her mother, "but I guess I should get pretty well beat out sometimes, wishin' for a good riz doughnut!"

THRICE DEAR.

Family affection is a beautiful thing, but as a writer in the Boston *Globe* observes, the public expression of it may be overdone.

A man and his pretty wife were parting upon a street corner, and he was overheard giving her this final caution:

"Don't forget, dear, to take a car at Park Square, dear, and remember that the number is three hundred, dear, and thirty-seven."

EXCUSABLE IGNORANCE.

When will employers learn not to expect unreasonable things of their servants?

A New York gentleman was put out of patience by some blunder of his new groom.

"Look here!" he cried in his anger. "I won't have things done in this way. Do you think I'm a fool?"

"Shure, sorr," said the groom, "Oi can't say, sorr. I only came here yesterday."

"Brown's Camphorated Saponaceous Dentifrice" is effective for cleansing teeth. It has no equal and is used and recommended by many dentists. [*Adv.*

"La Grippe" and Pneumonia.
Prevention Better than Cure.

Reports from medical sources show that "La Grippe" is again prevalent, and in connection with its return it is important to note that a decided increase of mortality from pneumonia is recorded.

This should be a warning to all classes to take precautions against exposure, and whatever tends to debilitate the system.

The trying changes of the weather, at this season, and the consequent cases of colds, influenzas, inflammation of the lungs, rheumatism, pains in the back, and the many other aches and pains caused by unavoidable or careless exposure, are things that cannot be neglected, except at the risk of more serious consequences.

As attested by indisputable testimony, they may be both prevented and relieved by the timely use of

ALLCOCK'S POROUS PLASTERS

Beware of imitations, and do not be deceived by misrepresentation. Ask for ALLCOCK'S, and let no solicitation or explanation induce you to accept a substitute.

THROUGH THICK AND THIN.

In Eight Chapters.—Chapter I.

Jack and Tony.

The broad, white road which separated the Marrowbone plantation, where Jack Randolph lived, and the little weather-beaten cottage at Lone Point, where Jack's friend, Tony Scaife, lived, separated two families as widely unlike as could be imagined.

Marrowbone was what is called in lower Virginia a "river plantation," and its fertile acres lay upon one of the broad, salt rivers that make in from Chesapeake Bay, while Lone Point was a mere strip of sand, having upon it three lonely pine-trees, and the little frame cottage where the Widow Scaife and Tony lived their quiet lives.

At Marrowbone was a great country-house, once splendid, but now painfully shabby.

There were large stables and kennels going to decay, and a perfect village of whitewashed "quarters," where, "befo' de wah," as the negroes said, the two hundred Marrowbone slaves had been housed.

The grounds had broad, gravelled walks, now overgrown with weeds, and what was once a fine garden had become a tangled wilderness of climbing roses, mock oranges and lilacs, growing in wild and beautiful profusion.

Inside the house was the same air of departed luxury, and the family belonged as much to the dead-and-gone time before the war as did the place.

First, there was Jack's grandfather, old Colonel Marmaduke Randolph, a tall, handsome old man, stiff and dignified, who idolized Jack, but expected the same dignity and elegance of a healthy, fun-loving, sixteen-year-old boy as if he had been of the Colonel's own age.

Colonel Randolph had been in the army, and was disposed to keep everything under martial law. So was Uncle Josh, who had been Colonel Randolph's body servant for more than forty years—a venerable black man, who was continually preaching to Jack.

"Boys wa'n't troublesome an' tormentin' befo' de wah, like dey is now," he would say. "Yo' pa, he shoes allers shine like de sun, an' he was jes' as nice as any young lady in he ways."

Jack thought the boys before the war must have been rather a queer lot, judging from Uncle Josh's highly colored account; but when he asked his mother about it, Mrs. Randolph laughed, and said that she supposed boys were always much alike.

Uncle Josh had been with Colonel Randolph in all of his campaigns, and was consequently a military critic of the highest acquirements, according to his own opinion. He had been with "ole marse" through the Mexican War, and taking that as a groundwork, he professed to have had an active share in the Revolution, as well as the War of 1812.

"Was I in de Resolution? Co'se I was in de Resolution! 'Twan' so long ago," he would say, stoutly, to Jack, when that young gentleman would start Uncle Josh on his reminiscences.

"Wa'n't ole marse an' Gin'ral Washington de bes' o' frien's? An' at de battle o' Yawktown I was wid Gin'ral Washington all de time."

"But grandfather wasn't born until after Yorktown, Uncle Josh."

"Chile, I'se ol'er den yo' gran'pa, an' I tell you *I* was dar. An' I fit de Britishers agin in 1812,—dat was arter de Resolution,—an' Gineral Scott an' me an' yo' gran'pa fit in de Mexican War."

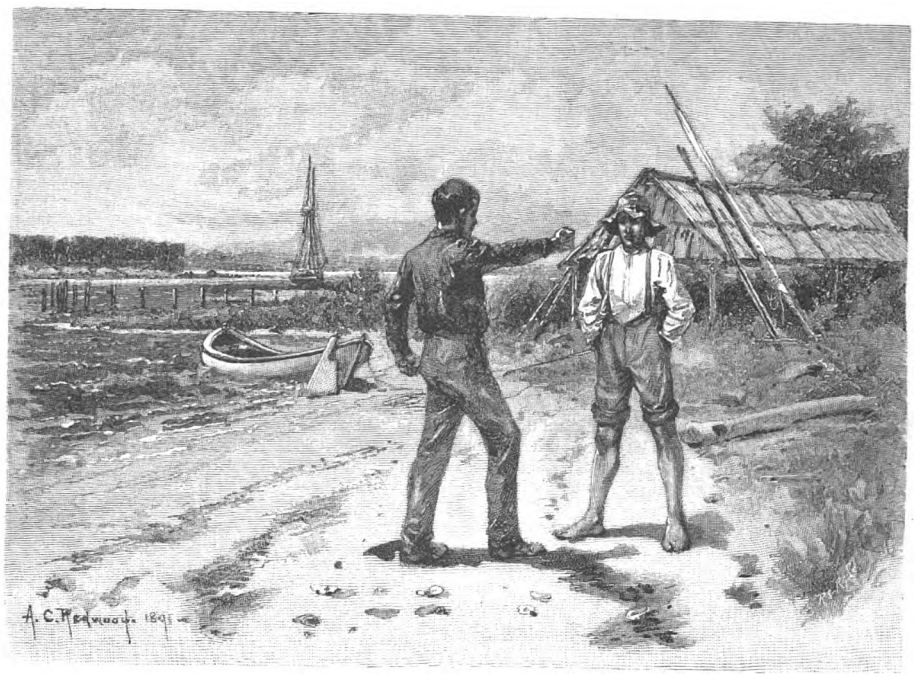
Then there was Mam' Betsy, Uncle Josh's wife, who had nursed Jack, and his father before him, and was consequently Jack's "mammy," who spoiled him, stuffed him with cakes and home-made candies, and always took his part, whether he was right or wrong.

Fortunately for Jack, he had a mother who could balance all of the old Colonel's injudicious severity and equally injudicious indulgence, Mam' Betsy's pampering, and Uncle Josh's wonderful tales of the splendor and importance of the Randolph family "befo' de wah."

Mrs. Randolph was a tall, slight, handsome woman, who always wore widow's black for Jack's father, and who was the sweetest of mothers. Jack not only loved her with all his boyish soul, but he admired her, for she knew all about poetry and history, and could play on the piano and sing beautiful sea-songs and hunting-songs. She could help Jack out with his Latin and French, and in fact knew more altogether than the schoolmaster.

Mere boyish restlessness and perversity on Jack's part never disturbed her; but the old Colonel, at Jack's noisy times, would roar:

"By George, sir, I think you are better fitted to be a professional acrobat, or a clown in a circus, than a Virginia gentleman—a Randolph of Marrowbone!"



Jack did not greatly mind this; but upon the few occasions in his life when he had done shabby or mean things, he had a terrifying recollection of his mother's displeasure. Her punishments commanded Jack's respect, because he knew how dear to her he was, and also how dear to her were uprightness and integrity.

The old Colonel, who blustered about and found fault with Jack a dozen times a day, always protested vehemently against any punishment that was visited upon him.

Jack went to a school which was maintained in a fitful and uncertain manner by a schoolmaster who had to eke out his living by surveying, and who kept the school or not, according to his other engagements. But the boys who attended it were by no means uncultivated, and the very poverty of the school led to habits of reading and education at home among them.

Jack, who was a very fair type of the education of his class, was weak in mathematics; but at sixteen he was well read in the English classics, and his taste for reading was for the most wholesome in literature. He liked exciting stories, as most boys do, but he found plenty of the fiction of adventure among the authors in the old-fashioned library at Marrowbone.

His mother only smiled when she saw Jack stretched upon the lawn reading a book, with one of his numerous dogs sprawling over him; but the old Colonel would shout at Jack: "Upon my soul, sir, I think you need to be parboiled and sand-papered and hung out to dry before you will be fit to appear in the society of Virginia gentlemen, after the way you are hugging that dog!"

A Bad Beginning.

Tony Scaife, in the shabby cottage at Lone Point, had more liberty than Jack had in the big house at Marrowbone. The Scaifes were strangers from a strange land, and when the widow and her boy came there, and offered to buy the little point of land from Colonel Randolph, paying part in cash, no one knew anything about them, except that they came from New England.

Tony was a fisherman in summer, and an oysterman in winter, and but for him the chronic hard times at Lone Point would have been harder still. Mrs. Scaife, a quiet, gentle woman, kept her poverty and her affairs to herself, and Tony, too, had early learned the lesson of the poor, to suffer and say nothing about it.

There was no old grandfather to preach to him what it was to be a Virginia gentleman, and he had no time for French or Latin. Nor could his mother help him with his school lessons, for he had none; but during the long winter evenings Tony would sit curled up on the wooden settle by the fireplace, where the driftwood burned with the blue and yellow lights, and would work manfully at his spelling-book.

Mrs. Scaife, who had a soft and plaintive voice, would read stories in American history for Tony, when he was too tired to read himself.

The friendship between Jack and Tony began rather inauspiciously for Jack, and he remembered it for many a long day after. One bright September morning Jack got out his boat, the *Undine*, and started for a sail down the river.

The possession of the *Undine* was the one point upon which Jack, with the assistance of his grandfather, had carried the day against his mother. The boat was long and narrow in the beam, and carried sail enough for two. She also had an uncomfortable trick of capsizing when the wind was fresh; but this was not so much the boat's fault as Jack's, for he insisted upon keeping up all sail until the very last minute.

Mrs. Randolph was a brave woman, but she never saw Jack put off in the *Undine*, with the big sail almost lying in the water as the boat careened, that she did not utter a prayer.

But the old Colonel said, "By George, madam, the boy sha'n't be a molly-coddle; and if the boat turns over, why, let him crawl out on the bottom, to be sure!"

Crawling out on the bottom was an accomplishment that Jack excelled in; but nevertheless it was rather a risky business.

So, on a particular September day, with a fresh breeze from the southwest, as Mrs. Randolph saw him lying down in the stern of the boat with the tiller in his hand, and the big sail swiftly drawing the little shell down the river, she felt a sinking at the heart.

But Jack sailed down gaily enough, until he got to Lone Point. The sun was shining brightly; but just ahead of him, on the broad bay, was a shadow moving fast across the green water, and turning it black as it ruffled the waves.

"That's a squall," thought Jack. But as usual, he concluded that it was not time yet to take down the sail.

Just as he had reached this opinion, the squall struck him. The sail flapped wildly for a moment, and then bent lower and lower toward the water. Suddenly, the boat gave a lurch, and Jack, following his usual tactics, clung to the mast, and soon found himself drenched to the bone, but clinging to the bottom of the boat, which was driving on the sandy shore.

Tony Scaife, who had just come in from looking at his nets, was standing in the water, with his trousers rolled up, as the boat drifted his way. He waded out as far as he could. The long tiller rope floated toward him. Tony caught it, and in two minutes Jack was on shore very wet, but otherwise all right.

Tony helped him haul the boat up, to take the sail out and spread it on the sand to dry, and then the trouble begun.

"Why didn't you take your sail down when you saw the squall coming?" asked Tony.

"Because I wasn't afraid," answered Jack, coolly.

"That doesn't mean being afraid," said Tony, with equal coolness. "That's common-sense."

Jack took fire at this.

"You had better mind your business, and keep a civil tongue in your head," he snapped.

"I'm civil enough," replied Tony, in a sort of drawl that infuriated Jack, "but I thought when I saw you sailing down with that squall just a-humming across the bay, 'That fellow aint fit to be trusted in a boat by himself!'"

Jack stared at him. No other boy had ever talked to him in that way. He had too good an opinion of his ability to take care of himself.

"Look here!" said Jack after a minute, eying Tony very hard. "Aint you a Yankee?"

"Well, I rather guess I am," said Tony.

"Then," said Jack, "you're a rascal, and you know it."

Jack was much larger than Tony, though only

Digitized by Google

a year older, but by the time the words were out of his mouth, Tony was upon him.

Neither wasted any words on the matter, and presently they were rolling over on the sand together, fighting desperately.

Tony showed unexpected strength, but Jack was too much for him. It took about five minutes for Tony to be thoroughly whipped. Then Jack let him up.

But although Tony had been beaten, his spirit was unbroken, and he was as plucky in defeat as in victory—which, after all, is the only real courage.

"Now," said Jack, breathing very fast and folding his arms, "Don't you dare to speak to me or to look at me, you rascal."

"I'm no rascal," gasped Tony, looking Jack straight in the eye, "you're bigger than I am, that's all; but if you had been my size, I'd have given you the worst whipping you ever had."

At this Jack jumped at him. But Tony was too quick. With a sudden jerk, he laid Jack sprawling on the sand, and was well out of the way before Jack could get up.

It was about two o'clock when the *Undine* was tied up at the Marrowbone Wharf. Jack came swaggering up to the house to tell his adventures to his mother.

Mrs. Randolph, sitting on the broad porch, where the overhanging branches of the elms and big live-oaks made a flickering shade, heard Jack through without a word. Then she said, very quietly:

"So, after the boy had helped you with the boat and the sail, you called him a rascal for telling the truth."

"Y-yes'm," answered Jack, rather surprised at the new way his mother put it.

"And then you whipped him, although you were twice as big as he."

"Yes'm," again answered Jack in a low voice. The true view of his conduct began to dawn upon him.

"Then," said Mrs. Randolph, rising, "go upstairs at once, change your clothes, and walk down to Lone Point. Ask for Tony, and make him the very best apology you can for your unmanly conduct. Go into the cottage then, and ask his mother's pardon for fighting on her land; and when you come home I shall have something further to say to you."

Jack looked at his mother in amazement. There was no trifling with her; besides, it came home to him how mean and tyrannical his conduct had been.

Without a word he went to his room, and came back within ten minutes. He went up to his mother, looking very pale.

"Mother," he said, "you are right. *I* was the rascal, not Tony. I promise you, I'll never, as long as I live, do such a thing again."

His mother said nothing. She was not often displeased with him; but when she was, she did not quickly relent.

Jack set off, with a weight of shame upon his heart. He a Virginia gentleman! He felt like a sneak and a coward, and everything else that was mean.

When he reached Lone Point he found Tony sitting on the little porch, mending his nets, while his mother sewed industriously on a ragged sail.

Tony was very silent. He felt keenly how he had been treated, and being a very human sort of a boy, he longed to be large enough to fight Jack Randolph and whip him.

"Why," said Mrs. Scaife, looking up, "here comes that Randolph boy now."

Jack, with his face deeply flushed, and looking down guiltily, was walking up the narrow path to the little porch. When he reached the foot of the two or three rickety steps, he took off his hat, and without knowing it, put on his best manner.

"How do you do, madam," he said. "I believe you are Mrs. Scaife."

The widow was not often addressed so formally. She rose in a quick, embarrassed way.

"Yes," she said. "I'm Mrs. Scaife."

"And I'm Jack Randolph," continued Jack, still keeping his head uncovered. "I came to ask your pardon for fighting on your land to-day. I know it was very ungentlemanly, and I feel very badly about it, and so does my mother—and I hope you'll overlook it."

The widow glanced toward Tony. He had told her about the fight, and she felt sore that this tall, stalwart young fellow should have beaten Tony, who was so small for his age. She remained silent, while the flush on Jack's face grew deeper.

Jack turned to Tony, who had stopped mending his nets, and was looking very hard before him.

"I hardly know what to say to you," said Jack. "You helped me with the boat and the sail, and you didn't say or do anything, and I'm bigger than you, and I behaved like a bully—and a coward, and I'm ashamed of myself. I came here to tell you so, and to ask you to shake hands and overlook it, too."

A queer look came into Tony's blue eyes.

"I don't think you're a coward. I think you're a pretty brave fellow," he said. Then the two boys shook hands.

The Widow Scaife's eyes filled with tears.

"I thought hard of you before you came," she said, "but now, I think you're a real man, and I forgive you. I hope Tony will."

"Yes," said Tony, "and if you'll come down here some morning, we'll go fishing together."

The two boys began to talk about fishing then, and got on very well. Mrs. Scaife went in the house, and brought out a wooden pail of buttermilk and some crackers, which the boys shared quite amicably.

Jack went home, feeling in his heart that he and Tony Scaife were friends.

MOLLY ELLIOT SEAWELL.

For the Companion.

THE BOOM AT BULLIONVILLE.

The town of Bullionville greatly needed a railroad. The richest ore veins of the vicinity had all "pinched out," and it was not profitable to work the large quantities of low-grade ore, or ship it away without a railroad.

It was not practicable now to work the great timber resources of the country without means of transportation. Everything in Bullionville languished for a railroad, and at least half the buildings in the place bore a sign, "For Sale or To Let."

The town had a good location at the junction of two rivers, and in the centre of a fertile farming tract, and the surrounding hills were rich in coal, limestone, lead, iron and low-grade silver ore.

The weekly Bullionville *Echo* had proclaimed these advantages month after month, until their reiteration came to be a matter of course, and no one paid any attention to them. They helped, however, to convince the people that a railroad was all that was needed to make the town a metropolis.

But would the railroad be built? This was the question which some of the town people asked young Morris when, one day in August, he made his customary trip from his camp, a few miles down the river, up to the post and telegraph offices at Bullionville.

Morris had been employed as clerk to the contractors who had built the last stretch of road beyond. He was ambitious to complete his education, particularly in geology, which was his specialty; and he had been glad to get this position, as it gave him an opportunity to make geological researches in a country rich in specimens.

He had answered this question about the railroad to the best of his ability nearly every day for a month, but he replied, good-naturedly:

"I don't know, gentlemen. Nothing new has developed."

"You aren't thinking of moving away the outfit, are you?"

"I have had no such intention. I will explain the whole thing. You know I am merely the clerk of the contractors who hope to build the road when the time comes. They finished it to a point about thirty miles from here last fall, and then moved their outfit, stock, tools, tents and all down into this valley for the winter.

"They hoped to get the contract to build the remainder of the road in time to begin work last spring, but, as you see, were disappointed. I report to them frequently, and I have standing instructions to keep things ready to begin work on short notice.

"But you see it is all guess-work. The company may not intend to build the road at all, or it may intend to go along the other side of the valley."

About a week afterward a group of men who had nothing to do were discussing the great topic in the post-office.

"It rather looks as though we weren't going to have a railroad," said the proprietor of the Metropolitan Hotel, in a slow, melancholy tone, as if each word were forced from him.

"I don't give up yet," said a real estate owner. "I believe that party of engineers in camp about forty miles down the cañon has some business connected with the building of the road, in spite of all they say."

"It's about time for that young fellow Morris to be up after his mail, isn't it? Maybe he knows something more about it," said another.

"He won't be here till late, then," said the ferryman. "He got me out of bed to take him across the river this morning, and has gone down the other side. You know the bridge down below his camp was washed away."

"I wonder if he didn't go to consult those engineers?" said the editor of the Bullionville *Echo*, eagerly.

"No; he said he was going down to see the stock, and to get a fresh saddle pony; but he was in a great hurry, and I tell you he looked mightily pleased at some letter he was reading on the ferry."

There was a general increase of interest at this announcement.

"I tell you," said the real estate owner, "that young fellow knows how to take care of himself. Like as not he will be the first to get the news, and will have half the town bought up before the boom begins. But I tell you, he won't get a foot of my land unless he pays a boom price for it. I haven't waited here five years just to be hoodwinked at the last."

"I'll bet something's up," said the editor. He started toward the telegraph office.

The ferryman was right in his surmise that Morris was pleased about something. He had received a letter which gave him assurance at last that he would be able to go East and enter college. This was to him the most important event that could take place, and it was with a very merry heart that he set about making his preparations to depart. The opening of the college year was near, and as he wished to have a day or two in which to complete a collection of geological specimens, he made all haste to get his work in shape so that he could spare the time.

It was almost sunset when he started from the herder's cabin on his return trip, but it was a clear, starlight night, and he found the ride enjoyable.

As he rode along the river, he ran over in his mind the preparations it was necessary to make, and the best means of getting his geological specimens to the college, where, he felt sure, the professors would recognize them as the nucleus of a very fine collection.

Before starting out to take his position with the railroad contractors, he had left some of his books and geological specimens with a friend at Portland. He wished to announce his good luck to this friend, and also to get the rest of his specimens; and as he rode along he framed in his mind the telegram which he should send.

He afterward said that he felt rather piqued to find that news of such importance could be compressed into so few words as these:

"*Going to Columbia. Send rest of outfit. Remember Idaho granite.*"

Even the last three words, he had to acknowledge, were superfluous, as he knew that his friend would never consider his "outfit" complete without those interesting granite specimens; but he thought he might as well make the message ten words long, since it did not cost any more.

It was nearly ten o'clock when he reached Bullionville. Dismounting before the telegraph office, he was chagrined to find that it had been closed almost an hour. He had forgotten that the office was closed at nine o'clock.

He made some inquiries for the operator, but could not find him. Having already taken so much trouble in the matter, and having so little time for his preparations, he resolved to ride up the line five miles to Whitewater, where he knew the operator slept in the office, and would get up, if need be, to send a telegram.

He had no notion what an excitement his conduct had caused in Bullionville. Groups of men began to gather upon the street corners, and the story was rapidly told that the contractors' agent had just come up from the engineer's camp with some very important news, and that he had ridden all the way up to Whitewater to save a few hours' delay.

Morris found the operator still up when he reached Whitewater. Taking a blank, he proceeded to write out his message.

The worn-out pen furnished for the public convenience made a bad blot upon the first blank. Crumpling it, he tossed it out of the window, and took another.

A man standing in the shadow of the building reached out and picked it up. It was the enterprising editor of the *Echo*, who was on his track

As Morris galloped back through Bullionville, an acquaintance, whom Morris was surprised to see up so late, stepped out and hailed him.

"We hear you're going to move at last," said the man.

Morris was too weary to be pleased at their interest in his college prospects.

"Yes," he said, shortly, "I'm going to Columbia this year."

"How are you going?" was the next question.

"Why, by rail, of course!" Morris said.

"Columbia is pretty near the salt water, aint it?"

"Salt water? Well, within two or three miles, I guess."

He was tired and in no mood for further talk, so he rode away.

"Boys," said the questioner, triumphantly, to a group at the hotel, "I guess none of you will dispute that the road is going to be built now."

Before morning the report had gone through the town that the road was to be pushed westward at once through Bullionville to the mouth of the Columbia River. Morris had said so.

If Morris had made his accustomed visit to the town next day, instead of going down the river in quest of geological specimens, he would have hardly known Bullionville. Activity and excitement had taken the place of listlessness. Men were busy staking out lots, and others were buying and selling real estate in the stores and on the corners. Lumber, brick and building-stone had advanced fifty per cent. in price, while the wages of mechanics had increased threefold.

Improvised real estate offices had been opened in a dozen places, and were doing a thriving business—though not, it must be admitted, a cash business, for money was as scarce in the town as ever.

So much bartering and swapping went on that an *Echo* extra estimated that on that day "over sixty thousand dollars' worth of Bullionville property had changed hands."

Meanwhile, the cause of all this excitement was collecting specimens, and making notes of the various geological strata fifteen miles away. About noon he went in search of a feed of oats for his horse, and had to call at several ranches before he obtained it.

Soon after this he met the stage-coach, coming up, and as usual without passengers.

"Prospecting?" asked the driver.

"Yes," said Morris, "I find wonderfully rich ground in this valley."

He was speaking geologically, for he had picked up the tooth of an extinct animal that very day.

"That's what I've been preaching for nigh onto seven years," said the driver, and went on.

In the *Echo* extra appeared the following paragraph:

Full particulars regarding the new development in railroad circles are not at this writing obtainable, inasmuch as the contractor's agent is at present down the river looking over the work, and buying up the grain in that neighborhood. To persons who have met him, however, he has expressed himself in glowing terms.

From that time the "boom" proceeded without much restraint. No rumor was too wild to be credited. Reports were rife that immense railroad buildings would be located in the town, that numerous syndicates were endeavoring to get possession of land, that manufactories would soon be started. All these reports seemed to start from nowhere, and yet to go everywhere.

It was after sundown when Morris rode up to the town. He saw at once from the air of haste and importance which dominated the crowds on the streets, that something important must have taken place. He began to make inquiries, but every one seemed too busy to notice him—even long enough to ask the usual questions about the road.

But presently a copy of the *Echo* extra gave him an inkling of what had taken place. The people had deceived themselves. He must undeceive them with as little shock to their new-found prosperity as possible.

After ascertaining that no message or telegram had really arrived for him, he went to the office of the *Echo*. He found the editor busy upon an article entitled, "The Future Metropolis."

"Come in! glad to see you!" said the editor, looking up from his work. "But you must excuse me if I don't talk much. You see we are desperately busy."

"Mr. Bastian," said Morris, earnestly, "it is all a mistake about this railroad—a very unfortunate mistake, and I came to request you to help me correct it. There is no news about the road."

"Indeed," said the editor, incredulously.

"I tell you it is not true. There is no more reason now to suppose that the road is going to be built, than there was a week ago. You people had no reason to interpret my actions as you have done."

The editor gazed steadily at Morris for about a minute.

"My dear boy," he said, slowly, "perhaps we know more than you think about your recent doings. What about taking out Idaho granite, and going to the coast *by rail*? I can readily see how it might have been to the advantage of your employers if the announcement had been deferred, but they should have thought of that before. If you have made a false move, it's too late now to withdraw it. No, sir; I know my duty to the public too well; and I haven't any more time to discuss the subject."

Morris felt himself completely crushed.

"I suppose," he said, "that I can publish a card over my signature?"

"Every inch of advertising space is engaged for over two weeks in advance," said the editor.

"But, Mr. Bastian," Morris persisted, "do you intend to go on deceiving these people?"

"I mean to continue telling the plain truth. If you are prepared to make an affidavit that your former statements were incorrect, I will publish it. Otherwise—good evening."

Morris rushed indignantly out of the office, and the editor proceeded with the writing of an article which began thus:

New York has its Brooklyn, St. Paul has its Minneapolis, Salt Lake has its Ogden; but Bullionville has no adjacent rival to break the circuit of its commercial empire.

Morris did what he could to explain the state of affairs to the citizens. But they would not listen.

People accosted him on all sorts of subjects connected with the railroad. Grain speculators wished to contract to furnish quantities of grain to his employers, merchants offered him supplies, and brokers sounded him on the land question. When he denied having any use for their commodities, they said knowingly:

"Oh, that's all right! but as soon as you are ready to 'spring it,' give us a chance."

Even the children stopped him to tell of some long-cherished object that they were going to carry out, "now that the railroad was coming."

The citizens showed remarkable method and energy. A Board of Trade was organized, and tents and other temporary quarters provided for the influx of immigrants that must soon begin. Committees were appointed to inquire into improved means of drainage and water supply.

The Mayor issued a proclamation, calling upon the citizens to "use every effort for the maintenance of law and order, and to support the dignity of the city in the trying position which the enlarged relations must entail."

Digitized by Google

Three religious denominations matured long dormant plans for the erection of churches.

The "boom" had gone quite beyond the power of one young man to check.

Meanwhile, a report of the unwonted activity at Bullionville became a subject of discussion in the office of a great railway company in the East.

"It must be that the other company has given the word to put its line through," said a director.

"I think we have the best of evidence to the contrary," said the secretary. "It has done no more than survey the route, just as we have done."

"Be that as it may," said the president of the corporation, "I think we had better tap that Bullionville country at once. It is a rich section, and a town with so much faith in itself is sure to become an important distributing centre."

A similar discussion must have taken place at the office of the rival system, for when Morris reached New York he had positive information, this time, that each company was trying to outstrip the other in the construction of its line, and that Bullionville was really "booming."

It is an important city now. It was only the other day that the *Daily Echo* contained some reminiscences of a well-known geologist who was a contractor's clerk in the town in its early days; and the chief item among the whole was one which told how the editor obtained confirmation of some railroad news of vital importance to the town by reading a blotted copy of an important telegram which the young man had carelessly tossed away.

WARREN L. WATTIS.

For the Companion.

BILL GATES AND THE SCHOONER "BELLE QUEEN."

On the Lake road in the town of Sheridan stands a weather-beaten old farm-house that belongs to Captain William H. Gates. Captain Gates is one of the prominent men of the town, prominent in that he has several times served his fellow-citizens in public offices, is possessed of many acres of Chautauqua County soil, and owns stock in various sorts of lake craft.

Though eminent now, time was when Captain William H. Gates was simply Bill Gates, and much to the humiliation of his relatives, was said to be the most stupid, and at the same time the shyest and most awkward boy in the whole town.

That he was eventually enabled to demonstrate that he was a lad of unusual abilities was due to the fact, as not unfrequently happens with such boys, that a neighbor, instead of his own parents, discovered the natural bent of his mind.

Bill was the oldest of several children. As soon as he was large enough he was set at work about the farm and garden; but somehow he never did his work well. If he had the onion or the beet-bed to weed, he pulled up or trod down so many of the vegetables as to excite his father's anger, and often bring about his own punishment.

Besides, when set at the work, sooner or later he would stop and gaze off over the waters of Lake Erie; then down would drop the hoe, and away he would go, dragging his feet over the ground as if they were lead, until the brook or the lake was reached.

Then he would squat on his heels and throw pebbles or bits of dirt into the water, or set sticks afloat upon it. The fact that his father might be at work near by, and was sure to resent this idleness, did not make the slightest difference.

At the school which he attended regularly when it was in session he did but little better than in the field, save only in two studies. He was a good pupil in arithmetic, and could commonly tell more about what was in the geography than his teachers could. In all other studies he was a failure.

There was a self-appointed task that he never wearied of, and that was whittling toy boats. The number of ill-shaped hulls that were launched on lake and brook it would be impossible to enumerate. To call them ill-shaped does not convey a good idea of what they were like. His conceptions of what a ship was like under water were very vague.

Nevertheless, when he was sixteen years old Bill determined to build a row-boat. He said nothing about his intention to his parents. He occupied such hours as he could get when not at his work in walking up and down the beach, searching for boards to use in making the boat, while every stray nail and screw that he picked up was secreted in a corner of a manger in the barn.

At last on a rainy day, having obtained enough boards to build three row-boats, if the boards had been of the right sort, he took the old buck-saw, the axe, and his knife to the barn, and began work.

The model chosen was that of a scow, but one considerably narrower at what he intended should be the bow than at the other end. He had two planks suitable for the side walls, and having cut the ends somewhat into the shape of a sled-runner, he put them on edge, and began to nail boards upon them to form the bottom and the ends.

Some of the boards were thicker than others, and some were warped. In sawing them to the required length, he was unable to cut them either square across or at the angle to fit the sides of the boat. Some of the nails were so large as to split the ends of the boards.

However, he did not see the defects, and as the form of the boat grew his interest in it increased, till his blood bounded through his veins.

His awakening was rude, but unusual in the respect that he did not feel the whip that his father had used to bring it about. As he was fitting the last board in its place, he glanced up and saw both his father and mother standing near by, and looking at him. The tears were in his mother's eyes, while his father's face was twitching as if he, too, were affected by some strong emotion.

Bill simply put down the axe with which he was about to drive a nail, and turning his head in his dull, heavy way toward the lake, which could be seen through the open doors of the barn, gazed silently over the water.

No wonder the mother cried, and the lines in the father's face worked nervously. The father was now quite sure that his oldest boy was really a fool, and the mother, whose heart was tortured because of her boy's trouble, could find no words or arguments to alter that conclusion.

As the boy dropped the axe, the father said, sternly, "Go into the house—no, stay where you are! Mother, go and tell Captain Lanphere to come here, where he can see that thing. Whatever made him think our Bill could be a sailor, or anything else, is more than I know."

The boy flushed violently, and began to stammer, "Don't, father! Please let me go in —"

Then he stopped. He had been proud of his boat, but now that Captain Jerry Lanphere, who lived up the road and commanded a schooner that sailed on the lakes,—a real schooner, as the boy had said to himself,—now that Captain Lanphere was to see it, the ill-shapen model, the cracks between the bottom boards, the hacked ends of these boards, the utter absurdity of the craft by way of comparison was very apparent to the poor lad.

But the father was inflexible, and the boy, in hopeless misery, stopped talking.

After a brief time Captain Lanphere entered the barn.

"Hello, Bill! How are you?" said the captain.

Bill turned around with a shamefaced smile, and said:

"Ye-es, sir."

"Been building a boat, eh?"

The boy's face flamed up, but he turned away his head without a word.

"Why," continued the captain, in a burly voice, "you needn't act like a school-girl over the thing! 'Tisn't much of a boat, but you tried to make one, didn't you? Why, my wife was telling me this morning about your whittling at boats all the time. She said you were counted just as much of a fool as ever, too.

"Somehow I'd never heard about the boats. When she said you were always making them, spite of the whippings your father gave you, I told her you weren't so much of a fool as folks thought. I used to make boats myself, and got whipped for it, too. How'd you like to go sailing?"

Go sailing! The boy could not for a time believe he heard aright. Ever since he could remember anything he had dreamed about going on the lakes as a sailor. Not that he had ever really thought he could go; it would have been the height of presumption in him, after what every one had said to him about being a fool, to think it possible that he could do the work of a sailor.

But now here was Captain Jerry Lanphere, the real master of a real schooner, asking him how he would like to go sailing!

Next morning Captain Jerry's hired man drove the Captain and Bill to Dunkirk, and by ten o'clock Bill was on the deck of the schooner *Belle Queen*, lying at the lumber docks in Buffalo Creek, with everything ready to pass a line to a tug that soon came along to tow her into the lake. Before twelve o'clock Bill was at last afloat on the great fresh-water sea.

It was late in the month of May, and the *Belle Queen* had made one round trip to Saginaw and back for lumber, and was bound up again on the same charter.

How the boy found himself in a new life; how he, as it seemed to him, worked his way through a mental fog that had shut him in; how he was at first ignorant, but not awkward, about the deck; how he was kicked and cuffed for his ignorance by the mate of the schooner; how he was never kicked or cuffed twice for the same mistake, because he never needed to be told a thing more than once; and how he very soon won the approval of even the men in the forecastle by his eagerness to learn and to do everything that was to be learned and done about the little vessel, need not be told.

By the time the *Belle Queen* had sailed through the rivers and was fairly afloat on Lake Huron, Bill Gates was able to do handy work on mainsail and topsail, and was even made to take his turn at the wheel in ordinary weather.

For twelve months thereafter Bill never left the schooner. He was invited to go up to Sheridan once, when the *Belle Queen* was in Buffalo and Captain Lanphere was going; but something, he could not have told what, held the boy back. Yet during all these months there was not a day when he was not homesick, and half-ready to cry from a desire to see his mother and the weather-beaten old farm-house, with its back yard running down to the pebbly beach of the Lake.

Bill had gone away from home leaving behind neighbors, and his own father, who believed that he was not bright mentally. Now he would not go back until he had in some way shown himself a sailor, or had at least finished out the season "man fashion."

The opportunity to show his qualities as a seaman came unexpectedly.

It was during the last week in October. The *Belle Queen* had cleared the Detroit River, bound for Buffalo after a very successful trip to Saginaw for lumber, and was again in the familiar waters of Lake Erie.

Here she hauled to the wind until well past Point Pelee, and then, as the wind canted to the east, stood off still further into the lake, intending to come about after a little, and go booming on her course to Buffalo.

It was between nine and ten o'clock at night when Captain Lanphere put her about. The wind meantime had freshened, and the air was full of heavy mist which drove along in clouds, now thickening until nothing could be seen a vessel's length away, now thinning till the horizon seemed almost a mile from the vessel, but never for a moment leaving the air clear.

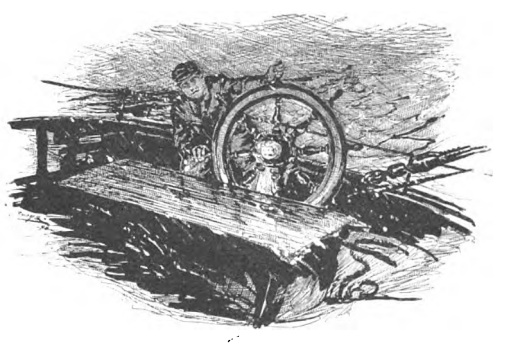
It was a "dirty night," and the Captain was somewhat nervous over it. Finding the rain increasing, he stepped into the cabin for his oil-skins, leaving the second mate in the starboard waist, and Bill at the wheel.

Hardly had he left the deck when the lookout on the forecastle shouted:

"White light on the starboard bow."

"Hard a-starboard," shouted the second mate.

"Red light on the starboard bow," continued the lookout, instantly. "Red and green lights under white light."



"Port! Port!" yelled the mate. "Port your helm!"

But it was too late.

The huge black hulk of a steamer came out of the mist not three lengths away, towering above the little schooner like the shadow of death. The second mate had made a mistake, and the *Belle Queen* was lying helpless in her path. If the steamer had been blowing her whistle, no one on the schooner had heard it before she was seen; told to put the wheel hard a-port, and hard a-port it must go.

As he worked at the spokes, there was a shout and a commotion on the deck of the steamer that was answered by the yells of the schooner's crew, and then with an awful crash the steamer struck the schooner. Bill was thrown across the deck by the whirling of the wheel.

For a moment the schooner heeled to port until her rail was out of sight. The deck-load of lumber slid off into the water, carrying all the men with it. The schooner, eased of the pressure of the helm and this weight, forged ahead, and the steamer swept past, and was lost to sight in the thickening fog.

It was all over in a minute, but when Bill had picked himself up from the deck there was not a glimmer of the steamship or the deck-load of lumber to be seen, though the shouts of the schooner's crew clinging to the floating planks could be heard plainly.

The first thought of the boy was of the effect of the collision on the schooner, and he ran to the broken rail to starboard, and gazed over the side. It was so dark that he could see little, yet it seemed to him that she had received no more than a glancing blow, from the bluff of the steamer's bow. It had "made basket-work," to use the sailor phrase, of the schooner's counter, but so far as he could see there was no very large hole that reached down under water. She was sure, in any event, to be a long time filling.

As this came to the boy's mind, he remembered that she was laden with pine lumber, and could not sink even if full of water. The idea that this thought suggested set his brain on fire.

He would stay by the schooner, and sail her into Buffalo single-handed.

He turned hastily to look off astern. He could see the steamer lights faintly. She was coming slowly back, and put out boats to pick up the men. She would come to the *Belle Queen* and take him off, and leave the schooner to be wrecked on the shore.

He thought he could save her, and in his stolid way, without thought of danger, he made up his mind to try.

The booms were flying to and fro across the deck, and the wheel was whirling, for the schooner was almost up in the wind. No matter. He must get away forward, and flatten aft the jib—get it to windward if possible.

It was a hard pull, but the boy worked with a will and succeeded. The flat-bottomed little vessel moved like a top to the impulse of the wind.

Now aft to the wheel, and take a look at the compass.

"Whoop!" said Bill, now greatly excited. She would lay her course already, for the wind was still canting to the southward. Away forward again, and let the jibs down to leeward!

By the time it was done, and the boy was aft at the wheel again, the fore- and the mainsails were drawing, and the *Belle Queen*, lightened of her deck-load, leaped to the impulse of the wind, and headed once more for Buffalo.

Bill turned to look astern. He thought it was lucky he was not taken off by the steamer, but after a little the excitement wore off. Then he began to realize where he was, and what was before him.

Turning his head once more, he gazed into the night, where he had last seen the steamer's lights. They had disappeared. He began to feel depressed. Turning forward, a dash of icy spray carried on a gust of wind caught him full in the face. He cowered under the blow.

Then he thought of the wound in the counter. Securing the wheel, he crept to the rail and peered over the side of the schooner. As he did so, her stern rolled low in the trough of the sea, and the open seams sank out of sight under water. The schooner was surely filling, he thought.

The wind was increasing slowly. Strained by the collision, the vessel might be torn to pieces by the violence of the gale. He might not be able to keep her to her course, and she would then drive ashore where he would have no hope.

but now its hoarse roar only added to the terrors of the disaster as she bore down on the unfortunate craft which she was plainly bound to strike on the starboard quarter.

At the first hail Captain Lanphere came on deck. He saw the situation at once, and shouted:

"Forward, men, for your lives!" Every man but Bill clambered over the lumber in a wild scramble for safety. As for the boy, he had been

Digitized by Google

He was alone on a wreck; he had thrown away his chance of rescue, now he must face the probability of an awful death.

Bill was only a boy. He had been half-wild in his ambitious enthusiasm, but now the reaction had come.

There were other ills, too, for him to face than the fear of death. He had gone to the wheel at eight o'clock feeling fresh enough, but now he was tired from work and excitement. The weather had grown colder. Snow was driving along on the wings of the gale where mist had been flying before, and the flakes struck his face sharply. He was wet to his skin, and his outer garments soon were glazed with ice.

For ten long hours, should the schooner float so long, he must stand at that wheel before even daylight would come to cheer him.

How those hours passed he has never been able to tell. But daylight did come at last. It found him almost dead with exhaustion and cold, but still standing at the wheel.

Somehow the light revived him, and he realized that he was terribly hungry. Securing the wheel, he dashed into the galley. There lay a big piece of boiled beef and a loaf of bread, with the teapot still standing where it had been left by the cook. Catching up these he ran on deck again, and placing them on the top of the cabin, helped himself to his food and drink with one hand while he steered with the other.

Nothing revives a tired boy like a hearty meal. Bill was soon gazing about more hopefully. He noticed then that the wind was aft on the quarter, so he secured the wheel and ran forward to ease off the sheets.

This made the schooner jump. Bill could see that she had taken in much water, but she was still able to make good speed, with that wind to drive her.

This set him to speculating as to the whereabouts of the schooner. She might even be abreast of Long Point, he thought. No land was visible, but he was sure she had had a fine run, and he had held her on her course. If he were so far along as that, the big elevators of Buffalo would loom up through the snow before dark.

That was a cheering thought. It served to help him pass the greater part of the day.

During the afternoon the wind increased, but the vessel did not gain in speed. This made him anxious about the safety of the masts. But there was nothing for him to do but hold on as he was, and look and pray for a sight of the Buffalo elevators.

But the night drew on, and no elevators appeared. The weather was so thick that he could not see the land if it had been in sight, and he could not tell where he was. He was likely to run ashore at any time.

He became more depressed than ever. He was almost exhausted for want of rest and sleep. Could he stand at the wheel another night?

He thought not. But he could and he would stand there till he dropped. Remembering the old days when everybody had thought him a fool, he resolved that if ever the vessel was seen by any one again, he would be found by the wheel, dead or alive.

Then night fell, and once more he found himself facing the gloom that had filled him with terror the night before. He nerved himself as best he could to stand to his post; but his thoughts wandered, and somehow he began to feel as if he were suffering less from the pains that had racked him during the day. He was even becoming easy in mind and body. His thoughts seemed to carry him in reality to the place to which they wandered.

But just as he began to feel delighted with this, he realized that these feelings were due to the influence of a sleep that could end only in death. By a mighty effort he would rouse himself, only to doze away again a few minutes later.

Men on shipboard sometimes fall asleep standing, and in the face of danger. The lad was doing worse than that, for he was suffering from the cold as well as from exhaustion.

How many times he slept and roused himself he does not know; but at last he dreamed, as it seemed to him, that the rest of the crew of the *Belle Queen* were once more on board, that they had just tacked the schooner and were heading away for Buffalo, and that a big steamer was bearing down on them as the one had done the night before, except that now her lights were flashing up in brilliant red flames at intervals, only to die out and disappear at times.

There she was, on the weather bow, drawing nearer with every swell, while he stood unable to turn the wheel or do anything to avoid the impending collision. The Captain and the mates yelled at him to put down the wheel, but though he strained every muscle not a turn could he make. Then, with a blow that knocked him across the deck, the steamer struck the schooner, and Bill awoke.

He was certainly lying on the deck, but not as the result of a collision. He had fallen down from sheer exhaustion. With his teeth chattering with terror—for he realized the peril in which he was placed by fatigue, and his inability to longer resist its influence—he scrambled to his feet. The vessel had broached to when he fell, and with a hasty motion he put up the wheel. She fell off at once, and the next moment Bill had forgotten alike his danger and his fatigue.

One more feature of the dream was real. Not only had he been knocked down, but there was the flashing red light fair on the starboard bow. Quickly turning his head further to the right, a fixed white light was plainly seen through the night, while the lights of a tug headed for the schooner were visible below the big white light.

Before him was Buffalo harbor and safety and rest.

He had saved the *Belle Queen*. And now the lad who had been called the most stupid boy in Sheridan was received when he went ashore as a hero. In great danger he had shown remarkable presence of mind, and under the most trying circumstances had exhibited unusual seamanship, bravery and skill. His conduct was commented upon and lauded in the newspapers, and everybody, both strangers and his own townsmen alike, echoed his praises.

Bill had found his vocation in life. He was a born seaman, and stupid though he had seemed in his youth, his early and his riper manhood showed that the dormant intellect of the boy only needed favoring conditions in order to develop qualities that would command both admiration and respect.

JOHN R. SPEARS.

DO TREES FEEL?

Trees of the forest, and the open field!
Have ye no sense of being? Does the air,
The pure air, which I breathe with gladness, pass
In gushes o'er your delicate lungs, your leaves,
All unenjoyed?

—*Bryant.*

For the Companion.

BROWN BETTY.

As most people know, the chief point of landing for emigrants coming to this country is now New York; but as many people do not know, there was once a time, when our grandfathers were young, that many emigrant ships discharged their living freight at St. John, New Brunswick, from which point the would-be citizens went overland on foot to reach their destination.

Some of them were bound for the city of New York, and others for the distant prairies of the West; but all travelled, on foot or by such other means of conveyance as they could find, through the State of Maine.

Across the line into our territory they came in straggling parties of from two to several dozen, perhaps—men, women and children.

One party would be made up entirely of a single family, each one, except the babies in arms, carrying a bundle or pack upon his back, while another contained several families, probably neighbors in the land from which they came.

Occasionally a single man or boy would be seen pushing on alone, impatient of the slow progress of his companions, and eager to be in the midst of the new world before him.

All these people ate, drank and slept by the roadside, save when a small party was given a dinner by some friendly housewife, or when, as more frequently happened, some kindly farmer threw open his wide barn doors, and gave permission to sleep upon his haymows.

About forty miles west of the line between Maine and New Brunswick there lived, at the time of which I write, a family by the name of Gilkey. It consisted of the farmer, his wife, and their two boys, called Phil and Teddy, who were about fifteen and thirteen years old.

These boys had the usual joys and sorrows that come to young people on isolated farms. There was rather more joy than sorrow, for there was good fishing in the river that flowed by the farm and partridges in the woods, besides much other game. The sheep, the lambs, the calves and colts engaged their attention and furnished them many companions.

They were especially fond of one young mare. She was named Brown Betty, and was a strikingly beautiful filly, whose coat was like silk in texture, and in color a beautiful rich seal brown.

Brown Betty had a thoroughbred ancestry, which she showed in every line and movement of her body. Her clean-cut limbs would be able to trot a great many rapid and tireless miles when their muscles had become hardened to work; she was but four years old, and had been used but little.

Her head was a delight to look upon, with its evident signs of spirit, intelligence and affection.

From the day she was born Brown Betty had been the boys' special pet, and between her and them had come to be a most perfect understanding. She would come at the call of either, and stretch out her beautiful neck for the apple or cake which she was pretty sure to find, either in their hands or pockets.

One evening in early summer, while the boys were milking in the yard in front of the barn, two men appeared, coming along the road, with emigrants' packs upon their backs—huge bundles supported by rough sticks across their shoulders.

They were unkempt and dirty. The open barn doors no doubt suggested to them a hope of a night's rest on the hay.

One of the men approached, and in broken English asked Phil for permission to sleep in the barn.

Farmer Gilkey happened to be away from home, having been drawn as a juryman to attend court at the county-seat, twenty-four miles away, where he must remain more than a week. Phil, the elder of the boys, seeing no reason why he should go contrary to his father's usual practice, hospitably told the men to go in and help themselves to a bed on the hay.

Both boys noticed that the men eyed Brown Betty sharply as they went through the yard. The mare always came up into the yard to get the nibble of corn or oats which she was sure to find awaiting her.

But admiration for the colt was too common to excite any other feeling than one of satisfaction in the minds of the boys.

When their "chores" were done for the night, they closed the doors of the barn, leaving the emigrants comfortably lodged in the hay, and went to bed. No harm had ever come before from such hospitality to wayfarers, and they had no thought of any now.

At about five o'clock the next morning, the boys, after lighting the kitchen fire and bringing in wood and water for their mother, took the pails and went to the barn for the morning milking.

Teddy was ahead, and when he saw that the colt was not in the yard, and that the side doors opening into the wagon-room were thrown wide apart, the truth flashed over his mind.

"They were thieves, and they have stolen Brown Betty and run away with her!" he screamed, dropping his pail and rushing into the barn.

He was followed by Phil, no less excited. The wagon, a harness and the colt were gone, and also the two very disreputable-looking lodgers.

For a moment the two boys looked at each other in blank despair.

"Run across the bridge, quick, Ted," Phil gasped, "and see which road they took! If they went round by Shattuck's Mills, we'll catch 'em yet!"

The road which came westward from the State line ran in a direction nearly southwest; but when it had passed the Gilkeys' house, it crossed the river and followed its western bank about twelve miles in a southerly direction.

But just across the bridge another road ran westwardly to the small settlement of Shattuck's Mills, a dozen miles away, and then, curving toward the southeast, after a circuit of nearly thirty miles, joined the river road ten miles below the bridge.

Both roads thus led to the same point, but one was direct and level, while the other was roundabout and hilly.

Ted needed no urging. He vanished at the top of his speed.

It was easy to trace the wheel-tracks, for no other wagon had passed at that early hour, and the ground was wet with dew.

When Ted had crossed the bridge, and had come to the point where the road branched, he saw at a glance that Brown Betty had been turned into the western road. The thieves had very naturally supposed that this was the right way, since it ran toward the west, whither they were going.

Ted had hardly re-crossed the bridge when he saw Phil running toward him with their two guns, which he had seized, after telling his mother what had happened, and what he was going to do.

Mrs. Gilkey made no objection to their going; indeed, in view of what we know of the women of that time, it is perfectly plain that if duties at home had not prevented, she would have gone too.

"Come on, Ted!" said Phil, rushing down to the edge of the river as soon as he had heard which way the thieves had gone, and casting off the old flat-bottomed boat in which the boys paddled up and down. "We haven't got any other horse and wagon, and we'll have to row down to the place where the roads come together. If we can only get there first, we'll have Brown Betty back again!"

The oars were pulled out from under the bushes, and the boys were in and away.

How many hours had the thieves been gone? Might they not have covered almost the whole distance already? No matter; the boys would catch them if they could.

The old boat pulled hard, but the boys bent sturdily to the oars. Their arms began to ache desperately, but they thought of Brown Betty, who so often, just at the speaking of her name, came up and stretched out her beautiful neck and laid her head over the shoulder of either one of her young masters, while her cheek softly touched his.

The boys thought of these things, and the thought, though it brought tears to their eyes, nerved their arms.

At that moment they knew Brown Betty was being cruelly driven at the top of her speed over rough roads that hurt her tender feet, up hill and down, by brutal men who cared only to save themselves some miles of plodding; for these men, too, had doubtless thought that they could drive rapidly fifty or a hundred miles, then either sell or abandon the horse and wagon, and continue on foot safe from pursuit.

Nowadays such a theft would hardly be attempted; but at that time there were no telegraph wires to cry "Stop thief!" nor any railroads upon which they might be pursued. And in this case not even a horse was left behind which could be used in a pursuit.

Over the rough road plunged Brown Betty, brutally spurred on by shouts and by the whip, her foaming sides and quivering nostrils showing how cruelly the work was telling upon her.

Down the river swung the great boat, propelled by willing but tired arms. Neither boy had eaten a bite of breakfast, and Teddy was on the point of giving out.

"Pull a little longer, Ted," cried Phil, increasing his own efforts, with a choking in his throat.

Ted thought of the mare, and struggled on manfully.

Within a mile of the end of the journey, as the boys redoubled their efforts, thinking they were so near the junction of the roads, one of Ted's oars caught in the roots of an old stump under the water, and snapped in two near the handle.

Ted took his other oar, and standing in the stern, pluckily plied it as a paddle. But they did not get on as rapidly as before.

Presently, working with all their might, they swung around the last bend of the river, and saw off to the right, upon the crest of a hill on the Shattuck's Mills road just as it joined the river highway, Brown Betty, white with foam, reeling and plunging madly down the hill.

The thieves would get to the joining of the roads first, and they would get away! The two men were clinging to the sides of the wagon, and whipping the half-crazed mare cruelly.

The boys saw the colt swing into the river road. They were too far away to stop her, and they would not have fired at the men, even though they were running away with stolen property.

Believing that the mare was lost to them forever, they sent after her a wailing, heart-broken cry: "Brown Betty! O Brown Betty!"

Like a flash, the mare wheeled sharply around. She had heard the sound of her young masters' voices.

Cutting a quick circle on the sloping bank, she plunged down to the water's edge, and stopped, neighing piteously, and looking at the boat.

As Brown Betty whirled around, the two wheels of the wagon on the inside of the curve leaped into the air, and, turning half over, the vehicle came suddenly down upon the hubs of the opposite wheels. One of the shafts was drawn tightly over the mare's back, straining her downward, but she kept her feet, still whinnying toward the boat.

Meanwhile, the two occupants of the wagon were thrown violently to the ground. The head of one struck a rock, and he fell senseless. The legs of the other were doubled beneath him by the wagon, and broken.

The boys, coming up, liberated Brown Betty from the shafts, and slowly walked her up and down to cool her off.

The two wounded men lay quite helpless, and the boys had no occasion to be in fear of them. They felt that Betty best deserved such comfort and succor as they could give.

Half an hour later a slowly moving procession advanced up the river road. Teddy was in the lead, holding by the bridle Brown Betty, who moved as if in pain, the boy now and then giving her a loving pat or word.

Next came the stout, old-fashioned wagon, right side up now, and apparently uninjured. The wagons of those old days were not made to go to pieces in any ordinary accident.

In the vehicle were stretched an unconscious man and another no less badly injured. In the rear came Phil, pushing the wagon from behind to help the mare.

Poor tired Betty! Her young masters were too inexperienced to know how cruelly she had been abused and overtasked, or what effect such a strain and shock must have upon her.

It was her stout ancestry that carried her over those last weary ten miles, when more than once she tottered on the point of falling, the blood slowly trickling from nose and mouth.

At last the little procession turned into the yard at home; and then kindnesses were showered on the colt in abundant measure. The ridges that the whip had left upon her sides were bathed in water, and her once glossy coat carefully rubbed and covered with a light blanket.

Then she was placed in a stall with great armfuls of clean straw beneath her feet, and into her manger were put the daintiest bites of corn, oats and clover that could be found.

Only then did the boys think of themselves and their helpless captives. There were neighbors not far away to the eastward. Mrs. Gilkey had gone to give the alarm, and by their help the injured men were removed from the wagon.

A distant doctor and a deputy sheriff were sent for, and their wounds and themselves taken care of. The people were much too humane to allow these men to suffer unnecessary pain, even though they had proved themselves brutal and thievish.

In due time they were sent to prison, and there expiated their serious offence.

Ted's breakfast or dinner was a short one. He slipped out of his chair, and ran to the barn to see Brown Betty.

"Why, Betty!" he cried; "you've lain down and gone to sleep without once touching your dinner! Poor Betty, you must be awfully tired!"

He sat down on the clean straw, and throwing his arms around the neck of the prostrate colt, laid his head on her brown shoulder. "Awfully tired" himself, he fell fast asleep.

There they found the two a little later, Teddy's tanned face half-covered by a silky mane, and his arms tightly clasping poor dead Brown Betty's neck.

MEDICINE AS A PROFESSION.

By Sir Morell Mackenzie, M. D.

FITNESS. — Second Paper.

"A physician's duty is to cure safely, promptly and pleasantly," said Asclepiades. The whole duty of a doctor, thus briefly yet comprehensively set forth by Cicero's famous medical friend, presupposes not only a certain amount of acquired learning within the reach of every industrious and persevering student, but also some qualities which, like the poetical faculty, are born with a man, and cannot be made.

Parents, before deciding to send a son into the medical profession, should carefully consider whether he possesses the qualities necessary to the making of a successful doctor, and when I speak of success, be it understood that I refer to the art of healing, and not to that of obtaining wealth and reputation.

If a boy, when questioned as to his views of a profession, replies, like Tom May in the "Daisy Chain," "I should like to be a doctor if it were not for the horrid sick people," a father may safely conclude that his son might have a turn for scientific investigation, but that he would not make a good practical physician. The true test of the doctor is *to cure disease*, a fact that is likely to be overlooked by men of a highly scientific tendency of mind.

Robert Boyle keenly noted this great error into which learned physicians of all times are likely to fall, and combated it strenuously in his works.

"I cannot forbear to wish," he says in one place, "that divers learned physicians were more concerned than they seem to be to advance the curative part of their profession. . . . I had much rather that the physician of any friend of mine should keep his patient by powerful medicines from dying, than tell me punctually when he shall die, or show me why it may be supposed he lived no longer."

One of your own great writers, Dr. Oliver Wendell Holmes, has said in "The Poet at the Breakfast Table," "Science is a first-rate piece of furniture for a man's upper chamber, if he has common-sense on the ground floor. But if a man hasn't got plenty of common-sense, the more science he has the worse for his patient.

"Each patient's disease has features of its own; there never was and never will be another case in all respects exactly like it. If a doctor has science without common-sense, he treats a fever, but not this man's fever. If he has common-sense without science, he treats this man's fever without knowing the general laws that govern all fevers and all vital movements. . . . . The men that have science only, begin too far back, and before they get as far as the case in hand, the patient has very likely gone to visit his deceased relatives."

Knowledge, then, is not everything. But the other necessary qualifications are not rare, and where they exist, they may be improved by cultivation.

The medical practitioner ought to possess the faculty of observation in the highest degree. He should be capable of reasoning accurately on ordinary concrete subjects, and he should have a good memory. Physically it is very desirable that he should be endowed with a good constitution, and that his manual dexterity should not be below the average.

Armed with these qualifications, moderate success—a livelihood in fact—can generally be attained; but in order to accomplish great ends and to arrive at a distinguished position, some other things are necessary in medicine as in everything else.

First, there is necessary the power of dogged hard work; secondly, a sympathetic nature, which can freely enter into the feelings of other people; thirdly, the ability to take advantage of that tide which, in the affairs of doctors as of other men, if "taken at the flood leads on to fortune."

Supposing that a lad is determined to venture on the treacherous sea of medical practice. How is he to steer his course for the haven of success?

If the lives of distinguished doctors are studied with attention, it will be found that one feature is common to them all. By whatever way success has been reached at last, they have all worked resolutely and unremittingly during their early years.

John Hunter is the only apparent exception to this rule. It is true that he wasted a good deal of time in his youth, and was never able in after life to make up for his want of what was in his day called "polite learning;" but from the time his brother William took him in hand, and gave him an arm to dissect, till his death in the Board Room of St. George's Hospital, his life was one of constant work.

Ricord, who had to teach English for a living while studying medicine, by persevering efforts reduced his allowance of sleep to five hours out of the twenty-four.

Nélaton was accustomed to read lying on a narrow board placed between two chairs. When drowsiness overtook him, he fell off his voluntary plank bed, and awoke to fresh struggles with his task.

Valpeau, who was the son of a farrier, and whose early education had been entirely neglected, had to study his own language besides Latin, Greek, history, geography, physics, chemistry, botany and other preliminary subjects during his first year of medical study, and successfully passed examinations in them all.

A still more marvellous feat is recorded of a young Japanese student, whose name I have unfortunately forgotten. He entered the University of Berlin some years ago as a medical student, being then entirely ignorant of German, as well as of science; yet in three months he passed an examination conducted in German, and including several branches of the medical curriculum.

It is needless to multiply instances, for, however easily the physician or surgeon in after life may seem to earn his fee, his success is the result of extremely hard work in his youth.

With regard to the second qualification, the sympathetic nature, some one may say that one cannot sympathize with every stranger that comes to him for advice. Nevertheless, that stranger expects sympathy as well as advice, and if he does not get it, his faith in the doctor is considerably diminished, and faith is, in many instances, a factor that must be reckoned with in the working of a cure.

Dean Mansel once said: "Affection is part of insight; it is wanted for gaining due acquaintance with the facts of the case." If we substitute for "affection" the word "sympathy," the maxim applies to the doctor's position.

Every doctor who is conscientiously desirous of doing his patient good, must enter into that patient's feelings, or he will not attain to a full knowledge of his case, and consequently will not be able to afford him all the relief in his power. I believe that the best and indeed only valuable manner for a doctor is one that impresses the patient with the notion that his adviser takes a real interest in him, and is thoroughly in earnest.

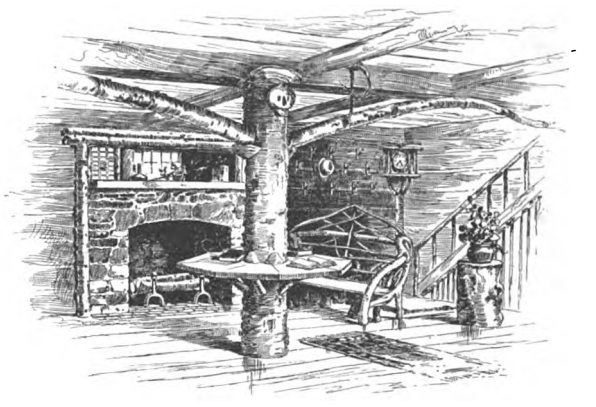
Next to solid knowledge and skill, which, as I have already pointed out, can only be acquired by real work, what is called *manner* is perhaps the most important aid to success. George Eliot was evidently of this opinion, for she describes Mr. Lydgate, the doctor in "Middlemarch," as possessing "the medical accomplishment of looking perfectly grave whatever nonsense was talked to him, and his dark, steady eyes gave him impressiveness as a listener. . . . . He said 'I think so' with an air of so much deference . . . . . that she (Lady Chettam) formed the most cordial opinion of his talents."

Sir Astley Cooper, whose manner was singularly winning, used to say that the brusqueness of his great rival, Abernethy, was worth a thousand pounds a year to him—Sir Astley. Certainly, other things being equal, a polished manner and some amount of sacrifice to the Graces — the "minor morals," as the French well call them—will be preferred by most people in a physician to uncouthness and rusticity, and an appearance suggestive of "an abstract idea untidily expressed," as was said of a late philosophical aurist before he remodelled to some extent his mode of life.

The third important element of success to which I have referred, the ability to take advantage of circumstances, is closely connected with what I have set down as the primarily essential quality of a doctor, namely, a capacity for hard work. Unless a man is prepared to profit by good fortune when it comes in his way, it is useless to him.

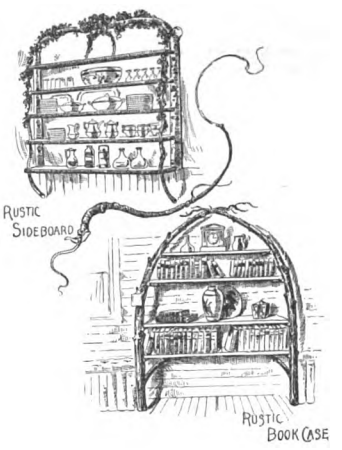
John Arbuthnot, the friend of Pope and Swift, who was physician to Queen Anne, is said to have owed his first rise in life to having had the luck to be passing by when Prince George of Denmark met with an accident. It is obvious, however, that in such cases fortune only favors the brave; or, in other words, those worthy of her benefits. Arbuthnot, who was so brilliantly successful when he had found his true level among the great and wise of the world, had utterly failed as a country doctor.

Dr. Messenger Monsey, who was physician to Chelsea College, and a noted wit in London society in the last century, was also a struggling country doctor until Lord Godolphin, son of Queen Anne's treasurer, was seized with illness near the place where he lived. Monsey was called in, and his noble patient was so charmed with his conversation that he took him to London.



The whole matter may be summed up in the one word: "Work." To succeed in the medical profession, as in every other, a man must be in earnest and he must work hard.

Genius has been said to be nothing more than an infinite capacity for taking pains, and what Ruskin says about artists applies equally well to doctors: "You may have known clever men who were indolent, but you never knew a great man who was so; and during such investigation as I have been able to give to the lives of the artists whose works are in all points noblest, no fact ever looms so large upon me—no law remains so steadfast in the universality of its application—as the fact and law that they are all great workers. When I hear a young man spoken of as giving promise of high genius, the first question I ask about him is always, Does he work?"



For the Companion.

RUSTIC FURNITURE.

It takes a good deal of mechanical skill to construct rustic furniture and ornaments for the house that will prove at once substantial, tasteful and cheap. Too often the amateur's efforts result in producing some gimcrack or fragile article that is positively ugly, and which has cost far more than a much better article can be bought for in a store.

At Twilight Park, a cottage settlement among the Catskill Mountains, an unusual degree of success has been achieved in making rustic furnishings and decorations, chiefly for two reasons: first, because there is an abundance of excellent material at hand in the shape of birch, wild laurel and "moose-wood" or striped maple in the adjacent forest, free of cost; and second, because skilled native American workmen can be found capable of carrying out designs with ingenuity and "gumption."

As a result, one finds there rustic seats that are really comfortable, and not full of nails and ragged protuberances, railings, archways, stairs, fences, sideboards, tables, bookcases, umbrella-stands, picture-frames, etc., that will bear rough usage, and that do not offend the eye.

The things chiefly sought in designing these articles have been simplicity and strength. Nothing has been done merely for effect, but always with some practical end in view,—to cover some bare space, conceal an ugly corner, shut out an unpleasant view, or render some practical service.

Everything is made solid and lasting. When a rustic fence is built along a dangerous ledge, it is made of massive hemlock posts as thick as a man's body, which look and are substantial, and convey a comfortable sense of security.

Second, there is but little ornamentation, and no labor is wasted on mere detail. Few objects are more truly beautiful than a ship under full sail, yet no thought is given, in her construction, to anything but utility. The same principle applies in other cases, and perfect grace may be best secured by perfect adaptability to a practical end.

The interior arrangements of many of the cottages at Twilight Park show great variety and skill in their design. One very original feature is a table, either oval or circular, made of two sections of inch plank, fitted around a massive birch post, with its gray bark left untouched, and curved brackets below to give additional support.

The top is painted a rich cherry or mahogany color, or it may be covered with some bright-hued material which will contrast suitably with the silvery sheen of the birch post. If desired the table may be made of native woods, inlaid so as to bring out the lustre and fibre, and the whole afterwards varnished. There is no limit to ingenuity in this direction.

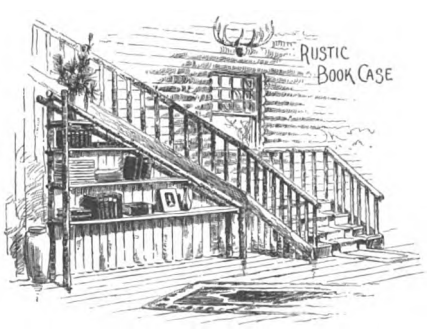
A number of very tasteful and useful sideboards have been constructed of birch or maple, by selecting a somewhat thick branch or young tree with a natural curve, and sawing it in half, lengthwise, so as to give two flat pieces having the same bend. These, when joined together, will make a perfect arch. They are nailed to a wall and the space between filled with shelves of smoothly planed pine, painted some bright color, and with their edges faced with narrow strips of moose-wood, whose smooth green surface makes a neat finish and a pretty contrast to the other material.

Such a sideboard serves admirably to set off silverware, glass and china. Or it may be used to hold books, bric-à-brac or ornaments of any kind. The niche just under the point of intersection is just the place for a piece of pottery.

In one cottage a rustic bracket for books was fashioned of rough maple, in triangular shape, and hung beside a hall stairway with some choicely bound books as its sole contents.

A letter-rack in the Club House to receive the daily mail was made of moose-wood, purple in some parts and snake green in others, with divisions like pigeon-holes for each cottager's correspondence, bearing the name of the cottage painted on the panel behind.

An unpretentious yet useful stand for plants, with a broad shelf below to hold periodicals and newspapers, was improvised from a carpenter's bench, faced with split sections of moose-wood and twisted laurel. The wild laurel, found in profusion in swampy places, is, on account of its extreme lightness, toughness and flexibility, admirably suited for picture-frames, brackets and mottoes. It can be fashioned into the most intricate designs, while its russet hue makes a pretty contrast when combined with other native woods.



Extra closet room is always in demand at summer resorts. By nailing a rod of any wood across the angle of a bedroom corner, and hanging cretonne or plain drilling from this support, a sheltered nook will be secured for articles of dress, and an ugly corner got rid of.

In one of the log-cabins at Twilight Park an objectionable corner is thus taken up with a bracket and clock-stand made of a huge knotty protuberance sawn from a tree, which has an opening just large enough to admit a clock-face.

A useful and rather sightly hat-rack may be made of a spruce or hemlock tree, trimmed so as to leave branches about three or four inches long at suitable intervals as pegs to hang hats and garments upon. After varnishing, set it in a hallway with the upper end braced to the ceiling. In one cottage, such a hat-rack was placed in the centre of a winding stairway, and reached upward to the second story ceiling.

Another very original hat-rack was made of an ancient ox-yoke with pegs set in it.

In one cottage regular bunks were constructed like berths on board ship by supporting two bedframes and sets of springs upon birch posts, set out about four feet from the wall of the room. When curtained with bright-colored Canton flannel, their use was never suspected, and they were very convenient when an overflow of guests occurred.

Window-seats or divans made of broad, thick planks well supported, and covered with cushions or skins of the fox or other wild animal, are always an attractive addition to a room, especially when there is a pleasant outlook. To such places children bring their dolls and toys and enjoy themselves, and even cats and pet dogs will be found taking their noonday siesta there.

Of course rustic furniture must be in keeping with its surroundings. It would be wholly out of place in a city boudoir or luxurious room; but in

Digitized by Google

a summer cottage at the mountains or by the sea the effect is harmonious, and it lends an additional charm to the unconventional out-door life.

A simple cottage with stained floors, open fireplaces and a few Turkish rugs, and some unpretentious ornaments such as have been here described, will be enjoyed, not only on account of its contrast to the luxury of city homes, but on account of their own proper comfort and attractiveness.

CHINESE GIRL SLAVES.

On the border of "Chinatown," in San Francisco, there stands a neat, square frame-house,

surrounded by a well-kept garden, which is used as a mission home for young Chinese girls of the city, who have been rescued from the peculiar form of child-slavery which prevails among the Chinese, or who seek or are given refuge from distress and degrading surroundings.

It seems to be a well-established fact that young Chinese girls—even girls in their infancy—are sometimes bought and sold among the Chinese of San Francisco; and so remote are those people from American customs and influence that it is practically impossible for the laws to prevent this practice, or to rescue its victims, unless specific acts of cruelty can be proved.

In this mission house any wretched or homeless Chinese girl can not only find a secure refuge, but may learn, at the hands of kind American women, how to do many kinds of useful work.

The inmates learn, moreover, what are rarely understood among the Chinese of San Francisco, the virtues and benefits of cleanliness, order, fresh air and light.

The girls who have found shelter in this home spend much of their time upon embroidery, fancy work and sewing, in all of which they show a natural facility. They wear the Chinese costume and are often found at work on the facings of their wood-soled slippers or on their *foos*, as their silk or cotton trousers are called.

How completely accustomed the Chinese of San Francisco are to the idea of selling their female children is illustrated by a story told by a young lady who works as a missionary among them, and who is held in great esteem by them. Among this young lady's Chinese friends was a woman who sought to provide for herself and her four little children by binding slippers for a Chinese factory.

Her husband smoked opium constantly and gave her no assistance. They lived in a damp basement, and had not sufficient food.

The young missionary not only carried food to this family, but spent much time in instructing one of the children, a girl six years old, in English, in order that she might be better able to earn money and help her mother. The child fell ill, and the missionary went often to take her nourishing food. During one of these visits, the mother made her this proposition:

"Miss Emma, you buy baby. I no feed him, baby all so hungly. You buy baby—I got sell him!"

"Him" was a baby girl. As the mother knew, the child had already a small market value with some speculator, because, when she grew older, she could be sold for a considerable sum.

The Chinese girl slaves are generally purchased by the speculators when they are under twelve years of age, and are afterward sold as wives or servants. They are often, indeed, put to regular day labor at an age when a white child might be considered too young to send to school.

The young girls in the mission home are a gentle, sweet-voiced little band, and in this respect there seems to be a radical difference between them and the Chinese boys at the public school provided for them.

These boys, it is said, are often very rough and ungentle fellows. The teacher of this school says that he has frequent occasion to quell small riots among them, and that it seems impossible to teach them American ideas of good behavior in the school-room.

The places in which some of these Chinese children dwell, when at home with their parents, seem quite uninhabitable. In one two-room tenement five women were found living with their children, in a space not exceeding ten by sixteen feet square. There were two small windows in the outer room, but no window in the sleeping-room. In this room bunks were built in tiers, one above another, on both sides of a narrow passage-way. No light or air was admitted save by the door, and here all five families slept. The living-room was six feet square.

The most wonderful thing about the matter was that the children looked well and happy.

Many of the girls who are sheltered and taught in the mission home leave it, when their work in it is done, to become the wives of respectable Chinese merchants, and they carry with them to their new homes many American ideas of cleanliness and beauty.

MARIE FRANCES UPTON.

For the Companion.

THE HORSE-CHESTNUT.

There is no more charming study at this season than the buds and branches of our trees. The buds contain the plan of the growth of next year, and, studying them, we can see the relation of the plan laid down in the bud to the whole character of the tree. The horse-chestnut is an excellent example.

Open one of the large, scaly buds, or, better still, place a branch in water in the house and watch the unfolding.

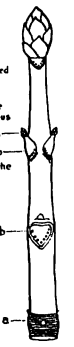
First the upper scales part a little, showing their inner green edges. The scales are varnished to keep out the wet, and are very sticky. As the leaves within enlarge, the scales are forced apart, and we see the little soft things, covered so densely with wool to protect them from the cold that we can hardly see that they are leaves.

Each leaflet is folded on its midrib, the halves closely pressed together so that it is difficult to separate them, and the leaflets are laid side by side, like the sticks of a fan. There are generally seven leaflets in each leaf.

If we are studying a large, terminal bud, we find the conical flower-cluster in the centre.

But how shall we define a bud? "A bud is the promise of a branch." If we watch its growth, we shall see the joints of stem between the leaves lengthen and grow woody. Everything which the horse-chestnut branch holds exists, undeveloped, in the bud.

If we look carefully at a twig, we shall see three kinds of markings. There are sets of rings at unequal distances on the stem (*a*), large, triangular scars in opposite pairs (*b*), and a round, rough scar wherever each branch forks, or turns aside (*c*). These markings must necessarily correspond with something in the bud, for the branch is only a developed bud, or series of buds.



Look at the one that is bursting, and you will see that, while the stem bearing the leaves is pushing upward, the scales remain behind. Pull off these scales, and marks are left exactly like the rings on the branch. These rings are, in fact, bud-scale scars, and as each bud holds a year's growth, the number of rings on the branch tells its age.

Next we notice that the leaves are in opposite pairs on the sides of the stem, and so are the large triangular scars on the branch. These are really leaf scars, and by counting we can tell how many leaves there were in each year.

Finally we look at the round scar in a fork, and see that it ends the year's growth, and is directly on the top of the stem. This is the position of the flower-cluster in the bud, and this round scar is where the flower-cluster fell off last autumn.

Sometimes one of these round scars is apparently on the side of the branch, but if we look carefully, we shall always find a ring, showing the beginning of another year's growth directly above it.

There are two places for buds to appear—at the end of the stem, and in the inner angle which a leaf makes with the branch. This is the axil of the leaf, and these are called axillary buds.

When the flower-cluster is on the end of the stem, it stops the growth of the branch; but the branch must be carried on, and one of the nearest axillary buds develops, or else two of them develop. When two buds grow a fork is made; when only one develops, it soon throws the flower-scar upon one side, because it grows so rapidly and strongly. Even when there is a fork, one of the forking branches usually gets the start of its fellow, and grows so much faster and with so much more vigor, that the other is thrown to one side, and looks like a branch of the stronger one.

This constant interruption of the growth of the limbs makes them very irregular and crooked, as we can see by looking at the tree. In trees where the flowers are in the axils of the leaves, the terminal bud grows every year and the limbs are nearly straight, as in the case with the boughs of the beech and elm.

There is another peculiarity about the horse-chestnut, that it bears so little fine spray, and has such thick, rugged branches. This is because the strong terminal buds take all the nourishment, and the little buds on the sides of the stem are starved.

When, however, the flower-cluster comes, one or two of them are given a chance, because no terminal leaf-bud is formed. There is hardly ever any branching in old trees, except when it is made in this way by a fork.

The little twigs may grow for years and years and be only a few inches long, while their main stem has grown many inches every year.

The axillary buds, or those at the ends of the small twigs, do not contain flower-clusters. In these there are generally six leaves, while the large buds have only four.

The leaf scars have five or seven dots on them, which generally answer to the number of leaflets in the leaf. These dots are made by the ends of woody bundles which make the framework of the leaf.

There is one other kind of marking on the horse-chestnut branch. There are little dots scattered over the bark, which become long and narrow in the older parts. These are the breathing-pores of the stem. Every living thing must breathe oxygen from the air, and through these little holes in the bark the stem gets its oxygen.

When the buds have burst, they grow very rapidly, and the tree is quickly in full leaf. When the leaves are young they droop as if they were not strong enough to hold themselves up. For this position there is a reason. If the leaves were spread out to the sunlight they would evaporate water too freely, for the cell walls are still thin, and the water can escape through them. After the walls have thickened so that the water cannot pass through, except through the breathing-holes, where the evaporation is regulated, they straighten themselves and the tree is in full leaf.

There is no trace now of the wool that covered the tender young leaves. It is no longer needed, and has been cast aside.

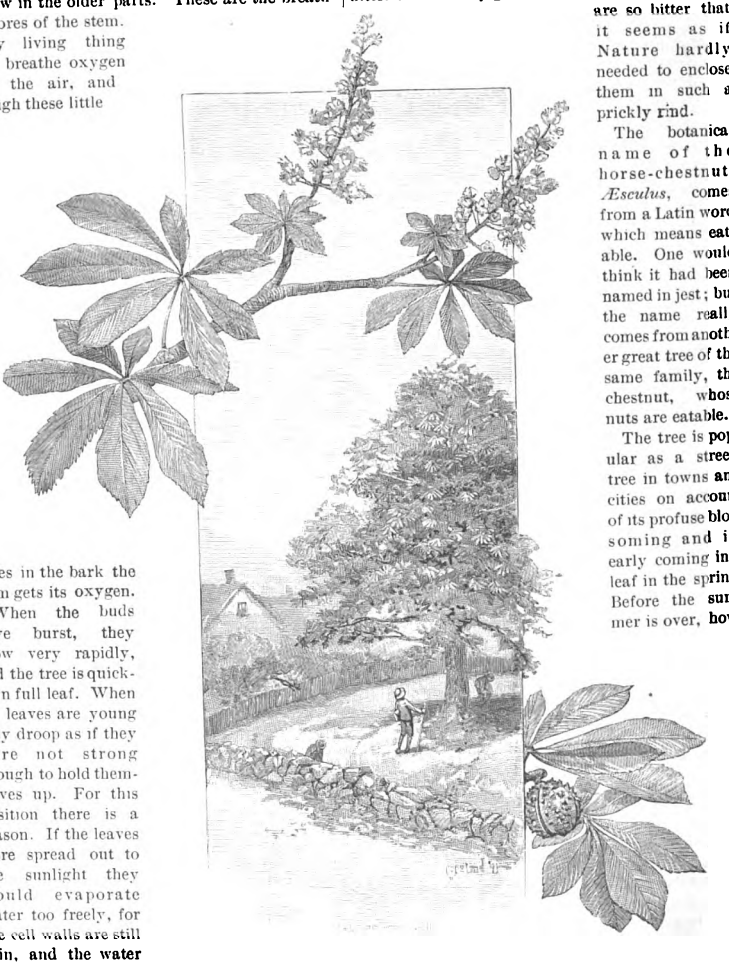
Soon the flowers appear; and then the tree is very beautiful. It has been used as a symbol of ostentation, because while the flowers and leaves are so showy, the fruit and timber are worthless.

But the blossoms are very interesting, especially in their fertilization.

There are two kinds of flowers in every cluster, the fertile and the sterile. The fertile flowers, that is, those that ripen fruit, are all near the bottom of the spike; you will always notice in a cluster that the nuts are near the base.

The styles of these fertile flowers hang out even before the bud opens, while the stamens are still immature. At the same time the upper flowers of the cluster have matured their stamens, which are of the same length as the style of a lower flower. In the upper blossoms the pistil is small, has only a rudimentary style, and never develops any seeds at all. These flowers are therefore sterile. Now mark the result. A bee, in search of honey, climbs on one of these staminate flowers, and thrusts its proboscis into the nectar secreted at the base. In so doing, he rubs off some pollen upon his body, and then, flying to a lower flower, leaves some of this pollen on the style, which is exactly in the same position relative to his body as the stamens of the upper flowers.

Some pollen would also probably fall on the styles or be carried by the wind, without the agency of insects.



The flowers are rendered attractive to insects by the nectar, and by the bright yellow spots on the petals, which change to crimson as they grow older.

Our bees have a very bad habit of crawling under the flowers, and sucking the nectar from beneath. This is very wrong, for they steal the nectar without helping their host in return. I have sometimes wondered if it were because it is a foreign tree, and the bees had not learned the proper way to the nectar.

The nuts of the horse-chestnut are very dear to the children, dearer, perhaps, because they are of no use but to look at and make baskets of.

Grown men sometimes carry them in their pockets, cherishing a notion that they "keep off rheumatism." Sometimes, perhaps, they carry the nuts in the pocket from a sort of idle liking for their round, polished brown surfaces, even when they have no belief in the rheumatism cure.

If we plant a nut we shall be interested to see how it grows. The hard white meat that makes the bulk of the nut belongs to the thick seed-leaves, which are stored full of food. This nourishment for the young plant is protected by being made so bitter that even pigs will not eat the nuts. They are so bitter that it seems as if Nature hardly needed to enclose them in such a prickly rind.

The botanical name of the horse-chestnut, *Æsculus*, comes from a Latin word which means eatable. One would think it had been named in jest; but the name really comes from another great tree of the same family, the chestnut, whose nuts are eatable.

The tree is popular as a street-tree in towns and cities on account of its profuse blossoming and its early coming into leaf in the spring. Before the summer is over, how ever, its leaves often become brown and shrivelled. The first leaves of the plantlet are within these thick seed-leaves, and the little stem has a small

Digitized by Google

pocket of its own in the brown shell. It must take a great deal of pressure to break this hard shell. The first leaves raise themselves above the ground, but the seed-leaves remain buried, and nourish the plantlet till it has roots and can get its own living.

JANE H. NEWELL.

WATCHED BY THE HUNTER.

Shrewd is our bird; not easy to outwit him!
Sharp is the outlook of those pin-head eyes;
Still, he is mortal, and a shot may hit him;
One cannot always miss him if he tries.

—*O. W. Holmes.*

For the Companion.

AT A CALIFORNIA SHEEP-RANCH.

In Three Parts.—Part I.

A "Tender-Lung" among the Mountains.

"Well, young man, you seem to be making yourself at home here! Who are you, anyway, and what are you doing here?"

These gruff words, and the trampling of horse's feet, waked me, and through the open door of the shack I saw a large, roughly-dressed man, black-bearded and sun-burnt, sitting on a powerful roan horse, with a Winchester across his saddle, and looking in upon me with unpleasant curiosity.

I felt sure he was a brigand.

I had nothing to do but to get up and go to the door.

The man looked at me closely for a moment, and then laughed. A laugh tells a great deal about a man, and his laugh at once led me to change my mind concerning him.

"I am a tenderfoot," said I, "or perhaps a tender-lung would hit it better. Three months ago some doctors in the East gave me my choice—to die, or come out this way and rough it, hunting and fishing, for a year or two. I did not want to come, for I had just finished my studies and begun the practice of law; but I decided that this alternative was better than the other. Is this your shack?"

"That's all right," said the Californian. "This 'ere hut is on my sheep-range, but you're welcome. 'Scuse me if I spoke a little rough. Sometimes we find land-jumpers up this way. If you're here only to fish and hunt, why, stay all summer and help yourself."

I expressed my thanks, and told him that I had come up over the range on a mule, and finding no one in this shack, had camped in it.

"I'm goin' on a bit," said the rancher, touching his horse; "but I'll look in on you again this evening, when I come back along."

Not a bad sort of man, I thought, and since, as tenant, I ought to do my landlord some honor, I began to prepare as good a supper as I could.

I had caught several fine trout in the creek earlier in the afternoon, and eight or ten of these speckled beauties, each weighing about a pound, I fried with bacon rolled in corn meal. Cooking, I may remark, is almost my only accomplishment; perhaps some of my ancestors were cooks.

To the trout and bacon I added hot biscuit and steaming, mealy potatoes, bursting their skins, a pot of fragrant coffee and plenty of canned pears.

It was nearly sunset when my "spread" was ready to set out on the slab table, and a few minutes later I heard the tramp of my landlord's horse. Presently the animal was picketed, and the rancher, after washing in the stream, came into the cabin, with saddle pockets and a roll of blankets over his shoulder.

"You're just in time for supper," said I.

"Wal, I must say," he exclaimed, "I didn't expect to strike such a lay-out as this to-night! Kit put up a lunch in my saddle pockets, but I reckon I won't touch it with such a table as this!"

We seated ourselves and began to eat.

"Kit," he went on, "is my oldest girl, and if I do say it, she's the best cook and the best girl in the whole valley. We always have a Chinese cook at the ranch, but there's no Chinaman that can hold a candle to Kit at cooking."

"You just ride down and see us the first chance you get," he added. "Any one can tell you where Dave Hughes lives; we'll all be glad to see you. A man who can cook like you can't be a very bad fellow, if he is a lawyer!"

He was a jolly guest, and when supper was over he entertained me until midnight with incidents of early mining days, encounters with grizzlies and adventures with Indians.

"You'll see more of us soon," he said, after breakfast next morning, as he was rolling up his blankets. "We are going to bring the sheep up here next week, and Bill, my oldest boy, is coming up to herd them."

"Is Bill a young boy?" I asked.

"About seventeen; but he knows these mountains like a book. His mother and Kit don't like to have him up here, all by himself; and I was just thinking that if you were going to be here, and you and Bill could camp together, his mother wouldn't worry about him so much. Bill would be tickled to have your company."

"It would just suit me," I replied.

"All right then. Bill aint so good a cook as you, but you'll find him a lively boy."

Five days later Mr. Hughes, with Bill and two hired men, rode up to my hermitage, driving three pack-mules and a band of twenty-five hundred sheep before them. Hughes himself and the men returned to the ranch next morning, leaving Bill with me, in charge of the "band."

For seventeen years of age, Bill was what we should call a strapping boy in the East. He was a manly fellow and a great worker. No herder his father could have hired would have taken better care of the sheep. His educational advantages had been small, but he was naturally bright, a keen observer, and his big slouch hat covered a head that was full of ideas.

The stock of provisions which they had brought up for our use was something quite astonishing. One pack-mule had been loaded with blankets and cooking utensils and flour, another with bacon, coffee, beans, potatoes and fresh vegetables, and the third mule carried nothing but cans, jars and bottles.

Every two weeks some one came up from the ranch, with a pack-load of fresh vegetables and provisions, and also brought my letters and papers, and during the fourth week Bill's two younger brothers made their appearance. They had heard of the good times we were having, and wanted to "join in."

The name of the older of the two was James Madison Hughes, but of course he was called "Jim." He was a tall, slim boy of fifteen years, whose legs appeared, as yet, to be about a foot too long for him.

The younger was Jim's opposite physically. He was short, "chunky" and fat, and a very jolly, gritty fellow. His parents had christened him Hamlet, but this name had been humorously altered to Ham-fat, as more in keeping with the circumstances of ranch life.

We led a jolly, happy-go-lucky boys' sort of life during the next three or four weeks, hunting, fishing and shepherding.

One day, while Jim and Ham-fat were helping me to get dinner, we heard a rattling of stones up the mountain-side beyond the spring, and glancing in that direction, saw Bill, who had gone out deer-hunting after breakfast, running through the pines, having upon his person no clothing but his overalls.

"He's been tackling a bear," cried Jim, "and has got his clothes torn off!"

"What's the matter, Bill?" I exclaimed, unable to restrain a laugh. "What's become of your clothes?"

"I've got three bears up a tree; that's what's the matter!" panted Bill, "and I left my clothes to keep them from coming down.

"You know that rocky point just this side of Dark Cañon?" he went on, after panting for a few moments. "Well, I was coming down that steep ridge, picking my way among the rocks and brush. I saw something run up a big fir-tree about a hundred yards below me.

"I thought it was a 'coon, and made a break for the tree as fast as I dared, it was so steep and rocky; and I had got down almost to the brink of the cañon where the tree stands, when I saw two more just like the first one, climbing up on the

other side of the tree, only one was a good deal bigger than the other two, and the big one was black as a coal, while the others were brown.

"I was near enough now to see that they were cub bears instead of 'coons. Then I stopped in a hurry, for I knew the old bear couldn't be far away. But the ground all around the tree is covered with rocks as big as this cabin, and all grown up with chapparal and buck-brush, so thick that I couldn't see a thing.

"I could hear her, though, rushing around among the rocks and brush at the foot of the tree, the minute I stopped, and making a kind of clucking noise. She was trying to call the cubs down out of the tree. I knew they would all get away, if I let them get to the ground, so every time they started down I threw stones at the tree. That sent them scampering up among the branches again.

"I guess one of the stones hit the old bear, for all at once she stood up on her hind feet and looked over the top of the thick brush, to see what I was about.

"That was just what I was waiting for. I could see all of her head and shoulders, and then I took aim with my Winchester and gave her a shot right between the fore-paws.

"I thought she would stay and fight for her cubs, but she turned and started up the side of the mountain as fast as she could run. I kept shooting and broke one of her hind legs, but she gathered herself together and got over the ridge.

"I think I must have killed her, though, for I'm sure my first ball went clear through her. I tracked her to the top of the ridge, and then came back to look after the cubs.

"They were all perched up among the branches, about sixty feet from the ground—the cunningest little rascals you ever saw! I made up my mind that we could catch them by cutting down the tree, so I took off my clothes, made a roll of them, and tied them around the tree to keep the cubs from coming down. We can bag them alive."

We ate a hasty dinner, and all four set off, taking the axe and several barley sacks. In half an hour we reached the place. Bill's clothes, tied around the tree, and his hat, which he had hung on a knot, had done good service. The cubs had been

afraid to come near them, and were still perched up among the branches.

They were at least seventy feet from the ground, and while they appeared small and harmless at that height, I knew they would look twice as large when on the ground. They were chubby little fellows, resembling balls of fur as they sat up among the branches—their ears cocked up, and their eyes following every movement we made.

The black one was a third larger than the others, and must have been a stray which the mother bear had adopted, for she was a cinnamon, as were the two smaller cubs. Bill and I began chopping at the tree. Jim and Ham-fat, meanwhile, had torn some of the barley sacks into strips and wound them thickly about their hands and arms, preparatory to grappling with the young bears. Each announced his intention to capture a cub.

We chopped an hour. Then the tree sagged heavily, and poised a moment, during which Bill picked up a club.

The tree fell with a tremendous crash. The huge, thick branches of the top, falling among the brush and rocks, made a great stack of greenery.

One of the small cinnamon cubs must have been killed by the fall, for we could find nothing of it. But the other and the black one scrambled up and perched themselves upon the highest part of the pile of broken branches; but when they saw us closing in around them, both whimpered and jumped off, the little cinnamon on the side next to Ham-fat, and the black one on the other, almost into Jim's outstretched arms.

Each boy made a grab for his cub. But the black proved too good a boxer for Jim; it turned upon him, and gave him so smart a cuff on the side of his head that he went head first into the brush. Bill, however, was close at hand, and before the black cub could get away, gave it a heavy blow upon the head with his cudgel. I had a sack ready, and we popped the whining little rascal into it before it recovered its wits.

Hastily tying the strings, all three of us ran around to the other side of the fallen tree, where the cinnamon cub's squeals and Ham-fat's shouts for help told us that a battle was raging.

Ham-fat had seized the cub the instant it gained the ground, and held on in spite of its vigorous scratching and biting. The creature must have weighed thirty pounds. It was a perfect little fury, and it tore savagely at its captor. In half a minute it had rent Ham-fat's protective wrappings to strings, torn his jacket half-off, and inflicted many scratches and bites on his limbs.

He held fast, till we ran up with a sack; but as he was endeavoring to shift his position, the cub got away from him and ran.

With a shout, Ham-fat gave chase, and the rest of us followed—down through the pines to the open ground near the top of the cañon, round and about among rocks, then down the steep side of the declivity toward the bottom of the gorge.

It was a wild race; but do our best, neither of us could get nearer the cub than the stocky Ham-fat! He was on the point of seizing the creature again when it darted into an old hollow redwood trunk that lay aslant along the steep side-hill.

"I'll soon have him out of there!" exclaimed the excited boy. Throwing himself flat on the ground, he crept in at the hole.

It was a large log, four feet thick, I should think, and the hole was large enough even for Ham-fat.

He wriggled in, first his solid body and then his boots disappearing from view.

"Haul him out!" cried Bill and Jim, encouragingly.

"I've got him by the hind legs!" mumbled Ham-fat; but his boots did not reappear.

"Why don't you back out?" cried Bill.

There was more muffled noise inside, and the log shook.

"O boys! I can't seem to get out," we heard Ham-fat say.

Bill crept in and seized his boots, but could not start him out. He was stuck fast.

"It's uphill!" we heard Ham-fat mumble. "I've got the cub by the leg; but a fellow can't back uphill! Swing the log around downhill, can't you? Then I can back out."

That seemed reasonable. We laid hold of the end of the log to swing it around and bring the hollow end downhill. With difficulty we stirred it from its place, at first, and then partly rolled, partly pulled it half around.

Before we were aware, it rolled over again. Bill grabbed at it. I did the same; but it rolled away from us, and in a moment more was going, sidewise, off down the steep slope.

"Stop it! Stop it!" cried Bill.

"Oh, don't let it roll down!" screamed Jim; and we heard a muffled outcry from Ham-fat, inside.

We threw ourselves upon it, but the ponderous mass kept revolving, and was soon whirling over and over, bumping on the stones and bounding over the inequalities of the rough surface.

A thrill of horror passed through me. I was sure the boy would be killed, for there was an even steeper and rougher descent ahead.

We ran recklessly down the cañon side, and I saw that Jim was almost crying at the sight.

Smash! the log went off a shelving rock, four or five feet high, then over another, then through a copse of dead fir scrub, and finally bounded down a still higher ledge, amidst green bushes, disappearing from our sight for the moment, with a crash in the bed of the creek that ran along the bottom of the gorge. We hurried down through the bush fringe. I expected to find the lad dead there.

But what we now saw was the log, split open across a rock in the shallow water, and Ham-fat making dizzied efforts to regain his legs. He still grasped the cub's hind leg with one hand, but when he tried to rise, fell over, as if intoxicated. The cub, too, seemed quite dazed and powerless.

When we asked if he was hurt, Ham-fat did not reply at first, but presently muttered something about "a sneaking-mean trick on a feller!" We found that he had supposed that we had rolled him down, purposely, for a joke, and in fact we were never able to wholly convince him that it was all an accident.

The adventure made him dizzy and gave him nausea, but otherwise did him no harm.

The cub was put in a sack. We took the young animals first to our camp and afterwards down to the ranch.

MYRON B. GIBSON.

A SHOWER OF DUCKS.

The old story ran somewhat in this way: A little chicken was peeping under a rosebush to see how such beautiful flowers were made. A roseleaf fluttered down upon it, and the frightened chick scurried off to its mother with the alarming report that the skies were falling.

My story reverses this, for it tells how ducks fell from the skies; and if roses had been peeping about, they must have been the ones to have a fright.

One May morning I was trolling for black bass on Elk River, one of the most bewitching of streams, where it elbows itself, by quick rushes, through West Virginia's mountains.

By rockside and drift-stacks, where the eel-grass floated over watery pockets, or flags held aloft their two-edged leaf-swords from irised shallows, as body-guard to some invisible river nixie; where dark forests of fir-like britterworts swayed in the lazy pools, there the bass lay, fixed and motionless, as though imbedded in solid crystal.

Neither the enticement of gaudy flies and tempting morsels in live bait, nor the glitter of whirring troll, stirred them to more than knowing eye-twinkles. It must have been a fast day with them; or, perhaps in some mysterious way, information had reached them that a dangerous fisherman was coming, with all the allurements of his craft.

At any rate they would not bite. So I rowed my cedar skiff under the shadow of an overhanging beech, and settled myself comfortably in it to watch quietly and enjoy what was going on about me, resolved to have at least as much patience as a fish, and knowing well that I could tell when feeding time began, by the leaps of frightened minnows from their ravenous pursuers.

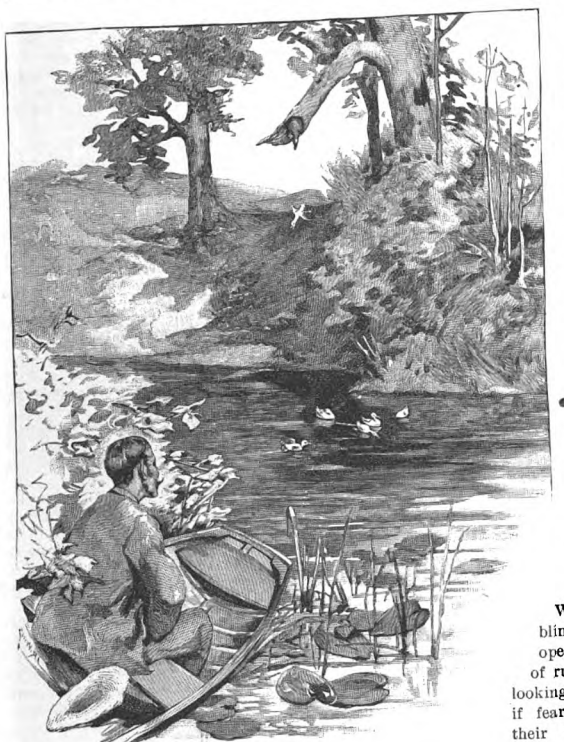
No one with eyes and ears need be lonely, even in the loneliest of places. Some bird or animal, insect or plant will be busy at its ever interesting life-work, from which strange bits of knowledge can be silently stolen for the observer's store.

Up the trunk of the friendly beech a procession of snails, with their curled-up houses on their backs, were journeying to found a snail-town somewhere; or perhaps the branches of the tree were their mountain resorts, and they were off for a summer jaunt.

"What an advantage," I thought, "to be able to run out one's eyes and send them ahead on independent exploring expeditions as does a snail! What trouble one would be saved if he had no legs to ache from climbing, or if he carried his breathing apparatus on his back, carefully housed against all danger of taking cold!

"How very convenient, too, to curl up in one's shell on a rainy day, or take a nap where wood flies, gnats and mosquitoes would not bother!"

I had almost decided that I should like to be a snail—for a while—when a splash in the water sharply disturbed the stillness.



"Aha!" I mentally exclaimed to the bass. "You could not wait any longer; some winged lunch has been too enticing for even your patience."

But no; no bass made those rings in the water a hundred feet or more from me; the bulging swirl

Digitized by Google

was wanting. Something had fallen into the stream.

As if by magic, a tiny, downy duck popped up, fluttered its stubby wings, shook its miniature head and sent sparkling pellets of water flying in every direction as it bobbed and scooped and paddled upon the surface.

Raining Ducks.

Surely it was what had made the splash. Where could it have come from? Had it dropped from the sky? Was it raining ducks?

I remembered that I had been told in my childhood that when it snowed, an old woman who lived up among the clouds was picking her geese. Did she keep ducks, too, and had a youngster slipped through her fingers?

As I wonderingly watched the pretty creature, there was another splash. Instantly a second ducklet appeared in the centre of sparkling wave rings, where it paddled and dove with the grace, skill and calm demeanor of a long-experienced waterman.

The two eyed each other a moment in comical surprise, just as if they were saying, "Hello! how did you get here?" Then they bobbed a merry recognition.

A third soon fell to join the swimmers. If bits of the sky had fallen they would not have puzzled me more.

But there are reasons for all things, and most human beings are not as easily deceived as chickens. I began to look about for a likely starting-place from whence could come the shower of ducks.

Directly over where the little fellows were sporting, leaned the white trunk of a hollow sycamore or plane-tree. About twenty-five feet from the water a large branch, with a great, black hole in it, stood over the stream, resembling the spout of an immense pump.

Something moved in the yawning opening. A feathery ball, with a fluffy neck and a diminutive head with wide-open, protesting bill, was thrust from it, held firmly in the air by a wing in the beak of some larger bird, just visible behind it. Then its captor poised it for a moment, took a hasty glance below to see if the way was clear, and dropped it.

The duckling's stubby wings closed tightly to its body. Down it shot, head foremost, struck the water, and disappeared in it, to pop up again quickly, sprightly as an angling cork.

Seven more ducklings followed it at short intervals. Evidently the mother duck was turning her children out of doors; yet not in anger, for, as she loosened her hold on each, she cocked her pretty head to one side, and kept her under eye upon her departing child until she saw it happily congratulated upon its lucky tumble by the merry group beneath.

Only once did the mother bird leave her retreat. Then she came out boldly, without pausing, and stood upon the edge of the opening. In her bill she held one of her children by the wing.

By rapid strokes of her own pinions she circled close to the river's surface, and gently dropping her feathered child as she flew, left it in safety with its comrades. Was this her pet? Was it her latest born, or was it crippled from its birth, and likely to be injured by such a fall?

What a jollification there was among the young navigators! They swam, splashed, dove, stood upon their webbed feet, flapped their tiny wings, preened themselves, joined in lively chases, or sat in ludicrous contemplation of their new surroundings.

At the least sound they huddled quickly together, or pointed their sharp tails toward the sky and were gone under the water in a twinkle. One by one they cautiously reappeared, and, as courage came, resumed their gambollings.

"What kind of duck is this, that tunnels her home in a tree-top and nests her family there?" I asked myself.

The question was soon answered. After all the ducklings had been ejected and unmercifully soused, the old duck flew up the river for a short distance, evidently on a scout, and settled in the water. Soon I saw her swimming cautiously back, closely eying the water's edge and bank for any sign of danger.

What a beautiful creature she was! so neatly dappled about neck and breast; her wings banded with a dark green, rich and lustrous as the finest satin; her shapely head, resplendent with irised colors and striped with velvety white, poised gracefully; her lines more perfect than those of a racing yacht; every fibre of her plumage preened to exquisite exactness.

She was the beautiful Summer Duck *(Anas sponsa)*, the handsomest of her kind.

When quite near to her dabbling brood, she left the river's open and swam into a cluster of rushes, where she sat quietly looking at them for a while, as if fearing to attract attention to their whereabouts by joining them. Presently I heard a low call. Every busy head stood still in quick attention. Another call; and instantly, without a check of hesitancy, twenty little paddles plied the water vigorously, carrying ten propelling ducklings to their mother's side.

A little later I saw the rushes quiver and the living fleet steal quietly away.

DANDELIONS.

The tale of sudden fortune soon is told:
But yester eve no flower enriched the lawn;
To-day the sward is bright with discs of gold
That soon on airy pinions will be gone.

CHARLES HENRY LUDERS.

ENGLISH MARRIAGE LAWS.

A case was recently tried and decided in the English Court of Appeal which attracted a great deal of attention, since it had an important bearing on the rights of an English husband over his wife.

It appears that a gentleman named Jackson, soon after marrying, was obliged to go to New Zealand on pressing business. He left his newly married wife in England. Upon his return, he found that she had taken up her residence with her relatives, and, to his surprise, she obstinately refused to go back to him and live with him.

The husband resolved thereupon to exercise the right which he supposed to be his by the time-honored law of the land, and to capture his wife and compel her to live with him whether she would or not.

With some friends he managed to get access to her, and forcibly seized her and carried her off to his own house. There he kept strict guard over her for several days, using, indeed, no bodily violence, further than to take her bonnet away and throw it into the fire, and forbidding her relatives access to her.

The relatives moved for a writ of habeas corpus, which compelled the husband to produce his wife in court, in order that it might be decided whether he was lawfully retaining her.

The Divisional Court, before which the case was first tried, affirmed the husband's right to hold and keep possession of his wife's person.

But an appeal was made to the highest court, that of Appeal, consisting of the Lord Chancellor, the Master of the Rolls, and Lord Justice Fry; and this highest court reversed the decision of the lower court, and unanimously decided that the husband had no such right; that he had been wrong from first to last, and that the obdurate wife must be released and restored to liberty.

In this country there would probably be but one opinion as to the justice of this decision. But in England, from ancient times, the idea that the husband has a right to compel his wife to live with him has been rooted in the public mind.

In recent years, however, many laws have been passed in England, regarding the rights of married women, which have been in harmony with modern thought throughout the civilized world.

It is true that the law, which has existed for more than sixty years, forbidding any man to marry the sister of his deceased wife, still remains on the statute book. It has been repeatedly repealed by the House of Commons; but the House of Lords, largely influenced by the bishops, has always refused to do away with the restriction.

While a wife who is deserted by her husband cannot, in England, as she can in most of our States, obtain a divorce from him on that ground, she can compel him to support her, by paying her such a weekly sum "as is in accordance with his means." On the other hand, it seems by the recent decision that a husband has no rights whatever over a wife who deserts him.

By a law passed within ten years, moreover, the married Englishwoman's rights in regard to property have been greatly enlarged. She can now acquire, hold and bequeath property in her own name, without any control or interference of her husband; while she is liable for the debts separately contracted by her. She has thus been placed virtually in the same position, as to property, as a man or as an unmarried woman.

The result of the decision which has been referred to is likely to be, that desertion by a wife in England will be added, in the laws of that country, to the other causes for which a husband can sue for a divorce.

For the Companion.

A NEW HOPE.

I scoffed at the "silver lining;"
I sneered at Hope. The care
That fell about my every hour
Cast shadow everywhere.

My little daughter listened
And, smiling, made reply:
"I thought that shadows never fell
Unless the sun were nigh!"

F. A. WHITING.

THE UNITED STATES AND ITALY.

On the night of the Fifteenth of October, 1890, David Hennessy, chief of police of New Orleans, was found on one of the streets of that city mortally wounded by pistol-shots. Before he died he declared that he had been shot by Italians.

The assassination of Hennessy was followed by criminal proceedings in the courts of New Orleans. At the trial there was testimony to show that Hennessy had been killed by agents of a secret society, called the Mafia, formerly existing—and, it is supposed, at present existing—in the Island of Sicily. Many thousands of the population of New Orleans are immigrants from Sicily, and the society is said to have been introduced by these immigrants.

Within the years in which the Sicilian immigrants have been established in New Orleans about thirty murders have taken place, in nearly every case of Sicilians or other Italians, which have gone unpunished by the law because no proof could be obtained against persons accused of the crimes.

Chief of Police Hennessy was engaged in an effort to break up the Mafia when he was assassinated. Certain confessions made by alleged members of the Mafia, and other evidence, led to the indictment of nine men for the murder of Hennessy, and ten others for complicity in it.

The nine men who were indicted for direct connection with the murder were placed on trial, and though the evidence against them was regarded by the general public in New Orleans as conclusive, the jury, on the Thirteenth of March, rendered a verdict acquitting six of the accused, and disagreeing as to the guilt of the three others.

This verdict caused great excitement in New Orleans, and it was declared in the newspapers and in meetings of citizens that the jury had been bribed and otherwise influenced by the Mafia to bring in a false verdict.

The next day, March Fourteenth, the jail was broken into, and eleven of the alleged murderers and their accomplices were put to death by a mob led by and largely composed of men prominent in the city, who thus undertook to right what they regarded as a wrong against the public peace.

Following this act, the minister of the government of Italy at Washington, Baron Fava, alleging that four of the men who were thus illegally put to death were subjects of the King of Italy, demanded of the United States Government the punishment of the men who had killed the Italian subjects, and the recognition of the principle that a money indemnity was due to the relatives of the victims.

This demand was made under the authority of a treaty between the United States and Italy, which stipulates that the citizens of each of the two nations "shall receive in the States and Territories of the other the most constant protection and security for their persons and property, and shall enjoy in this respect the same rights and privileges as are granted to the natives."

On the last day of March Baron Fava, the Italian minister, notified our government that he had been ordered by his own government to take his leave and depart from Washington.

The recall of an ambassador in this way is always an expression of displeasure on the part of one nation with another. The reason which Baron Fava gave for his recall was, that his efforts had been in vain to obtain an assurance from the United States Government that the persons guilty of the massacre in New Orleans should be brought to justice.

The government, which had already sent, through the Secretary of State, a message to the Governor of Louisiana requesting him to take all possible steps to bring to justice all who had violated the law in New Orleans, replied that it could give no assurance to the Italian Government that the New Orleans rioters would be punished.

No government, Secretary Blaine declared in his reply, could give an assurance in advance of their trial, that accused persons would be punished; and that the Constitution of the United States gave the jurisdiction over the alleged murderers in this case to the State of Louisiana, and not to the federal government. The government admitted the principle of indemnity to Italian subjects who had been wronged.

It has not yet been ascertained precisely how many of those who were put to death by the rioters were Italian subjects. But of course the principle is the same, whether there were two such or a thousand.

The diplomatic complications that have arisen out of this affair are almost novel in the foreign relations of this country. In former times, and between nations less reasonable than Italy and the United States, they might have led to war. But no cool and well-informed person on this side of the Atlantic has feared that these events would result in war.

IN A HOSPITAL.

A visitor to a hospital in Paris, in which diseased children of the most wretched class are received, wrote home lately:

"Charity, so often with us cold and grim in its dealings with the poor, puts on a merry, tender face here. The walls of the hospital were gay with colored prints. Flowers brightened the windows. In the baths into which the grimy, scared babies are coaxed on their entrance floated tiny swans and ships with red sails to entice and amuse them. The doctors placed dolls and bonbons on the operating-table as prizes before the patients were brought in, and addressed these ragged, blear-eyed children of the slums with the courtesy due to princes in disguise, as '*Monsieur*,' '*Cherie*,' or '*Ma gentille demoiselle*.' They put hope and courage into the souls, as well as health into the bodies of their patients."

No wise teacher can long deal with the minds of children without discovering the value of this system of the French physicians.

Twenty years ago a forlorn little mulatto boy sat apart, one summer day, in a school for negroes in Philadelphia. He was idle, mischievous, and as usual, in disgrace. A visitor came into the school, a woman, who, herself one of the "dark people," possessed culture and much wisdom and tact.

"What is this boy waiting for?" she asked.

"A whipping," dryly replied his teacher.

She beckoned the child to her side, and held his hand while she heard the class recite. When they had finished, she asked a few questions about him, and then said to him, smiling:

"You must take your whipping, for you deserve it; but never deserve another. We colored people need great men of our own race to help us—great doctors, great preachers, great scholars. Your teacher tells me that you are fond of arithmetic, and do well in it. Try to be a great civil engineer."

The boy became a man of influence and a help to his people. He said lately, "Those chance words put a soul into me. I really owe to them much of my success in life."

It is not necessary to dwell upon the hackneyed truth hinted in this story. Whether a child or man be white or black, the touch of kindness, hope and courage will often bring all of his energies to work, while the stern discipline of fear may paralyze him.

As long ago as when Æsop lived the driver was told not to whip his donkey if he would win the race, but to hang a green branch before his nose.

WHERE THEY DIFFER.

In a town in the far West, a crowd of cowboys stood around a fenced enclosure, beside the railroad track. In this enclosure was confined a large bull. The cowboys were amusing themselves by annoying in many ways the poor brute, who was fast becoming furious.

Suddenly, one of their number, lightly vaulting the fence, landed squarely astride of the bull's neck, and grasped him by the horns. The infuriated animal plunged and snorted, but his rider, with wonderful agility, quickly leaped to the ground, and before the bull could turn and gore him, sprang over the fence again to be greeted by the applause of his comrades.

Their attention was soon diverted, however, by the arrival of a passenger train which was just drawing up to the station across the street, and the cowboys, with characteristic shouts and laughter, ran across toward the platform.

Meanwhile, the now maddened bull had succeeded in breaking through the fence, and with tossing head and lashing tail was trotting across the street, bellowing as he went.

Just then a young man, satchel in hand, came running down the street to catch the train, passing on his way some farmers who were standing some distance from the bull.

They shouted to the young man as he passed, "Hi, there! Stop! The bull! The bull!" but he kept on, with a wave of the hand and an "All right! I'll look out for him."

The next instant the bull saw him, and with lowered horns, ran to head him off. But the young man was a fast runner. He passed just in front of the bull's head, which, the next instant, brought up with a thud against the side of the station. It was a very close shave.

Dazed by the shock, the bull stood still for a moment, then turned just as two children, who had

Digitized by Google

arrived on the train and had passed through the station, started to cross the street. When they turned the corner of the building, they caught the animal's eye, and quick as a flash he charged them.

A cry of horror went up from the group of farmers, as the two little girls, now aware of their danger, started to run hand in hand.

A stalwart young farmer soon appeared a short distance behind them. He took in the situation at a glance. By hard running, he overtook the bull when but a few feet from the children, quickly grasped with both hands the horn nearest him, set his feet firmly, and with one quick, strong, downward and backward jerk, threw the animal heavily to the ground.

With the help of the other farmers, who by this time had reached the spot, the bull was secured and led away where he could do no more harm.

Thus, in less time than it has taken to tell it all, occurred perfect examples of three distinct human qualities, which in the minds of many people are often confounded—bravado, recklessness and courage.

ELIE BERTHET.

The late Elie Berthet was a French novelist of the old school, a writer of tales of adventure, a Republican, and a man of excellent qualities. An amusing incident in which he figures, related by the Marquis de Belloy, occurred when he was at the height of his popularity. At this time he visited Brest. The marine officials received him cordially, and some of them gave a banquet in his honor.

At the close of the banquet Elie and his entertainers sat chatting pleasantly, when the report of a cannon imposed a moment's silence. Elie blushed a little, and looking very appreciative, said, "Ah, gentlemen, this is too much! I thank you, sirs, but it is too much honor."

It was, in fact, an honor not intended for him. The supposed salute was the discharge of the cannon which announced the return of the convicts.

Berthet's Republican sentiments enabled him when he was quite young to assist in, and enjoy, the joke of an old soldier named Fisson, who lived in the same town with him. Fisson was not able to express his Republican sentiments openly, but he derived a great deal of satisfaction from calling this young Republican by name when he met him on the street.

If a police officer was in sight, Fisson shouted, when he met his young friend, *"Eh, liberté! Eh, liberté!"*

The officer would hasten to Fisson and demand, "What did you say?"

"I said nothing," Fisson would reply.

"You cried '*Liberté!*'"

"I cried '*Liberté!*'"

"Yes, you cried '*Liberté!*' and to cry '*Liberté*' in the open street is a misdemeanor."

"Nonsense!" was Fisson's triumphant reply. "I was calling that young man there, 'Elie Berthet.'"

"Elie Berthet?"

"Yes, certainly, Elie Berthet. Come, my boy, I have something to say to you."

Whereupon Elie Berthet advanced, acknowledged his name, and the officer was obliged to retire nonplussed.

BALLOT REFORM.

The introduction of what is known as the "Australian ballot" system of voting has been very rapid considering what a radical change in American political methods it involves.

By the new system each man is enabled to decide for himself, free from the oversight of a political "boss," how he wishes to vote. He votes secretly, and no one can tell whether he has supported one person or another for any office, unless he himself is willing to reveal the fact.

This system has been in operation in the conduct of several important State elections. It has worked admirably, and has given universal satisfaction. This is more especially true of the operation of the law in States that have adopted the system entire. Attempts to combine the old plan and the new by a half-reform have been less successful.

Several State Legislatures have discussed the matter this year, and one at least, that of Maine, has passed a law and adopted the Australian ballot in its entirety.

This is a reform that may be heartily commended to the people of every State. Pure elections are at the foundation of good popular government, and a measure which enables each voter to act his pleasure, free from dictation and supervision, is a long step toward purity of elections.

Indeed, there is but one thing more needed—an honest count and return of the votes. If any one can invent a method by which cheating after votes are cast can be prevented, he may share with the Australian ballot the glory of having solved the question of honest elections.

"AND —."

The time seems to have been reached when the sorrows and the hardships of the Civil War are giving place, in the memory of those who took part in it, to the romance and humor of to-day. Nothing does more to bridge over the much-talked of, but largely imaginary, "bloody chasm" than the jovial laughter of a group of old soldiers, who fought on opposite sides, telling their funny experiences during the conflict.

In 1862 General Bragg led a Southern army into Kentucky in the hope of regaining that State for the Confederacy. He had in his army many Kentuckians, who took advantage of the opportunity to set up a sympathetic government at Frankfort, the State capital.

The regular government had fled to Louisville as Bragg advanced, and there was nothing in the way of carrying out the plan as soon as Frankfort was held by a small body of Confederate troops.

The ceremony of installing the new governor proceeded rapidly, for the Federal General, Buell, was near at hand, and an attack on the small force at Frankfort was feared.

"I don't think I ever witnessed a more ludicrous scene than the conclusion of the exercises," said an ex-Confederate who took part. "Humphrey Marshall was making a great speech inaugurating the new Confederate governor.

"'This,' said he, solemnly and impressively, 'is not to be a provisional government. It has come to stay, and will last as long as the eternal hills that encircle us, and —'

"At that moment a shell from the Federal guns at Devil's Glenn hissed over the town, proclaiming Buell's advance guard. We were too few to give fight. Marshall's speech ended abruptly. Citizens ran for shelter, and in a few minutes, accompanied by the troops, Marshall's everlasting government disappeared in the mouth of the railroad tunnel, going toward Bragg's army at Lexington."

NOT USUALLY EATEN.

The mother of Heinrich Heine, the poet, was particularly careful about matters of etiquette, and her boys were brought up with great strictness, and occasional severity. Among other things, she was extremely decided in her ideas of table etiquette, and her children's manners in this regard were then thought quite irreproachable.

They were taught, when they were guests at a table, never to eat all the food which was put on their plates; a portion must always be left "for respect," so their mother said. Also, they must never take more than a certain fixed amount of sugar in their cups of coffee, no matter what the cravings for it might be.

This last rule was a great trial to Maximilian, Heinrich's younger brother, who had a particularly "sweet tooth."

On one occasion Frau Heine and her children were at a garden restaurant in the suburbs of the city, and had been enjoying the fresh air and good coffee at the same time. As they rose to leave the table, Max, then seven years old, saw that a large and tempting piece of sugar had been left in the sugar bowl. Thinking himself unobserved, he quickly seized it, and put it in his mouth.

Unfortunately for him, he had been noticed by Heinrich, who, without meaning to be a tale-bearer, ran to his mother with an expression of horror on his face, as if he expected some calamity would instantly befall them, and said, in a shocked and astounded tone:

"O mother, mother, would you believe it, Max has *eaten* the respect!"

PROMPT JUSTICE.

In the "History of Beverly," Mass., the following anecdote is related of a good justice of the peace in the old colonial times. On a cold night in winter, a traveller called at his house for lodging. The ready hospitality of the justice was about being displayed, when the traveller unluckily uttered a word which his host considered profane.

Upon this he informed his guest that he was a magistrate, pointed out the nature of the offence, and explained the necessity of its being expiated by sitting an hour in the stocks!

Remonstrance was unavailing; for custom at that time allowed the magistrate to convict and punish at once, and in this case he acted as accuser, witness, jury, judge and sheriff, all in one.

Cold as it was, our worthy justice, aided by his son, conducted the traveller to the place of punishment, an open place near the meeting-house where the stocks were placed. Here the traveller was confined in the usual manner, the benevolent executor of the law remaining with him to beguile the time of its tedium by edifying conversation.

At the expiration of the hour, he was reconducted to the house, and hospitably entertained till the next morning, when the traveller departed with, let us hope, a determination to consider his words more carefully before giving them utterance in the hearing of a conscientious magistrate.

MR. SMITH'S LEAVE-TAKING.

Probably the final story of absent-mindedness will never be told. A correspondent of *The Spectator* vouches for the truth of an anecdote which he relates, apropos of recent discussions about plagiarism. He is, he says, acquainted with the clergyman referred to, whose name he alters for publication.

The Rev. Septimus Smith was many years ago Vicar of St. Cross Neneham. He made no secret at all of his habit of buying ready-made sermons. He was a kindly-natured, easy-going man, and was popular among his people.

One Sunday morning, on going into the vestry after service, he found his old clerk in tears.

"What's the matter, Jones?" inquired the Vicar.

"O sir," replied the clerk, "this is a painful surprise to us all."

"Surprise, Jones, what do you mean, man?"

"Your sermon this morning, sir. We are all very sorry, and you gave us no warning."

"Sermon, Jones, sermon? What do you mean?"

"Why, your farewell sermon. We are all dreadfully cut up."

The Rev. Septimus had actually read to his congregation an old farewell sermon without either intending it, or knowing what he was saying to them.

HIS SIGHT FAILED.

An appalling prospect for any one to face is that of losing the use of the eyes. A writer in the *Albany Press* relates the remarkable experience of one of his friends. On returning home from business, he put his glasses in his pocket and lay down for a nap.

When he went to dinner he found, to his great alarm, that he could not read a letter which his daughter handed to him. He washed his eyes with a sponge and warm water, but to no purpose. For years his left eye had been comparatively useless, and now that his right eye was apparently affected, the prospect was depressing.

He retired to his room at once, with a sinking heart. Probably he could not even see to write. He felt in his pocket, the pocket where he carried the now useless eyeglasses, for a lead-pencil.

His fingers touched something which sent a thrill of joy through him. His sudden blindness was explained. He had found the pebble out of the right eye of his glasses.

PEEVISH.

Fretfulness may be excusable in sick people, but it isn't pleasant to encounter.

"My dear," said a sick man to his wife, "this room is dreadfully warm."

"There is no heat coming from the register," answers the wife.

"Well, see if the dampers are right at once. Do you want a man to stay here and freeze to death?"

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [*Adv.*

Coughs and Colds. Those who are suffering from Coughs, Hoarseness, or any throat trouble, should try "*Brown's Bronchial Troches.*" They may be used at all times with perfect safety. Sold only in boxes. [*Adv.*

GRAYS HARBOR, Washington, is attracting the attention of Eastern investors because it has the only ocean harbor in the State, assured of railroad facilities, is the centre of a country rich in agriculture, timber and coal. For full information, address, *Grays Harbor Co., Grays Harbor, Wash.*

The Birds of Spring

If they *could* be weary of their songs, would find, in our great stock, an almost infinite variety of *new* melodies.

Cantata.—THE JOLLY FARMERS, Sargent. [40 cts., $3.60 doz.] New, bright, easy, and all jolly farmers and their friends will like it.

Sunday Schools like **PRAISE IN SONG** [40 cts., or $4.20 doz.] Emerson.

Choirs constantly send for our Octavo Music—8000 numbers of Anthems, Sacred Selections, etc., 5 to 8 cts. each. Send for Lists.

Organists furnished with Voluntary and other music.

EMERSON'S VOCAL METHOD for ALTO, BARITONE and BASS VOICES [$1.50] is a new and superior method.

FACTORIES: **Meriden, Conn.**

It is Vouched For.

Well-known people vouch for the fact that Dixon's Graphite Paint covers 2 or 3 times more surface and lasts 4 or 5 times longer than any other roof paint. In other words, a tin roof well-painted with Dixon's Graphite Paint will not require repainting for 10 or 15 years. This should interest all who are in need of such a paint. It is equally useful for shingle or tin roofs, or iron structures. Circulars, testimonials and sample gladly sent.

THE MORAVIAN DEATH-HYMN.

Unheard the spoilers' murderous search
Had tracked the woods below,
No watcher on yon village church
In warning waved, to show
Where sighing pine and whispering birch
Concealed a deadly foe.
Sang sweet the robin and the wren
At sunset as if lay
No demon near the homes of men
Before next morning day
That hamlet of the land of Penn
To sweep in blood away.

Came twilight with its lingering gleam
And sparks of twinkling gold,
All silent—save the ceaseless stream
Of Lehigh's waters cold,
And stir of leaves that half in dream
Their drowsy vespers told.
But fierce, with eyeballs slumber-proof
Beneath hate's fiery frown,
The red Mohegans lurked aloof
For midnight darkening down
To smite with ruin, roof by roof,
The small Moravian town.

But list! what strange ethereal tones
Their savage hearts surprise?
They heard the chapel-tower trombones
Like voices from the skies!
The Brethren's trumpet-dirge that moans
The hour a faith-mate dies.
Soft, clear, between the light and dark,
The tubes melodious through
The spirit of Sebastian Bach
His Passion Choral blew,
And all the air stood still to hark
The passing soul's adieu.

As if an angel welcome met,
Before its wing could tire,
The soaring life, o'er love's regret
Sang hope and high desire,
And peace her requiem music set
To join the pealing choir.
As clods in turfless deserts melt
Beneath unusual rain,
The wild assassins trembling felt
That sweet, mysterious strain,
And anger in their breasts that dwelt
Was changed to coward pain.

"'Tis the Great Spirit's voice," they said,
"He breathes some fearful charm
To guard this people's slumber-bed;
We may not do them harm.
Where Heaven its mighty shield has spread
No warrior lifts his arm."
They fled, as flies at fear's command
The baffled plunder-bird;
And still in air that trumpet-band
Their guilty fancy heard
Till all the echoing forest-land
Gave back God's awful word.

And night to morn serenely swept
With all its shining spheres,
While calm the pious Brethren slept
Unvexed with worldly fears—
And time their peril's secret kept
Thro' many after years,
Till told one redman of the gang
That planned that ruthless raid
How ere the skulking murderers sprang
From their dark ambuscade
The solemn horns of cloudland sang,
And made their hearts afraid.

Still from the sacred tower is poured,
When comes the Fatal Guest,
The hymn they love who gave the Lord
Their Bethlehem of the West,
The strain that scared the vulture horde
And saved the turtle's nest.
And still, where death affection smites,
If from the heights of prayer
Faith's song between the evening lights
Surprises blind despair,
The sound the lurking fiend affrights,
And peace stays slumbering there.

THERON BROWN.

For the Companion.

TRUE SERVICE.

The relief corps who worked amid the horrors of the Johnstown disaster speak with gratitude of two women who lived in a house upon a hill which escaped the flood. They were a mother and daughter, educated, gently-bred women.

When the flood had passed, they found themselves safe, but with neither money to give the survivors, nor strength to dig for the uncounted dead, their friends and neighbors, who had been buried before their eyes.

"One thing we can do," the mother said. "We can cook for these starving people."

For weeks they rose at five o'clock in the morning, and worked over a hot stove through each day, cooking the provisions which were forwarded from all parts of the country to feed the survivors. For this they refused to accept any reward.

It seemed a poor little work, and passed unnoticed in the great upheaval of generosity throughout the land.

Was it wholly what it seemed?

A story is told of an old negro who was seen guiding his donkey and cart into Charleston the day after the terrible earthquake. The cart held all the proceeds of his little garden.

"What have you there, uncle?" he was asked.

"Yerbs, sah. No, I don't sell 'em. Dey's fo' dem pore souls in de town. It's all I hed, sah."

During the Civil War there were men on both sides who held back from volunteering, because they could not obtain positions as officers. They would not fight as privates.

God's work goes on all the time in the world for the help of the poor, the hurt, the crippled in the great army of humanity.

Go in as a private. Help, if it is only to bend over a hot stove or to bring a poor bunch of herbs to the needy.

God will accept your service. It is not the marshal's baton or the conqueror's sword that can win you honor in His eyes. His "well done" is bestowed not for showy deeds or high station, but for that inward service which only He sees and knows.

HE COULD FORGET.

The late John Boyle O'Reilly was a political prisoner for several years of his early life, first in England and afterward in Australia; and in Mr. Roche's biography of him it is said that he long afterward spoke of himself as still retaining a kind of affectionate regard for a certain cell, on the iron-barred door of which hung a white card, inscribed, "John Boyle O'Reilly, 20 years." The following anecdote gives the reader an idea of the ex-convict's magnanimity.

At one of the stations to which he was occasionally sent with messages there was an overseer, warden, or watch-dog of some sort, who chose to be an exception to all human kind by conceiving, at sight, a bitter dislike to young O'Reilly. On their very first meeting he looked hard at the newcomer, and said:

"Young man, you know what you are here for," adding, with an oath, "I will help you to know it."

From that time he watched his victim sharply, hoping to catch him in some infraction of the many regulations governing the convict settlement. At last his time came. O'Reilly one day was a few minutes late in making his trip. He found the overseer waiting for him, watch in hand.

"You are late—so many minutes," he said. "You are reported."

Among the penalties of being "reported," one was that the offender should not be allowed to send or receive a letter for six months.

A few days after this incident the overseer called O'Reilly into his office. He held in his hand a letter, heavily bordered with black, which he had just perused.

O'Reilly knew that his mother, at home in Ireland, had been dangerously ill for some time. The letter probably bore the news of her death, but it might contain tidings of a less bitter loss. No one, except the overseer, knew its contents. He said, "O'Reilly, here is a letter for you."

The prisoner said, "Thank you," and held out his hand for it. The overseer looked at him for a moment, and then said, as he tossed the letter into a drawer: "You will get it in six months!"

When, at the end of six months, O'Reilly received the letter, he found that it confirmed his worst fears. The mother whom he had loved and idolized was dead.

Listening to this story years afterward from the lips of the victim, I asked him why he had never published the name of the cold-blooded wretch, for the execration of humanity.

He smiled, and said that he did not bear the fellow any malice; that a man who would do a deed of that kind must be insane and irresponsible—a being toward whom one could not cherish animosity.

"Besides," he added, "I do not know his name now. I have forgotten it."

CULTIVATING WILD FLOWERS.

Persons who like to have wild flowers in their gardens lose a pleasant and interesting experience when they buy from a nursery what they might procure from the woods and fields. One learns, in seeking wild plants, many things which are not mentioned in catalogues and botanical descriptions, and the knowledge so acquired contributes much to one's success in cultivating the plants. Some hints about making the acquaintance of wild flowers in their own homes are given by a correspondent of *Garden and Forest:*

Almost any New England town contains from six to a dozen varieties of wild violets. The best time to distinguish the various kinds, and to transplant them, is when they are in flower.

Go out into the woods and fields in the middle of May and look for them. Lift the finest plants with plenty of their home soil about their roots, using care that they do not wilt. Keep them moist and shielded from the sun, especially for the first few days. Well-cared for, they will make strong flowering stock by the next spring.

At the season when violets are in bloom many other fine things will be found, such as anemones, trilliums, spring beauties, lady's-slippers and ferns. One who begins to collect will be surprised at the number met with, the pleasure each new discovery gives, and, if proper care is bestowed, the small proportion of losses.

Scarcely a day passes from May until December when some wild plants may not be successfully transplanted. A light pickaxe about a foot in length, with a handle fifteen inches long, is the only implement needed for most plants.

A tin collecting case with a tight cover will keep plants fresh a long time, but a closely woven handle basket will, in most cases, answer just as well, and is much lighter to carry. A wet cloth spread in the bottom and another over the plants will keep them cool and moist.

IN THE LOG.

A Southern correspondent sends to *The Companion* a story of war-time. In some parts of the South, and especially in North Carolina, the horrors of war were greatly aggravated by the strife between irregular organizations of Union and Confederate sympathizers, known respectively as "Buffaloes" and "Guerillas." Both organizations were composed of lawless men, and no ultimate good appears to have been accomplished by them, either for the North or for the South.

After General Burnside's capture of Roanoke Island and Elizabeth City, things began to grow very uncomfortable for the Buffaloes, who had made themselves obnoxious to their neighbors by many deeds of mischief. One of their acknowledged leaders put his family into a buggy, and set out for Elizabeth City. On the way he was met by a band of Guerillas, who called upon him to surrender.

He knew that he could hope for no mercy if he gave himself up, and thinking that they might not fire upon his wife and children, he urged his horse forward, at the same time holding his infant child in front of himself as a shield. But the order to fire was given, and he fell back dead, a volley of bullets having reached him through the body of his child.

The horrible deed roused intense indignation, of course, and vengeance was threatened. Unhappily suspicion fastened upon the wrong man, and he was marked for destruction. News reached him upon his farm that the Buffaloes were in pursuit of his head, and he arranged with his wife a code of signals for his protection.

Again and again, by day and by night, his house was searched, but without success. Many times he watched the searching parties as they withdrew, disappointed, from the premises. One day he had a peculiarly narrow escape.

A band of armed men were seen approaching. Evidently they were after him again. He hastened from the house into the field, thinking himself unseen; but his pursuers had caught sight of him, and at once started in pursuit. There was no time to reach the woods, and in his extremity he crawled into a log which lay near the entrance to the field.

Hardly was he inside when his enemies swarmed into the field. "Where is he?" "Where is he?" he heard one and another ask. "We saw him run this way, and he hasn't had time to cross the field. He is hiding here somewhere, and we have him at last."

Some kept watch, and the rest searched the field. After a while all hands came together about the log, and some of them sat down upon it. One would shoot him at sight; another wanted to hang him to a tree and riddle him with bullets. No one suggested a trial, or the possibility of his innocence.

The prisoner was almost afraid to breathe. Another search was made, and his agony of suspense continued. In his distress he prayed earnestly for protection. No one thought to look into the log, and late in the afternoon the sound of the bell notified him that the coast was clear, and he might return to the house.

Many years have passed. The man still lives, and still believes that there was some connection between his prayer and his deliverance.

For the Companion.

ON THE UP-GRADE.

As the horse-car reaches the foot of the hill,
Gray Jerry swings up with a lively clatter:
"Is that you, Blackie? Good day to you, Bill!
A steep one to climb—but 'tis little matter,"
He seems to say, "for I've nothing to do
But to hitch right on and to pull with you!"

He puts new life in the jaded pair,
Their ears prick up and their eyes grow bright;
The car is heavy, but little they care,
For good gray Jerry will make it light.
They trot together without a stop—
Time for rest when they get to the top!

Now the horses are half up-hill,
The driver has little or nothing to do;
Courage Blackie, and pull away Bill!
Jerry will see the whole business through;
He twinkles his eye, and he switches his tail,
And makes the car fly, on the up-grade rail.

A model of active benevolence
Jerry the car-horse appears to me,
With his brave, kind heart and his good horse-sense—
And 'twere well with us, could we always be
Ready as he is, to cheer and aid
The brothers that toil on the hard up-grade!

E. CAVAZZA.

NOT SO POETICAL.

It is not needful to look for illustrations of the old saying that things are not what they seem, since new instances present themselves at every turn. Not infrequently these are a bit droll, and one who had a turn for satire might make something from the incident in which a romantic Boston society girl figured last summer at the mountains.

At the hotel where she was staying with a party of friends appeared a young man who was of the romantic sort of beauty which is especially dear to the heart of sentimentally disposed young women. He had dark, wavy hair, big brown eyes, a silky moustache, and a dreamy air which seemed to the silly girl in question the most poetical thing in the world.

No one whom she knew was acquainted with the stranger, but she was determined to secure his acquaintance, and one evening when there was a hop at the hotel she laid a plan for accomplishing her object.

On the arm of her dearest girl friend, to whom she confided her project, she sauntered toward the spot where the poetical young man stood, his dark, dreamy eyes fixed upon the face of a young lady to whom he was talking.

As she came near the stranger, she said to her friend sentimentally:

"Oh, do let us wait and hear what he is saying. It is something beautiful and poetical, I can see by the lovely and speaking expression of his eyes."

Her friend stopped with her, and the pair pretended to be engaged in examining a stand of plants, while they listened; and this is what they heard.

"And so you have charge of arranging the windows of the store?" said the young lady to whom the romantic-looking youth was talking.

"Yes," he answered, with the air of one who communicates the weightiest secrets of æsthetics; "of course we never put our best goods into the windows, though, for they get faded and dusty; but they let me have anything else in the store to work with."

The romantic young woman clutched her fan firmly with one hand, and the arm of her friend with the other, as she hurried away from the spot.

Not very poetical, was it?

"If you ever tell what a goose I've been," she said in a tragic whisper, "I'll never speak to you again!"

But in the end she told of the incident herself, having learned a lesson cheaply, and being able to laugh at her own folly.

STRONG YARN.

"Did I ever have a fearful adventure?" repeated Mrs. Catherine Cabbage, an old lady of Dedham, Mass., when a party of young people were urging her to tell some of her early experiences. "Yes, fearful enough to me," she added, with a smile. "'Twas the year after I was married. Dedham aint much like what 'twas then. My nighest neighbor was a mile away, but for all that we was a good deal more neighborly than folks be now.

"One winter afternoon I took my knittin'-work—I was knittin' my husband some indigo-blue socks—an' ran over to a neighbor's. I was knittin' the foot, an' I stayed pretty late, hopin' to toe it off; but I jest got it to the narrerin's an' give it up, an' started for home.

"I carried my yarn ball in a bag tied to my waist, an' the sock I tucked into my belt, the needles all in it. 'Twas a bright moonlight evenin', but I was always kind of timid to be out alone after dark. The road was lonesome, an' I walked pretty lively.

"I'd gone about a quarter of a mile, I guess, when I heard a noise behind me. I looked back, an' there was a black creature that looked in the twilight bigger'n a wood-chuck runnin' close after me. I'd heard stories of wild-cats bein' round, an' I thought in a minute 'twas one after me.

"I hurried on, an' I could hear what seemed to be that miserable beast's claws a-scratchin' on the snow, an' the faster I went, the faster he went. I couldn't stand it, so I broke into a run; on came that creature at a run, too. I was terribly frightened. Every time I looked round the wild-cat seemed bigger, an' the scarter I grew.

"How I run! An' *scratch, click, scratch,* came that ugly beast after me! You'd scarcely believe how the size o' that creature grew. I was certain 'twas a panther.

"I was out o' breath an' wheezin' when I got to the house. Sweat stood in beads on my face. I had jest strength enough to push open the door, rush in, slam it together, an' then I fell full length on the floor.

"My husband was scart enough when he see how I was. 'What's the matter?' he cried out.

"'The—pan—panther,' I gasped, 'chased—me—all—the way home!' and pretty soon I got breath enough to tell my dreadful experience.

"Husband went to the door an' looked out. 'I don't see anything,' he said. Then he begun to laugh. 'Here's your panther!' says he, an' he came in holdin' out that indigo-blue sock I'd been knittin' on! Every needle was out of it, an' 'twas still held by the ball of yarn in the bag at my belt, an' I'd been a-draggin' it on after me, an' thinkin' 'twas a wild beast!

"I felt cheap enough over it. But wa'n't that strong yarn to stand all the runnin' an' pullin' it got, an' not break?"

TRUE TO HIS CHURCH.

"In Greenfield Meadows, Mass., about 1848," writes a correspondent, "lived one Edwin Smead, a farmer, whose dog was as constant as his master in attendance at the old First Church. The meeting-house contained a high pulpit, which was approached by winding stairs in front of the gallery containing the singers. When the congregation entered the church, the old dog, with the utmost gravity of manner, always climbed the pulpit stairs, and composed himself for a nap.

"About 1851 alterations were made in the meeting-house. The seats were turned around, a platform was erected at the other end of the church, and a modern desk was placed upon it.

"When the day came for the reopening of the church, the old dog walked in with the rest, and wearing an expression of deep disgust at the changed appearance of things, sought the stairs leading to the old pulpit, which, alas! had disappeared forever. He walked up one aisle and down the other, looking disturbed, and apparently aware that he was the object of ill-suppressed merriment, until at last, hearing the voice of good old Doctor Chandler in the opening services, he reluctantly and shamefacedly mounted the modern platform, and composed himself to sleep.

"Not long after this Mr. Smead died, and his farm was sold to Mr. Parmenter, a good Baptist deacon, who attended *his* church in the village.

"The dog stuck by the farm, but did not take to the new religion. Every Sunday morning, when the family started for church, he was ready, and trotted along by the side of the wagon until he came to the place where the road branched off toward the Congregational meeting-house. At that point he parted company with the family, and stood by his own creed.

"For some years longer the old dog was the most constant member of that society, never missing attendance upon the Sunday services, rain or shine, until his dog days were ended."

TESTING THE OYSTERS.

A Chicago lady called upon Health Officer Wickersham, not long ago, says the *Mail*, upon a mysterious mission. She brought with her half a dozen fried oysters. "They have been trying to poison me again, doctor," she said, as she laid the oysters before him.

"Oh no, I guess not," replied the official.

"Yes, they have," said the visitor, "but I've outwitted them this time, you see. I have brought the poisoned oysters right to you to be analyzed. There they are."

The doctor argued quietly with the lady, trying to convince her that she was the victim of an hallucination, but his labors were vain. Realizing the fruitlessness of argument under these circumstances, the doctor chatted pleasantly with his visitor till she became quieter, and then said: "So the poison is in these oysters, is it?"

"Yes, I'm certain of it."

The doctor picked up one of the bivalves, nibbled at it cautiously for a moment, and with a sigh of satisfaction slipped it into his mouth.

"My stars! that was good!" he exclaimed, smacking his lips. "Your cook understands his business. That was fit for a king!"

And without more ado the remaining oysters, one after another, went to satisfy the hunger of the health department of the city of Chicago.

There was a long period of silence, broken at last by the woman, who said, very meekly: "Doctor!"

"Yes'm."

"I've been a fool. I'm sorry for it, and for the trouble I have caused you."

"I assure you that I am your debtor, madam," gallantly rejoined the doctor. "If all my professional analyses were as agreeable and satisfactory as this seems likely to be, I should be much better pleased with my position."

TOO WELL HIDDEN.

Elizabeth Glover, in her wise and useful little book, "Family Manners," devotes a chapter to deploring the New England habit of repressing one's feelings on the matters nearest at heart, and never allowing them to find expression in words. She says:

There was a railroad accident, and a poor farmer's wife was taken out, bleeding and unconscious. The doctor and a kind woman were working over her when her husband came in and stood a moment, looking on in disturbed silence. His cheeks were drawn in, his eyebrows lifted, his hands in his pockets.

Presently, with some effort, he cleared his throat to speak; and as the doctor looked up he asked, "Ye didn't see a new tin dipper lyin' round where ye picked her up, did ye?"

He got no answer from the indignant doctor, and presently strayed out again in search of his dipper.

Meanwhile his wife opened her eyes, and at once asked for her husband. "He's safe," said the doctor, shortly. She felt his curt tone, and faint as she was, she divined what it meant. "He's a dreadful feelin' man," she said, "but he don't never say much!"

SOMETHING EASY.

Mathematics and imagination are not commonly supposed to have any relation to each other, but there are occasions when a teacher of mathematics, like any other teacher, needs to be able to put himself in his pupil's place. Here, for example, is a case reported in the Philadelphia *Times:*

A learned professor was examining a graduate in the presence of a board of judges.

"What do you know of differential calculus?" he asked.

Deep silence ensued.

"Well, then, tell us something about the binomial theorem."

Another term of silence, deeper, if possible, than before.

"Perhaps you had better begin with some easier question, professor," kindly suggested one of the judges.

"Very good," said the professor. "Well, sir," turning to the shivering candidate, "you will please tell us the distinction between the differential calculus and the binomial theorem."

A MAY-DAY PICNIC.

The day was a lovely one, clear and sunshiny, without a cloud so big as a man's little finger in the sky. Amos, who was Grandpa Dent's hired man, declared it was a "weather-breeder," but this didn't trouble the children a bit.

"It's just be-eautiful now," said Maidie, shaking her curls at Amos, "and I think it's going to keep right on being that way! My grandma says it isn't a good plan to beg trouble."

"Ho! ho!" laughed Amos, taking up his wheelbarrow handles, and thinking that Maidie was a very funny little girl. "Well, I hope you'll have a nice picnic," said he.

"Oh, we shall!" chorused the children, joyfully, and it was safe to say they would unless something happened to prevent.

There were seven of them in all, three from Uncle Jack Harvey's, three from Mr. Thatcher's, whose farm joined Grandpa Dent's, and Maidie, who was going to stay until her mamma came home from California—perhaps all summer long.

Of course there were a great many good times, and this was one of them. Aunt Prudence packed a delicious lunch for the picnic, and Grandma Dent added some oatmeal cookies and jam tarts, which nobody else knew how to make so nice. Then away the children went in the sunshine of the bright May morning to the pine grove where the May-flowers grew.

The snow had disappeared unusually early that spring, and the April days had been as warm and golden as they sometimes are in June, and so the buds, hiding under the rusty brown leaves, had burst into masses of pink-and-white bloom just in time for the May-Day picnic.

"How sweet they are!" cried Maidie, sniffing in an ecstasy of delight. "Isn't it funny that such homely leaves have such pretty flowers?" she asked, thoughtfully.

Cousin Ted laughed. "That's one way of evening up things," said he.

"My father says everything ought to be evened up some way."

When they had come quite through the grove, they sat down on the edge of the sunny slope to make the wreath. It was settled in the beginning that Maidie was to be the queen.

"Because you're visiting, you know," said Pet Thatcher.

"Oh!" exclaimed Maidie. "Look, Dolly! What a funny little house over there! Who lives in it?"

Dolly looked. It was a funny little house, painted red where it was painted at all, and with a roof only on one side.

"Oh, that's where Mitty Bliss lives," said she, "and her grandma."

"And Mitty can't walk a step, ever," added Bess Harvey. "She's—she's—"

"Paralyzed," put in Ted, wisely.

"She just sits in a chair all day long," said Pet, soberly. "And her grandma knits and knits, and sometimes folks give her things."

Maidie's eyes were big and bright. "Can't the little—can't Mitty ever go out doors—ever?" she asked.

"No," answered Dolly, softly, "she can't, unless she's carried, and there's nobody to carry her."

The little shed-roofed house on the opposite slope wavered for an instant before Maidie's eyes. She wondered how things were evened up for Mitty. In another minute Ted held up the wreath, all pink and white and green.

"Your crown is done, Queen Maidie," he said, with a funny bow. "Now, where'll we have the picnic?"

"Right here," decided Dolly, promptly; "it's so nice and warm."

"Pooh!" said Ted. "This isn't any kind of a place. We want to go somewhere. We'll have it on the big rock the other side of the woods."

"Nonsense!" declared Jamie Thatcher. "Let's go down there by the brook, under the big elm."

Ted's face grew red. He was the oldest of the seven, and felt that he had the right to decide. He said so, rather crossly, and Jamie answered back; and so the first cloud came up, which grew bigger and blacker until Jamie was ready to cry, and Ted declared he wouldn't have a picnic at all.

"Oh, let's don't do this way," urged Dolly, gently. "Let's let Maidie say, because she's the queen."

A quick little twinkle that wasn't all fun came into Maidie's blue eyes.

"Oh, will you?" she cried. "I'm so glad! And I'll go ahead, just like a real queen."

So the crown was placed on Maidie's head, and Ted took the lunch-basket, and the whole little party with their arms full of flowers followed down the slope.

"Goody!" thought Jamie, jubilantly, "she's going to the brook!"

But Maidie didn't stop at the brook. Over in the little red house a pair of eyes were watching eagerly from the big chair by the window. Old Mrs. Bliss had gone to the village, and Mitty was lonesome enough; and she did hope the party would be where she could see it. She caught her breath when she saw the children tiptoe over the big arms across the brook, and come up the slope.

A MAY-DAY PICNIC.

"I can't see 'em," she said; "they're going where I can't see 'em."

It was a great disappointment. Mitty turned her face away from the window, and shut her eyes tight. But only for a minute. There was a merry clatter on the step, and a knock at the door.

"Come in," said Mitty, all in a tremble.

And in they came, filling the room with lusciousness and sweetness and May-time joy. Poor little Mitty. Her thin cheeks peeled and flushed. The tears seemed ready to fall.

"Oh, don't—don't cry!" said Maidie, springing forward. "We've—we've come to have our picnic with you, and we want you to be the queen. Oh—I thought you'd be glad!"

Just for an instant Mitty hid her face; then she lifted it, trembling and rosy, and fairly shining with joy.

"Oh, I am!" she cried; "I'm gladder than I ever was in all my life!"

They were all glad; a merrier little party never was seen, and Uncle Jack said when he heard of it that it was an "evening up" worth telling of.

DORKY'S MAY-BASKET.

"Mamma, I do wish Dorky could come to my May-party!" said little Nan.

"Well, why can't she?" queried mamma, looking up from her work.

"Oh, her dress is so old and worn; and her mother can't buy her another—not till she gets Mrs. Damon's wool done—and that'll take as much as a month, I guess, for there's such a big pile of it, and it's such slow work to grind it out."

"Grind wool! Oh, Nan," teased her brother Tom.

"Well, they turn a wheel anyway," said Nan, "an' isn't that what old Jacob Names does when he grinds corn?"

"To be sure!" laughed Tom. "But his wheels are great stones that crush the corn, and Dorky's mother spins the wool, that is, *spindles* it, because it comes off a *spindle*."

"Well, Dorky can't come to the party, whichever way it is," said Nan.

Suddenly a little plan sprang into her mind, and Nan ran away to the big red cupboard in the dairy where the maple sugar was kept. There was a box full of cakes—round and scalloped and heart-shaped—and *thimbles* of all sizes, which she had made all herself that spring to eat the next winter.

Slipping on her waterproof, she took the cakes, thimbles and all, in a basket, and running down to Mr. Blake's store, bought with them six yards of pink calico for a dress for Dorky.

"It shall be Dorky's May-basket, too!" Nan whispered to herself as she trudged home.

Mamma, who was in the secret, made Nan a big strong May-basket out of brown paper, and putting the dress in it, Nan carried it over to Dorky's house before it got too dark, and tied it to the door-latch.

Dorky was too happy to eat her supper, and went to sleep with the precious bundle in her arms.

AUNT LITTLE Pauline had gone to sleep one night, some one turned her little crib around, putting the head where the foot had been. She was very indignant when she awoke, because she had "slept upside down."

Enigmas, Charades, Puzzles, etc.

ANAGRAM.

The omitted rhymes are formed from the eleven letters omitted from the last line.

If a Frenchman should wander from Paris away,
And reach fair Southern France on the first sky of ——,

Little maids he might see, each
dressed in a —— of blue,
In bowers of flowers, as fragrant and
——
When a child, 'twas my hap to travel
that way,
And under a church porch I saw such
a ——.
Her robe was so white, and her face
was so ——,
And garlands of flowers as covered
her hair,
I thought she was a goddess protecting
her fane,
Though sure, such a thought was
quite foolish and ——.
The smile on her lips was gentle, not
——,
A green wand of olive her scepter to
sway,
And while I admired the pretty
——,
A maid with a basket said, "Please,
for the ——."
My mother some coins dropped the
maid in her ——,
And my pennies I gave, the fair god-
dess to win;
"Now what will she do with our pen-
nies?" I ——,
I asked, as we turned and wandered
——.
The reply:—"She'll appoint a glad
——
When all will rejoice with this
——."

3.

NUMERICAL ENIGMA.

The answer, composed of 41 letters, is well known by an English poet to May-Day.

The 20, 17, 26, 1, 23, 34, 16 is reproach of cowardice.
The 2, 3, 44, 41 is to wither.
The 12, 13, 14, 15, 16 is a low, fashioned vessel, driven by oars.
The 7, 21, 30, 40 is sacred.
The 30, 6, 19, 29, 36, 40, 31 is a false appearance.
The 24, 25, 35, 27 is scarcely ever a welcome visitor.
The 42, 43, 45, 23, 31 is to endure.
The 18, 23, 33, 6, 30, 37, 39 is a sharp-corer.

ANN O. TATOR.

Does Scene Exhale Ifrans?
Thou Hast a Poetry and So.
Themiek
Shall a Nan Do the Picabo?
No Checkmefe.

5.

CONCEALED WORD.

The[y'll] now conceal it thrive,
[Th]e blame it not stay concealed,
And in this dilemma you see
Can see how soon [will] be revealed:
'Tis peering from a yellow flower—
From all that sweet aroma yield.

6.

TRIPLE CHARADE.

I.

I know of no article longer than *my first*.
My second is used in this sentence.
My third is a note in music.
My fourth is used in coining.

II.

My first is what the two suitors wished to do to number one.
My second is the latter half of the cold season.

III.

My first is the result in addition.
My second is the French word for sea.

In an ancient May game number one was a young woman, and number two and number three were her suitors, of whom she favored the latter.

Answers to Puzzles in Last Number.

1. Way, weigher, waxie, waist.
2. Nobility, Orphaned, Diamonds. Ned.
3. Sweden, Swede, we, wed, den, seed, Eden.
4. Ice, ice, I, ire. 2. Loo. 4. Pat. 5. Leon. 6. Ida, Ana. 7. Ben.
8. Simple Simon.

9. Example is better than precept. Fine feathers make fine birds. The smallest mind is a continual feast. Hunger is the best sauce. It never rains but it pours.

A VERY PECULIAR RIDE.

Time softens all things, including the memory of disagreeable incidents. What, at the time, may have been irritating, perilous or intensely disagreeable, after a lapse of years becomes a matter of pride or amusement. Otherwise, this anecdote, which relates an incident anything but funny at the time of occurrence, would never have been recalled. It was told by a gentleman now in prosperous circumstances.

When I was a young man, said he, I had a hard struggle to make both ends meet, and for a time did any odd job that came to my hand. One very rainy night, very nearly one o'clock in the morning, I was passing along Chestnut Street, in Philadelphia, when I was accosted by a gentleman whom I knew slightly.

"Jim," said he, hurriedly, "I want you to take a message for me to Brown Street" (a locality near Fairmount Park), "and I will pay you a dollar for delivering it, and I'll give you another dollar to pay your cab hire out there."

It must be borne in mind that this was before the days of district messengers, and the local telegraph offices were closed at ten o'clock P. M.

I agreed to carry the message—a letter—and going around the corner of Ninth Street, found a single cab standing there. It was a most dilapidated vehicle, with two wretched horses, and the driver was in keeping, being old, poorly clad, and, as I soon discovered, extremely hard of hearing.

However, it was Hobson's choice, and after some chaffering I got into the cab, and it started. Away we rattled up Ninth Street and out Ridge Avenue, and had gone perhaps two squares on the latter street when a most extraordinary accident happened. The floor of the cab gave way beneath my feet!

I was half-asleep at the time, and when I came to my senses I was stuck in the debris and my toes were bumping along the cobble-stones. I kicked and struggled to regain my position, until the seat as well as the bottom boards fell into the street, except one jagged piece that kept banging the calves of my legs.

Placing either hand on the side sash of the cab doors I trotted along inside the cab, meanwhile crying loudly to the driver; but I might as well have appealed to the wheels. The old horses clattered along at a spirited rate; I dared not drop for fear the jagged board would knock out my brains, and so I was compelled to keep running. In short, I ran clear out to Fairmount Park, nearly four miles!

I could have cried with vexation at the time, and I had a fearful row with the cabman, but now I can afford to laugh at what was as ludicrous a disaster as ever happened in civilized life.

INSECTS AT SEA.

Birds of passage make their way across wide stretches of water with instinct, not only in regard to their course but in regard to the proper season as well. The finding of flies and butterflies a long way out at sea is perhaps hardly more wonderful, but to most readers the fact is not so well known. What Mr. Collingwood found to be the habit of such insects in Chinese waters may be observed over large areas of tropic seas.

When we had stood out some thirty miles from the land, a plague of flies overtook us. The cabin was so full of them that the beams were blackened. Common black house-flies they were, for the most part, with, however, a good sprinkling of large green flies. Where they could have come from was a mystery; but they were a terrible nuisance, and although we swept off hundreds in a net, their numbers were not sensibly diminished.

Another singular circumstance was, that although no land was in sight, large dragon-flies repeatedly flew across the ship; and I observed a large, dark butterfly flit across in the direction of the land, without stopping to rest on the ship. At this time the nearest land was the Chusan Islands, fully thirty miles off.

It is by no means an uncommon circumstance to see butterflies launch themselves off one shore for a short aërial excursion to the opposite shore, half a mile or a mile distant, without the least hesitation; and when we were anchored in harbor, as at Ke-lung, they were constantly flying through the rigging so rapidly that it was impossible to catch them, for they never rested upon the ship. Under these circumstances, they usually fly low, in a straight line, and near the water.

ONE OYSTER FOR TWO.

We laugh at the innocent young housewife who ordered "half a dozen halibut" for dinner. Had she lived in the South Pacific Islands she might have been equally laughed at for ordering half a dozen oysters—not to say a pint. The author of "Oysters, and All About Them" gives some examples that nearly match the giant clams and abalones of the California coast.

Pliny mentions that, according to the historians of Alexander's expedition, oysters a foot in diameter were found in the Indian Seas, and Sir James E. Tennent was unexpectedly enabled to corroborate the correctness of this statement, for at Kottier, near Trincomalee, enormous specimens of edible oysters were brought to the rest house. One measured more than eleven inches in length by half as many in width.

But this extraordinary measurement is beaten by the oysters of Port Lincoln in South Australia, which are the largest edible ones in the world. They are as large as a dinner-plate, and of much the same shape. They are sometimes more than a foot across the shell, and the oyster fits his habitation so well that he does not leave much margin.

It is a new sensation when a friend asks you to lunch, at Adelaide, to have one oyster fried in butter, or in eggs and bread crumbs, set before you, but it is a very pleasant experience; for the flavor and delicacy of the Port Lincoln mammoth are proverbial, even in that land of luxuries.

A GIRL.

Readers of John Ruskin's works will probably not recognize his master hand in the following comment on the lines:

No fountain from a rocky cave
E'er tripped with foot so free,
She seemed as happy as a wave
That dances on the sea.

"A girl is always like that when everything is right with her."

THESE FIGURES TELL THE STORY of the EVER-GROWING, EVER-GOING, EVERLASTING Steel AERMOTOR Where one goes others follow, and "WE TAKE THE COUNTRY"

This unprecedented success is due:

1st. To the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of sail surface, the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations proved that the power of the best wind wheels could be doubled, and the **AERMOTOR** daily demonstrates it has been done.

2d. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and

3d. To the enormous output of its factory which has made possible a reduction of prices so that it furnishes the best article at less than the poorest is sold for.

If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last 10 times as long—**IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB** (The Tilting Tower) **and THE WHEEL that RUNS when all others STAND STILL,** or if you want *a wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e.* **A GEARED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE** ($100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and work, to the **AERMOTOR CO.** Rockwell & Fillmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

FOR $60 and freight, we erect on a 40 FT. STEEL TOWER a Steel Wheel that equals any 12 feet Wooden one. GREAT REDUCTION TO FIRST PURCHASER.

STAMPS! 500 Mixed, Foreign, 16c.; 160 *var.*, many rare, 25c.; 50 var. U. For the Companion.

A SHARP TRICK.

Anna Mowry was left in charge of her two younger brothers one summer, while her parents went to California. She was with them in a farm-house on the Massachusetts coast, and frequently lectured them on questions of morals and manners. One evening she talked to them on the subject of honesty. "I have often read in the papers," she said, "of young men who are first led into extravagance, and then rob or defraud their employers. If a brother of mine was to be guilty of such dishonesty I would never forgive him—never! I would not acknowledge him as my brother!"

The boys had never been tempted to steal, and the suggestion that temptation and fall were possible, together with their sister's threat, startled and impressed them. The next day, while the question of honesty was still fresh in their minds, Anna came in, eager and excited.

"I hear," she said, "that a woman in the neighborhood has some fine old Satsuma ware. Her husband was a sea-captain and brought it to her fifty years ago. Come with me. I am going to try to buy a piece of it."

The house, when they reached it, was a meagre, forlorn little cottage. The woman was old; her lean, pale face lightened when she saw Anna. She was poorly clad. Here was a chance of earning money!

"Lookin' for rooms, ma'am?" she said. "I have some good ones to let."

"No," said Anna, carelessly. "We just stopped for—a glass of water."

"Why, sister!" exclaimed Bob, astonished at the deception.

She shook her head angrily at him to be silent, and when the woman left the room, she whispered, "If she knew what I came for she would charge twice as high for the ware." Then she followed her hostess, who was opening a cupboard.

"You have some nice glasses there," she said.

"Yes; cost a dollar a dozen."

"Very neat pattern indeed."

Anna turned the cheap, ugly-shaped goblet in her hand, while her keen eye scanned the recesses of the cupboard.

"Queer-looking old china cup, that," she said. "May I see it? Thank you. What is it?"

"Some foreign kind of crockery. My husband brought it to me. I've been told it was worth considerable money."

"Ah? I shouldn't like to give much for it. It's a dingy-looking bit of china. I think I would give seventy-five cents for it—just for the oddity."

"I couldn't let it go for less than a dollar," said the woman anxiously. "My husband gave it to me, but I do need money."

Anna laid the cup down, declaring that it was "dingy," but after some higgling she bought it for a dollar. She hurried away with it, her cheeks flushed and her eyes shining.

"Cousin Belle gave twenty-five dollars for not half so good a specimen!" she cried, exultantly, when they were on the road.

"Is this worth so much?" asked Bob, gravely.

"It is worth more; but she did not know it!"

"That was a pretty sharp trick of yours, Anna," said Tom, thoughtfully, after a pause.

Anna laughed complacently. "Yes, I think so," she said.

When the lads were alone that night, Bob said, "Anna said she would not acknowledge us as brothers if we stole money. Didn't she the same as steal that cup from the old woman if it was worth twenty-five dollars? If the old woman had known it she would not have let it go for a dollar. Anna took advantage of her ignorance. She really stole it."

"It looks like that," replied Tom.

"Well, then, I guess Anna wouldn't mind sharp tricks in business if we were men, Tom, would she?"

"No," said Tom.

The seed was planted which would reach a deadly growth hereafter, and Anna's talk about dishonesty was always thought of with derision.

HORSES IN SPECTACLES.

One of the curious effects of the unwonted cold weather in Europe during the past winter was observed in Austrian Moravia, where the inhabitants are said to be very fond of their horses, and humanely inclined toward them.

For many weeks the ground in Moravia was covered with a thick coating of snow. As this was unusual, and the people found that their own eyes were unpleasantly affected by the intense whiteness of the snow, it occurred to them that their horses must be affected in the same way, and needed protection for their eyes.

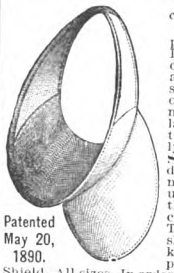
The farmers, therefore, procured quantities of goggles and spectacles with black, blue, or green glass, which they tied over their horses' eyes whenever they went out.

A market-day in Moravia during the prevalence of the great snow is said to have been a funny sight. Scores of horses, dragging wagons through the snow, or else improvised sleds and sledges, were seen in the streets, and nearly every horse had on a pair of blue or green spectacles.

The white horses were especially comical, and if they possessed a sense of the ridiculous, as some horses are thought to do, perhaps they wished that they were black or chestnut, for on colored horses the glasses were not so conspicuous.

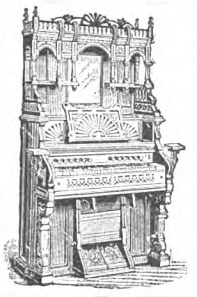
WILL VS. CIRCUMSTANCES.

A writer in the New England *Farmer* makes the following interesting comments concerning the power of will over circumstances.



Last summer I chanced to find an old school book which probably had never been opened since its owner, a girl student, died forty years ago. The book was filled with loose sheets of paper, covered with hand-writing, uniform and beautiful. There were drawings of plants and their separate leaves and flowers; there were carefully written notes of lectures; copies of poems which were fresh then, but have now become standard selections. Some difficult mathematical problems were also worked out, and the whole was the work of an earnest student.

My conclusion was, as I reverently laid aside the book, that will is stronger than circumstances. The high-school girl of to-day, bright as she is, cannot show better work than this New England farmer's daughter, of what our girls would term "long ago."



THESE WARM DAYS
soon spoil the rubber in elastic suspenders. The
CENTURY-BRACE
TRADE MARK

SIGSBEE'S SEAMLESS SHIELDS.

Patented May 20, 1890.
Sales this year over 50 per cent. greater than 1890.
One of the most troublesome parts of a lady's apparel is the Dress Shield. They are hot, causing profuse perspiration and annoying odors. Dresses set uncomfortably on account of this cumbersome attachment under the arm, and every lady has experienced much trouble by her shields constantly ripping out. The **Sigsbee Shields** overcome all of these difficulties. They are worn next to, or underneath, the undervest with equal comfort, thus keeping the corset and corset cover sweet and clean. They conform perfectly to the shape of the arm, do not wrinkle. Instantly adjusted. Imperviously. The only perfect Dress Shield. All sizes. In ordering, give measure of arm-scye. Price, per pair, 38c. Sold by Dry Goods Dealers everywhere. Sent by mail, postage prepaid, on receipt of price. SIGSBEE MANUFG. CO., Ayer, Mass.

Johnson's Poultry Books with Colored Plates.
Do you love Choice Poultry? Do you want the best? Success depends on thorough information.
Practical Poultry-Keeping
is a book of 130 pages, indexed, with Two Full-page Colored Plates and ten full-page illustrations. It treats on every subject pertaining to poultry. Descriptions of different Varieties, Diseases, Remedies, Incubators, Capons, etc., Plans for Poultry-Houses, etc. The New York Weekly *Tribune* says of it: "It is just what every one needs who keeps a dozen fowls." The *Poultry Messenger* says: "It contains all that is valuable to the farmer or fancier for both pleasure and profit. One of its chapters, 'A Word to Beginners,' is worth to old and new the full price asked." Price, 50 cents; cloth, 75 cents. Read last offer.
Poultry for Pleasure and Profit.
48 pages. Lithograph cover with one colored lithograph. Over 50,000 sold. Price, 25 cents.
The Turkey, Duck, and Goose.
Just out. 48 pages. As its title implies, pertains to the breeding and management of turkeys, ducks, and geese. Price, 25 cents.
THIS IS MY OFFER.
I will send the three books, paper covers, post-paid, for 75 cents; or the "Practical," in cloth, and other two in paper, for $1.00. With every order I send my
Poultry Annual for 1891, 20 Pages.
Catalogue and Price-list of 14 Varieties of Poultry and Eggs for Setting, Incubators, Crushed Shell, Bone, and Poultry Supplies. Postal Note preferred. Stamps taken.
G. M. T. JOHNSON, Box 10, Binghamton, N. Y.

For the Companion.

RIBBON FRAME FOR PHOTOGRAPH.

If some *Companion* girl intends to present one of her own photographs to a dear familiar friend, who would not wish to shut it away from sight in an album, let her frame it, according to the following directions, with her own favorite color. It will not only be doubly suggestive of herself, but will make a pretty holiday or birthday gift or valentine of what would otherwise be—only a photograph.

Take a cabinet photograph or one of a larger size, put a few drops of paste on the back side, lay it on a piece of heavy cardboard, an inch and a half larger than the picture all around and rounded off at the corners, and press it firmly down so that it will adhere to the back securely.

Over it lay a square of good clear glass a little larger than the photograph card—or what is still better, a slightly convex glass made for the purpose, which may be obtained at a photographer's. Then take a strip of cambric, cheese-cloth, or any thin cloth that will absorb paste readily, saturate with paste, and fold it like a binding all around the picture, letting it lap over the edge of the glass at least half an inch.

Press it on smoothly, rubbing out superfluous paste, and turn the other edge over on the back side and rub it closely down. When dried it will be firm and solid, and no air can reach the picture.

Nor is the picture marred in any way; it can be removed and put in an album if one should tire of the frame. The back may be finished with a neat paper cover, or a piece of thin lining-satin may be fitted smoothly over it by being drawn closely over a little way, on the right side, by a strong draw-thread run into the narrowly folded edge.

For the frame take any pretty ribbon—three-inch satin ribbon is very pretty for a large picture—and arrange it as illustrated, or in any original way that is pretty or characteristic, and tack it securely, beneath the folds and knots, through the cardboard beneath; milliner's stitches, long and loose but still firm and invisible, are better than finer ones for this work.

Bright or delicate ribbons are only suitable for framing children's or blooming girlish faces, while such colors as golden brown, old gold, and olive, are better for their elders.

THE PUBLIC SCHOOLS.

The figures relating to public school attendance, published by the census bureau, bring out the encouraging fact that the greatest gains in school enrolment and attendance have been made, for the most part, precisely where they were most needed. That is to say, the States of the Union where, ten years ago, the greatest proportion of children were without school advantages are, as a rule, those which now show the greatest gain in public school enrolment.

All the Southern States for which the figures of public school attendance have been collected and tabulated, show a great proportional gain.

In Virginia, for instance, the gain in the enrolment of children in the public schools has been fifty-five per cent.; in Louisiana, fifty-three per cent.; in South Carolina, fifty-one per cent.; in North Carolina, twenty-seven per cent.; in Maryland, twenty-three per cent.

At the same time in several of the States where the public school attendance was already comparatively high, and is so still, the enrolment of pupils in the public schools has not increased in as great a proportion as the population.

This is the case with nearly all the Northern States east of the Mississippi River, and is in most of them due to the increase of parochial schools, maintained by churches.

In two States, Maine and Vermont, an actual loss in public school attendance is recorded. Maine had about eleven thousand fewer pupils enrolled in the public schools in 1890 than in 1880, and Vermont about seven thousand fewer. Yet in each of those States the population had slightly increased.

Virginia and North Carolina have come into the front rank of States in enrolment of public school pupils in proportion to the total population, having over twenty per cent. of school enrolment in proportion to population.

In other words, the tendency of educational development is to equalize the conditions which prevail in the several States. If the States where free public schools have been longest in existence wish to maintain their relative rank, they must take measures to increase their school attendance.

A CHANGEABLE BUST.

Recently there was displaced from a command ing place in the *mairie* or town hall in a village in the mountains of Auvergne, France, a bust of Napoleon III., whose reign as Emperor of the French ceased in disaster more than twenty years ago. The bust, quite unnoticed by the officials of the Republican government at Paris, had tranquilly presided over the public proceedings of the town ever since the time when it had really typified the highest authority in the land. A bust of the Republic has been enthroned in its place.

This circumstance calls to mind the story of the famous bust of Verrine-sous-Bois, another small French town, which passed through a very interesting career during a long course of years.

This bust, which was in plaster, and was a faithful portrait of Charles X., king of France, was presented to the municipality of Verrine-sous-Bois by a conservative marchioness, in the year 1828.

Two years later, in 1830, King Charles was driven into exile, and soon after Louis Philippe, the citizen-king, ascended a new and more democratic throne.

All the busts of the Bourbons were sent to the attics, throughout France—at least, all but the one at Verrine-sous-Bois. There happened to live at the place a painter named Nicholas Rouffiquac, who was also something of a politician. He set about saving this bust for his fellow-citizens. He painted upon it a pair of side-whiskers, tufted up the front hair, and gave the bust a general appearance of commercial respectability rather than an air of royalty.

The bust was at once recognized as a striking portrait of King Louis Philippe. Shortly afterward Rouffiquac was appointed the local agent of the government tobacco monopoly.

The year 1848 came, and with it the Revolution. Rouffiquac put himself at the head of a mob, and proclaimed the advent of the Republic on the church steps. The mob broke into the town hall, and was about to smash the bust of the discarded Orleans when Rouffiquac intervened.

"Hold, citizens!" he said. "Do not strike the enemy, contemptible though he be, when he is down. Spare the bust till to-morrow, and I will give you a surprise."

Next day the bust had undergone a remarkable transformation. The man had turned into a woman, the monarch into the Republic. The side-whiskers had disappeared, the hair had grown long, and a yellow star shone on the classic forehead.

The bust, covered with flowers, was borne about the town to the music of the "Marseillaise" sung by more than a hundred citizens. A month later Rouffiquac was made tax-collector at Verrine-sous-Bois.

Next came 1852, and with it Napoleon III., Emperor. Rouffiquac was at the head of the Imperialist movement in his town. A crowd of men, armed with clubs and pitchforks, attacked the tranquil head of the Republic in the town hall.

The artist came to its rescue again. His task was a hard one this time, but he painted imperial epaulets upon the shoulders, decorated the breast with the grand cordon of the Legion of Honor, painted out the long hair and the star on the forehead, put some "beau-catchers" on the temples, and provided the upper lip with a moustache and the chin with a "goatee."

It was Napoleon III. Rouffiquac received public praise from the new imperial prefect of the district, of the work of his "patriotic and distinguished pencil," and afterward was given the cross of the Legion of Honor.

When 1870 and Sedan came, Rouffiquac had gone. The old bust, no longer venerated, was sold to a dealer in second-hand bric-à-brac. It deserved a better fate; for, as Charles X., Louis Philippe, the Republic and Napoleon, it had epitomized the history of France and strikingly illustrated the national character.

NOT LITERATURE.

Farmer Ellsworth lives in the suburbs of a little Massachusetts town, and is a man of considerable consequence among his friends and neighbors. During the long winter evenings he and Aunt Huldah, his wife, read much, and his comments on the literature of the day, though not often grammatically expressed, often display discrimination.

Not long ago he took a book of short sketches of country life from the town library, and when he brought it back, he had to pay a small fine, having kept it several days over the time allowed.

"I'm willin' an' glad to pay it, too," he said, as he laid down his pile of coppers.

"You enjoyed it, then?" asked the librarian.

"Enjoyed it! I should think we did!" said Farmer Ellsworth. "My wife, specially, has read every one of them stories, twice over. But I'm bound to say," he added, in his character of critic, "that it aint exactly what I should call *writin'*. Why, it's jest like *folks!*"

NOT TO BE STOPPED.

The Boston *Globe* tells a story related by the assistant manager of the Symphony orchestra. The Friday afternoon rehearsals of the orchestra, as is well known, are attended by a great concourse of women.

One afternoon the doors had just been opened, and there was a grand rush up the stairs for the unreserved seats in the second balcony. In the crush one woman shed some of her fine feathers, in the shape of an overskirt.

The assistant manager held it up and cried, "Here, madam!"

She turned and looked, but music and a good seat had charms. "Keep it for me," she said, and hurried on up the stairs.

HIS WORK.

In a pretty church on the island of Anityum in the New Hebrides, is a tablet erected by grateful natives to the memory of their missionary, Rev. John Geddie.

On this tablet is written in their language the following:

When he landed
in 1848
There were no Christians here,
and when he left
in 1872
There were no heathen.

—*Missionary Link.*

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

WHAT DO YOU THINK?

A hot iron, passed over the back of Briggs's Patent Transfer Patterns, will stamp the design for Embroidery on any material. We will send you the following as sample, on receipt of 20 cents:

6 Yards 3 inch Border . . . . . 25c.
1 Dress Set (for Braiding) Collar, Cuffs and Revers 25c.
All for 20 cents. 50c.

MADE WITH BOILING WATER.

EPPS'S

GRATEFUL—COMFORTING.

COCOA

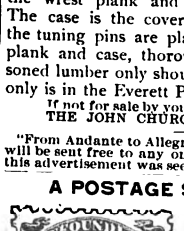
MADE WITH BOILING MILK.

You hear a great deal about self-acting machines. The "Pittsburgh" is about as near that as can be.

Fill and wipe it once a day and trim it once a week—that's all.

Drop us a line and we'll tell you all about it.

Pittsburgh, Pa. PITTSBURGH BRASS CO.



The EVERETT PIANO.

The skeleton of a piano is the frame to which the wrest plank and iron plate are attached. The case is the covering. In the wrest plank the tuning pins are placed. In skeleton, wrest plank and case, thoroughly and naturally seasoned lumber only should be used. Such lumber only is in the Everett Pianos.

If not for sale by your local dealer, address THE JOHN CHURCH CO., Cincinnati, O.

"From Andante to Allegro," an illustrated pamphlet, will be sent free to any one who will mention where this advertisement was seen.

A POSTAGE STAMP MAN.

Stamp collecting is one of the most interesting and instructive of pursuits, and it is estimated that there are over 500,000 postage stamp collectors in America. A stamp collector, generally speaking, is not one who simply amasses stamps in quantity, but who collects one specimen of each variety of the postage stamps of this and foreign countries, classifying and arranging them in a suitable album or blank book, as a source of study and amusement. These collections are usually arranged in geographical divisions and chronological order, and it is surprising to one who is not initiated, the real pleasure and enjoyment that may be derived from a collection of postage stamps.

Wise parents encourage it in their children because it teaches them something of geography, history, the money denominations of various countries, as well as teaching them to be observing

The subject of this sketch, Mr. C. H. Mekeel of St. Louis, Mo., is a postage stamp man, and although a young man is the most extensive stamp dealer in America and during the last ten years has built up a trade among the stamp collectors of the world that is truly marvelous

His business is to import used and unused postage stamps from every country in the world, and from every remote colony or island that issues stamps, and to furnish them to collectors.

In this way it becomes possible for the collector to add to his collection by the expenditure of a little money, stamps that he might be a long time finding in any other way.

This business which at first thought seems a very trifling one, involves an immense amount of capital, requiring correspondents and purchasing agents all over the globe.

Stamps have been collected as a source of amusement ever since first issued in 1840, and the interest in this direction does not seem to have been confined to any nationality; England, France, Spain, Germany, India, Japan and South America have their stamp collectors, in fact there is not a civilized country on the globe today, where there are not native stamp collectors.

The collecting of stamps is by no means confined to boys; we find lawyers, physicians, professors, military officers as well as business men who have magnificent collections; many of these commenced as boys, and have always kept up their old interest and love for stamps; others have become attracted to it by their children, and have become interested in it, in helping them classify their collections.

Millions of stamps are handled annually by this firm, and a large force of clerks is engaged in classifying the stamps that are pouring in from every clime, and attending to the wants and filling the orders of American collectors. Correspondents in French, German and Spanish are required, and remittances are received and dispatched daily to all parts of the world.

Mr. Mekeel has made several trips to Foreign Countries perfecting his business connections; last summer he went to Mexico, and the year before to Europe.

He is fortunate in having two brothers who are associated with him. His business was organized into a stock company a couple of years ago, and is the largest concern devoted wholly to stamps in America.

This business is carried on almost entirely by mail, over 100,000 pieces of mail matter being handled by them a month; this domestic trade extends from Maine to California.

This article may catch the eye of some one who is not a stamp collector but who may be profited by it.

Many valuable stamps are packed away in old trunks on family letters, or in the letter files of old established banks and business houses.

It would pay you to look up your old stamps and send them to Mr. Mekeel, who will pay best prices.

All U. S. stamps on letters, also stamped envelopes from 1840 to and including 1869, have a market value, the 3c values being the commonest. Some of the other values are very desirable. also the official stamps issued by the various government departments from 1875 to 1884.

Local stamps issued by express companys and local posts from 1843 to 1860, and Stamps issued by Confederate postmasters from 1861 to 1865 are also desirable, and should be kept on the original envelopes or letters to prove their genuiness. as this class of stamps were usually of crude design, and are extensively counterfeited.

The stamps issued by the provinces of Canada from 1851 to 1867 are saleable.

Parties who are able to find any of the above, or who have any old stamp collections will find in Mr. Mekeel a ready purchaser.

The system of submitting stamps to collectors on approval marked at market prices, and allowing a liberal discount on sales or purchases is engaged in very extensively. This firm sends stamps in this way to thousands of collectors, all over this country, and often have as much as $200,000.00 worth of stamps out on approval.

The stamps are neatly mounted on thin sheets of linen paper, and priced. Collectors are allowed to keep them 10 days, and then return those unsold with the money for those retained less 40 % commission.

This is one of the most important departments of the business, and requests for selections are solicited.

This department is in charge of a competent man, who is assisted by two stenographers, two special book-keepers and ten other assistants, which force can be doubled if necessary, and the attention of the readers of the COMPANION are especially directed to the advantage of having stamps submitted to them that they can depend upon.

For those who want to START a stamp collection, a few offers are made:

Outfit No. 1 consists of an album 9x12, with spaces to hold over 3000 stamps, and an assortment of 350 different stamps for $1.00 post free.

Outfit No. 2 consists of a large album with spaces for all stamps ever issued, and an assortment of 500 different stamps, for $4.50 post free.

Outfit No. 3 consists of a fine large cloth bound album, with spaces for all stamps, and 1000 different stamps, for $10.00 post free. A bargain!

Now for those who are already collectors, we have a few offers as follows:

Packet A containing only United States stamps, issues of 1851, 1857, 1861, 1868, 1869, 1, 2, 3, 6, 10, 12 and 15c, and the 30c and 90c values of the three latest issues, also stamps of the Departments of Agriculture, Interior, Justice, Navy, P. O., State, Treasury and War, also some scarce United States envelopes, 100 varieties, some RARE, for $6.00.

Packet B contains only Mexican stamps, issues from 1856 to 1890, including some of every issue and many very rare, 50 varieties in all, for $1.00.

Packet C contains United States stamps similar to Packet A but only 50 varieties, for $2.00.

Packet D contains only Mexican stamps including many RARE varieties, 100 all different $5.00.

Packet E contains only stamps of the American continent, includes all in packets A and D besides, Central, South American and Canada, making 300 varieties for $15.00. A FINE PACKET.

Packet F similar to Packet E, contains all stamps in Packets B and C, and Central, South American and Canadian, making 200 varieties for $7.50.

Many collectors are anxious to deal, and suitable wholesale lots are here offered.

The best lot is a complete stock for $25.00, containing 6500 stamps, a dozen albums, printed letter heads and approval sheets, and a three inch advertisement in our paper; this is in fact everything required to start in the business, and is a better stock than Mr. Mekeel had when he started to deal in 1877.

The stamps in this stock consist of 1000 different stamps from all parts of the world, 1500 well mixed South, Central American and Mexican stamps, 1000 assorted from British Colonies, 1000 assorted United States stamps, and 2000 well assorted European stamps together with the 12 assorted albums, printed matter and advertising, for $25.00. This is sent by express, or $1.50 extra for postage.

Those who want smaller lots for sale or exchange, may select some of the following:

1000 finely mixed South American, $7.50 post free.
1000 finely mixed Central American, $10.00 post free.
1000 finely mixed Mexican stamps, $5.00 post free.
1000 finely mixed from all Countries, $3.50, post free

All stamps handled by this firm are guaranteed genuine, and exactly as represented.

The following is a partial list of our publications:

"THE PHILATELIC CATALOGUE," by Major E. B. Evans of the British Royal Artillery, is a complete and comprehensive illustrated history of the postage stamps, envelopes and cards of all countries. The largest book on stamps ever published in the English language. 530 pages, in cloth binding, $4.00 post free.

This book should be in the hands of every collector

"THE HISTORY OF THE POSTAGE STAMPS OF THE UNITED STATES," by John K. Tiffany, Esq. A valuable work. 228 pages, paper, $1.00, cloth, $1.50

"MEKEEL'S STAMP DEALERS' AND COLLECTORS' ADDRESS BOOK," containing the addresses and announcements of over 5000 collectors and dealers in all parts of the world, cloth bound $1.00 post free.

"MEKEEL'S ILLUSTRATED AND PRICED CATALOGUE OF AMERICAN STAMPS" for 1891, 25 cents.

Small printed album, size 9x11, contains 64 pages and spaces for over 3000 with illustrations for many varieties No. 1 in board covers, 30c; No. 2 cloth, 50c; No. 3 cloth and gold, 75c; all post free.

The large printed album, size 11x16, contains spaces for every stamp ever issued, brought up to date with illustrations. No. 1, board covers, $1.50; No. 2, cloth and gilt, $2.50; No. 3, same with extra pages for new issues, $3.50; No. 4, same but only printed on one side of the paper, $5.00; No. 5, same elegantly bound in full leather, $7.50 Nos. 1, 2 and 3 post free. Nos. 4 and 5 express extra

Mekeel's Blank Stamp Album, is intended for more advanced collectors who prefer to arrange their stamps to suit their own ideas, and for those who make a specialty of certain countries No. 1, cloth bound with guards, $2.50; No. 2, same binding, larger size, $4.00; both post free

THE PHILATELIC JOURNAL OF AMERICA is the oldest, largest and best monthly magazine devoted to the interest of stamp collecting Although this journal has from 60 to 100 pages monthly, it is only 50c a year, sample copy free.

MEKEEL'S WEEKLY STAMP NEWS, is a large 4-column weekly stamp newspaper, the only WEEKLY stamp paper in the world; $1.00 per year; subscriptions received for 3 or 6 mo. at same rate, copy free.

The above is a reduced heading of the newspaper, the building at the left is Mekeel's establishment.

Correspondents can remit money safely by bank draft, post office or express company money orders or registered letters.

They may also be sure of their orders receiving the promptest attention.

Every stamp collector who reads this article should have something to write about, and to each and EVERY one who mentions this paper a Mexican postage stamp will be presented free.

ESTIMATES for furnishing residences with Silver, Brass and Iron Bedsteads and Fine Bedding of every description given upon application. Mention COMPANION.

PUTNAM & CO.,
546 Washington St., Boston, Mass.

DONALD KENNEDY
Of Roxbury, Mass., says:

My Medical Discovery seldom takes hold of two people alike! Why? Because no two people have the same weak spot. Beginning at the stomach, it goes searching through the body for any hidden humor. Nine times out of ten, inward humor makes the weak spot. Perhaps it's only a little sediment left on a nerve or in a gland; the Medical Discovery slides it right along, and you find quick happiness from the first bottle. Perhaps it's a big sediment or open sore, well settled somewhere, ready to fight. The Medical Discovery begins the fight, and you think it pretty hard, but soon you thank me for making something that has reached your weak spot. Price, $1.50. Sold by every druggist in United States and Canada.

Digitized by Google

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

CATARRH.

Catarrh is an inflammation of the mucous membrane. As the membrane lines every cavity of the body that has an outlet, there may be as many different forms of catarrh as there are such cavities.

The closed cavities are lined, not with mucous membrane, but with one that secretes a thinner fluid—serum—for lubricating purposes, which is readily absorbed after doing its normal work. Still, the serous membrane also may be inflamed, and its secretion abnormally increased.

Thus we may have pericarditis, with its "water" around the heart, from inflammation of the membrane that lines the heart-bag, or pericardium; pleurisy, with its fluid crowding against the lungs, and sometimes causing their complete collapse, from inflammation of the membrane that lines the chest; peritonitis, so painful and dangerous, from inflammation of the membrane that lines the cavity of the abdomen; synovitis, with its painful and puffed-out joints, from inflammation of their similar lining membrane.

A common "cold" is an inflammation of the air passages. When it is confined mainly to the nostrils, it is popularly known as a cold in the head, but medically as coryza.

When it is confined mainly to the bronchial tubes, it is called bronchitis, which, when it has gained a permanent hold, greatly resembles "consumption," and is often mistaken for it by the people.

Catarrh of the ears and catarrh of the Eustachian tubes often cause deafness. Catarrh of the stomach loads the stomach with tough phlegm and interferes with digestion. Catarrh of the gall-bladder obstructs the outflow of the bile, which is absorbed into the circulation, and thus gives rise to jaundice. Catarrh of the bladder is a dangerous disease, from the difficulty of getting rid of the mucus.

Two forms of catarrh are due to pollen: one, in summer, known as "rose cold" or "hay fever;" the other, in autumn, known as "autumnal catarrh."

The word catarrh, as popularly used, means either nasal catarrh or bronchitis. Nasal catarrh is often helped by snuffing up, so as to carry it into the mouth, a weak solution of salt and water, repeating the operation several times a day. Where the disease is very persistent, it is well, when possible, to try a change of climate. In bronchitis the case should be attended by a physician.

TRANSIT OF MERCURY.

A transit of Mercury occurs on May 9th, when the smallest of the planets passes over the sun's face, looking like a tiny black ball floating slowly over a sea of fire.

The transit begins at six minutes before seven o'clock in the evening, and ends at ten minutes before midnight in Eastern standard time, continuing four hours and fifty-six minutes. As the sun sets at eight minutes before seven on the 9th, the transit is invisible in Eastern New England, for it begins about the time the sun sinks below the horizon.

Observers West and North will be more fortunate, as the time is an hour earlier for every fifteen degrees of longitude farther west. The transit will, therefore, begin an hour before sunset, for those who make use of Central time, two hours for those who use Mountain time, and three hours before sunset where Pacific time is used. The whole western coast of North and South America therefore affords favorable conditions for observing the phenomenon.

The cause of the transit may be easily explained. As Mercury revolves within the earth's orbit, he must come between the earth and the sun at every inferior conjunction. If his orbit lay in the same plane as that of the earth, there would be a transit at every revolution. As his orbit is inclined seven degrees to the earth's orbit, he must be at or near his nodes or crossing points, or he will pass above or below the sun, and there can be no transit. The earth arrives at Mercury's nodes on May 7th and November 9th, and transits must occur near these dates.

Mercury is too small to be visible to the naked eye when crossing the sun, and was never seen in this position until years after the invention of the telescope. Gassendi witnessed the first transit in 1631.

Transits of Mercury are looked upon as astronomical curiosities, and have little practical importance. They afford data for measuring the planet's diameter, and for accurate determination of his orbit.

UNPACKING ALLIGATORS.

The author of the "Recollections of a Lion-Tamer,"—"*Les Memoires d'un Dompteur*,"—relates how, after being for some years employed as an animal trainer, he and his wife had, by great economy, saved enough to buy a modest menagerie, and received their stock of crocodiles, serpents and monkeys at an inn near Lyons, France. One evening several alligators came, and were placed in a store-room which opened from the courtyard.

Maria and I, with several persons to hold lamps, set to work to unpack them. You can imagine how agreeable that unpacking was. The alligator is wholly lacking in grace and gentleness. Each of his jaws is ornamented with seventy-five teeth, his body is covered with armor that defies attack, and his tail is an invincible weapon that can overthrow, cripple, or destroy an adversary. Our alligators had had a long voyage.

Never of an amiable disposition, alligators are in particularly bad humor after a journey, and become the most ferocious of creatures if they escape. Ours escaped! What confusion there was! Every one rushed to the door, the lights went out, my wife and I were left in the darkness, face to face with this horrible, invisible danger.

We had climbed on a table. At one blow from the tail of one of the saurians the legs gave way. Terrified, we rushed from one side of the room to the other, hunting for the door. The frightful grumbling of the angry beasts mingled with the sound of their tails and jaws striking against the furniture, the flag-stones and the walls. At last I found the door.

We were free; but that was not the end of the matter. Not to be injured by a stroke of the tail of one of the alligators was one point, and not to be ruined was another, for these delightful companions had cost us our little fortune. I went back carrying a torch. I threw myself resolutely into that *mêlée*, and finally succeeded in getting the saurians into safe quarters.

PROMPT RULING.

It is chiefly in civil courts that complaint is made of "the law's delay." Courts martial are only temporary organizations, and cannot continue cases from term to term. But with all the promptness of military legal procedure, it is not often that a decision is obtained with so little hesitation as in the following case:

An old lady living in "Dixie" in the time of the Rebellion brought her complaints to the headquarters of the Confederate General Bragg, where she was met by his adjutant, and the following conversation ensued:

Old Lady—Is this where Captain Bragg lives?

Colonel Brent—Yes, madam; can I do anything for you?

Old Lady—Well, you see, mister, I live over where the fightin' was, and when Captain Bragg's company skeered the Yankees, they ran rite peerst my house—rite peerst—when up comes Captain Forrest with his crittur company [cavalry] and makes a line of fight rite through my yard, and oversets my ash-hopper, and treads—

General Bragg (sitting near)—Colonel Brent, see that the lady's claim is settled *immediately*.

AN HONEST KING.

Whoever reads the following must own to a feeling of respect as well as liking for the honest king. King Frederick VI. of Denmark, while travelling through Jutland, one day entered a village school, and found the children lively and intelligent and quite ready to answer his questions.

"Well, youngsters," he said, "what are the names of the greatest kings of Denmark?"

With one accord they cried out, "Canute the Great, Waldemar, and Christian IV."

Just then a little girl to whom the schoolmaster had whispered something stood up and raised her hand.

"Do you know another?" asked the king.

"Yes; Frederick VI."

"What great act did he perform?"

The girl hung her head and stammered out, "I don't know."

"Be comforted, my child," said the king; "I don't know, either."

HOPE FOR HIM.

How often do we hear a parent say of a mischievous boy: "I would not mind so much if I could only believe him." Whatever his other traits, truth is essentially the touchstone of a boy's character. The following case in point appears in the *Christian Leader:*

"I don't know that you will be able to do much with him," said a father to the principal of a school, to whom he had brought his son as a pupil, "he is so full of mischief."

"Does he tell the truth?" asked the principal. "Can I always depend upon his word?"

"Oh, yes," said the father, "he is honest, he will tell the truth, even when it is against himself; you may depend upon that."

"Then we can manage him," said the principal. "He will make a reliable, manly man."

MODERN COOKERY.

Ignorance of American institutions, on the part of English people, is not unnatural, perhaps, but it is none the less amusing.

A rosy English girl who sat beside a bright young American in the dining-saloon of a Cunard steamer, as the story is told in the Albany *Press*, suddenly put American politeness to the test by propounding the inquiry, "Can you make clams?"

"Clams?" answered the bewildered American maiden.

"Yes; they're a kind of bread or biscuit, aren't they?"

"I will never buy a cheap extract again," said a Mrs. Brown, when she found her child's life in danger from eating an ice cream flavored with an extract recommended for its cheapness. Buy Burnett's and be sure.

BEST FOULARD CRAVATS. Black, Navy, Napoleon, Light Blue, Dark Red, Plumbago and White Grounds. Four in Hands, $1. Flat Scarfs, $1. Ascots, $1.50. Sashes, $3.75. By mail on receipt of price. HEWINS & HOLLIS, 4 Hamilton Place, Boston, Mass.

FINE MILLINERY, DRY GOODS, ETC.

"Spring Season."
We beg to inform our many friends and patrons through THE COMPANION that we are now exhibiting the finest lines of **Spring Millinery, Costumes, Wraps, Jackets, Dress Goods, Silks, etc.,** in this city. Pay a visit to our Mammoth Establishment, or if you do not live in the city send for our illustrated catalogue (ready April 1st) and see what inducements we are offering. We are sure we can please you, both in quality and price.

DR. JAEGER'S SANITARY WOOLEN SYSTEM CO.
HERMANN SCHAEFFER, President; ERNEST BENGER, Vice-President.
Note our Trade-Mark. Beware of Imitations!
We ask attention to our *Complete Assortment* of
SUMMER
UNDERWEAR
For Men, Women, and Children;
And Especially to our exquisite
All-Wool GAUZE
Underwear for the hot, summer season.
These Sanatory garments are guaranteed to be all-wool of the finest quality; they are made under Dr. Jaeger's supervision.
Send for illustrated Catalogue.
Garments Made to Order, a Specialty.
Mail orders promptly attended to.
827 & 829 Broadway, New York.
153 Broadway, below Courtlandt St., New York;
504 Fulton Street, Brooklyn, N. Y.;
1104 Chestnut Street, Philadelphia, Pa.

The Second Summer is the most critical period of a child's life, because the
Pains of Teething
increase the susceptibility to disease and lessen the resistive power. A catarrhal attack, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to combat injurious influences.
"Tooth-Food"
will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger. This remedy is made of the nutrient elements necessary to bone growth, and is absolutely harmless. A bottle, with full description of the remedy and directions for its use, will be sent free to any address on receipt of one dollar.
THE REYNOLDS M'F'G. CO., CINCINNATI, O.
Your druggist should have "Tooth-Food," and before sending to us you had better ask him for it.

THROUGH THICK AND THIN.

In Eight Chapters.—Chapter II.

Tony at Marrowbone.

It was not strange, considering that both Jack and Tony were sturdy and excellent fellows in their way, that they soon became inseparable. A great part of what Tony lacked in education he made up in natural shrewdness, and the two boys, quite unconsciously, were an education to each other.

Jack found thorough manliness and independence in Tony, who had taken upon himself the balance of the payment for the few acres at Lone Point, and worked and contrived to that end. Tony for the first time associated on terms of equality with a boy highly bred and carefully brought up. Their very differences drew them together.

Jack found it great fun to go down to the little cottage and talk fishing and sailing and dogs and horses with Tony. It cannot be said that Tony enjoyed as much his visits to Marrowbone. The first night he came up to tea, after much begging and pleading from Jack, the old Colonel, who had heard the story, quite overpowered Tony with elaborate politeness at the tea-table. He called him "Mr. Scaife," and treated him generally as if he had been fifty instead of fifteen, which embarrassed Tony.

But Mrs. Randolph called him "Tony," and from the minute Tony saw her kind, handsome face his heart was won. Tony had been taught table manners, and although evidently a "working boy," there was an air of decent breeding in all he said and did that made him appear well.

But he felt painfully conscious all the time that his hands were red and rough, and he was not exactly at ease with Uncle Josh eying him, for Uncle Josh, in his heart, strongly disapproved of the intimacy between "Marse Jack, de very fust quality, an' dat ar little fisherman, dat aint nothin' but po' white trash."

Tony was undoubtedly manly, sturdily truthful and industrious. In character he was fully Jack's equal.

The first thing Mrs. Randolph wanted to see was whether Tony really wished to educate and improve himself. She soon found that he did. At Marrowbone there was a fine collection of books, although somewhat ancient, and Mrs. Randolph, after talking with Tony one day, offered him any books he might want.

She perceived that the imaginative books in which Jack delighted did not suit Tony at all; but in browsing about the library, he came upon a volume of voyages made by the early Spanish navigators. Jack, who had been a little vexed with Tony because he would not read "The Talisman" and "Ivanhoe," and had begun to think Tony did not care for books, was convinced of his mistake when he saw him absorbed in this book, which he borrowed and read twice through.

"It isn't bad reading, anyhow," said Jack. "I like that part where the pirates chase the Spanish galleon, and the captain blows her up with the treasure and gets away with the boats."

"Pshaw!" answered Tony. "That isn't the principal thing. Don't you see there's a lot about geography and seamanship in it? I'm going to be a sailor, and I'm going to learn all I can before I go to sea."

This rather surprised Jack, who read from pure love of reading, with very little notion of improving himself, but who managed, as all boys do who read much, to pick up a good deal of useful knowledge.

But Tony went at it with a spirit of dogged determination to find out facts, and read with a system unknown to Jack.

The boys' intimacy grew day by day, in spite of Uncle Josh's notion that Jack was "quality" and Tony was "po' white trash." The first revelation of a difference in their social condition dawned upon them when Jack's mother, as usual, arranged for a birthday party at Marrowbone for him.

"Of course Tony will be asked," said Jack, aggressively, as if he feared some opposition from the old Colonel.

"Certainly," said Mrs. Randolph. "But if he has as good sense as I suppose he has, he will not come."

"Why not?" Jack fired up. "Tony's one of the best fellows in the world, and as good as I am, or anybody else."

"Of course he is," answered Mrs. Randolph, calmly. "But in the first place, perhaps Tony has no clothes that are suitable for a party, and as all self-respecting people like to appear well, probably on that account he won't come. Then some of the boys and girls might affect to look down on him, and Tony would feel it. Besides, the dancing and games would be strange to him. I am afraid we couldn't make Tony have a good time, no matter how much we tried. But you may ask him, and if he chooses to come, we will do our best."

Jack, who did not stop to reason where his wishes were concerned, went at once to Lone Point to ask Tony to the party.

"Well, I thank you very much, but I don't think I can come," said Tony.

"Why not?" demanded Jack, standing very square, with his hands in his pockets.

"Because—because your friends aint exactly my sort, and I'd feel —"

"But I'd make them polite to you—see if I don't!" argued Jack.

"Of course they'd be polite, but I can't exactly explain it. I feel all right with you and your mother—but—all the same I shall not go to the party."

Jack pleaded in vain. Tony was firm. Jack went home disappointed.

His mother's quiet remark was, "I told you so. Tony has excellent sense."

As the autumn came on, Jack went to school every day, and Tony turned oysterman. The boys still kept up their intimacy, though Jack went oftener to Lone Point than Tony came to Marrowbone. Tony was out in all weathers, "tonging" for oysters, and when he came in at night he was very tired, and curled up on the wooden settle in the chimney corner to sleep, while his mother sewed or knitted patiently by the light of one candle.

Meantime Tony, going about silent, hard-working, and apparently without any ambition beyond that of selling his oysters, turned over many things in his mind, and one night, when, for a wonder, he was not too tired to talk, he sat up looking straight at the fire, and then said, calmly:

"Mother, I'm going to sea."

Mrs. Scaife dropped her knitting suddenly without a word; but she uttered a sort of sob that went to Tony's heart.

"I knew it was coming," she said, presently. "It's in the blood. Your father before you would go to sea. The sea has given me all the living I ever had, but it has taken away from me, one by one, everything I ever loved—my father, my two brothers, my husband, and now it will take you, Tony."

"But, mother," said Tony, with a strange light shining in his eyes, "something calls me. I can't be happy on shore. I'm only happy in the boat, and if I live here, I shall never be anything but a fisherman and an oysterman all my life.

"There's that big four-master out in the river, loading with oysters," he went on. "Well, I went to see the Captain. He's a fine man, Captain Staveley is, and he said he'd like to have me, if I had my parents' consent. He said he'd come ashore and talk to you —"

At that moment a loud knocking resounded on the door of the little cottage, and the widow, rising, went and opened the door. A big, burly man entered.

"Why, it's Captain Staveley!" cried Tony, delighted.

The mother was not delighted. It had been hanging over her that what she said was in Tony's blood would come out, and sooner or later Tony would start on a voyage that might be his last.

The Captain was a tall, handsome man, with a great beard that covered nearly his whole face. He shook Tony's hand cordially, sat down in the one big chair, and put his feet out toward the fire.

"Well, ma'am," said he, "this young fellow wants to go for a sailor."

"Yes," answered the widow, in a tremulous voice. "I knew 'twas coming. I felt it. Tony was born with a love for the water. I never knew any of my blood that weren't."

"It's a hard life," said the Captain, after a moment. "But—it makes a man of a fellow."

"And that's what I want to be—a man," said Tony.

"And the grub's poor," remarked the Captain.

At this Tony made a grimace.

"Sometimes I don't get enough grub," he said.

The Captain eyed him, and then looked around the little cottage. In spite of cleanliness and evidences of hard work, there was every indication of poverty—the poverty of the grinding kind, when it is a struggle to keep body and soul together.

"What will become of your mother, boy?" asked the Captain.

"I'll send her my wages, and that's more than I'll make by tonging for oysters," answered Tony, boldly.

"What do you say, ma'am?" asked Captain Staveley, turning to her.

"I say nothing," answered the poor mother, after a pause. "The best part of my life, whenever I've heard the wind blowing at night, I've said to myself, 'Maybe that wind is driving somebody I love to destruction;' and every time I'd hear the waves on the shore I'd say, 'Perhaps at this very minute the water is dashing over my husband, or my father, or my two brothers.' And now that the sea has got them all, I say, when I hear the wind and the waves, 'It'll be Tony next.'"

"What do you say, ma'am?"

At that moment the wind rose, and the sound of the waves dashing on the sandy shore almost drowned the quiet voices in the little living-room of the cottage.

"But, mother," said Tony, "I can't keep away from the sea. It seems to be calling, calling, calling. And, mother, I want to be a man, a real man, and this is the only chance I've got. Though you'll be lonely, and 'll miss me, yet it's the only way I'll ever have of making a good living for you."

The Captain remained perfectly silent. He saw how things were going; and when the widow said, in her patient way, "Tony, do what seems right to you," the matter was settled.

Captain Staveley then offered him eight dollars a month, with a promise that he should become a thorough seaman. When he rose to go, the mother, with a break in her voice, said, "Thank you, sir," and the Captain, putting his hand on Tony's shoulder, said, kindly, "I'll take care of him, and I think he's a good boy."

Bright and early the next morning, Tony went up to Marrowbone to tell the news to Jack Randolph and his mother. When he walked up to the door and knocked, Jack, with another boy about his age, bolted out of the door, and almost bowled Tony over.

"Why, old fellow," shouted Jack, delighted, "I was just going down to see you. This is my cousin, Edgar Mount, who's come to stay with me."

Edgar Mount was a well-made fellow about Jack's age, with a certain fine manner in his bearing, although not so handsome as Jack. He had a very good figure, which he held very erect, and a pair of penetrating dark eyes that took in everything at a glance.

Tony felt instinctively, as the two young fellows shook hands, that Edgar noticed how hard Tony's hands were, and that his clothes, although neatly made by his mother's careful fingers, and scrupulously clean, were not exactly the sort turned out by the tailor who supplied Edgar's perfectly fitting garments.

Tony never felt these differences with Jack, and as a matter of fact, Jack's clothes were home-made, too; but Jack had an air of refinement that made him quite superior to his clothes, no matter what they might be.

"I wish I could go back with you right away," said Tony, "but it's hard to get a morning off, and I have something particular to tell your mother."

"All right," said Jack, heartily; "then we'll wait awhile."

"I think," said young Mount, in a remarkably well-modulated voice, "I won't go with you this morning, Jack. I've some letters to write, and if you'll excuse me, I'll go to see your friend some other day."

Something in the tone implied a slight to Tony. Jack answered at once, with ready coolness:

"Just as you please. Come, Tony, mamma is always ready to see you."

The two boys went off with their arms around each other. As soon as they got out of ear-shot,

Digitized by Google

Tony said, with a laugh: "Edgar Mount hasn't any use for Tony Scaife."

"Well, that hardly counts," said Jack, carelessly. "I don't think Jack Randolph has much use for Edgar Mount, to tell you the truth. He only came yesterday morning—he's my cousin, you know. I never saw a fellow exactly like him. He speaks French and Spanish, and last night he sat down to the piano, and played and sang beautifully."

"Does he live anywhere about here?"

"He is from New Orleans, but he was brought up in Paris. He doesn't seem to be afraid of anything. Yesterday he rode Black Prince"—this was Jack's colt which he had broken himself, and not broken particularly well—"and the Prince kicked and shied, but Edgar sat him. But as soon as Prince was conquered, Edgar got off and said he didn't believe he'd ride at all, and went in the drawing-room and sang French songs to the piano."

This type of boy was even more startling to Tony than to Jack.

"And he's got high notions, I see that," continued Tony, with a smile. "I saw the queer look in his eye when he felt how hard and rough my hand is."

The two boys went to Mrs. Randolph's room, and Tony sat down and told her that he was going away to be a sailor, that he could better help his mother in that way than any other.

"You know, Mrs. Randolph," he said, "we owe two hundred dollars still to the Colonel for Lone Point."

Jack seemed stupefied by the news that Tony was going away. Although his mother knew that Jack had grown very fond of the fisher-boy, she did not realize how strong the feeling was until she saw Jack's blank face, and noticed his perfect silence.

Mrs. Randolph, after hearing all Tony had to say, gently encouraged him.

"You are right, Tony," she said. "It is the best chance you have. You can never do more than make a poor living out of Lone Point, and you will at least have an opportunity of seeing something of the world; and if you are best fitted for a seafaring life, you should follow it."

Tony's eyes shone with gratitude. "I don't want to be uppish," he said, "but I should like to get along in the world, and some time be something like you."

"There is nothing uppish in trying to improve one's self," said Mrs. Randolph. "And, Tony, try not only to be a man, but to be a gentleman. You know there is a difference."

"Yes'm," said Tony. "There's Captain Staveley, he's every inch a man, but he hasn't nice table manners, and he'd be very uncomfortable if he was invited to dinner by the Colonel—just as I've been myself," he continued, laughing and blushing.

Mrs. Randolph smiled, too.

"But you are young enough to learn, and when you are Captain Staveley's age, you may, if you choose, be the equal of the Colonel or any man, and not embarrassed if you were to sit at the President's table. That's what I mean when I tell you to be a gentleman as well as a man. It isn't quite so important as being a man—but it's very important."

"I think so, too," answered Tony, quietly.

When Tony was gone, Jack went to look for Edgar Mount. He found his cousin sitting in a deep chair in the old-fashioned library, absorbed in a sentimental novel—a class of literature that Jack did not like.

"How did you come to make such a friend of Tony the fisherman?" asked Edgar.

"Because Tony is the manliest fellow I know," answered Jack, composedly.

"He seems rather a rough customer."

"Do you think so? Well, he may be so. All the same, I'd rather you did not say anything about Tony Scaife. He's my best friend, and he's going away. I think if a fellow said anything against Tony, I certainly should feel very much like whipping him!"

"Tut, tut, tut, little marse!" spoke up Uncle Josh, who had come in at this moment with an armful of wood for the library fire. "Ain' you 'shamed o' yo'se'f, for tu talk to cump'ny dataway?"

Jack turned red and began to whistle, while Edgar Mount lay back in his chair, and laughed in a very disagreeable way, Jack thought.

MOLLY ELLIOT SEAWELL.

(To be continued.)

YOUR DUMB BEAST.

He can't complain, but God's all-seeing eye
Beholds thy cruelty and hears his cry.
He was designed thy friend and servant, not thy drudge,
And know that his Creator is thy Judge.

FLOWERS FOR GRANDPA.

"Yes, yes, child, it runs pretty, but it's nothing but weeds. You ought to see some 'sturtions 't we used to have—yaller and red and satiny! I tell *you* there aint *no* flowers of no kind can equal 'sturtions. And on this here perairie there aint nothing but just weeds."

The old man gazed long and vacantly across the brown prairie toward the place where the sun rose every morning—the only reminder of "the East" where he had spent his long life.

The little girl, standing in the low doorway, tried to keep back the tears. She had mourned with her grandfather over the loss of the trees and flowers that grew by their little house in the far-off East; but her bright young wits understood that this brown land would grow green and blossom-filled after a few years of toil, and provide much better for their wants, and for that education that was to be hers some time in the future, than her father's fitful wages could where they had lived before.

The old man had long since forgotten how to hope for the future. His life was in the past. For years his mind had been chiefly occupied with his loved flowers, and when they had been neglected in this new and busy life, and he mourned for them continually, little Millie stole from her household duties and, wandering over the brown lands, found many delicate and pretty blossoms for her grandfather.

"To-morrow's Saturday, and Jamie is going to town for provisions. What shall he get for you, father?" said the brave young wife, coming in from her hard work and smiling cheerily to the little girl, who was setting her daintily prepared supper on the table—dainty because she had made everything as nice as possible, though the fare was simple and the dishes coarse and few.

"I dunno, Mary," mumbled the old man. "There aint nothing I want that I can have."

Millie stole to her mother's side and whispered, "Don't you think I might go, mother? I have a plan. You'll trust me, won't you, mother, if I don't tell you yet what it is?"

Her mother consented, and saw Millie go to her little pasteboard "treasure-box" and take from it a bright dime that some young friend of bygone days had given her for a pocket-piece, "not to be spent forever and ever." She heard Millie heave two or three gentle sighs.

Early the next morning Millie and her father drove to Little Pittsburgh. In this town there were two trading-places. One combined, curiously enough, the post-office and a blacksmith's shop. The other was a general store, containing a small stock of cheap goods of all sorts.

It was to this place that Mr. Ransom drove first, and after leaving Millie there to await his coming, he paid his weekly visit to the post-office.

As soon as he was gone, Millie slipped from her seat in a broken-backed chair, and approached the man behind the counter.

"Please, do you keep 'sturtion seeds?" she asked, in a frightened voice.

"'Sturtion seeds?" asked the man. "Why, maybe there is a package amongst these seeds here."

He took down a few packages which contained seeds of flowers and vegetables.

"Well," he said, "I guess this is what you want. Just one package, and it's been here, I should say, ever since I opened the store."

Millie blushed a little when she saw the long name, "nasturtiums," on the package; and one might have heard the ghost of a sigh when her beloved dime fell jingling into the cash-box.

She slipped the little packet into her pocket, and waited until her father reappeared.

Once at home she ran to her mother, showed her treasure, and told how she was going to have some flowers for grandpa. Her mother was much interested in the little plan; but when the package was opened, and only four seeds, and those much shrivelled in appearance, were found in it, her hope of growing any nasturtiums was faint.

Nevertheless, the seeds were planted in the mold near the house. Never was a plant of rare and wonderful species watched more closely by some great botanist than these nasturtiums were watched by little Millie; and her joy was great when three of the shrunken seeds sprouted and grew, and their shoots began to train prettily up the strings which were stretched for them.

Millie learned, with her three precious vines, as well as did her father with his broad fields of wheat, the need of irrigation in that rain-slighted country, and faithfully watered her flowers.

But poor grandpa, for whom all this trouble was taken, was failing rapidly. It was like asking the oak to be uprooted just as it was decaying with old age, and try to start again in new soil. He had long been feeble, and with the addition of homesickness and loss of old friends, had now reached the point where he lay upon his narrow bed and murmured continually.

Mrs. Ransom cared for him tenderly, fearing, yet never telling Millie, that he could not live till the blooming of the nasturtiums. He knew nothing of them. They did not tell him for fear that they might fail, and then the disappointment would be great.

It was almost the end of July. The seeds had been put in the ground so late that they came late into bloom. But at last the buds had appeared, and buds had opened into lovely flowers, bright yellow and red, and mottled. Millie thought there had never been prettier nasturtiums.

She had watched the buds with feverish impatience. Grandpa had been so restless and wakeful lately, that, if he did not have his flowers soon, she feared he would never see them.

At last she gathered a handful of the precious blossoms and ran to her grandfather's side, bending over him. Poor old man! He had not slept for many hours, and in his half-insensible, half-delirious condition, he imagined he had never slept since he was a child in his mother's arms.

"I used to sleep when I was little," he muttered, slowly. "We had flow'rs then—'sturtions, some of 'em."

Millie almost cried with excitement as she leaned over and placed the brilliant blossoms in his hands. His eyes opened wonderingly.

"It seems to me," he said, "that I see 'sturtions now—red and yeller, and as satiny as any that ever grew!"

He put out his hand feebly, and took the flowers from Millie, who trembled with a sort of fear that she did not understand.

"Well, well!" said the old man; "I shouldn't wonder if I should sleep—some—now —"

Millie stole away to tell her mother that grandpa was going to sleep; and when Mrs. Ransom went to his side, she found that he had indeed fallen into the "sleep that knows no waking."

Millie had never before seen death; and she wondered why people should dread it, if it was only going to sleep, and lying with a gentle smile on one's face, as did grandpa with his 'sturtions in his hands.

VELLIE V. BENSON.

For the Companion.

HOW MEG LOST THE BABY.

One morning Mrs. Sackett put Julia carefully into her carriage. She tucked her up with rugs, afghans and shawls. Meg often wondered how the baby could breathe; but Julia was fat and hearty, and Meg knew that she grew heavier. So it must have agreed with her.

"Keep where it's pleasant and sunny, and take good care of her," said Mrs. Sackett.

She said this every day. Meg took as much care of Julia as any well-meaning but careless girl of fourteen does of a baby. At the crossing she thumped the carriage down into one gutter, and banged it up out of the other. The baby was used to this, and only opened her eyes wide and gasped on arriving at the opposite side.

Meg was just turning the corner when she heard her mother's voice.

"Me-e-eg!"

"Yes'm!"

"Stop at Hurd's and send home three pounds of brown sugar and a half-pound of tea!"

"Yes'm!"

Meg thrust her elbows through the handle of the baby-carriage, and crocheted as she walked. Crocheting tidies was Meg's favorite pastime. She always had a tidy under way.

Hurd's was a corner grocery store, with a door opening on each of the two streets. Meg wheeled the carriage close to the show window, and fastened the wheel with a stone so that it couldn't roll off.

Julia sat still, and gazed with attention at the resplendent advertisements of Jenks's soap and Tompkins's ginger, although she must have known these placards by heart. Babies have to endure so much which they do not understand that it is not surprising that they become philosophers.

Hurd's was crowded, as it always was in the morning, but Meg did not object to waiting. She chatted with Katie Allen and Lou French, and even drew out her tidy and did two rows before the salesman had time to attend to her.

Then she ordered sugar and tea with as grand an air as that worn by Mrs. Ponsonby, who "resided" in a four-story brown-stone house on a stylish avenue, while Meg lived in a "third flat."

"Wait for me!" said Katie Allen. "I've got to go to the butcher's."

"All right," answered Meg.

She waited, and when Katie started, she walked with her, talking briskly, down the street almost a block before she suddenly cried: "Oh! I forgot the baby!"

"What baby?" asked Katie.

"Why, I had our baby with me, and I've gone and left the carriage outside the store!"

"There wasn't any baby at the door when we came out," replied Katie.

"Sure enough," said Meg, "there wasn't!"

She gazed in bewilderment at Katie's round eyes, and then cried:

"Oh, I know! I came in at the other door; that's it! She's round on Harrison Street."

The girls ran laughingly back, and turned the corner. There was no baby nor carriage there!

They stared at each other, and Katie would have laughed but that Meg looked so solemn.

"Perhaps you didn't bring her!"

"Yes, I did! I left her just here. I know I did!"

"Could the carriage have rolled down the street?"

Meg looked up and down the street in vain. No carriage was in sight.

"Perhaps a policeman thought she was lost, and took her to the station-house," suggested Katie.

Meg began to cry. Katie's words seemed cruel.

"Run home quick, and tell your mother about it!"

Meg took Katie's advice. She ran fast, for she was frightened. Mrs. Sackett heard her story, and gave her a severe scolding for carelessness.

"Some boy took it to scare you. It must be about the neighborhoood. Go and look!" she ordered. She was a hard-working woman, and treated things in a matter-of-fact way.

But when Meg came back to report that no one had seen baby or carriage anywhere, Mrs. Sackett became alarmed. She forgot to scold this time. She put on her bonnet, and searched the street thoroughly. She inquired at all the stores, and even went to the police station.

Coming back from her fruitless expedition, she dropped wearily into a chair by the door. Meg could not bear to see her mother's white face. She picked up her hat and crept downstairs.

An organ man was playing a lively tune, and Lou French's little sisters were dancing to the music. They came up to ask Meg "if the baby was found," and Meg, without looking at them, choked and rushed down the street. She walked on in a breathless state for several blocks, and happened to pause for breath just where there sat, on a doorstep, a boy about twelve years old, with a woebegone and tear-stained face.

Meg looked at him and asked, abruptly, "What's the matter? Have you lost a baby?"

"Lost a baby!" shouted the boy, indignantly. "You clear out of this!"

He seemed to look as if he thought she was making sport of him.

Meg was glad to "clear." She had only spoken out of the abundance of her thoughts. She walked along, surveying absently the windows she passed. She wondered if all the babies who lived in those houses were safe, or if their parents were hunting for any of them in grocery stores and police stations.

At the next corner she stopped again. Three women stood there talking. Said one of them, a small woman:

"I told her, says I, 'Mrs. Smith, you'd better report it at the station-house. It belongs to somebody that's looking for it, of course!' says I."

"She wouldn't take the trouble. She's too elegant!" remarked a stout woman, sarcastically.

"That's so," replied the first speaker. "She said, 'Let them that's lost it look for it. Jimmie brought it home, and he'll have to amuse it till the mother comes,' says she. It serves Jimmie right, though," the stout woman added, decidedly. "A pretty trick, to wheel home the wrong baby!"

Meg felt faint. She leaned against the railing. Whose baby were they talking about?

"Where was his own?" asked the third woman, who didn't seem to understand the circumstances.

"Why, you know he left it beside a store while he played marbles, and his mother came along, and took it home to frighten him!"

"Ha! ha! ha!"

"You may depend she was mad, though, when he brought home a strange baby!"

"Ha! ha! ha!"

Could two babies be lost in one day? Meg stood in doubt a few minutes, while the two women discussed the story. She remembered the little boy whom she had seen up the street, and stepped boldly up to the talkers.

"Will you please tell me who's found a baby?" she asked.

The eyes and tongues of all three were directed at her at once.

"Why!" "Well—have you lost one?" "Mercy on us! do you know whose it is?"

Meg colored, but stood her ground.

"Somebody wheeled our baby away while I went into a store of an errand," she explained. "We've been looking for her all the morning!"

The three women were delighted. They all insisted on escorting Meg down the street and into the right house. The mournful little boy sat on the front steps, his attitude showing his thorough disgust with life.

"You'd better go up and take care of your twins, Jimmie!" laughed the sarcastic woman.

Jimmie looked at her, his countenance expressing unutterable things.

"Come, Jimmie, come," cried the sharp little woman; "take us upstairs, we want to see your mother!"

"This young lady has lost her baby, Jimmie," said the tall woman, kindly. "Perhaps it's the one you've found."

Jimmie's face brightened. He stole a glance at Meg, remembering she had spoken to him. He turned into the house, and led the way upstairs.

Digitized by Google

"Here's somebody come for that baby!" he announced, gruffly.

He threw the door open, and immediately got behind it, from whence he could easily observe proceedings; or escape, if he should find it prudent.

"I thought somebody would come," exclaimed a drawling voice. "I knew the child would be called for. She evidently belonged to nice people!"

The speaker rocked herself in a low chair. Her hair was in papers, and she wore a pink wrapper. In her lap lay an embroidered tidy, at which she took languid stitches. It may be recorded here that Meg gave up tidies from that day.

She did not stop to examine the lady, however, but snatched up one of the two babies who crawled about the floor, and kissed and hugged Julia more lovingly than she had ever done before.

Jimmie, behind the door, was startled. He wondered if he should feel the same affection for Lauretta, if she were lost for three hours.

The three women all talked together. The lady in the rocking-chair listened complacently, convinced that she had done all that could be expected when she allowed the strange baby to creep on her carpet until called for.

"I told Jimmie," she laughed, "he'd have two babies to take care of, instead of one!"

Jimmie had disappeared into the hall.

"I think I'll take the baby home to mamma; she's fretting about her," said Meg, holding the baby tight. "We're very much obliged to you, ma'am, for keeping her here."

Mrs. Smith bowed politely. She indicated with her forefinger where Meg would find the baby's clothes and wraps.

Meg dressed her and carried her carefully downstairs, followed by a cheerful "*Good* morning!" from Mrs. Smith. With a light heart she tucked Julia once more into her carriage. Jimmie stood watching her from the door.

"Say!" he called. "Are you really glad to get that kid back?"

Meg laughed out of her gladness. "Why, of course!"

"Did you feel awful bad when you found she was gone?"

"Of course," said Meg, again. "What made you do such a stupid thing as to wheel home the wrong baby?"

"Oh," he said, grinning, "I didn't bring her home!" He lowered his voice. "I was playing with Bob Price, and I sent another fellow, and he didn't know her, you see!"

"Good gracious!" exclaimed Meg, looking at Jimmie with horror.

But Jimmie was bursting with his wrongs.

"Perhaps you think you had the hardest time of it, but if you had to amuse an extra baby three hours, you'd know finding a baby was worse than losing one!"

Meg was so impressed with his air of conviction that she said not a word.

AT A CALIFORNIA SHEEP-RANCH.

In Three Parts.—Part II.

Tapping a Bee-Tree.

The day after their exploit in catching the cub bears, it became necessary that Jim and Ham-fat should make a trip home, and have an interview with their mother with regard to the condition of their clothes. What that worthy woman would say to them was somewhat uncertain, and the faces of the boys lengthened as they pondered the subject.

They went, however. Bill guessed that his mother would not let them come up to camp again; but in this he was mistaken, for during the afternoon of the next day we heard a long "coo-whoop" down the trail, and saw both heading for the shack, driving the pack-mule, "Old Nig," loaded with vegetables.

They were now arrayed in some old suits which they had outgrown, and their first exclamation was that they had found a bee-tree on the way up.

It was not more than a hundred yards from the trail, they said, and about two miles back from the camp, and they insisted that we must go with them to "tap it" that very night.

"We'll do all the work!" cried Ham-fat. "We only want you to go for company and see the fun. We've planned just how to get it."

A mountain-lion had harassed the sheep the previous night, and Bill had intended to watch for the animal that evening; but the boys were so urgent that we yielded and went with them. We started shortly after dusk.

We took the pack-mule, an axe, and two five-gallon tin cans for the honey. Jim had made a hive out of an old nail-keg; for they proposed to get the bees as well as the honey.

There was no moon, but the stars shone brightly, and as the boys had been careful to mark the spot, we had no trouble in finding the tree, which was a stunted oak, about eighteen inches in diameter, standing upon the very brink of a steep, rocky declivity. To fell the tree was out of the question, for it leaned over the crag, and would have fallen at least a hundred feet before striking. Knocking on it with the back of the axe, the boys found that the tree was hollow.

While Bill and I looked on, the two boys lighted a bright fire at the side of the tree, and chopped a hole near the bottom. Listening at the opening, they found that the bees were only ten or twelve feet above the ground. Jim cut a hole as high up as he could reach, through which, by the light of the fire, we could see masses of clear white honey-comb hanging down almost on a level with the hole. The bees had entered through a large knot-hole about twelve feet from the ground. This hole the boys had carefully stopped up at the outset.

Jim now clambered up and adjusted the nail-keg over this knot-hole, propping it up, as he thought, quite securely, with sticks and poles which Ham-fat passed up to him.

When Jim had arranged the keg and drawn out the leaves with which he had stopped the hole, both boys set about gathering sticks with which to make a platform to stand upon while getting out the honey.

They also placed a few live coals in the hole at the bottom of the tree, and heaped piles of leaves and rotten wood over them to make a smoke and drive the bees out.

Bill and I sat and watched their manœuvres, not a little amused. Their plans seemed to work very well, for the bees began to make the tree hum with their buzzing. They were manifestly pouring through the knot-hole into the keg.

Jim now mounted the platform, and swinging the axe at a lively rate, soon began to lay bare the finest and largest store of honey that I had ever seen in a tree.

We had been joking the lads somewhat, not expecting that they would find much honey in the tree, and we doubted Jim's ability to manage the bees; but everything progressed so nicely up to this time that the boys began to laugh at us in turn, declaring that they should secure a pack-load of honey, beside a large swarm of bees.

But they were too confident. The tree contained not only a great amount of honey, but more bees than I had ever seen in one swarm, and before Jim had half finished chopping away the two or three inches of bark and wood which surrounded the honey, the keg literally overflowed with bees.

Bill and I noticed, too, as we lay upon the ground at a safe distance, that the blows of Jim's axe made the keg totter, and that it was likely at any moment to come tumbling down upon the heads of the two boys, who were standing directly beneath it.

"Say, Jim," I called out, "your keg is over-full of bees! Hadn't you better stop chopping and take care of them?"

"No," said Jim, who evidently distrusted my advice. "The bees are all right, and I'm going to bag the whole nest. Don't fret!" he added, with a sarcastic chuckle. "Maybe you think we don't know how to tap a bee-tree. We'll show you."

Whack went his axe again, but he had not dealt many more blows before down came the keg!

Luckily for the boys, it was thrown a little to one side by its props, and went over the brink of the crag. About a pint of the bees fell down upon them, however, and landed for the most part on Jim's head.

They were in a stinging mood, and stung fiercely wherever they touched. Jim dropped his axe and jumped to the ground, screaming, slapping and brushing frantically at the back of his shirt.

Ham-fat fared but little better. They made the hills echo with their outcries. The hills also echoed with Bill's shouts, but his were shouts of laughter.

It was several seconds after the keg went over the crag before I heard it strike. Then it bounded on downward, thumping and bouncing, scattering the bees right and left. We found what there was left of the keg a week later nearly a quarter of a mile from the bee-tree.

The boys soon shook off the bees, but were not rid of the smart of their stings so readily. Jim was half-inclined to give it up, but Ham-fat's temper was of a more gritty sort. Our laughter had hurt him more than the bee-stings, and he was determined now to have the honey at any cost.

"Laugh away, if it amuses you!" he shouted to us. "Awful tickled, aren't you? Maybe you think we're going to back out, but that's just where you are mistaken. We'll have that honey. Come on, Jim, let's finish up the business!"

He and Jim then set to work gathering up damp brush and rotten wood, so as to create plenty of smoke. Piling the wet fuel on the coals of the fire about the roots of the oak, a dense smudge was raised, which soon drove away the bees which were buzzing about.

Under cover of the smoke, Jim again mounted the platform, and succeeded in cutting away enough of the tree to enable him to get at the honey. They then cleaved out large blocks of comb, and soon filled both the cans. There was enough of it, indeed, to have filled several more.

Jim, whose stings no longer troubled him much, was inclined to jeer us.

"Ha! ha! You smart fellows!" he shouted to Bill and me. "What do you think now? You'd like to help eat this honey, wouldn't you? But you won't get the chance! We'll pack the whole of it down to the ranch, won't we, Ham-fat?"

"Yes, and sell half of it at the store for some clothes. Mother won't want so much honey."

They brought up the mule, and set the large cans, which were about a foot square and eighteen inches deep, into the rawhide pockets which hung from each side of the pack-saddle, lashing them firmly in place.

While they were tugging at the ropes Bill and I noticed that now and then a bee was beginning to buzz by again.

They flew blindly, in the darkness, alighting everywhere, crawling rapidly about and stinging, too.

The old mule began to get uneasy. He stamped his feet, flapped his long ears, and shook himself several times. The boys made slow progress.

"Whoa, old mule, what's the matter with you?" cried Jim.

"It's the bees coming back from the keg," Bill whispered to me.

"Why don't you hold the mule?" cried Jim; for the animal was now plunging about, and immediately began to kick violently.

"I can't hold him, Jim," panted Ham-fat. "Something's got into him! Ouch!" he cried, slapping at the back of his neck. "The pesky bees are at me again!"

The bees were no doubt mercilessly at work on the mule. Jerking away from Ham-fat, he kicked, reared and bucked, as only a mule can, till all the fine comb honey was well churned and thrown over the sides of the cans. Then, finding that he could not rid himself of his tormentors, the brute suddenly wheeled about, struck into the trail and started for camp at a terrific gallop.

Jim and Ham-fat gave chase, fighting off bees as they ran.

As soon as we recovered from our laughter, Bill and I followed. The mule had left such a trail of honey and bees behind him, that we found it prudent to keep well to one side. About half a mile farther on we overtook the boys, who had sat down to nurse their wounds; for the bees had stung them pretty badly during this last encounter. Neither felt like talking; in spite of all Ham-fat's youthful fortitude, the big tears would gather in his eyes—tears he disdained to wipe away, but occasionally dislodged with an impatient shake of his head.

When we reached the shack the old mule was standing by the door, his ears lopped over in front, and his head bowed almost to the ground; while, from the tips of his ears to the end of his tail—pack-saddle, ropes, straps and all—he was a mass of dripping honey!

Not more than a gallon was left in both cans, and that was unfit for use.

It was long past midnight before Bill and I fell asleep; and in consequence I was very late astir next morning, though Bill went out at five o'clock, and took the sheep to graze. I was faintly conscious of his departure, and later on was dimly aware that the boys were awake and whispering, but I fell asleep again.

It was almost eight o'clock when I woke at last. I was alone in the shack. Where Jim and Ham-fat had gone I could not guess. I rose and proceeded to get breakfast.

Bill had shot a deer the previous morning, and we had abundance of venison steak on hand. After a time Bill came in from the range, and when I asked him where were the boys, he said he had seen nothing of them.

"I guess they felt pretty sore and babyish this morning, and have left for the ranch," said he.

But as we were sitting down to breakfast the boys came in sight along the trail—Jim with a large can in each hand, and Ham-fat with two buckets all heaped full of honey-comb.

"How's that!" they cried out, in triumph, setting the cans and buckets on the table. "Look at that, will you!"

Their bee-stings had ceased to smart during the night, and their courage had revived. We found that they had set off at six o'clock, and going back to the bee-tree had built a dense smudge, under cover of which they had been able to fill both the cans and the buckets with the comb.

"And we haven't half of it yet!" cried Ham-fat. "The whole trunk of the tree, up above the hole, is full of comb. We are going back as soon as we get something to eat, and get the rest of it."

"Oh, we'll show you yet that we can take care of a bee-tree," added Jim.

Bill was obliged to return to the sheep; but after breakfast all the remaining pails and kettles about the camp, to the number of six or seven, were mustered, and I went with the boys to the tree.

But before we had reached it, we heard a deep humming sound which was almost a roar. Approaching nearer, the air about the oak was seen to be actually dark with bees. Attracted probably by the odor of the scattered sweets, not only the rightful proprietors, but one or more swarms of robber bees had come about the tree, and apparently a terrific battle was raging between them.

While we stood watching the clouds of insects, another would-be robber made his appearance on the scene, in the shape of a large bear which suddenly climbed up into view from over the brink of the declivity.

We had been so loaded down with pails and kettles that we had neglected to take a gun—an oversight which Ham-fat and Jim lamented in eloquent whispers, as we crouched behind a rock.

The bear, a large cinnamon, walked around the tree, inspecting it on all sides for some minutes. If the bees stung him he did not appear to mind it.

"Let's all three yell at him together," said Jim, "and see if we can't scare him off. If he gets his paws into that honey he'll spoil it!"

"He may rush at us," said Ham-fat.

"No, he won't," whispered Jim; "and if he does, we'll run for those little pines back of us here, and climb out of his way. All ready now, *yell!*"

As our discordant shout burst on the bear's ears, he jumped suddenly aside and, as I now think, mistaking the direction from which the sound had come, ran directly out toward the rock behind which we lay hidden.

There was no knowing exactly what his intention was; and if ever three fellows made a rapid movement toward three low pines we were the trio, I am confident. The creature had no sooner seen or scented us, however, than he turned away, and made off through the woods.

"I told you he wouldn't touch us," Jim now exclaimed.

"Then what are you half-way up that pine for?" retorted Ham-fat.

"I didn't know but he might run into me by mistake," muttered Jim.

Brush and decayed wood were again collected, and another immense smudge raised beside the tree; and while I tended it, the boys tore down more than enough honey-comb to fill all our dishes, and Bill packed about a hundred pounds down to his mother next morning.

MYRON B. GIBSON.

(To be continued.)

For the Companion.

KOREA AND ITS ARMY.

The newest country, to us, of the far East is Korea. Not many years ago it was practically unknown to the civilized world, and it is only nine years since Admiral Shufeldt, of the United States Navy, acting as ambassador, made our first treaty with its King. It was through this treaty that Western civilization was first introduced into the Hermit Kingdom. Since then embassies have been sent from the Korean court to some of the greater powers of the world, and two or three years ago their strange-looking representatives, clad in bright-colored silk gowns and wearing great horse-hair hats on the crowns of their heads, surprised Washington.

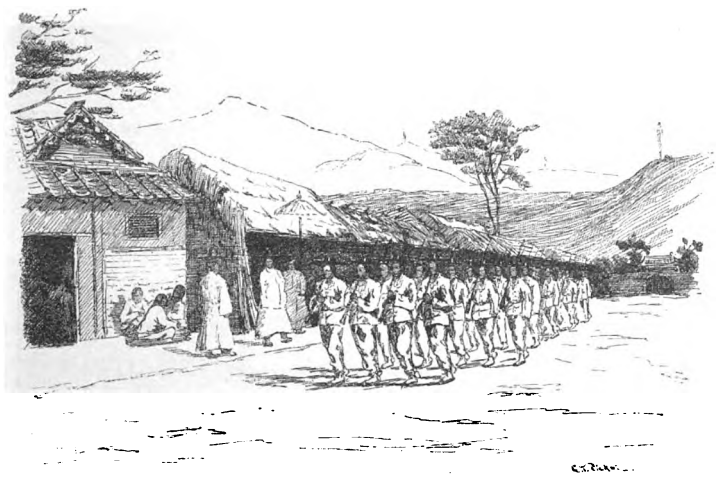
Before this a party of the Korean nobility had travelled throughout this country and Europe, and since then many noble Koreans have gone abroad and brought back new ideas to the King and his people.

Not long ago the King bought a steam launch, and he can now sail from his capital to his seaport in a few hours on the great river Han. He has introduced electric lights into his royal palace, and the business of the court, which always takes place at night, is done under the rays furnished by the inventive genius of Mr. Edison.

The King is doing all he can to advance his people in the new civilization, and in order that he may understand what is going on in this new world, he takes American and English newspapers, and has them translated for him. During my visit to his capital, about a year ago, he was having a volume of international law translated into the Korean.

A few years ago the King of Korea resolved to reorganize his army. Being very friendly with the United States, and admiring the Americans greatly, he sent ambassadors to Washington to select four army officers, and promised them large salaries if they would come to his capital, start a military school, and make American soldiers out of the Koreans.

The chief of the officers engaged was General William McE. Dye, who had served with honor in the late Civil War, and who had been employed by the Khedive of Egypt in the organization of the Egyptian forces.



The Korean army, prior to this time, had been drilled after the Chinese plan. The only arms used were old matchlocks. There were very few cannon, and the matchlocks and bows and arrows were the principal weapons. The army consisted of about eight thousand men, about four thousand of whom were at the capital, Seoul. Picked troops were kept about the royal palace, and were used to guard the body of the King.

The uniform of these soldiers consisted of long gowns, and the officers were gorgeously apparelled in gowns of silk, the sleeves of which were blood-red, this color being emblematic of the old fashion of wiping bloody swords upon sleeves. Each army officer of note wore a great embroidered square on his back and breast containing the picture of a tiger, whose wide-open jaws glared at the enemy.

General Dye first attempted to remodel the dress of the common soldier. There is a strong anti-foreign faction in Korea, and he had to work

Digitized by Google

very slowly, as this faction was opposed to any change in army matters. He at last got the sleeves cut down from their bag-like shape to the width of a rather full party-dress sleeve of an American lady, cut off the skirt so that it was made into a kind of blouse, and took out four-fifths of the cloth which the Korean soldiers had formerly worn in their pantaloons. He did not attempt to make them change their hats, but armed them with good guns.

The Korean Army.

He organized a royal military school, but had as much trouble to induce the young nobles to adopt a soldier-like dress as Professor Bunker has to get them to study without the assistance of their servants. The young noblemen thought they would lose caste in changing their costume. As they were so high in rank, it was almost impossible to punish them, and the American officers have had hard work to make progress.

The colors used in the new Korean uniform are different from those of any of the armies of Christendom. The shirt-like waists are of purple cotton, faced with red; the hats are black, and there is a bright red band about them. The pantaloons are purple, and the feet are swathed in great white boots of padded cotton.

During my stay at the Korean capital the native General-in-Chief invited me to attend a review of the troops. I rode in a chair borne by four big-hatted Koreans to the drill grounds at the edge of the palace, and saw four hundred soldiers go through all sorts of evolutions, most of which seemed to be those of the gymnasium rather than those set down in military tactics.

The General would give a command, and every soldier would lift his leg and hold it at right angles to his body until another word brought it to the ground again. There was the raising of the arm, the throwing out of the fists, and other exercises which many school children of the United States practise daily.

There was also some very pretty marching, and the men handled their guns with no little skill.

After the review was over, I accompanied the General-in-Chief to an audience with the King, and was much amused at the state of this military man. Two servants walked with him, one on each side, holding up his arms, and a whole retinue went in front with a band of music, shouting to the people to clear the road, for the great general and the foreign dignitaries were coming.

In battle Korean generals are always accompanied by their servants. When he rides on horseback, a general has a servant on each side of his war-horse to hold him in position, and a third stands at the horse's head to hold the animal during the fight, or to lead it to the advance or retreat.

These servants accompanied General Han to the gate of the King's audience hall. They left him there, and he walked alone across the yard, with his head bent and his sword-hilt toward the ground. He walked softly up the steps at the left leading into the room in which his Majesty, the King of Korea, stood, bent down on all fours, and bumped his head before him as a sign of the reverence he felt for his King.

Then, rising, he stood, with his sword uplifted, at the right of the King, while my audience took place. At the close of it he backed out from the King's presence with bended head, and so continued till outside the gate, where he again sprang into greatness, and had a whole host of servants to do him homage.

This Oriental formality runs through all ranks of the Korean army. It is, says General Dye, the ruin of the service. He thinks that Korea will never have good soldiers until the officers learn military tactics by the same hard knocks that our officers do, and until they put themselves more on a level with their troops, and work with them.

The soldiers of Korea act as the police of the capital. The city of Seoul contains about three hundred thousand people, most of whom live in one-story thatched huts. A great wall runs around the city, climbing the mountains and crossing the valleys which surround it, and this wall has a number of gates.

At sundown a band of soldiers, with music much like that of the Scotch bagpipe, marches out of the palace and closes the gates of the city, which, after this, cannot be opened until the morning. At this time the King's military signal corps springs into life on the mountain-tops about the city. Watch-fires built upon them tell him, by means of an elaborate code, whether there is trouble or peace in the different parts of his realm.

This system of watch-fires acts as a sort of telegraph line, reaching from the capital to the remotest districts, and at this hour every night fire after fire appears on the hill-tops throughout Korea.

FRANK G. CARPENTER.

For the Companion.

MAY-DAY MEMORY.

A thousand scenes of joy we may forget,
But one in pearls of memory is set,—
The mossy woods, the brook, the sparkling sky,
When first, with childish heart exulting high,
We plucked the May-flower and the violet.

FRANCES L. MACE.

AUSTRALIA.

An event of great interest and importance has recently taken place in the Australian colonies of Great Britain. They have resolved to become a practically independent nation, and to construct a federal union of States, like those collected under our own general government.

The movement to bring the Australian colonies together in a federal bond began eight years ago. Its first result was the formation of a "Federal Council," in 1885; but this Federal Council had but very limited powers. It comprised two members from each self-governing colony, and one from each "Crown" colony.

To it the crown and the colonies delegated certain authority; but it could not bind the action of any colony without its consent. It was, in short, something like our own early Confederation, before the Constitution was adopted. The tie it created between the colonies was but a loose one.

But during last March a Convention, consisting of delegates from the colonies of New South Wales, Victoria, Queensland, South and West Australia, Tasmania and New Zealand, sat at Sydney, and adopted a constitution for a closer federal union, and in this constitution it took many features of that of the United States.

When this constitution shall have received the assent of each of the colonies, it will be sent for approval to the Imperial Parliament at London; and if it is also approved by that body, the new Commonwealth will have been fully established.

The very name selected for their new union by the Australians is significant. They did not choose the word "Dominion," which was adopted by the Canadians. The consolidated government will be known as the "Australian Commonwealth," a phrase which suggests to Englishmen not the British Empire, but the era of Cromwell, when England had no king.

The taking of this name indicates that the Australians intend to assert a somewhat larger degree of independence than that enjoyed by Canada.

The main features of the new Federal Constitution of Australia are as follows: The Governor-General of the Commonwealth is still to be appointed by the crown, and will be endowed with the power of veto. He will be the only official in Australia appointed by the home government.

The Parliament will comprise two houses, called the Senate and the House of Representatives. The senators will be chosen for terms of six years; half retiring every three years. Each colony will be entitled to eight senators, and will thus be equally represented in the upper house.

The House of Representatives will be chosen for a term of three years, instead of two, as with us. Its members will be apportioned according to population.

The Parliament thus formed will have powers very similar to those of our own Congress. It will deal with the customs and federal taxation; will legislate on the army and navy, on banking, the census, immigration, patents, weights and measures, bankruptcy, marriage and divorce. It will have control of the postal and telegraphic systems of the colonies; and power to legislate on any subject committed to it by one of the States, its acts in this case, however, applying only to that State.

All money bills must originate in the lower house. The Senate may approve or reject, but may not amend such bills.

The executive power, under the Governor-General, will be exercised by a cabinet of seven ministers, chosen from the Senate or House; and these ministers, as in England, will be responsible to the houses for all executive acts and policy.

A Supreme Court of appeal is created, which will be the final resort in all cases, except where the crown desires a revision of its judgment by the Privy Council in London.

The Constitution, moreover, provides that a uniform tariff as regards the rest of the world shall be established for the Australian Commonwealth; and that absolute free trade shall exist between the several States.

Thus comes into being a new and great nation of English-speaking people at the Antipodes. The success of the scheme of Federal Union can scarcely be doubted; nor is it unlikely that the new Commonwealth will, in the near future, completely sever itself from Great Britain.

THE OLD FARM-HOUSE.

Deserted now its windows blank
Stare at the passer-by,
And weeds and grasses, stale and rank,
In wind-swept chaos lie.
No more from pastures green, at night
To farmyard come the kine,
Nor homeward come with hearts so light,
The boys of "auld lang syne."

Boston Transcript. —*W. M. Rogers.*

THE PRESIDENT'S JOURNEY.

The President took advantage of the long recess of Congress and the comparative lightness of public duties to make a journey to the far South and West.

He set out from Washington on the 14th of April, accompanied by a distinguished party, and proceeded in a southwesterly course as far as the Mexican boundary of Texas, and thence by the southern route to California. His intention is to return in May by another route, so that, in the course of his journey, he will have passed through most of the States and Territories of the West.

The journey was made in a palace. No sovereign, however great his love of luxury or however lavish in his expenditure, ever set forth on his travels under conditions of such comfort and such provision for his daily wants.

Yet vastly greater sums have been expended frequently for vastly inferior accommodations. A hundred years ago money could not buy as much ease for a journey of fifty miles, as a dollar or two and a seat in an ordinary railroad car will procure to-day.

The train in which the President made his journey was constructed especially for the occasion. It is spacious and sumptuous, and is so fully provided with everything that is necessary for the comfort of the travellers that, except for the slight motion of the cars, they are as much at their ease as they would be in their own homes.

One hundred years ago, in 1791, the President of that day, the great Washington, made a journey to what was then the extreme South, namely, to Georgia. The undertaking was a greater one than is Mr. Harrison's trip to the Pacific coast. The time occupied was longer. Bad roads and a jolting carriage made it impossible to cover much more than fifty miles a day without great physical discomfort.

The example set by Washington has been followed by many of the Presidents who have visited distant parts of the country in state. Some of these journeys have become historic, notably the protracted tour of Mr. Monroe, and Mr. Johnson's speech-making trip, which is known as his "swinging around the circle."

It will have been noticed by many of our readers that while Mr. Harrison went as far as El Paso, in Texas, he did not cross the line into Mexico. This is in accordance with a tradition that the President should not leave the country during his term of office. When President Grant visited Maine, on the occasion of the opening of the railroad to Saint John, New Brunswick, he went to the border of the State, but did not cross it.

Another tradition which should never be violated, and which has been transgressed on very few occasions, is that the President should avoid carefully party questions in any speeches that he may make when on his travels.

The President is greeted everywhere by men of all shades of politics, as the official head of the government; and it is due to those who pay him their respects, while differing from him on public questions, that nothing be said to offend them. President Harrison observed strictly this tradition also, and devoted his speeches to helpful hints as to the best means of securing prosperity for the section he was visiting.

Such journeys as this of the President are useful in many ways. Sometimes they bring the Chief Magistrate into regions which he never before has visited, and into contact with people of whom before he has only heard. But whether he is visiting new or familiar scenes, he brings himself before the people, who, with characteristic good-nature, receive and honor him as the first officer of the Republic.

By such means the asperities of politics are softened, and the people, young and old, are taught to respect and reverence the government, when they learn how to treat with distinction the man whom perhaps they are eager to drive from office, because for the moment he represents the majesty of the nation.

UNWISE CASTE FEELING.

At the great convention of workingwomen held in New York last fall, domestic servants, shop-girls, artists, teachers, the daughters of millionnaires and bishops, authors and seamstresses sat side by side, and eagerly discussed the practical and charitable schemes brought before them.

At some of the houses of what is called the exclusive class in New York and Philadelphia, regular meetings of women have been held during the past winter, in which the uneducated and the poorest in purse were welcome guests, provided they could bring warm sympathy, or experience, or good sense to aid in the reformatory work for children, which was being pushed forward.

At one of these gatherings a girl who was a tailoress rose when the meetings were about to close, and said, "I have been cured of some mistakes by coming here. I thought we were the laboring class, and that all rich women spent their time in dressing and lolling in carriages. I sew eight hours, and then I'm done for the day. But as for Miss Blank,"—naming a prominent society leader who was one of the chief promoters of the Convention,—"her work, it seems to me, is never done! I have just found out that brain work is as hard and tiring as hand work, and that there are other kinds of hard labor in the world than that of earning your living in the factory or in the workshop."

King Leopold of Belgium, in a speech made not long ago to the Workmen's Council of Industry, impressed his hearers by saying, "Workingmen in this country are wrong in considering themselves a separate caste. The heads of departments have great labor to perform. I myself am not an idle man. In different grades we are all Belgians, and all of us are workmen."

Great danger lies before this country in the formation of castes, and the prejudices which exist between the rich and the poor. Much of this might be averted if each class of workmen would learn to appreciate and respect the labor of other classes, provided that labor conduces to the general good.

The statesman who directs the machinery of a branch of the government; the editor who furnishes thousands of readers with both facts and opinions; the clerk who bends over the desk all day; the woman who superintends asylums and hospitals; the mason, the tailor, the carpenter and the cook—all are laborers together. The labor of the muscles is not more useful to humanity nor exhausting to vitality than the labor of the brain.

These are platitudes, but platitudes which are apt to be forgotten. Safety to the Republic can only come from our unitedly working together, and in honoring each other's work.

HUNTING FOR HANDLES.

An intimate friend of a merchant who had just lost his property called to express his sympathy, and found the family much depressed, with the exception of the youngest son, who appeared as cheerful as usual.

"How happens it, Bob," the visitor inquired, "that your face isn't so long as the rest of the family?"

"I suppose," Bob returned, "that I have been so busy hunting handles that I haven't had time to pull it down."

"Explain yourself," demanded the visitor, laughing.

"This is all," said the courageous Bob. "When I was a little shaver, my grandfather used to have a carpenter's bench in his woodshed, and one day he sent me for a particular tool, and I brought it to him without the handle. 'What good is that?' he cried. 'Are you a fool, Bob?' Then I was mad, and cried back, 'There isn't any handle to anything there!' He seized me by the arm and said, 'Bob, remember one thing: there's always a handle to everything! *Go hunt the handle!*'

"My grandfather was a man who knew what he was talking about; if he said there's a handle to everything, then, sure as a gun, there's a handle to our affairs now, and I mean to find it!"

No virtue is more easily imparted than that of courage, and it is needless to add that the whole family set about "hunting for handles"—and found them.

NORWEGIAN INDEPENDENCE DAY.

Some of our school-boys have opportunities to learn history without taking much trouble about it. In a large school in some of the Western cities there may be pupils of a dozen nationalities: Italian, Spanish, Swedish, Norwegian, French, German, Hebrew, Irish, Finnish, Russian, and each of these has its own national days, as we have ours on the Fourth of July and the Twenty-second of February. An American boy of inquiring mind will naturally want to know what those national days are, and what they commemorate.

Suppose we take the Seventeenth of May for an example, when all the Norwegian children like to be absent and have a good time somewhere. This is the national holiday of the Norwegian people. What happened on that day that the people of Norway should hold it in such honor?

A well-informed Norwegian boy will answer that on May 17, 1814, the people of Norway "declared their independence." During the Bonaparte

Digitized by Google

wars an attempt was made to unite Norway and Sweden on terms that would have been degrading to Norway, reducing her to the rank of a subject province. The people rose against this threatened indignity, and "declared their independence."

It happened that the King of Sweden was Bernadotte, one of the Bonaparte marshals, a man of much ability and some real insight into the nature of things. He proposed to Norway a kind of union that she could accept without loss of self-respect; a union under one king, indeed, but also under one constitution, each State being sovereign within itself, and each governing itself in all matters local and domestic.

This constitution expressly declared that Norway should remain forever "free, independent, indivisible and inalienable." The union was, in fact, an application of the Federal or Home-Rule principle.

This constitution was adopted November 4, 1814, but the day celebrated and beloved by Norwegians is May Seventeenth, when they declared that they would not be joined to Sweden except in an equal and honorable union.

DARWIN'S ENTHUSIASM.

In the summer of 1860, Darwin, then fifty-one years old, was "idling and resting," as he says, at the house of his sister-in-law. Two species of Drosera or sundew—plants which are common in Eastern North America—were abundant in the neighborhood, and he noticed that many insects seemed to have been entrapped by the leaves.

This observation led him to make some experiments, and as he wrote to Dr. Asa Gray, the eminent botanist, he soon became "infinitely amused" at his results.

In the following November he wrote to Sir J. D. Hooker, "I have been working like a madman at Drosera;" and in a letter to Sir Charles Lyell, a few days later, he says, "I will and must finish my Drosera manuscript, which will take me a week, for at present I care more about Drosera than the origin of all the species in the world."

But the manuscript was kept for fifteen years, and finally brought out in 1875.

Meanwhile, he had written and published his work on "The Expression of the Emotions in Man and Animals," but had not forgotten his "beloved Drosera." "It is a wonderful plant," he writes to Doctor Gray, "or rather a most sagacious animal. I will stick up for Drosera to the day of my death."

It was enthusiasm of this kind, held in check by sound judgment, which made Darwin so brilliantly successful as a scientific experimenter. In 1862 we find him deep in the study of different forms of flowers on plants of the same species, and writing, as usual, to Doctor Gray.

"I am almost stark staring mad over Lythrum," he says. "It has just flashed on me that you might have Lythrum in North America, and I have looked to your Manual. For the love of heaven have a look at some of your species, and if you can get me seed, do. I want much to try species with few stamens. Seed! Seed! Seed! I should rather like seed of Mitchella. But, O Lythrum! Your utterly mad friend, C. Darwin."

Work done in such a spirit as this is more enjoyable than anything which goes by the name of sport.

RICH MEN OF THE FUTURE.

A leather merchant, not generally known to be a wealthy man, died some months ago in New York. A lawsuit arose from his will, which distributed great legacies among a score of colleges. The suit was compromised, and the legacies will be paid. Out of the estate of this unknown millionnaire nearly four million dollars will be given to thirty-five colleges; half a million more will be divided between several hospitals.

It is impossible to estimate the good to students and the sick that these bequests ensure for years and years to come. There is no doubt, however, that in general a rich man's money had better be given away before his death than after it.

Many years may pass between the making of a fortune and the carrying out of the maker's will. Besides this useless delay there is the danger that bequests will be diverted from their intended purpose. While a man is alive, he can see that his money is spent as he wishes. After his death there is no telling what legal contentions and unforeseen difficulties may bring about.

Money in itself is worth nothing. Its only value lies in what one can do with it. Many young people are going to make fortunes within the next generation or two. If they will devote a share of their wealth, while they can still control it, to the wise, generous service of their fellow-men, the value of money will be realized as never before.

A CHURCH CAR.

The school-on-wheels, or railway car fitted up with school apparatus and provided with a teacher, which the Russian Government some time since sent out upon the line of the new railway in Turkestan, has a worthy imitator in the church car now running upon the railways in North Dakota.

Bishop Walker, of the Episcopal diocese of North Dakota, having long experienced the need of places where he could conduct religious worship in new railroad towns, resolved to have a railroad car fitted up as a church or chapel, which could be hauled from place to place as needed.

By the aid of friends in his own diocese and in other parts of the country, Bishop Walker has been enabled to provide himself with such a travelling place of worship. His new car is marked "Church of the Advent" in one place, and "Cathedral Car of North Dakota" in another. Externally it is not unlike an ordinary palace car, but has a projection upon each side simulating that of the transept of a church.

Within, the car is provided with a double row of chairs, seventy-five in number, with pointed backs, on each side of the aisle. At the end is a raised altar, and in the rear corner a small organ.

There is also a room in which the bishop puts on his robes and sleeps at night. He is his own organist and his own porter, and takes with him no assistant.

The car is now upon its rounds, and has been filled many times with worshipping congregations.

The idea has been acted upon by missionaries of other denominations, and the travelling church bids fair to do a great work in carrying religion to the pioneers of the Western country.

GRANT AND SHERMAN.

Like most silent men, General Grant was little given to witticisms. A writer in the Chicago *Tribune* relates an anecdote, however, which shows that he was not without ability to say bright things on occasion. Grant and Sherman were discussing the plans of a campaign, when a third general, a brigadier, entered the tent—a good soldier, but notorious for his carelessness as to his personal appearance.

The brigadier finished his errand and went out. General Grant pulled upon his cigar for a few minutes in silence, and then said:

"Sherman, I wonder whom that man gets to wear his shirts the first week."

Grant and Sherman were diametrically opposite in temperament, but each believed fully in the other, and their mutual confidence and affection were never disturbed by any of the petty jealousies so distressingly common among army officers.

During the siege of Vicksburg Grant announced his determination to move to a point below the town. All the generals vigorously opposed the plan, and Sherman in particular gave it as his decided opinion that the movement would be fatal.

Grant had studied the situation thoroughly, and was not to be shaken in his resolve. At last Sherman drew up a formal protest, explained its contents to Grant, and asked him if he had any objections to sending it to General Halleck.

"Certainly not," replied the man of few words.

Grant's bold scheme was successful, as all the world knows, and after the capitulation of the city, he said to Sherman:

"You remember that protest you wished me to have sent to the War Department?"

"Yes," answered Sherman.

"Well, here it is. I put it in my pocket. I thought any time would do. I'll send it now, or you may have it, just as you wish."

Sherman took it. Grant never referred to the matter again, and the circumstance was given publicity by Sherman himself.

MORE THAN READY.

"The successful canvasser," once said a business man, "is the one who can persuade you to buy what you don't want." Few persons of refined feeling would care to undertake the business under those circumstances, but even they could scarcely help being amused by some instances of persistence in agents.

A "summer boarder" was one day sitting on the farm-house steps, when a vender of patent medicines appeared, and began to advertise his wares.

"Good for toothache, rheumatism, gout, ague," he said rapidly, displaying a bottle. "Got rheumatism now, haven't ye? I could tell that the minute I set eyes on ye."

"Never had a twinge in my life," said the victim.

"Subject to headache?"

"No."

"Teeth trouble ye?"

"Never."

So the conversation went on, from nostrums to liquids for cleansing purposes, and still nothing was sold. After half an hour's steady effort, the agent slowly packed up his wares and sadly prepared to depart. As he was about to go, a neighbor approached, bringing the morning's mail, and called out, triumphantly:

"I've got two magazines, and there's a story by you in each!"

The agent threw open his bag with a lightning-like gesture. He seized a bottle from its contents, and proffered it imploringly.

"Why didn't you tell me you was a writer?" cried he. "Twenty-five cents a bottle! Best thing on earth for writer's cramp!"

He had conquered; the nostrum was bought, though only to be tossed over the orchard wall.

TO CONTRIBUTORS.

Taverner, of the Boston *Post*, makes a suggestion which may be commended, with some grains of allowance, to all contributors to *The Companion*. "I doubt," he says, "if Shakespeare himself would have furnished good 'copy' if he had attempted to put down his plays with a pencil and a pad," and he continues:

The late Philip Welch, who flooded all the comic papers and some of the serious ones with the most original, the most concise and pointed paragraphs, wrote each one—they were always short—in the middle of a sheet of good, thick note-paper.

Thus he secured two advantages. Having a sheet of paper for each joke, he was under no temptation to lengthen his witticism to suit the page; and the nature of his material, such as one would use for an invitation to an evening party, naturally led him to be concise and finished—to have a beautiful *bon mot* in the exact middle of a beautiful expanse of white.

I will only add that I make these observations chiefly for the benefit of my friend, Penloper, whose comparative failure as a humorist I attribute to his use of cheap yellow paper and an ill-sharpened pencil.

AS A PRIVATE INDIVIDUAL.

In the popular estimation of Russia, Tolstoi is almost a mightier man than "our father, the Czar." An exceptional personage to every one, he is in his own land a saint and deliverer. One of the authors of "The Czar and His People" gives the following instance of his independence of thought and action:

General Loris Melikoff had been given such unbounded power to act against the Nihilists that, as he said, he was virtually created vice-emperor. He discovered, in the course of his official investigations, that one of the leading Nihilist chiefs was in the habit of visiting Tolstoi, and one day Melikoff himself went out to the novelist's country-house. Before the visitor had announced himself, Tolstoi recognized him, and said:

"You are Loris Melikoff. Do you come to see me officially or as a private man? If you come officially, here are my keys. Search, open everything. You are free to do so."

"I do not come officially," replied Melikoff.

"Very good," answered Tolstoi, and calling two stalwart servants, he said to them, "Throw this man out of the house!"

The order was obeyed to the letter, and Melikoff dared not seek redress.

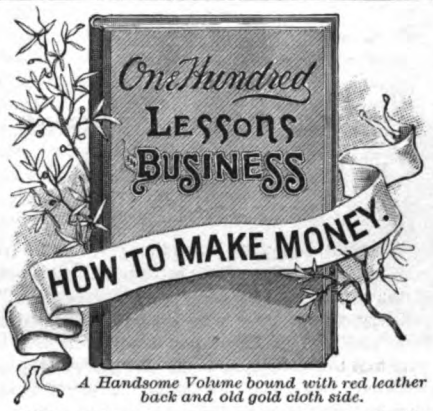
Take a Picture.

This illustrates the **Harvard Photographic Outfit** complete, ready for business. THE YOUTH'S COMPANION guarantees every instrument to be perfect.

Only $1.75 complete.

The price is so low that some may think it is simply a toy. Far from it—it's a practical Camera, capable of taking a most excellent picture 4 x 2½ inches in size.



BOSTON, APRIL 20, 1891.
I have examined a large number of Photographs that have been taken by boys and girls with the Harvard Outfit. The excellent character of these Photographs indicates that the Harvard possesses real value. It certainly is surprising to see how such an Outfit can be had at such a low price.
53 Boylston Street, A. MARSHALL, Photographer.

THE YOUTH'S COMPANION, Boston, Mass.

"DO NOT STAMMER."

OFFICE OF POSTMASTER-GEN., WASHINGTON, D. C.
DEAR SIR:—I know Mr. E. S. JOHNSTON, of whom you write, and have knowledge of the fact that he has produced wonderful cures of stammering.
Yours most truly, JNO. WANAMAKER.
To T. H. URQUHART, M. D., Hastings, Neb.

Send for 54-page pamphlet to
E. S. JOHNSTON'S INSTITUTE,
Cor. 11th & Spring Garden Sts., Phila., Pa.

A Handsome Volume bound with red leather back and old gold cloth side.

The author has prepared this book Especially for Boys and Young Men who are Ambitious to get on in the World. It offers to any young man the stepping-stone to a successful business career. It contains—

Sound Business Advice.
Safe Business Rules.
What Successful Men Say of Success.
What Successful Men Say of Failure.
Rapid Addition Made Easy.
Business Fractions and How to Handle Them.
Decimal Numbers and What They are Good For.
Valuable Exercises for Practice.
Short Cuts in Figures.
Something About Wages and Pay-rolls.
Losses and Gains.
How to Speak and Write Correctly.
How to Write a Good Business Letter.
Hints and Helps for Corresponding Clerks.
Answers to Advertisements and Applying for Situations.
Bills and Accounts.
Easy Methods in Bookkeeping.
Trade Discounts.
How to Collect a Debt.
Hints on Advertising.
Checks, Notes and Drafts.
Accurate Interest.

Fully illustrated with Checks, Sample Letters and Accounts, Styles of Penmanship, and Complete Examples showing every rule and how it is worked out.

If you were to gather the information contained in these Business Lessons from successful houses (where the most and best of them were secured), it would take months of time and hundreds of dollars.

Thousands have already purchased this book. See two-column advertisement in October PREMIUM LIST.

Sent postpaid for $1.00. Address,
The Burrows Bros'. Co., Cleveland, Ohio.

MEDICINE AS A PROFESSION.

By Sir Morell Mackenzie, M. D.

FAME.—Third Paper.

"Thought, I say, is always thought," said Carlyle. "No great man lives in vain. The history of the world is but the biography of great men."

Every young man who enters a profession from choice has hopes and aspirations which lead him to strive after some ideal, either vague or clearly defined in his mind. Every French recruit is said to have the marshal's *bâton* in his knapsack, and the office of president is open to every native male citizen of the United States.

The medical profession has its heroes, too, whose deeds may well inspire the young student with a desire to imitate them, and their fame has been gained exclusively by the benefits they have conferred on humanity, which cannot be invariably maintained of the successful general or statesman.

There have been doctors of renown who have actively and intentionally followed the professions both of killing and of curing, like Podaleirius and Machaon, the "two excellent physicians, both sons of Æsculapius," who came to Troy with "thirty hollow ships," and fought as bravely as the rest at the head of their clan.

Their double worth as fighters and physicians was fully realized by their companions in arms; for Homer tells us, in the Eleventh Book of the Iliad, that when Machaon was wounded in the shoulder by Paris, as he was checking the advance of Hector, Idomeneus begged Nestor to carry the wounded hero out of the battle in his chariot; for, he said,

> "worth many a life is his,
> The skilful leech, who knows, with practis'd hand,
> T' extract the shaft, and healing drugs apply."

But, though it is no longer part of an army surgeon's duty to inflict wounds on the enemy, as well as to heal the wounds of his friends, he has yet plenty of opportunity for showing as much heroism as the soldier. In the war of 1877, between the Russians and the Turks, an English ambulance was working in company with the Russian, at a small village called Trnjanè, on the afternoon of September First. About half-past six word came that the Turks were surrounding the village, and a general retreat was sounded.

At this moment, two young English surgeons, Mr. Hare and Mr. Sandwith, were preparing to amputate the thigh of a wounded soldier. A cry arose that the Bashibazouks were surrounding the village, and the panic became universal. Colonel Georgewitch galloped up to the two surgeons, shouting: "Retreat, gentlemen!" but they went on with their operation as calmly as if they had been in an operating theatre, and when they had finished, the patient was conveyed in a cart to a position of safety, while the young men left the village on foot, half an hour before it was sacked and burnt by the Bashibazouks.

The excitement of war is said often to generate courage, even in the blood of men not constitutionally brave; so that grave risks deliberately run amid the methodical and prosaic surroundings of the hospital are, perhaps, greater proofs of a heroic nature than the instance given above.

There have been many instances where doctors have followed the example of the before-mentioned medical hero, Machaon, who sucked the blood from the arrow-wound of Menelaus; and the case of Dr. Samuel Rabbeth, one of the most recent of these, is still remembered by those in England who read their daily papers.

In October, 1884, Doctor Rabbeth was treating a child for diphtheria, in the Royal Free Hospital, Gray's Inn Road, London, and was obliged to perform the operation of tracheotomy to prevent suffocation. In spite of the operation the breathing was not relieved, and Doctor Rabbeth, in order to save the child from immediate danger of death by asphyxia, and fully conscious of the risk he ran, sucked the tracheotomy tube, and cleared it of the obstructing membrane.

The child was not saved, and the doctor was lost; for ten days afterward he died of the diphtheria, caught through his heroic act.

Harvey sat under a hedge during the battle of Edgehill, calmly reading his book, till a bullet from a great gun grazed the ground near him and suggested that he had better move a little further off if he did not wish his circulation to be stopped. He did not, in these circumstances, give evidence of courage so much as of an absorption in the theme that interested him so great as to render him perfectly oblivious to what was going on around him.

But Harvey was a hero in another way. He arrived at his great discovery of the circulation of the blood, after many years of patient toil and careful investigation; but it was long before he could make up his mind to publish the treatise which was to contradict the teaching and confute the theories of men whom he honored and respected.

Unlike many reformers, who are delighted at the chance to expose the errors of their predecessors,—as if the finding out the fault of another of itself added lustre to their own fame,—Harvey had all the humility of a really great mind, which, while it must believe and proclaim the incontestable truths it has discovered, has yet a reverence for other great minds whose researches did not bring them quite so far on the road of knowledge.

Harvey was conscious that the publication of so epoch-making a discovery would rouse a storm of indignation and opposition. "What remains to be said . . . . is of so novel and unheard of a character," he says, "that I not only fear injury to myself from the envy of a few, but I tremble lest I make mankind at large my enemies. So much doth wont and custom, that become as another nature, and doctrine once sown that hath struck deep root, and respect for antiquity influence all men. Still the die is cast, and my trust is in the love of truth, and the candor that inheres in cultivated minds."

Alas for the upright, simple man who trusts in the power of truth and candor to overcome the "envy, hatred and malice and all uncharitableness" that also exist, at times, in cultivated minds! Harvey's biographer, Aubrey, says: "After his book on the circulation of the blood came out, he fell mightily in his practice. It was believed by the vulgar that he was crack-brained, and all the physicians were against him."

Tardy recognition of Harvey's merits came a few years before his death, but he declined the honors offered by the College of Physicians after he had presented that body with a handsome gift, and died in 1657, leaving to the world an example "of a noble independence of mind, prepared to follow the truth at all hazards, while yet imbued with a profound respect for the authority of his teachers."

A greater hero even than Harvey was Edward Jenner. For nearly thirty years he quietly, patiently and perseveringly pursued his investigations in the little town of Berkeley, in Gloucestershire, and its neighborhood, making constant experiments in vaccination, often baffled, but never daunted; and when at length he gave his great discovery to the world, he was abused and vilified by his colleagues to an extent almost unheard of in the history of medicine.

But in spite of the opposition of the medical faculty, headed by the venerable College of Physicians, vaccination was rapidly adopted all over the civilized world, America being, as is so often the case, the first to recognize the value of the discovery.

It was made known by Doctor Waterhouse in an article published on March Twelfth, 1799, in a Boston newspaper, the *Columbian Centinel*, entitled "Something Curious in the Medical Line;" and at a meeting of the American Academy of Arts and Sciences, presided over by John Adams, President of the United States, the subject was attentively considered, and a resolution was adopted that vaccine matter should at once be procured from England.

The well-known surgeon, Mr. Cline, who was friendly to Jenner, and recognized the value of his discovery, wrote and told him he ought at once to leave the country and set up in London and make ten thousand pounds a year. But Jenner loved science for its own sake, and not for what it would bring in; and he thought with Ruskin "that the things to be desired for man in a healthy state are that he should not see dreams but realities; that he should not destroy life, but save it; and that he should not be rich but content."

His reply to his friend is characteristic: "Shall I, who, even in the morning of my days, sought the lowly and sequestered paths of life, the valley and not the mountain; shall I, now my evening is fast approaching, hold myself up as an object for fortune and fame? Admitting it as a certainty that I obtain both, what stock should I add to my little store of happiness? My fortune, with what flows in from my profession, is sufficient to gratify my wishes. And as for fame, what is it? A gilded butt, forever pierced by the arrows of malignancy."

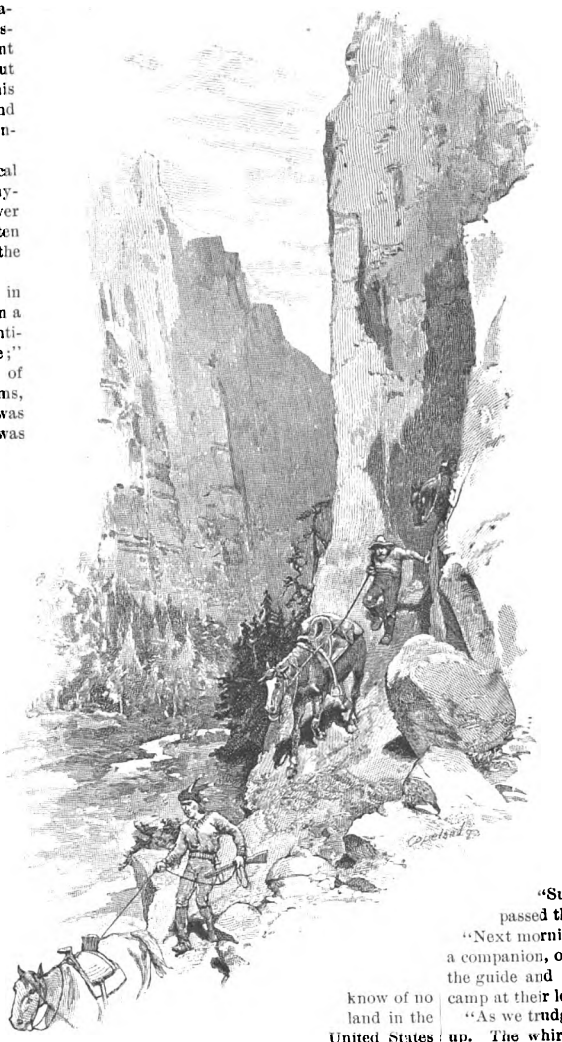
Further on in the letter he expresses his fears lest his discovery should suffer through being applied by incompetent persons, and this, unfortunately, did afterwards happen. He did not escape calumny by remaining in retirement. But truth is mighty and will prevail, though it sometimes takes a very long time about it, and Jenner may, perhaps, be considered more fortunate than many, in that he lived to see his discovery welcomed as a blessing all over the world. "Pronounce meditatively the name of Jenner," said Coleridge, "and ask, what might we not hope, what need we deem unattainable, if all the time, the effort and the skill which we waste in making ourselves miserable through vice or error, and vicious through misery, were embodied and marshalled to a systematic war against the existing evils of nature."

Limited space, not want of material, hinders me from multiplying instances of men in the medical profession as heroic as any soldier who ever led a forlorn hope or mounted first in a breach.

"At bottom," said Carlyle, "the great man, as he comes from the hand of nature, is ever the same kind of thing. . . . True, there are aptitudes of nature too. Nature does not make all great men in the self-same mould. Varieties of aptitude doubtless; but infinitely more of circumstance; and far oftenest it is the latter only that are looked to."

Had Jenner lived in the dim ages of which Homer wrote, he would have come down to posterity as a mythical hero half-divine, who had overthrown and slain some terrible, all-devouring monster. Had circumstances made him a modern general or admiral who had been instrumental in killing many thousands of his fellow-creatures, he would probably have been rewarded with a peerage and a fortune by his grateful country.

But he, and such as he, who spend their lives in noble devotion to the cause of humanity, have their names graven in brass; for



> "Fame is no plant that grows on mortal soil,
> Nor in the glistering foil
> Set off to the world, nor in broad rumor lies,
> But lives and spreads aloft by those pure eyes,
> And perfect witness of all-judging Jove;
> As he pronounces lastly on each deed,
> Of so much fame in heaven expect thy meed."

For the Companion.

THE BIG HORN CANON.

By Gen. James S. Brisbin.

So little undiscovered territory is left in the United States, that he who can plant his foot on a spot where the foot of civilized man never trod before, achieves a victory of which he may well be proud. With the exception of a few inaccessible mountain peaks, some portions of Alaska, the Colorado Cañon and the Big Horn Cañon, I know of no land in the United States that has not been well explored.

Though the Big Horn Cañon is located within sixty miles of Fort Custer, in Montana, where I am writing, I can find no one who has ever been through it. Some men have been in it, but did not stay long, and only a few have traversed it for as much as twenty miles.

The only man I ever met on these plains who could give a good account of the great cañon was Lieutenant George P. Belden, the celebrated trapper, guide and scout, who died some years ago. Even old and thoroughly travelled scouts and hunters have had to acknowledge that they knew nothing about the Big Horn Cañon.

Belden often told me about it, and said he had been from its mouth to the top, and once had spent a portion of the winter beneath the friendly shelter of its mighty walls. Belden left some notes in a book giving a partial account of the "sunken plain," as he called it.

"We had been toiling up, up, all day long," says Belden in these notes, "and at night looked far back and below us to the Chetish or Wolf Mountains. They were to the north, and fully forty miles distant. They loomed up from the plain, low, broad, black and flat, and we could see that they had no connection at any point with the giant Big Horn Range. West of us was the Big Horn Valley proper.

"Wishing to strike the Big Horn Cañon at its mouth and go up it to its head, I told our Indian guide so to lead as to bring us to the cañon at its junction with the river.

"Early the next morning we set out nearly due westward. Our Indian guide, although a Crow, and born in the country, had great difficulty in locating the cañon, so broken and uneven was the land. At last he pointed to some pines on a distant hilltop, and, calling out 'There! there!' rode smartly forward.

"At the foot of the mountain below the pines we found an old trail, almost obliterated from long disuse. Taking this, the guide galloped swiftly forward.

"In about an hour he stopped on the brink of a deep ravine, and told us that this was the great cañon. Dismounting, and going forward on foot, I looked over wall rock hundreds of feet high. The Indian said that a mile below was a trail leading down into the cañon, and that we could descend if we wished. He said it was twenty miles or more to the mouth of the cañon, and the descent was more difficult there than by the trail just below us.

"I told him to go ahead, and we would enter the valley at once.

"After rolling, jerking, sliding and tumbling, as it were, down the side of the cañon for fully five minutes, we suddenly found ourselves in a little valley, from which the light was almost excluded by the black walls of rock.

"There was a bright streak of sunshine along the centre of the valley, and a stream rippled by. The tall pines sighed mournfully in the light breeze. Not even the tops of the tallest trees ascended as high as the top of the cañon. They were extremely tall, for they had been sheltered from the storms that had twisted and dwarfed their less fortunate neighbors on the prairie above.

"The little stream was filled with mountain trout. They were of the mountain brook species, and we could see their golden bars flash as they darted through the crystal waters.

"Up the stream was a herd of a dozen elk, and below, almost within rifle shot, two black-tailed deer browsed. There were many kinds of birds, and the cawing of hundreds of crows could be heard up the stream where the timber was thickest.

"When the sounds of the birds, the brook and the trees ceased, the silence was intense. The valley seemed cut off from the rest of the world.

"One has strange feelings in such a place; and I was not sorry when the Indian, who had been creeping down the valley toward the deer, fired a shot and killed the buck. The noise of his gun seemed almost as loud as a cannon, and as the echoes reverberated far up and down the valley, the birds rose screaming in the air, and circled far above us.

"Supping on trout and deer meat, we passed the night by the side of the stream.

"Next morning, wishing to hunt, I set out with a companion, our rifles on our shoulders, leaving the guide and scout to pack and follow with the camp at their leisure.

"As we trudged along, many prairie hens flew up. The whirring of their wings and the loud call of the old cocks attracted the attention of a fine buck. On seeing us, he stooped low, and, creeping away, hid in the nearest bunch of pines.

"He seemed to suppose that we had not seen him. As he tiptoed into the wood, Dan, my companion, laughed outright; but we let the fine fellow go, for we had plenty of meat, and it would have been cruel to kill him merely for the sport of shooting him.

"A mile further up, as we turned a sharp angle of the high wall on our right, we saw a band of over one hundred elk grazing within easy rifle range. The leader threw up his head, whistled danger, and started up the valley.

"The excitement was too much for old Dan. Bringing his gun to his shoulder, he fired, and the leader fell, shot through both fore-shoulders.

"The herd halted when the leader fell and gathered about him. None except the wounded buck had yet seen us. They looked everywhere about in a frightened way, but we had hidden among

Digitized by Google

the rocks. Finally they started up the valley again.

"It was a beautiful sight. Nothing but a mass of horns, tips of ears and flying feet could be seen as they moved in a compact mass. The noise of their hoofs and the glint of their red necks reminded us of a flight of birds more than of animals.

"The Indian guide said the true name of this cañon was Elk Cañon, and that elk were always to be found there in great numbers, not only on account of the fine shelter it afforded, but of the warmth and good grass and water.

"After looking at the buck, now quite dead, and taking his hump and tongue, we pushed on up the valley in the rear of the elk. We had meat enough not only for ourselves but for the escort, and we determined not to kill any more, however great the temptation might be.

"We soon began to notice that both the cañon and the stream were becoming narrower rapidly. The stream was a mere rivulet, but still well stocked with red speckled trout. The valley was so narrow that no animal could pass up or down it without coming in close rifle range.

"The wall rock on either hand became higher and higher. Little springs from the side flowed in and bubbled up from the base of the high walls. Pockets, meadows, thickets and ravines increased in numbers, and the great hanging walls above our heads closed until the daylight was almost excluded.

"Deer were very abundant, but all other game had disappeared. Selecting one of the widest of the little pockets or side valleys, we began to climb a deer trail leading up the mountain-side. Since we left camp we had travelled due east, and now we went up the south side of the wall, and soon found ourselves in the wildest of scenery.

"On our right was the snow range, with glistening tops flashing like polished silver. The valley had been very warm, but the change to a colder temperature was perceptible at an elevation of five hundred feet. We were going out of summer into winter, and all within a mile or two.

"The air became so thin that one could not run at all, and every few hundred steps our breath gave out, and a short rest was necessary. We were entering the confines of perpetual winter.

"Working forward over the snow line, we found the stunted old pine-trees becoming more and more gnarled, and most of them dead or dying. Here and there, in the crevice of a rock, we found a bush growing which bore brown berries that were sweet to the taste and not unpleasant eating.

"Here and there little red and striped chipmunks frisked about, and shot in and out of the rocks. They seemed larger than the chipmunks of the East, but were evidently the same animal.

"We also saw several large rock-rats, or mountain-squirrels, which inhabit these high regions. Some of them were as large as small prairie-dogs, and were like them except in their movements.

"These animals are sluggish, and shooting at them does not seem to alarm them in the least. They drag themselves lazily in and out of their holes and act as if they were deaf.

"Above the ground vines rise ranges of granite rock, gray, pink and brown, with veins of delicate purple and blue running through them. There is a rose-colored granite on these mountains that takes a high polish and is very beautiful. I saw an almost jet black marble, the finest stone I had ever seen, and there is much white marble.

"From the top of these granite walls the snow extended over the mountain, hiding everything above from view.

"Standing at the foot of the great granite walls, our feet pressing the snows of many winters, our teeth chattering in the cold mountain air, we looked far down below us to see the Black Cañon with its green trees, grassy valley and sparkling stream, which looked like a tiny thread of silver. With my glass I could see wild sheep on the opposite hills, and far down the cañon a band of deer playing at hide-and-seek as they dashed in and out of the little thickets.

"I had been at the snow-line before, but never at so interesting a place as the Black Cañon.

"Finding the night coming on we began our downward course.

"About half-way down the mountain-side, as we came out from among a group of pines, we noticed a large mound, upon which sparkled millions of bright little objects, having the appearance of bits of broken window glass. The mound, we found upon approaching it, was a bed of gypsum; the thin scales and large slabs gave it the appearance of a huge jewel set in the mountain-side.

"Down, down we went, almost an hour and a half, and then we came out into the little valley once more, and found an escort awaiting us. The sun was still shining on the hills, and we determined to go up the cañon a little way and camp for the night.

"An hour's march brought us to the head of the stream and some fine springs. Here, the guide informed us, we must stop or go a long way to water. We accordingly encamped, and after a good supper went out and gathered Kinnikinnik, or bearberry leaves, to mix with our tobacco.

"We found many curious colored pebbles, some agates and several other stones of value.

"We had explored only twenty miles of the middle portion of the great cañon, and in the morning determined to climb out and go over to Bear Cañon of the Big Horn to hunt for grizzlies."

This is the only description of the Black Cañon of the Big Horn that I have ever seen. It is meagre and unsatisfactory, but if I live until the summer of 1891, I hope to explore, map and photograph the entire region.

CHOW-WICH-AR.

"You have eaten salmon from the Columbia River and salmon from the Restigouche, you say, and you think that you have eaten good salmon; but let me tell you that you don't know what good salmon are, and that you never will know unless you go to Alaska and taste of a *chow-wich-ar*."

"A *chow-wich-ar* is a kind of salmon, then?" I asked.

"The king of all the salmon. There are five kinds—the *nerkar*, the *gorbuskar*, the *keetar*, the *ki-such* and the *chow-wich-ar*. They all go up the rivers of Alaska, particularly the Yukon; and in size and in flavor the *chow-wich-ar* is above them all. If you have tasted one of these, you will never say much about the other kinds.

"I have seen these fish speared in the Yukon, six feet long, and a hundred pounds in weight. It took a good strong Siwash Indian to get a fish of that size out of the water, too. There was enough in one fish to feed our whole mining-camp two days; and we bought it for about a quarter of one small plug of tobacco.

"We could have speared the fish ourselves; but it did not pay us to spend the time, when an Indian could be hired to bring us such a fish for three smokes. The gold-mining season on the Yukon is too short to leave much time for fishing and hunting."

As the speaker was one of the adventurous miners who have for several summers crossed the "divide" from Chilcat to the upper Yukon waters, I improved the opportunity to ask if, in his opinion, there are profitable gold washings on the Alaskan rivers.

"Well, I've been there three summers," he replied; "I've spent a good share of the time prospecting, hoping to come upon rich pockets, or bonanzas; and I haven't got wealthy yet. At the same time I know of twenty or more different washings where a man can make from ten to fifteen dollars a day, if he is willing to shake a cradle and really work well.

"Speaking of the *chow-wich-ar*," my mining acquaintance went on, "reminds me of a bear-hide I've got among my luggage. I want to show it to you."

He went below, where he had his "traps" stowed away in the steamer's forehold, and presently emerged with a bulky bundle which proved to be, when spread out on deck, an immense grizzly-bear skin. It was nearly ten feet long and almost or quite as wide.

"That must have belonged to a fearful beast!" I exclaimed, as the vast stretch of thick iron-gray was extended along the deck.

"Well, I reckon it did," remarked the miner, laughing. "You should have seen his tracks, too! I saw his tracks before I saw the bear; so I wasn't quite so much surprised when I saw the old fellow himself."

"How did you contrive to kill him?"

"It was while we were prospecting a river which makes down out of the hills into the Yukon, some forty miles below the mouth of the Natchonde. I borrowed a carbine one morning and went out with a Siwash Indian, whom the miners called 'Beany,' in the hope of shooting an elk; for we had lived on salmon, till, good as they were, I thought a change might be wholesome.

"We went up the valley of a swift tributary stream two or three miles. Then, in the sand and gravel around the foot of one of the deep, clear pools, 'Beany' stopped and pointed to what I at first took for holes dug there by martens, but which at second glance I perceived were tracks.

"Well, sir, every one of those footprints was almost eighteen inches long by a foot wide! My first thought was, that they must be the tracks of that mastodon which some of the Hudson Bay Company's men say they have seen on the Porcupine River!

"But Beany grunted out '*markee-mook*,' a word which I had heard meant bear. The imprints were so fresh that I felt sure they had not been made more than ten minutes. We followed the tracks cautiously. You know what ugly customers these bears are. If they find that a hunter is following after them, they will lie in wait and spring upon him.

"Beany and I had been tiptoeing along for half a mile, perhaps, when we suddenly heard a tremendous splashing in the water a little way ahead. The Siwash knew what it meant. He made signs for me to creep along after him.

"The bushes were thick here, and there were several great rocks which shut out from view the pool ahead of us where the splashing seemed to be. But at last we crawled in between the boulders, and caught sight of it—a deep pool down among ledges.

"Right in the middle of this pool was the grizzly, plunging first one way, then another, and spattering the water twenty feet in the air!

"He was not taking a bath, either. There was a bunch of salmon in that deep hole, and old Ephraim was fishing, with his claws for hooks.

"The depth of the water troubled him; but he got hold of a fish at last, and crawled out, snorting, to the top of the shelving ledge on the other side.

"I saw then that the bear was a monster. The salmon that he had caught was about a ten-pound fish, of the common kind; and at just three bites of the bear's big jaws, the fish disappeared down his throat. Then, after smacking once or twice, he began to eye the pool again, on the watch for another, as the salmon swam around and around.

"As often as he saw one that suited him, he would make a feint of plunging in, but did not take the leap for some moments. But at last he made a long leap into the pool, with a tremendous splash. After a tussle for it all around the pool, he got the fish and came out, blowing like a whale.

"This time he had a *chow-wich-ar*, and a fine one. It made a big struggle, and the bear had to grip it close. He clambered up the rocks with it and lay there for some time, waiting for the salmon to die before he let go his grip; for it was a big five-foot fish, and squirmed vigorously.

"As the beast crouched there, across the stream, I seized the opportunity to pull down upon him with my borrowed gun. When 'Beany' saw that I was going to shoot, he crept off as fast as he could. He was making for a tree, I suppose.

"I did not blame him. I am not a great marksman; but I had a splendid chance, and contrived to drive a bullet into the animal's head. It entered near the left eye orbit; and when it struck home, the bear rose on his hind legs, with a strange growl, dropped his fish and pitched headforemost into the pool, dead.

"We pulled the creature out into shallow water, at the toe of the pool, and there 'Beany' took off the hide for me. I think that it is the biggest bear-skin owned in the United States."

For the Companion.

SPRING WOOD-FLOWERS.

Some of the most delicate, beautiful and fragrant flowers bloom in the Northern woods in early spring. It seems as if the deep snow of winter were a nourishing mother to these flowers; for some of them push their delicate petals through the very edges of the melting snowdrifts. Most of them, however, cannot bear the full sunlight, like the glorious daisies and goldenrods of summer and autumn; and those who would behold their beauty must seek them in their quiet retreats.

Ordinarily, the very first flower to make its appearance is the hepatica, or liverleaf. This flower, indeed, has been found in every month of winter, peeping forth from the snow in some favorable situation. It is common in rich, deciduous woods throughout the Northern States, from the Atlantic to Minnesota.

The hepatica's flower, which is generally blue, but sometimes quite white, resembles in form the anemone, to which it is nearly related. It is found lifting its fuzzy stalk and pretty flower against a warm rock or the hole of some ancient tree.

The lovely hepatica is too delicate to bear picking for bouquets. It is puzzling to young botanists, being apetalous,—that is, having no petals,—though the sepals are so richly colored that they look like petals.

Though the hepatica in exceptional cases appears so early that its blossom seems to belong to the year before, its ordinary and copious blossoming time comes when the ground has become well cleared of snow.

One of the prettiest spring flowers, and a near neighbor, though not a relative, of the hepatica, is the "spring-beauty," or claytonia. It sends up a slender stem with grassy leaves, and bears a loose cluster of cup-shaped, rose-colored flowers with pink veins. It is quite common, and, like the hepatica, fades rapidly, and can hardly be brought home in good condition.

The spring-beauty is a wild cousin to the portulaca and the common purslane.

Among the first flowers to appear is the trailing arbutus, or ground laurel—or, as the early settlers of Plymouth named it, the mayflower. Deep in the piny woods it seems to distil the aroma of the "murmuring pines and the hemlocks," and send it forth, refined and sweet, in its clusters of rose-colored and white blossoms.

Nowhere is the "mayflower" more abundant than in the Plymouth woods, where the Pilgrims first found it; and indeed it must have been enough to charm those exiled wanderers' hearts to see the lovely clusters nestling in the pine leaves, and to inhale their delicious fragrance.

It is by no means the exclusive property of New England, for it is found growing from Newfoundland to Minnesota, and even as far south as Florida.

Along the edges of the woods will be found the wood-anemone and the rue-anemone growing together, like twins that must be looked at carefully in order to distinguish one from the other. But the wood-anemone bears but a single flower, while the other has two or more.

When the gentle breeze moves the green leaves and snowy petals of a thousand exquisite anemones by the woodside, we do not wonder that the Greeks called this the *anemone*, or flower shaken by the wind.

Let us follow the brooklet that runs through the woods, and gather the flowers that love its oozy banks. Here, one on each side of the little stream, are the two dicentras. The beautiful, spray-like, light-green leaves are the same in each, but the stem of delicate, peculiar flowers that springs among the leaves of one is different from the other.

On one side we see the yellowish "Dutchman's breeches," and smile at the aptness of the name. On the other side is the squirrel-corn, with flesh-colored, heart-shaped flowers. The flowers of the squirrel-corn are very fragrant. The name has nothing to do with the flower, but refers to the little yellow grains which constitute the roots of the plant.

A little further up the brook we find the royal trilliums. The great purple trillium, or "Benjamin," as it is sometimes called, is a gorgeous bit of dark purple against the green of the leaves and moss; but its odor leaves much to be desired.

The painted trillium is smaller but more attractive, with its wavy white petals marked with deep pink stripes.

The queen of all the trilliums is the great-flowered, white trillium. It blooms a little later than the others; it likes ground a little drier than the banks of our brook, and is rather rare. To come upon a group of these flowers is like meeting a company of woodland nymphs, such as the ancient Greeks delighted to imagine.

Near the brook we shall find also the dog-tooth violets, or yellow adder's-tongue, which is not a violet at all, but a member of the lily family. These flowers love to congregate in some moist little hollow, where sometimes hundreds of their yellow bells may be seen ringing out silent music for fairy dancers.

And who is this so proudly standing beneath his rich and varied canopy? It is Jack, the black preacher, in his pulpit; and though he has never been heard to assert that "the sun do move," he has felt it in every leaf and vein. There is not a more curious and interesting plant in the spring woods than the boys' Jack-in-the-pulpit.

In the edges of rich woods may often be found a magnificent display of blood-root blossoms. I have sometimes found them covering a large extent of ground, and could not withhold an exclamation of delight at such an exhibition of pure white color. I remember that it was a great mystery of my childhood how the bloody rootstock could send up the stainless white flower; and the mystery is a mystery still.

The violets afford an interesting study from early spring until midsummer. I have stood upon a snow-bank and picked the little white, sweet violet, whose blossoms would seem far too frail to venture forth before the warm breezes of June have come.

The most beautiful of the spring violets is the pedata, or bird-foot. It grows in profusion in sandy soils, and is often found a neighbor to the trailing arbutus. It bears picking well, and the children often gather hundreds of the violet flowers into a bunch that makes a delightful bit of color. It will last, when plucked, several days.

The tall and branching violets are found in early summer. Among the most beautiful and interesting of these is the Canada violet, which has a profusion of whitish blossoms, tinged with purple within. Unlike most of our American violets it has a delicious perfume.

Very interesting, too, is the downy yellow violet. It is not so common as the blue varieties, and yet in many districts it is very common indeed.

The reason for the early blooming of most of these flowers is the fact that they do not spring directly from the seed, but from stores of nourishment laid up the previous season. In some instances the buds are well developed before winter begins. Thus the trailing arbutus buds are well grown in the autumn, but they are protected by stiff green scales or sepals from the cold of winter.

The dainty blood-root has a strong and thick rootstock full of juice, and Jack-in-the-pulpit has a large, turnip-shaped root full of nourishment that sends up the stout leaves and spathe with wonderful rapidity.

Two flowers that sometimes appear in countless numbers in favorable localities are the tiny innocence, or bluets, and the red columbine. The bluets are not chiefly wood-flowers, but grow on moist banks and grassy places. The flower is very small, and light blue or almost white in color. The leaves are scarcely to be found, and the flowers grow so closely together that I have often seen a field in June, which was covered with them, look as if it were overspread with little snowdrifts.

The columbine, with its large, peculiarly-shaped flowers, flourishes on rocky hillsides, as if it loved to make a display of its rich beauty. Such a hillside, recently cleared of second-growth trees, I saw covered for half a mile with thickly blooming columbines. I think it was the most glorious exhibition of color that I had ever seen, except in the sky. The whole place seemed to send forth a warm radiance, as if it reflected the very heart of the sun.

Those who love to be "near to nature's heart" will find many other woodland flowers in spring besides those which I have mentioned, and will learn to welcome them with ever increasing pleasure as the years go by. J. MERVIN HULL.

SUGGESTIONS

EXPERIMENTS WITH A PENDULUM.

Suspend a small weight—a bullet, pebble or heavy button—by a thread exactly two feet long.

Let this swing back and forth a few inches, and carefully count its vibrations per minute.

Does the distance it swings affect its rate?

Repeat, having the thread just four times as long; also, having it just one-fourth as long.

Compare the results with the former ones.

For the Companion.

CRADLE-SONG.

In the garden of Dreamland a flower ever grows,
In form like a lily, in hue like a rose,
With odor like jessamine sprinkled with dew,
And it bourgeons and blossoms, my darling, for you.
Then travel, my baby, to Dreamland.
Slowly rock, cradle, to carry the baby;
Steadily, readily rock, and it may be,
Ere she shall know it, the baby will go,
Happily smiling, to Dreamland.

In the garden of Dreamland in summer is heard,
Trilling there in the moonlight, a beautiful bird;
And it sings, and it sings, all the pleasant night through,
And its music, my darling, is only for you.
Then travel, my baby, to Dreamland.
Slowly rock, cradle, to carry the baby,
Steadily, readily rock, and it may be,
Ere she shall know it, the baby will go,
Happily smiling, to Dreamland.

To-morrow my darling, refreshed by her rest,
With the bird in her hand, and the flower on her breast,
Shall return to her mother, and frolic and crow,
But to-night on her journey to Dreamland must go.
Then travel, dear baby, to Dreamland.
Slowly rock, cradle, to carry the baby,
Steadily, readily rock, and it may be,
Ere she shall know it, the baby will go,
Happily smiling, to Dreamland.

THOMAS DUNN ENGLISH.

WHAT A FREIGHT-MASTER DID.

An engine bumped against some empty cars in the early dawn of a winter morning. A boy who had been asleep in one of them was thrown, dazed and bewildered, against the door, which he had pulled to when he crawled into the car the night before.

Just then a brakeman thrust his head into the car, and reached for his jacket, which he supposed was hanging where he had left it. He was somewhat surprised to find a boy on it, and took it from him without ceremony.

"Now get out of here!" he said, thrusting the boy from the door. "If I catch you in one of these cars again, I'll give you to a policeman!"

"What's he been up to, Bill?" said a man who was putting freight into the next car.

"Up to my coat," he said, giving it a vigorous shake as he walked off.

The boy looked dirty and dejected, as he limped along by the side of the track. The man who had spoken called after him:

"Hullo, there! Do you want a job?"

The boy turned back quickly.

"If you'll help me load them firkins, I'll pay you for it; but you'll have to work spry."

The prospect of a little money brightened the boy, and he set to work in earnest, though he was stiff and cramped and hungry.

"Do you live round here?" asked the man.

The boy shook his head.

"In case we should want to hire a boy about your size, can you give me any recommendations as to your character?"

The boy's face flushed, but he made no answer. The man watched him narrowly, and when the car was loaded, handed him twenty-five cents, saying: "We're short of hands in the freight-room. Do you think you'd like the job?"

"Yes, I would like it." The boy's face was almost painful in its eagerness as he followed the man into the freight-room.

"Now," said the freight-man, seating himself on a box, "we'll have a bit of talk before we get to business. I don't know anything about you, except that you're cold and hungry; you look that. But I think it is likely that you've got into some scrape, for if you hadn't, you wouldn't be loafing about stations and sleeping in freight cars. I'm not going to ask you if you have done anything wrong, but I *am* going to ask if you've got a mother."

"No; she's dead."

"Got any father or folks that belong to you?"

"I've an uncle and some cousins."

"Well, now, if you had a mother, I'd send you to her in no time, for there is nothing that a mother won't forgive; but uncles and cousins are different.

"If I recommend you at the office, they'll take you; but mind, if I do it, I'm going to watch you as a cat does a mouse. You'll have to spend your evenings and Sundays with me.

"I went wrong myself when I was no older than you are," lowering his voice. "An' if it hadn't been for my mother— Well, that was a long time ago. You've got switched upon the wrong track I am very sure, and as you haven't any mother to help you get on the right one, God helpin' me, I'll do it, if you'll let me.

"Preachin' isn't in my line, but there's just one thing you don't want to forget, and that is the good Father is giving you a chance now to get back where you can do right and feel right. Are you going to take it?"

The boy answered faintly that he would try. He was taken into the freight-yard, and was under his new friend's eye constantly, and it was not long before the man had so won his confidence that he told him his story.

There was trouble and dishonesty connected with it, but for two years the lad proved himself faithful and trustworthy in his new occupation. He was then advanced to a more responsible position, but there was something almost pathetic in his devotion to the man who had befriended him, and in his respect for the religion he professed.

Here was practical Christianity, worthy any man's emulation.

E. F.

NUMERALS THAT INFORM.

When our forefathers began to number the houses in their cities, they went to work in a very simple fashion. They put 1 on the first house, 2 on the next, 3 on the third, and so on until they came to the end of a street. Then they crossed over, and if the last house they had numbered was 80, the first on the opposite side was 81, the next 82, and so on until they came back to their starting point, when perhaps number 160 faced number 1. As straight and regular streets took the place of crooked and winding ones, a new plan of numbering came into vogue. The odd numbers were given to the houses on one side of the street, and even numbers to those on the other side. When a street's direction was known, a number at once told whether a house faced north or south, or east or west.

Another improvement became possible when new cities sprang up in America, with thoroughfares as uniform as the lines on a chess-board. Philadelphia is a model in this regard, and its regularity enabled its houses to be numbered in so instructive a way that the plan has been copied in many other cities of the Union.

When, for example, one walks up Walnut Street, he finds the first door above Ninth Street to bear No. 901. This although the next house below it, across Ninth, is, let us say, No. 849. The plan does not tell how many doors there are in the street, but it does something much better: it shows in the hundreds figure or figures of the number in what particular block a door is to be found.

If a tailor advertises coats at 1013 Walnut Street, or any street parallel with it, we know his door to be the seventh above Tenth Street. Tenth Street itself, and all the thoroughfares running in the same direction, conform to the system, and begin a new block with a new hundred for a number. This makes it not only very easy to find one's way about the city, but also to tell in advance how long it will take to get from one place to another.

In hotels and large office buildings a somewhat similar plan is adopted, greatly to the aid of guests and callers. Room 417, for example, will be found on the fourth floor; immediately beneath it will be 317 on the third floor, and over it 517 on the fifth.

Perhaps the most ingenious use of numbers to convey information is due to Mr. Melvil Dewey, State Librarian of New York. He has divided literature into ten great departments, and given each of them one of the ten numerals. History, for instance, is represented by 9, and every historical work has 9 for the first figure in its number.

The second figure denotes the subdivision of history to which a work belongs; 7 as a second figure is marked upon volumes treating of North America. Another and similar step gives 3 as a third figure for histories of the United States.

The works of Mr. George Bancroft, as Mr. Dewey would classify them, would bear the numerals 973. After that number would come the figures pointing out the shelf on which the volumes were to be found. To avoid disarrangement, it is usual in large libraries to leave ample room for new additions in each department; the shelves are not permitted to become quite full.

ANOTHER POCAHONTAS.

The recent troubles between the national government and the Sioux Indians recall to the memory of a correspondent a pathetic incident which occurred in that tribe sixty-five or seventy years ago, and which she believes has never been in print. She is not positive as to dates, but the events are actual, and can be vouched for, she says, by other persons now living, some of them children and grandchildren of the heroine of the story.

About the date I have given, a Scotchman named Laidlaw, belonging to one of the great American fur companies, traded extensively with the Northwestern Indian Tribes. On one of his expeditions his head-quarters were for several weeks among the Sioux. During that time a few men of the tribe, for some fancied injury, or in consequence of some actual disagreement, became mortally offended with him and determined to take his life. One man, a skilful archer, was to steal up to the tepee, and while Laidlaw was busy with his accounts, send an arrow into his heart.

An Indian maiden overheard the men discussing their diabolical scheme, and determined to save the Scotchman's life. She crept quietly to the tepee, but just as she reached it, and before she could warn him, she saw the Indian at the opening of the tent with bow already drawn.

Quick as thought she threw herself before Laidlaw's breast, and the arrow went through one of her arms. The Indian fled, leaving the suffering girl to her fate. Laidlaw, surprised and shocked by the suddenness and horror of the affair, knew not what to do, but the girl's fortitude and presence of mind did not forsake her.

She told him to assist her in removing the arrow, which he did by cutting the stem in two, and gently pulling it out. They then sought her parents, who applied their crude remedies to the wound.

After the maiden's recovery, Laidlaw, in gratitude for her heroism, married her and brought her to Clay County, Missouri, where she died about twenty-three years ago.

Mr. Laidlaw built an elegant house, with spacious and lovely grounds, and kept a retinue of servants. His place was visited by sight-seers and thronged with guests. He had, I think, eight children, whom he sent to the best academies for education. The daughters were fine-looking, though showing in a marked degree their Indian blood. The mother told me that only the two sons had pretty blue eyes like their father.

The mansion was provided abundantly with comforts and luxuries, but while the children enjoyed them to the full, Mrs. Laidlaw seemed to prefer solitude and simple food and clothes.

For many years of her widowed life she lived with one of her daughters, a kind neighbor of mine. I often visited her, and she talked of her husband, her parents and her tribe with so much feeling that I was often moved to tears. She told me that after she had been married sixteen years a Sioux chief, passing through Missouri, heard of her and came to see her; but she could not talk to him, for she had forgotten her native language.

She said it broke her heart. There was so much she wanted to ask him about her people, whom she still loved so dearly, and so many messages she would have liked to send to old friends and kindred.

In her last days, even when partially blind, she wandered every day through the woods, dejected and alone. Though she had kind friends and affectionate children she seemed to shun companionship, and her stately figure, but little bent with age, coming slowly through the woods, was a sight touching in the extreme. It appeared that she could say:

"Of all the pictures that hang on memory's wall,
The one of the dim old forest
Seemeth the best of all."

For the Companion.

"A MIDSUMMER NIGHT'S DREAM."

(With Mendelssohn's Music.)

The sorcery of ancient woods is quelled,
The sunshine falls but half-forlornly fair
Upon the hills, since from our earth and air
The fairy-folk are gone. Yet I beheld,
But lately, Oberon and Puck propelled
On firefly chariots through the mist, to rare
Moonlighted revels. How the tricksy pair
Poor mortals fooled! What eerie music swelled!
Then, by the eloquence of sweetest words,
I knew the conjury of Shakespeare's brain,
And recognized in their companion chords
The spell of Mendelssohn's enchanting strain.
Full clearly sang they both unto my heart:
The fairy of the centuries is Art!

HENRY TYRRELL.

UNTIMELY MIRTH.

Uncle Marcus Parrish was a staid old gentleman, regarded as a model of good sense and decorum by the whole community. On one occasion, however, his conduct was most unseemly. A carriage had been sent to fetch him and his wife to the funeral of their cousin James. Just before leaving the house, Uncle Marcus rushed down cellar to look after the furnace, having donned, according to habit, an old straw hat. After seeing that everything was right he hurried back, locked his front door, and entered the carriage without a thought of exchanging his head-gear for the new silk hat on the hall-stand.

Mrs. Parrish, who was deeply affected by the death of her relative, was in tears nearly all the way, and failed to notice Uncle Marcus's mistake.

Not until the usher was gingerly bearing away the grimy old hat, with the ashes still lingering on its brim, did Uncle Marcus know what he had done. With something between a groan and a laugh, he followed his still unobserving wife into the mourners' parlor.

In spite of his efforts to control himself, his mouth twitched and his eyes sparkled with merriment. With a look half of curiosity, half of shame, his wife said:

"For pity's sake, Mark, what ails you?"

"Nothing, Eliza, nothing. I—I was merely thinking," said he, "what if poor James was alive," and that thought sent him into a worse laugh than ever.

As soon as he had quieted down a little, his wife said:

"Everybody is looking at you, Mark, and I don't wonder. I should think you were at a sociable," and Mrs. Marcus took to weeping to hide her shame.

By this time Uncle Marcus was in a nervous, half-hysterical condition, and could not control himself. The service began, but not once could he forget the absurdity of his mistake. Whenever he looked out through the open door into the hall, he fancied the usher was eying him. If he looked at the coffin of his cousin to steady himself, the knowledge of what a joke James himself would think it was sure to make him laugh.

The eating of troches which his wife handed him served only to make his agony more intense. He coughed, blew his nose, pinched his wrists, bit his lips, but in vain. He could only keep himself from making violent outbursts.

At last the minister finished his words of eulogy, and with a hasty whisper that he must go home,—did not feel equal to a ride to the cemetery,—Uncle Marcus left his wife to the care of his brother, seized the old hat which the usher brought him,—no fear of its belonging to any one else,—and hurried home as fast as he could.

Half an hour later his wife found him sitting before the mirror, the old straw hat in one hand, and the new beaver in the other.

"Well, Marcus Parrish, are you, or are you not, raving crazy?" was her greeting.

"I should have been, Eliza, if that funeral had lasted a minute longer. Sit down now, and I'll confess what was the matter with me."

His confession had to be told to more than one person, and he was forgiven by every one but his wife. She never could quite overlook the fact that he had laughed all through a funeral.

RUNNING FOR LIFE.

While foraging in the vicinity of Tiflis in the Caucasus, one morning, an Englishman spied a herd of antelope, at which, after getting within reasonable distance, he fired two shots, apparently without effect. But a most unpleasant adventure resulted, as the shots roused some savage sheep-dogs who were doing duty over a flock near by. The man was surrounded in a moment, and as the dogs were closing in on him a shepherd ran toward the scene with a shout which still further inflamed the brutes, one of whom rushed upon the Englishman, and bit through one of the tendons behind the knee.

Drawing his revolver the exasperated Englishman fired at the dogs, thus for the moment freeing himself. Then he ran to the shepherd, seized him by the collar, and forced him to call them off, after which he resumed his search for an antelope.

He wandered fruitlessly about for many hours among the hills, and finally stumbled upon a campfire, round which three Tartars were seated—among them his friend of the morning. An invitation to join them was immediately given, which, not being accepted, took at once the form of a command. A signal-cry was sounded, while two of the Tartars made for their reluctant guest.

"My first thought," says the Englishman, "was to stand and fight, for their intentions were obviously hostile. But unless I meant to use my rifle, my chance against the four—for another had now appeared—would evidently be poor; so with a good start I took to my heels and ran.

"Up one hill and over its brow into the valley that separated it from another no bigger than itself—from that to another and then to a third, the chase went on, the pursuers growing in numbers each time I looked back, until, when quite blown, I stopped to see whether my rifle would intimidate them, they had increased to over a dozen.

"A shot from the rifle did stop them for a moment or two; but before I was well at the bottom of the hill from which I had fired, I heard them coming on again. And here I began to feel that things were really extremely serious for me.

"I had killed their dog, and had, therefore, little mercy to expect from them. I was dead beat, and my bitten leg made running all the more difficult. I had only half a dozen cartridges with me, and at the best I could not hope to make a good fight of it, so poorly furnished with ammunition, against so many rascals with their blood up, in a place where there was no stone or bush to get behind.

"But here a double saved me. At the bottom of the little hill was a wide earth-crack; into this I jumped, whilst my pursuers were still on the other side of the summit, and following the course of the chasm I doubled round the base of the hill a little way and then waited. Yelling like demons, the Tartars came over the hill, and to my infinite relief, supposing me probably to have just topped the next rising ground, redoubled their exertions to overhaul me in the direction which they fancied I had taken.

"The moment they were safely past me, I turned and ran back on my track for some distance, and then made for the plains. I am thankful to say that there I found my friends and the horses, and heard no more of either dogs or Tartars."

TWO BIDDERS.

An Iowa man, who is a great lover of horses, and who keeps a grocery store and a livery stable, was desirous of obtaining a certain horse which was to be disposed of at a public sale of a gentleman's estate. He knew that it would never do for him to bid in person, as the auctioneer, aware of his weakness for fine animals, would manage by one means or another to run up the price. The story is told in the Chicago *Herald*:

The grocer and livery-keeper arranged to have another man bid off the horse for him, but when the hour of the sale arrived he felt that he must be present, and see to it that his instructions were carried out.

He arrived a little late, and just as the horse was being sold. Yes, there was his man Jones, true to his trust, in the midst of the crowd that surrounded the fine animal. Just at that moment Jones bid one hundred and five dollars.

Some one must have immediately nodded five better, for in another moment Jones bid one hundred and fifteen. From some unseen bidder the auctioneer received another advance of five dollars.

That was as much as the horse was worth, but Jones had orders to buy it at almost any price, and he promptly raised his offer to one hundred and twenty. So matters went on till Jones's bid was one hundred and thirty-five dollars.

At that point the livery-keeper mounted a box to see what fool wanted the horse so badly. On the further edge of the crowd stood Smith, and just as he nodded another five, it flashed upon the livery-keeper that he had told Smith to do exactly what, in his forgetfulness, he had afterward instructed Jones to do.

He lost no time in stopping the fun, which had already cost him about forty dollars.

CHIVALROUS DEVOTION.

At the most extensive aquarium in England, the Brighton Zoo, the female lobster recently cast her shell. She screwed herself up together on the toes and tail, and suddenly bent her body. Snap went the shell in its centre, and the case of the back came away in one piece. The claws were her next care, and she worked away at them for a long time.

It was a procceding of extreme delicacy, considering that all the flesh of the great claw had to be passed through the small base. During the operation one claw came off altogether, and this must have seemed to the lobster lady a serious misfortune, as it will not grow to its full size again until the second year. The tail and legs gave very little trouble, and the body, when thus undressed, proved to be of a pale blue.

The shell-casting over, the lobster sank on the sand, and this action seemed a signal for the attack of every creature in the tank.

The defenceless victim bade fair to succumb to the fury of her enemies, when the male lobster suddenly came to the rescue. Standing over his shell-less better half, he fought her assailants relentlessly. Day and night did he watch over her, until her shell was sufficiently hardened to protect her in fighting her own battles.

When this happy moment arrived, he deliberately picked up the old claw, broke it in his nippers, and ate the meat. He then dug a hole in the sand, placed in it the broken bits of shell, buried them, and piled a number of small stones above the grave.

AT A WEDDING.

The wedding in question was, in many ways, the most brilliant event of the season. Nothing which could serve to heighten the grace and significance of the affair had been spared. The church, fittingly decorated by a Boston artist, was filled with interested guests. The faint strains of Mendelssohn floated through the still air, and the beautiful bride stood before the altar with her chosen one.

The pastor of the church, ritual in hand, read the solemn service until he came to the critical moment, when he said:

"Repeat after me, 'I, William, take thee, Frances.'"

He did not proceed at once, for to every one's astonishment, before the bridegroom could find his voice, the bride, in clear, firm tones, repeated:

"'I, William, take thee, Frances.'"

There was a dead silence, till the second officiating clergyman, unable longer to control himself, laughed outright. This was the signal for a contagious wave of merriment.

As soon as the pastor could compose his features and resume his dignified voice, he said:

"Repeat after me, 'I, William, take thee, Frances.'"

This time the bridegroom spoke up bravely, and there was no more blundering.

ONCE TOO OFTEN.

A recent German paper tells the story of an elderly man who had for a wife one of those trying persons who, according to their own ideas, are always in the right, and who make it a point of conscience to prove every one else in the wrong.

The poor man was never allowed to make any statement without having it instantly disputed by his accurate but irritating spouse. She had acquired such a habit of correcting and contradicting him, that, according to the story, she one day made a mistake which gave her suffering husband a chance to laugh at her.

"Do you remember, my dear," he said in a retrospective mood, "the letter-case embroidered with pearl beads that you made for me with your own hands, when we became engaged? It was worn out years ago, but I can still see it very plainly. On one side there was embroidered a beautiful butterfly, and —"

"The butterfly was on the *other* side!" interrupted his wife, in her most decided tone.

And she always complained that Mr. Underfeld "was fond of telling stories without any point," whenever he referred to this conversation afterward.

For the Companion.

MAY.

Little brown bee in this May morning sunny,
Setting full sail on a voyage for honey,
Toward the apple-tree ports and their sweets you are steering,
And now midst their pennons you're fast disappearing.
Do you know that the flowers with their fragrance and honey
And the bees are a part of the May morning sunny?

Blithe little bird in the maple-tree swinging,
My heart echoes softly the song you are singing;
It tells me the woods have put on their adorning,
And have sent me a welcome this sunny May morning.
For sunshine alone doesn't make the May weather,
'Tis the woodland and song and the singer together.

Dear little Goldilocks, merrily playing,
As your laughter rings out I can fancy 'tis saying,
"Be happy! In May there's no minute for sadness,
For now the whole world's running over with gladness."
Ah! I'm sure when the springtime the wide land embraces,
The joy of the May is in children's sweet faces.

ANNA M. PRATT.

For the Companion.

GRANDMA KING'S CLOVE APPLE.

Some years ago it was fashionable to make clove apples, and Grandma King had made one to keep in her bureau drawer, with her caps and neckerchiefs and laces, to give them a sweet odor.

Grandma King was very particular about this upper drawer. Tillie knew it; still many times, when no one was in the room, she pulled it open a crack—just enough to squeeze in her brown hand and take out the clove apple to take long, deep sniffs at its rough, sweet sides. I am afraid that Tillie coveted that apple.

One day last spring, when grandma was out in the garden to see if her sage roots were winter-killed, Tillie scudded into grandma's room to the bureau drawer. She had not smelled of the apple for a week, and she really longed for it. Sieg, her little dog, followed on behind.

Tillie pulled open the drawer carefully, so as not to joggle the cap-borders that were standing up stiff and straight all in a row; she drew the apple out of its nest in the black lace cap, and squeezed her little pug nose into it as far as she dared. Somehow, the next moment she dropped it, and Sieg, standing ready to engage in any mischief at hand, seized it, and ran with all his might, his great ears flapping and his tail whirling around and around in delight.

After the first fright Tillie ran after him, shouting, "Drop it! Drop it, Sieg!"

And Sieg would drop the bitter thing at the word of command, but as soon as Tillie would come near he would catch it up, and run on toward the big ledge where he and his little mistress played many an hour together. He soon arrived there, dropped the apple, and sat down ready for a tea-party or anything that Tillie pleased to do.

But the apple kept rolling toward the deep, narrow seam in the ledge down which Tillie had lost "Annsophia," her best doll, and several of her playthings.

The provoking thing! She knew that was where the apple was going, too, and she ran as hard as she could. But it got to the edge before her, tilted for a moment, then went over into the seam and disappeared.

Oh dear! Tillie laid down flat on the ledge, and put first one eye, then the other, to the deep, dark crack, and squinted till she could scarcely see at all. Then she sat up and cried, and I am sorry to say, boxed Sieg's ears.

Well, she told no one about it, and grandma did not discover her loss till the next morning, when she went to look for a clean cap.

But Tillie had been making plans, and that morning she got permission to go over to Uncle Joe's to stay all day. And she did not ask to put on her clean frock nor her best shoes, which her mother thought queer.

That night when she came home her arms ached, and her head ached, and her face was very red. Grandma was certain that it was an attack of "worms," and *would* give Tillie a big dose of "pikry" which made the little girl fairly groan; but she shut her eyes hard, and took it bravely.

Then she told her mother all about how she had lost grandma's clove apple, and how sorry she was, and how she had worked for Uncle Joe planting corn and pumpkin seeds all the long, hot day for money with which she had bought cloves at the "corner" store.

And now *would* mamma help her make another clove apple for grandma?

Of course she would, and mamma kissed the poor little sunburned nose tenderly, and then, while she very kindly rebuked the meddlesome spirit which prompted her to open the drawer without leave, she pointed out to Tillie how we must sooner or later always suffer for our wrong-doing.

So the *new* clove apple's nest is in the black lace cap; and Tillie has one of her own now that Grandma King made from the biggest Roxbury Russet in the barrel, "to remove all temptation," grandma said.

For the Companion.

BRAVERY.

The bravest lad will never fight,
Except in aid of weakness;
The truly brave seek to do right
In peace and love and meekness.

LITTLE Elsie hung about her mamma's visitor all day with her lips shut very tight, and sometimes with her hand over her mouth. "What is it, Elsie," the visitor at last inquired. Elsie unlocked her lips. "Mamma said I must keep my mouth shut. She's *orfle* 'fraid I shall tell you that Uncle Arthur has to sleep on the floor while you're here."

For the Companion.

A CARELESS DOLL.

Virginia Cleveland, I declare!
You're nothing but a constant care!
Such habits I must try and cure—
This time you'll get a scolding sure!
Of course you're old enough to know,
(How many times I've told you so!)
It's very wrong to run away—
Besides, it wasn't nice to say
That Maud and Ethel teased you to—
For shame! A doll as big as you!

Dear me! this muddy stain, I guess,
Will spoil your dotted muslin dress.
I had to put it in the tub,
And wash, and wring, and scrub and rub.
Perhaps you wasn't all to blame—
But you were careless, just the same.
I might have dropped you in the sand
That time I heard the circus-band.
And Rover ran—he heard it too—
And possibly he stepped on you!
Oh, if he did, why then you see,
I was the careless one, maybe.
To scold myself will never do—
But then!—too bad I scolded you!

For the Companion.

TEDDY.

Teddy wasn't a boy; he was a dear little striped squirrel. Some people call them chipmunks, and I suppose that is their real name.

Our cat brought him in one morning as a breakfast for her three baby kittens, but Ray found him too soon for him to get used in that way.

He wasn't hurt much, and in a few days was as brisk and cunning as ever.

We made an old bird-cage into quite a nice house for him, with a chamber above and a dining-room below.

We put some batting into the little dining-room, but he carried it all upstairs, and made just the cutest little nest for himself.

He was such a little miser, that he would carry all the nuts that he did not want to eat up into his chamber, and carefully hide them in his bed!

He grew quite tame, and we would sometimes let him out into the room for a frolic; but we did not leave him out alone, for he would take everything that he could carry into his little chamber.

When cold weather came, he began to lose his pretty, frisky ways, and would lie curled up in his warm bed, until he gave up going down to his dining-room altogether.

He would eat from his hoard of nuts, but was dumpish and blind until the warm, spring sunshine came to melt away the great snowdrifts. Then, when he knew the cold winter was indeed gone, he waked up from his long sleep, and was a cunning pet once more.

But, alas! affection had no place in his little heart, in spite of all our efforts to win it, for he pushed the door open one night, when we left the cage out on the veranda roof, and we never saw him again.

E. H. S.

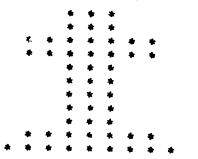
THE other day little Ida May, three years old, having just returned from a ride with the other children, ran to her mother, saying, "Mamma, the horse stepped into an awful *tall* hole!"

Enigmas, Charades, Puzzles, etc.

1.

DOUBLE ACROSTIC.

I can plainly speak, tho' dumb,
For I tell that May has come.



I'm utility indeed,
Habit, custom, common need.

That I am present time is clear,
Always passing, always here.

My primals bring the flowers of May,
My finals keep them fresh and gay.

2.

CROSS PUZZLE.

Across. A Hebrew name, meaning "A foster-son." To contend. To prepare. To diminish. A Hebrew name, meaning "gratuitous gift." Maturity. A certain tree. The Goddess of Revenge. A fox. Prevalent. Defended from any evil.

The central letters, read down, will spell the name of a celebrated explorer, who died on May 2, 1873. C. D.

3.

ANAGRAM.

The initial letters of the following names will give the name of a Christian festival: first Jewish high priest; a Jewish sect; the promised land; a great prophet; the noted proprietor of a vineyard; a Jewish watchword; Jacob's second name; Naomi's daughter-in-law; the brazen serpent. H. A. G.

4.

CHARADE.

One thousand take—nor more nor less—
And add to this what stands for *yes*,
To make the sum of sweetest things
That peasant sees or poet sings.

E. S. B.

5.

PARAPHRASED PROVERBS.

They who hearken at no time receive an impression through the auditory sense characterized by moral excellence concerning the very persons.

One of a large number of veracious oral expressions is uttered in an intentionally expressed ludicrous saying.

The perfect demonstration of a dish consisting of flour or other farinaceous substance with suet or milk and eggs, sometimes enriched with fruit, is in the masticating and swallowing.

6.

BROKEN WORDS.

In each of the following sentences fill the first and second blank with the word to be inserted in the third blank, but so divided as to make two separate words.

Example. She *has ten* minutes in which she can *hasten* to school.

I asked the man to come in and — — once accepted, as the —— made him ill.

The child cried, and said, "There is a — —," but his mother kept on talking about a —— of the church, and paid no attention to him.

My mistress said, "When you opened the — — you find anything wrong about it?" And I replied, "To be —— I did."

— — with us in California where the —— grows.

The doctor gave — — — cure for neuralgia. This is the prescription, please —— it with care.

It is — — who is —— for fine singing.

Conundrums.

If a monkey wished to announce that he was sick, how could he do it and at the same time mention the medicine he wanted? "Ape ill" (a pill).

Why is your tooth like a tendon? It is in you (sinew).

Why is a perfumer like one who coins pennies? He makes scents (cents).

Why are crockery-ware dealers unlike all other shopkeepers? Because it won't do for them to *crack* up their goods.

Why is a young lady's face, when unprotected, like the pleading of a rejected suitor? It is without avail (a veil).

What ape did I see on the parade-ground, to-day? The mandrill.

Why is a camellia like a man who is insolvent? It is scentless (centless).

Why is twilight like the letter Y? Because it is the close of day.

Answers to Puzzles in Last Number.

1. May; fairy, airy; fay; fair; vain; gay; array, May; (with)in; mamma, afar; "Virgin of May."

2. *Song of Spring.*

Give the children holidays,
And let them be jolly days,
Grant freedom to the children in this joyous spring.
Better men hereafter
Shall we have for laughter
Freely shouted to the woods till all the echoes ring.

3. "Of all the glad new year, mother; the maddest, merriest day."
Key-words. Remorse, fade, galley, holy, mermaid, death, stands, whetter.

4. The HinD and Panther. Ode on AlexandeR's Feast. Essays on Dramatic PoesY. The MeDal. Absalom and AchitophEl. Mac FleckNoe. Dryden.

5. May.

6. 1. The May Ladie. 2. Winter. 3. Summer.
1. 2. 3. 4. 1. 2. 1. 2.

Digitized by Google

PAT AND THE "PRIZZIDENT."

The Washington *Post* relates a story of an Irish volunteer who had been wounded and sent back to Washington, where he was put upon guard-duty till he should be in condition to go back to the front. His beat was in front of the War Department.

The Colonel in command instructed him always to present arms to the President.

"Yis, sor. Prizzidint, is it?" said Patrick. "An how will I know him?"

The Colonel tried to describe Mr. Lincoln, and Patrick seemed to understand.

Further on [illegible] arms fast enough if I know him," said the sentry, and with that assumed the position of a soldier at present arms, afterward, as Colonel had instructed, he saw the President looking out of the window, he saw the President looking out of the window, he saw the President looking out of the window

SOBERED BY A JEST.

How much more readily a person who has a keen sense of humor may sometimes be influenced by a quiet sarcasm than by serious remonstrance, was illustrated many years ago by an incident in the life of Captain M——, a famous old navigator of Nantucket, in the days when Nantucket was still a great shipping centre.

Captain M—— had been round Cape Horn more times than any one dared say, and in his later years set up as an instructor of navigation at Nantucket, where he was visited by many young navigators and by some older ones who wished to brush up their nautical knowledge on some of the many points where the Captain was especially well-informed.

Captain M—— was greatly liked by his fellow-townsmen, but he had one grave fault, which was only too common among men of his generation. He was given to the use of West India rum. At intervals he disappeared from view, retiring to his little bed-room, and gave himself up to his jug for hours and even days. At these times the Captain simply gave out that he was not "in port."

His wife, a most excellent woman, expostulated, entreated, scolded, in vain. The Captain seemed beyond her influence.

On one occasion when the Captain had retired to his room for this discreditable reason, and had spent more than twenty-four hours there, there happened to be a great demand for his services on the part of navigators who were just starting out for Cape Horn. They came and went, and poor Mrs. M——, the Captain's wife, was worn out in answering calls for her incapable husband.

Finally there came to the door two young New Bedford men, masters of whalers, who wished to obtain from the Captain some information likely to be of great value to them. When Mrs. M—— opened the door, one of them said, in a rather loud voice:

"I am told that Captain M—— is not in port. Can you tell me when he will be in?"

"Hum!" she exclaimed, turning half around, and speaking loudly enough to be heard in the Captain's room. "He may be expected in port when the wind stops blowing from the West Indies!"

The Captain heard. There was silence for a few moments, and then came a crash of crockery on the stone flagging at the back of the house. The jug had gone out of the window. Then there came a sepulchral voice from within:

"She's stopped a-blowin', Priscilla!"

By and by the Captain came out, dressed in his best clothes, with a clean "dickey" and a neatly adjusted stock. His wife's simple joke had sobered him, and he was not only "in port" that day, but continuously thereafter.

DIDN'T TAKE IT.

It is not often that one can see from without the actual workings of conscience. When it is possible, however, he must rejoice greatly if right prevails. The New York *Tribune* gives the following instance of such moral warfare:

One day, a man on a railway train picked up from the car seat a package that the former occupant of the seat, who had left the train at the last station, had forgotten. He looked at the package critically, and then glanced at the conductor, who was at the other end of the train. He evidently thought himself unobserved, for after a few moments of reflection, he put the package, which was a small one, into his pocket, and then resumed the reading of his paper.

But his mind was not at rest. He tried several times to read, and each time removed the paper from his eyes and gazed into vacancy, lost in meditation.

The conductor passed him, and it made him uneasy. He moved about nervously in his seat. Presently he folded up his paper, put it in his pocket, leaned his elbow on the window-sill, and allowed his head to rest in the palm of his hand.

He was having a hard struggle. It would have been interesting to know the drift of his thoughts. Perhaps the question of the value of the package entered them, but it is to be hoped that it did not. At any rate, his sense of justice triumphed.

He raised his head from his hand, in a determined way, and took the package from his pocket. It was easy to see that he was happier now. The next time the conductor passed, he handed him the package with the remark:

"Here is something the lady who left the train at the last station forgot."

HUSBAND AND WIFE.

It is by no means a new theory that a man and woman who have been married a great many years grow to resemble each other, not only in manner and voice, but actually as to features and expression.

A recent number of the *Illustrirte Welt* has an article on this subject, which states that the photographic association of Geneva has quite lately been investigating the truth of this theory by the aid of the camera.

The photographs of seventy-eight elderly or very old married couples were taken, and an equal number of family groups.

The result proved quite satisfactory to holders of this theory, inasmuch as in twenty-four cases the resemblance between husband and wife was much greater than that between brother and sister, and in thirty cases more it was fully as great.

The failure of the other twenty-four old couples to realize the expectations of those interested in the matter is supposably due to "incompatibility of disposition," which time was apparently unable to combat in its effects.

QUEEN'S ENGLISH.

"I'm always perfectly impartial," said an old man, gravely, "but I do hate potato-bugs and furriners." So does many another kindly person.

An English bicyclist was coming, at great speed, down one of the steepest streets in Edinburgh, when his machine capsized, and landed him in the middle of the road. Two carters were passing, and they promptly came to his assistance.

"Maun, hoo did ye fa?" kindly inquired one of the carters. To which he received this answer:

"I was coming down that declivity with such velocity that I lost my gravity and fell on the macadamized road."

The carter turned from the unfortunate rider with true insular contempt.

"C'wa', Jock," he said to his mate. "If I'd kent the cratur' wis a forriner, he would hae lain in the gutter lang eneuch for me."—*Weekly Citizen.*

Good situations for all who enter Palms' Business College, Phila., Pa., this spring or summer. If you mean business, ask for catalogue. [*Adv.*

Children are often irritated and made sick by worms. A simple and effective remedy is found in "*Brown's Vermifuge Comfits.*" They contain nothing injurious. [*Adv.*

For Coughs, Sore Throat, Asthma, Catarrh, and diseases of the Bronchial Tubes, no better remedy can be found than "*Brown's Bronchial Troches.*" [*Adv.*

LADIES, we want a reliable woman in every County, to establish a Corset Parlor for the sale of DR. NICHOLS' CELEBRATED SPIRAL SPRING CLASPS AND CORSETS. Wages, $40 to $75 per month and expenses. We furnish complete stock on consignment. $3 Sample Corset free, conditionally (see terms). Send 13 cents postage for sample and terms. **Nichols & Co.,** 23 E. 14th St., New York.

Varnish is like sweet words; it brings into activity all the virtues and harmonies. Good varnish is like a shoemaker; it lasts.

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.

The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.

MURPHY VARNISH COMPANY,
FRANKLIN MURPHY, President.
Head Office: Newark, N. J.
Other Offices: Boston, Cleveland, St. Louis and Chicago.
Factories: Newark and Chicago.

AWARD

of Prizes offered in our OCTOBER PREMIUM LIST.

In awarding the **Harvard Photograph Prizes,** several of the leading photographers of Boston and the officers of the National Amateur Camera Club marked such pictures as they each independently judged to be the best. To the pictures which received the highest and next highest number of marks in each class, we have awarded the prizes.

This competition has brought out a large number of most excellent photographs, and we congratulate our friends upon the skill they have acquired in this beautiful Art.

The Awards are as follows:

Log Cabin,	1st,	John A. Tenney, Brule, Wis.
Log Cabin,	2d,	C. G. Ridout, Hutchinson, Minn.
School House,	1st,	R. E. Nelson, West Chester, Pa.
School House,	2d,	John D. Groves, Condersport, Pa.
Post Office,	1st,	Wm. H. Buckley, Guysboro, N. S.
Post Office,	2d,	Randolph Peterson, Sheldahl, Ia.
Store,	1st,	Alfred R. Burr, Thomaston, Conn.
Store,	2d,	A. H. Chamberlain, Portland, Me.
Church,	1st,	Harry E. Loveland, Elizabeth, N. J.
Church,	2d,	M. B. Rich, Minneapolis, Minn.

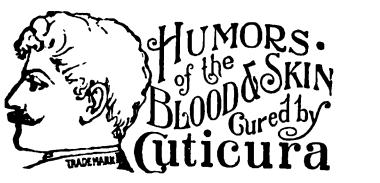
FAIR FACES Face and Hands made and kept *fair* and *white* with Miner's Almond Meal. Cures Pimples, Eczema, Moth, Wrinkles, Freckles. Harmless. 25c. by mail. H. A. MINER, Malden, Mass.

Who has not had Poor Hose?



GOOD RUBBER HOSE could be bought ten years ago. Why? Because there was *rubber* in it. The hose sold by dealers to-day contains little or no pure rubber. Our BLUE BRAND HOSE is the *old-fashioned kind*, and is made of *rubber*. With good care it should last five or six years. It is cheap at the price. As a guarantee that you are getting what you pay for, and are not paying a high price for a poor article, we place this brand on every length:

If you cannot get it of your dealer, we will send it, express paid, on receipt of money.

Sample free if you mention this paper.

BOSTON WOVEN HOSE CO., Manf'rs. of Rubber Belting and Packing, 226 Devonshire Street, Boston; 205 Lake St., Chicago; 8 Bush St., San Francisco, Cal.

HUMORS OF THE BLOOD, SKIN AND Scalp, whether itching, burning, bleeding, scaly, crusted, pimply, blotchy, or copper-colored, with loss of hair, either simple, scrofulous, hereditary or contagious, are speedily, permanently, economically, and infallibly cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. CUTICURA REMEDIES are the only infallible blood and skin purifiers, and daily effect more great cures of blood and skin diseases than all other remedies combined.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass.

Send for "How to Cure Blood and Skin Diseases."

Pimples, blackheads, chapped and oily skin prevented by CUTICURA SOAP.

Backache, kidney pains, weakness, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

If you Value
Clean Homes and Clean Clothes
If you have any feeling for the poor souls who make them so, lighten their tasks by supplying them with

Pyle's Pearline Washing Compound.

You will have better results, happier servants—they will have more time for rest or other work. Your clothes will not be rubbed to pieces. You will not be under any increased expense, and you will have taught your help to use their heads in the right direction rather than their muscle in the wrong. Give Pearline a fair trial *without soap* or any other preparation. Millions are using it. Beware of imitations and peddlers.

Sold everywhere. Pearline is manufactured only by JAMES PYLE, New York.

"La Grippe" and Pneumonia.

Prevention Better than Cure.

Reports from medical sources show that "La Grippe" is again prevalent, and in connection with its return it is important to note that a decided increase of mortality from pneumonia is recorded.

This should be a warning to all classes to take precautions against exposure, and whatever tends to debilitate the system.

The trying changes of the weather, at this season, and the consequent cases of colds, influenzas, inflammation of the lungs, rheumatism, pains in the back, and the many other aches and pains caused by unavoidable or careless exposure, are things that cannot be neglected, except at the risk of more serious consequences.

As attested by indisputable testimony, they may be both prevented and relieved by the timely use of

ALLCOCK'S POROUS PLASTERS

Beware of imitations, and do not be deceived by misrepresentation. Ask for ALLCOCK'S, and let no solicitation or explanation induce you to accept a substitute.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

SPRING-CLEANING.

By spring-cleaning we do not mean the annual beating of carpets, washing of windows, and general overturn of everything indoors, for which women are famous. What we are thinking of is a spring-cleaning for men—a work which, if it were faithfully done, would lessen the death-rate.

One thing of prime importance is the care of the cellar. The air circulates as freely from cellar to attic as the blood circulates in the body, and that, too, in spite of closed doors. Indeed, the cellar should be kept pure the year round; but if this has not been done, the time to rectify the mistake is before the disease-breeding heats of summer are upon us.

If there are decaying vegetables in the cellar, or rotten wood from boards that rest upon the ground, whether loose or as a fixed floor, or accumulations of useless rubbish in the corners, or under the stairs, or under the front doorsteps, by all means let them be removed.

The cellar floor should be thoroughly swept, and the sweepings removed. Effectual ventilation should be kept up from this time until winter. Where it is possible, have the floor cemented. Wooden floors are often death-traps. Keep the air of the cellar as pure as that of the parlor.

Another important thing is to examine anew the sewage-pipes from the kitchen and bath-room, to make sure that there is no leakage. Such leakage is often going on under floors, which conceal it, but do not prevent the deadly mischief.

Now is the time to clean out the cesspool. Let it be examined afresh, to see that no disease-bearing gases can pass back from it into the house. Note, too, its distance from the well, and if this is less than one hundred feet, remove the cesspool to at least that distance.

If, during the winter, the slops have been thrown upon the ground near the house,—an unwholesome and filthy practice,—see that every vestige of them is removed, and clean sand or soil or green turf put in their place. Let nothing remain that can in any way corrupt the air or annoy the sight. So far as possible, make the surroundings pleasant as well as pure.

UNHORNED CATTLE.

Every one is familiar with the animal which, in the country districts of America, is called the "muley cow," or, as it is sometimes spelled, the "mooly cow." She is an animal without horns. Generally she has not lost them, but has never had them. She has the reputation of being a very good milch cow, but particularly ill-natured.

Though at least one "muley cow" may be found in most large herds, in a great part of the country, and though polled cattle, as hornless cattle are also called, are sometimes exhibited at fairs, it has never, probably, occurred to any one until lately that a race of hornless cattle ought to be bred or developed on account of a greater economy in raising and nourishing them.

Such a notion, however, has been broached by an American cattle-raiser. He maintains that, in raising young horned cattle, and, for that matter, in keeping grown-up cattle, a considerable share of the nutriment given them goes to their horns.

The same gentleman argues that the horns of domestic cattle are a relic of barbarism—a survival of a means of defence associated with a wild life, and are now not only no longer needed, but positively mischievous. The horned bullies of a herd get more and the weaker ones less than their share of the fodder.

But how are the horns to be got rid of? Regularly cutting off the horns of young cattle will not prevent subsequent generations of young cattle from developing horns as they grow to maturity, any more than the shaving of men's beards for many generations makes men beardless.

There is a way, however, in which it could be done. A certain proportion of cattle turn out to be hornless. If only such cattle were used to breed from, undoubtedly a great proportion of their offspring would be hornless, and in the course of time a race of unhorned cattle would be produced—among which, however, individuals with horns would probably be even more common than hornless cattle are now.

Domestication has undoubtedly reduced the size of cattle's horns considerably. Under domestication, the horns are much less used, and consequently are inferior; but they are not got rid of altogether except in rare cases, and then seemingly only by a freak of nature.

"WAIT IN THE HALL."

In London it is not considered "good form" for a gentleman to carry through the streets a parcel, however small or elegantly wrapped. He may carry a book, if it is not too large and is not wrapped up; for a book is a book, but a parcel may be a pound of cheese or a dozen red herring. The restriction is a foolish one; a form of class distinction that is inconsistent with the highest civilization, in which every man will be a gentleman if he is thoughtfully considerate of others, whether he is a laborer or rides in a carriage. The author of "England, Without and Within" gives an anecdote of an easy-going English gentleman, who was not bound by the absurd law against parcel-carrying.

A shoemaker had missent to him a pair of shoes intended for a neighbor, and had probably sent to the neighbor the shoes that should have been sent to him. As he had no prejudice against carrying bundles, he went with the shoes to his friend's house.

On arriving at his friend's door he asked to see Mr. Dash, but was understood by the servant to ask for Mrs. Dash, and was ushered into her presence. The lady, who had never seen him before, looked up and curtly asked:

"What have you there?"

"Mr. Dash's shoes," replied the gentleman.

"Oh, yes; it's all right. Mr. Dash is out, but he'll be in soon, and if you want to see him you'd better take a seat in the hall, and wait till he comes."

"But, madam—" began the gentleman, who was a baronet's son.

"Never mind, never mind; it's all right. Step out in the hall, please, and wait for Mr. Dash."

The gentleman, of course, appreciated the situation at once. But he was too well-bred and had too keen a sense of humor to explain, which would have both mortified the lady and prevented him from enjoying her mistake. He stepped into the hall, intending to give the shoes to a servant and leave the house.

But meeting his friend coming in, he gave him the shoes and, after a few words, bade him good morning. Though pressed to remain, he refused, knowing that his return to the wife's presence would cause her embarrassment.

His consideration for the feelings of another person would have made him a gentleman if he had been a hod-carrier.

TOO MANY BEARS.

A young huntsman of Helena, Montana, was following the upper course of the Milk River, and came suddenly face to face with a bear. He brought his rifle to his shoulder, took careful aim, and shot the bear dead. The next moment a second bear appeared from a rocky den. The young hunter again made a successful shot. To his surprise a third bear came out of the den. He killed this one also, and before he had time to move from the spot, bruin number four appeared. It was exciting sport, to be sure, but there were more bears than he cared to see at one time. However, he made a good shot, and bruin tumbled over, making four dead bears.

While the huntsman stood watching his game, a fifth bear, larger than any of the previous ones, came out of the den and rushed forward. The young man fired, but missed; and before he could reload, the infuriated beast was upon him! One blow of the huge paw sent the gun flying from his grasp, but he quickly drew his hunting-knife, and wounded bruin in the neck. In doing this he received a severe squeeze from the brute, and a fearful bite on the shoulder. Then he lost consciousness.

When he recovered his senses, his horse was between him and the bear. The horse was kicking viciously, and bruin was making but feeble resistance, and soon lumbered off into the brush. The hunter was badly shaken up, and the wound in his shoulder was exceedingly painful. With difficulty he mounted his horse, which was quite unhurt, and rode to a place of shelter a few miles further on, where his injuries received attention, and his game was secured.

CONCISE.

A teacher in a suburban school, not long ago, gave her pupils twelve minutes in which to write an "abstract." A shoe was the subject selected by her, and the boys were to write in the first person. No limit as to the number of lines or words was given them.

Most of the boys wrote—and erased, during the whole time allotted, but the teacher noticed one fellow who sat idle until the time was within two minutes of expiring. As the scholars filed out, she said to him, "Brown, did you finish your abstract?"

"Yes, ma'am," he answered.

Curious to see what he could have written in so short a time, she looked over the papers, and found this:

"I am a worn-out shoe; my coffin is the ash-barrel; my grave, the dump."

She says that almost as firmly impressed on her memory as this remarkable composition, is the expression of amazement on the boy's face the next morning when he saw the "100" mark on his paper.

PROVED IN COURT.

It is a little strange, perhaps,—and yet not so very strange when one comes to think of it,—that the truth of a thing is not always the better established because it has stood the test of a legal examination.

A colored man of rather doubtful appearance applied to a coal-dealer for a position as driver, says the Washington *Post*. On being asked for references, he mentioned one of the dealer's old hands, who was called in and questioned as to the applicant's honesty.

The referee rubbed his chin meditatively for a moment, and said:

"Honest? Well, boss, dis yere man's honesty hab been proved befo' de court. He's been tried seben times fer stealin', and escaped ebery time."

And the man expressed surprise that this strong testimony did not secure him employment!

Burnett's Cocoaine allays irritation, removes all tendency to dandruff, and invigorates the action of the capillaries in the highest degree, thus promoting a vigorous and healthy growth of hair. [*Adv.*

THROUGH THICK AND THIN.

In Eight Chapters.—Chapter III.

Tony Under an Accusation.

There were two or three weeks yet before Tony was to sail with Captain Staveley in the big four-master, and meanwhile Jack clung to him more and more.

The feeling of dislike between Tony and Edgar Mount steadily developed. Without saying an unfriendly word, Edgar expressed in many actions his contempt for a boy in Tony's position in life.

Tony felt this acutely, but it only made him the more determined to advance by honorable means to a place where neither Edgar Mount nor any one else could look down on him.

The three boys were much together, and although Edgar was a disagreeable third in many of their talks and walks and expeditions—for Tony was taking a little holiday before going away—yet it was necessary to have him, and Edgar Mount himself did not avoid Tony. He rather treated him as if he did not exist.

One morning the three boys went off in the *Undine* for a sail. The day—one of the last that Tony was to be at home—was so warm and bright that it was hard to realize that it was November and not May. All three seemed determined to forget dislikes and to have a good time.

Edgar, who always made himself luxuriously comfortable, carried a big travelling rug in the boat. They had a basket of luncheon, and meant to spend the morning in the boat.

Toward noon they had passed Lone Point, and were sailing along with a fresh breeze. The sun was strong, and they decided to go ashore and eat their luncheon. They hauled the boat up on the shore after taking down the sail, found a sunny corner under a sandy bank, and spread out their luncheon.

Tony and Edgar were nearer being friends that day than ever before. After they had eaten, Edgar said he thought a nap would not be a bad idea, and Jack agreed. Tony rather laughed at them, and when the two boys were snugly rolled up in the rug, falling asleep in the golden noonday, Tony went off down to the boat, and taking out a book began to read.

An hour or two passed, and as afternoon came on, the air began to be chilly. Tony went up the bank, and called to the boys.

Apparently, they were sleeping too soundly to hear him. He went to them, therefore, and began to drag the rug from off them.

They waked by degrees, but in the process of unwrapping them, Edgar Mount's handkerchief, his pearl-handled knife and various odds and ends rolled out of his pocket. Tony stuffed them back again.

"Hold on! hold on!" cried Edgar, half-asleep and half-awake. "Take your hand out of my pocket."

Tony started slightly.

"I was only putting your things back," he said. "You might have left them here on the sand. Come, it's time to be off."

Jack scrambled up, and in a few minutes they were all in the boat. The sail was set, and they were going up the river as fast as the wind could carry them.

A few minutes after they were in the boat, Edgar began to feel in his pockets, as if looking for something, which he evidently could not find. He gave a queer look toward Tony, who was steering; and suddenly into Tony's mind flashed that speech, "Take your hand out of my pocket!"

As Tony thought about it, a dusky red stole into his tanned face. A sort of constraint made itself felt between them. They had nothing to say to each other, and Jack did most of the talking on the way home.

As they passed Lone Point, Tony decided that he would not go back to Marrowbone with the other two, although Jack urged him, and he made them put him ashore. Then the two boys sailed up to the Marrowbone landing.

Scarcely had the boat been made fast when Edgar, jumping out, ran up to the house—a very unusual thing for him, as he was generally as deliberate as Colonel Randolph himself in his movements—and into Mrs. Randolph's room, where she was reading.

Mrs. Randolph looked up as he came in.

"Cousin Emily," he said, "I've had a loss."

"Have you? What is it?" asked Mrs. Randolph.

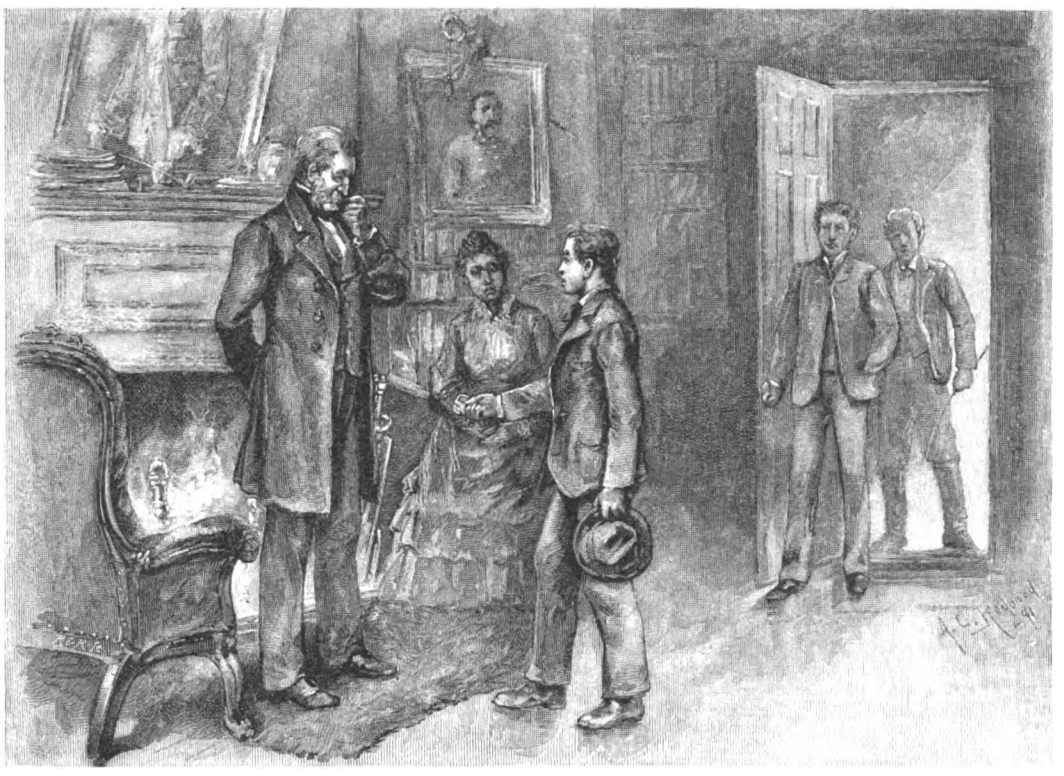
"It's a good deal of a loss. It is about two hundred dollars that I had for my expenses."

Mrs. Randolph sat bolt upright.

"And, Cousin Emily," he continued, as coolly as if he were saying that Tony Scaife had borrowed his knife, "I think Tony Scaife took it."

"Impossible!" cried Mrs. Randolph, rising excitedly. "Pray, don't utter such a suspicion again. I would as soon think that Jack did it." But if Mrs. Randolph became excited, Edgar continued cool. She could not but be struck by the calm way in which he proceeded to impeach Tony's character, qualifying it all by saying, "He's only a fisherman, you know—he isn't a gentleman, and of course you couldn't expect very much of him."

Then he said that he had found Tony putting his hand in his pocket.



Mrs. Randolph listened, and then said at once, "The boat must be searched. You must go back to the sandbank, and I will have every nook and cranny in the house looked into. But, Edgar, let me warn you to say nothing about this to Jack. Nothing could shake his confidence in Tony; and nothing except finding the money in Tony's possession would shake my belief in him."

Mrs. Randolph went directly to the library and told Colonel Randolph. Like her, the high-minded Colonel had no disposition to convict Tony upon the mere suspicion which seemed so conclusive to Edgar, but he agreed with Mrs. Randolph that a search must be made promptly, and that Jack must be got out of the way.

The Colonel remembered that he wanted to communicate with a man who lived seven or eight miles away in regard to the sale of some hay. He arranged that Jack should go off on this errand, riding Black Prince. It would take him until dark.

Jack out of the way, the search began in earnest. Edgar Mount rode a horse along the shore to the sandbank where he had taken his noonday nap, and came back in an hour, with the report that the most careful search had failed to discover the money.

In the midst of the searching and anxiety, Mrs. Scaife came across the lawn. She seldom came to Marrowbone. Though grateful for the way in which the family treated Tony, she was not disposed to claim the same equality for herself. Sometimes, however, she spent an hour or two with Mrs. Randolph in her own room, and often did odd jobs of sewing and knitting for her.

Tony Pays the Balance due.

This afternoon she appeared with a bundle of work, and went quite naturally to the door of Mrs. Randolph's room and knocked. Mrs. Randolph opened the door, and as she gazed at Tony's mother, so meek, so gentle, wearing her shabby black with an air of refinement, her heart ached for the widow.

Suppose such a charge had been brought against Jack! Mrs. Randolph's heart almost stood still at the idea.

Her greeting to the widow was more than usually cordial and gentle. But Mrs. Scaife, seeing that she was evidently busy and preoccupied, sat down only long enough to rest herself. When she rose to go, Mrs. Randolph went downstairs with her.

As they passed Colonel Randolph's library door he came out. He made Mrs. Scaife a low bow, and said in his most impressive manner, "I hope, madam, you find yourself very well."

The Colonel's elaborate, old-fashioned politeness always hopelessly confused Mrs. Scaife, who was not used to being addressed as if she were a queen. But for the first time in her life she now summoned up courage enough to say something more than "Very well, I thank you, sir," in a very weak voice.

This time, with a little hesitation, she said, "Perhaps you know, sir, that my son, Tony, is going for a sailor."

"So I have been informed, madam," responded the Colonel, with another bow.

"I hope I'm doing right in letting him go. Although I shall miss him," here the widow's voice failed her for a moment, "it's Tony's only chance. And, Colonel, I'm very much obliged—and so is Tony—for your and Mrs. Randolph's kindness to him. It's been the greatest thing that ever was for him; for Tony is a proud boy, and he don't take naturally to the other fishermen hereabouts."

"A proper disposition, madam, to elevate one's self above one's surroundings, is most commendable in any youth," was the Colonel's reply.

"And—and, Colonel," continued Mrs. Scaife, in a tremulous voice, encouraged by the Colonel's suavity, "Tony told me good news just now. I didn't know he had a cent to pay on Lone Point before he went away, but he came to me just as I was getting ready to come here, and told me he had saved up two hundred dollars without saying a word to me, to finish paying for Lone Point.

"Tony is very quiet about his affairs, even with me, and although I wondered if he could save anything out of what he made, I didn't like to ask him too often because it seemed to worry him. And now, he says, he was saving all the time, and made some money I didn't know anything about, all to surprise me. It was a surprise to me, too—the best surprise I ever had in my life. He told me not to say anything about it."

Then she added, suddenly, "Oh, dear! Please don't tell Tony I said anything about it! He charged me not to be talking about it, because he says I never can keep anything, and if it was known we had two hundred dollars in the house, we might be robbed."

If the sky had fallen, Mrs. Randolph and the Colonel could scarcely have been more horror-stricken at this revelation of sudden wealth on Tony's part. The Colonel, his tall figure shaking slightly, looked toward Mrs. Randolph, who turned and walked to the window.

Fortunately, Mrs. Scaife, quite unsuspecting, and embarrassed at her own temerity in addressing the imposing Colonel Randolph, said a hurried good evening, and slipped out of the door.

As it clanged after her, and the Colonel and Jack's mother stood alone in the great, old-fashioned, darkening hall, there was a pause as they stood face to face. At last the Colonel spoke in an agitated voice.

"It looks very black for Tony," he said.

The Colonel had scarcely got back to his library chair, and Mrs. Randolph seated herself on the opposite side of the hearth, when there was a knock at the door, and Tony himself entered. It was dusk outside, but the wood fire, lighted up by snapping "lightwood knots," made bright the whole of the shabby, comfortable room.

Tony, after speaking to Mrs. Randolph, went up to the Colonel.

"Colonel," he said, "I met my mother just now, as I was coming across the field, and she told me what she had said to you about the two hundred dollars. I've got it, sir. I was bringing it to you when I met my mother. I got the last of it this morning."

There was a slight pause, as Tony fumbled in the breast pocket of his rusty jacket.

Digitized by Google

The Colonel and Mrs. Randolph looked at each other. Had Tony been older, the fact of his producing the money so soon and so frankly would have been a strong presumption of innocence; but Tony was too young to be expert, and both Colonel Randolph and Mrs. Randolph remembered that inexperienced thieves do the most foolish and self-destructive things very often in disposing of their plunder.

"Two hundred dollars is a large sum for a fisherman to save," remarked the Colonel in a queer voice.

"Yes, sir," said Tony, with a little laugh. "It's taken me a long time, and I've done without Sunday clothes and a good many other things to get it together. But I had splendid luck last summer."

He took the roll of money out of his pocket. It was large, being chiefly in five and ten dollar notes. All at once the door opened again, and Edgar Mount and Jack walked in together.

Edgar, who always took in instantly what was going on, saw the roll of money in Tony's hand, and this was what he said:

"I dare say that's my two hundred dollars now." At that a pin might have been heard to drop. Tony was the first one to speak.

"What do you mean?" he asked.

"I mean that I lost two hundred dollars out of my pocket to-day, and I caught your hand in that pocket five minutes before I missed it."

The idea that he should be accused of being a thief took some time to lodge in Tony's brain.

"Tony," said Mrs. Randolph, "a terrible charge has been brought against you. Nobody in this house will believe it, though, except on the most positive proof. Edgar, what sort of notes was your money in?"

"Oh, I don't know exactly," answered Edgar, carelessly. "Small notes—fives and tens, and perhaps a twenty."

Tony silently handed the roll of money to Mrs. Randolph, who, lighting the lamp on the library-table, with trembling fingers examined it. The money was chiefly in fives and tens, and there were two twenties.

"Can you identify this as your money, sir?" asked the Colonel of Edgar.

"No, not positively. But I think it's mine, and I know I wouldn't want to be in Tony Scaife's shoes now," replied Edgar.

"Give it to him, Tony!" burst out Jack, in a rage. "Let him have it. It'll burn his fingers every time he touches it."

"No, I shall not," said Tony, stoutly, recovering himself a little. "I worked for every dollar of this money, and even if I had a million, I wouldn't give it to him, and give up my good name with it."

Tony told clearly how he got the money; but most of the men from whom he obtained it were masters of fishing schooners, who had gone away, no one knew where.

The old Colonel cleared his throat to speak. Edgar threw himself into a chair to listen. Tony folded his arms, and stood as if he were about to receive sentence of death. Jack came up and threw one arm around Tony's neck.

"The case is a very unfortunate one. The money has not been identified, but there are circumstances—circumstances connected with it —"

Tony turned around and faced them.

"Do any of you," he said, in a hard, unnatural voice, "Do any of you, who have all been so kind to me, believe that I am a thief?"

"I don't, Tony," said Mrs. Randolph, going up to him. "It is dreadful as it stands, but I haven't lost my faith in you, and I shall not lose it unless the money is really identified."

"Do you believe it, sir?" asked Tony, turning to the Colonel.

"I am in doubt," said the Colonel, "but I incline to the belief that your honesty can be proved. It is unfortunate that the men who paid you the money should have disappeared."

At this Tony shook Jack's arm off.

"Jack," said he, "*you* believe in me—I know you do! But we can't have anything more to do with each other until this is cleared up. Don't think it can't be cleared up, and the time will come when you and I will be just as we have been every day since we had the fight. Good-by!"

Tony, with a white, miserable face, went out of the house.

It was two or three minutes before Jack recovered his self-possession enough to rush after Tony. Tony had made good use of his time, as when Jack dashed out of the hall door he was nowhere to be seen. The moon had risen, and its white light flooded the flat, peaceful landscape.

Jack ran across the stubble fields toward the little cottage at Lone Point. When he was halfway there, he saw a figure lying face down on the ground. It was Tony, sobbing as if his heart would break.

He recognized Jack's quick step over the frosty stubble, and sat up on the ground. He continued to sob, although his eyes were quite tearless.

"Tony," said Jack, throwing his arms around him, "don't you mind it, dear old Tony!"

For the first time, Jack seemed stronger than Tony in will and resolution. He clung to Jack, and then the tears came.

"Don't tell my mother—it will kill her!" was all he could say.

The two boys sat there talking, Tony becoming composed, for an hour, until the moon was quite high. Then, with a last embrace, and a "Remember, Jack, every word I've told you," they separated.

When Tony reached home, his mother noticed that he looked strange, but Tony did not tell her what was the matter. She supposed that he had been parting with Jack. He went to bed soon.

Jack was back at Marrowbone in time for supper. Nobody asked him where he had been, and he ate his supper in silence.

Afterward Edgar Mount, as usual, went to the cold drawing-room, where, by the light of a solitary lamp, he played and sang at the piano. Jack, sitting opposite his grandfather, while his mother, looking pale and disturbed, sat between them, said, after a while:

"Grandfather, did you ever see anybody so cool about taking one's character away as Edgar was? He never quivered while he was doing it."

"I never saw anybody's character taken away before," interrupted Mrs. Randolph, while the Colonel was cogitating a reply, "but I must say it gave me a bad impression of Edgar to see how readily he believed that Tony was guilty."

"I shall be glad, my dear boy, when Edgar Mount's visit comes to a conclusion," was the Colonel's diplomatic answer to Jack's question.

For the Companion.

THE NECKTIE PARTY.

One Saturday afternoon in October four Swaleville boys stood on the Willamette River bridge in earnest conversation. These boys represented, at least in their own estimation, the aristocracy of Swaleville.

The eldest, a boy of seventeen, was Percy Drake, whose father kept the Drake Hotel, and was a man of consequence. Ben Tyndal's father had a general merchandise store adjoining the hotel. Harvey Ballard was the editor's son. But the crowning aristocrat of them all was Clinton McKinsey, a new-comer in Swaleville.

It was his father who had mysteriously arrived in the town, as mysteriously purchased the worthless farm of a shiftless farmer named Pete Morley near by, and afterward laid it out in building lots, calling it "McKinsey's addition to Swaleville."

It had afterward turned out that he had got wind of and anticipated the building of a railroad to Swaleville, and his timely purchase made him a person of importance.

In the business development of the place which followed the news of the coming of the railroad, the improvement and embellishment of the "church-house," which served as a place of worship and general assembly for all the religious denominations, might have been neglected if the ladies had not taken it in hand. They began a series of fairs and festivals to raise money to paint and refurnish the unsightly building.

Swaleville had never known such a round of gaiety as it had now. At first the people gave liberally, but when all the new and taking things in the way of entertainment seemed exhausted, the "two-bit pieces" came reluctantly.

At this discouraging juncture Miss Carlisle, the popular village schoolmistress, offered to help the ladies get up a "Necktie Social." It was arranged that each lady who attended should bring a lunch for two, and enclose in it a duplicate of the tie which she wore.

These lunches, put up in fancy baskets or attractive parcels of some sort, were to be sold by auction to the gentlemen. Each purchaser was then to share his lunch with the lady whose duplicate tie came into his possession.

The ladies advertised the affair at once, and the flagging interest of the people in the reconstruction of the church-house revived.

It was not only new, but it was Miss Carlisle's plan. That counted for much.

The boys on the bridge were talking of this party.

"Yes, of course we'll go," said Ben Tyndal, "only I hope the bidding won't run high. I don't want to make a very big hole in my bicycle money."

"I'll risk that," said Harvey. "Father says folks are desperately close with their money. Every one wants to pay subscriptions to the *Informer* in stovewood or apples."

"If I could find out which was Miss Carlisle's lunch, I'd pay five dollars before I'd let any one else get it," said Clinton McKinsey.

"So would I," said Percy Drake. "It would be money in their pockets to let the cat out of the bag about her basket some way. There'd be some lively bidding if 'twas known."

"That's the trouble with this sort of thing. Nobody knows, and everybody goes—all the riffraff. Fancy a fellow's having to lunch with one of the Glass girls, for instance! It takes one's appetite to think of it."

Clinton's nose went up in air.

"Or, worse still, with Betty Morley!"

A chorus of laughter followed this suggestion. Betty was the very unattractive and very uncultured daughter of the worthless Pete Morley.

"Oh, she won't be there," said one.

"I'm not so sure of it. If she gets it through her head what it's to be like, and could make a raise of corn-bread and bacon enough for a lunch, I think she'd go."

"She might stew one of those big pumpkins in her father's late corn-field. They reserved the crop when father bought the place," said Clinton McKinsey.

"Hello!" cried Ben. "Here comes Mark Grannis. Wonder if he's going, too?"

"With Betty?"

"In his overalls?"

"I say, boys," said Percy, hurriedly, and lowering his voice, "I've an idea for a regular lark! It's about Mark and Betty, and the pumpkin comes in. You keep still, or else fall in with what I say, when he comes along. I'll explain afterward."

"All right!"

Mark Grannis's father was hostler and man-of-all-work at the Drake Hotel. His mother took in washing. Mark's social standing was decidedly low; but he led his class in school, and the "upper ten" were a little jealous of the kindness which Miss Carlisle always showed him. What teacher fails to appreciate a bright and earnest scholar, even though he is clad in overalls?

"Hello, Mark! Going to the necktie party?"

Mark shook his head, and was passing on when Percy called out:

"What's your hurry, old boy? Can't you take time to be sociable once in a while? Because you beat us all at school, you needn't put on airs outside, eh?"

Mark had an uneasy suspicion that Percy was making fun of him. Still, in spite of misgivings, the unusual tone of comradeship warmed his heart.

"Why not go?" asked Percy.

"Oh, I don't know. I guess I don't want to."

"Come now, there's no use of a smart fellow like you making a hermit of himself. All the other fellows are going."

"Come now, say you'll go—just to please us!" said Ben. "We're going to try for Miss Carlisle's basket, and the lucky fellow has to stand treat. We shall not know her basket, of course. All that is to be kept secret; but we're going to guess. If it's like her, it will be the prettiest one there. Understand?"

Mark nodded, and a sudden light came into his eyes. To him Miss Carlisle was almost an angel. The thought of her wakened all the manhood in his breast.

"See here, boys," he said, bravely, "what's the use of my pretending to you this way? You know as well as I do why I can't go. I haven't money to buy anybody's lunch. Besides, my clothes aren't fit."

"Pshaw! Lots of the fellows will wear just their every-day clothes, and maybe you can earn two bits between now and Thursday."

"If I can, I'll go!"

"Sure?"

"Yes, sure. I've got two bits now, but I wouldn't like to go to a place like that with less than four bits."

"Give us your hand on it."

Mark went on his way in a strange tumult of feeling. What did it mean? Perhaps the boys were not so bad at heart as he had thought.

"Now tell us what you're up to, Percy," said Ben, as soon as Mark was out of hearing.

"What Clint said about the pumpkin made me think of it. You know how the boys bother Mark about Betty? He's sensitive to ridicule, and if you want to make him angry, ask him about his friend Betty. Now I mean to get Betty to go and take a raw pumpkin for her lunch, and we'll fix it so Mark will bid it off and get her tie."

"Will she do it?"

"I'll make the thing work some way. You'll see."

Before the boys left the bridge the details of the plot were carefully planned, and they parted in high glee.

As the last boy vanished from sight, there was a rustling in a thick clump of willows that grew on the river-bank close by the bridge, and Miss Carlisle, with botany-case in hand and a queer smile on her face, stepped out from their leafy cover, and walked quickly up the bank.

So mysterious were the preparations that went on the next week that one would almost think Christmas was at hand. Each lady wanted to outdo her neighbor in the tasteful arrangement of her lunch, and at the same time keep her secret.

The boys' plot throve well. Betty, through Clinton's skilful diplomacy, was induced to go to the festival and send a pumpkin for her "lunch."

As good luck would have it, Miss Carlisle gave Mark an errand to do for her in the country, for which she paid him a half-dollar. It might have been pure accident that she paid him the money in the presence of Percy Drake.

Another apparent accident happened. She made so elaborate a basket for her lunch that she was obliged to take it to school to work on at recess when the pupils were out. Once, on hearing footsteps, she slipped it quickly in her desk without covering it.

A short time afterward, she sent Clinton McKinsey to her desk to get a book. He had the lid half-raised when she stepped forward to intercept him. It was too late! He had seen the basket, and noted the necktie of fringed white silk which lay upon it.

There was no danger that Clinton would not keep the secret. He even went so far in his self-conceit, as to suspect that she wished that he should know which was her lunch!

The eventful evening arrived. The church-house was filled to its utmost capacity. The boy conspirators sat on a front seat with their unsuspecting victim, Mark Grannis, in the midst. His eyes sparkled, and his cheeks glowed with excitement, for the four boys seemed bent on nothing else than making him have a good time.

Such unwonted comradeship was intoxicating to him. He forgot all about his darned and threadbare best suit—especially after Miss Carlisle came in, and smiling brightly at the group of boys, took a seat facing them, in the "amen corner."

She wore a dress of dark blue, on which a white silk tie showed very plainly. There were white chrysanthemums in her belt, and her hair glistened in the lamplight like waves of gold—at least, so Mark thought.

He even forgot to be annoyed when Ben Tyndal nudged him significantly as Betty Morley came in. Betty was never abashed by a crowd, and elbowed her way to the front, until she had found a seat as near as possible to Miss Carlisle.

Betty wore a dress of gaily flowered red print, upon the breast of which was pinned an enormous tie of green cambric.

Miss Carlisle smiled upon her also, and Betty grinned broadly. Miss Carlisle had paid her a call that afternoon, and the honor of it was fresh in Betty's mind.

Soon the bidding began. Baskets, large and small, fancy boxes and ornamental bags went off in rapid succession. As yet nothing had sold for less than "four bits," or half a dollar, and several had even brought a dollar. The ladies were elated.

When the silk-lined Japanese basket which Clinton had seen in Miss Carlisle's desk was put up, that young man, without the least caution, started the bid at one dollar.

There was a little stir in the audience. It was the highest starting bid yet made.

"One—twenty-five." "One—fifty." "Two dollars," came in rapid succession. "It is the schoolteacher's," the whisper had gone around.

At last, with flushed cheeks and a triumphant glance at Miss Carlisle, Clinton McKinsey laid a five-dollar gold-piece on the auctioneer's table, and bore away the prize.

"Are you sure it's hers?" whispered Percy, as Clinton resumed his seat and rested the costly treasure on his knees.

Clinton nodded. "I know it," he said.

"Well, it's about time for us to be taking in something. Let's try for the next; what do you say, Mark?" said Percy.

He saw the auctioneer's hand upon a brown paper bundle tied with red tape. The red tape had been supplied to Betty Morley for the purpose.

"Now, gentlemen," said the auctioneer, "don't be afraid to bid on this because there's so much red tape about it. Appearances are sometimes deceitful; and judging by its weight, I should say there was enough in it to feed the heaviest two people in the room. What do you say, Joe Gump? What'll you give?"

Joe Gump was six feet two, and weighed about two hundred and fifty pounds.

"A nickel," responded Joe, good-naturedly.

"Ten cents!" called Percy Drake.

"Fifteen!" said Ben Tyndal.

Clinton nudged Mark.

"Go in for it," he said. "I happen to know something about that parcel, and if I had not been after this, I'd take it in, sure. It's going cheap, too. Folks seem afraid of it because 'tisn't fancy—more fools they. Look here, boys, not so fast! Give Mark a chance."

Harvey Ballard had just offered twenty cents.

"Two bits!" said Mark, half-frightened at his own voice. There was no opposing bid!

The boys in the plot were squeezing their lips together hard in their effort to suppress their laughter. Mark had fallen into the plot more readily than they expected.

As Mark took the clumsy parcel in his hands, the tape slipped, and one corner of the stiff paper fell away, disclosing to the curious crowd a yellow pumpkin reposing on a tin platter bordered with parsley leaves!

Mark turned deadly pale. It was a cruel hoax, planned by those boys, whom he had been silly enough to trust. He had a mad impulse to turn and hurl the pumpkin at their heads; but Miss Carlisle was looking at him.

The color surged back to his face, and tearing the wrapper entirely away, he strode back to his seat, holding aloft his yellow prize with a forced laugh.

"He takes it pretty easily; but wait till he finds the necktie!" whispered Clinton.

"The necktie!" shouted some one from the crowd.

"Yes, the necktie! Show us who likes raw pumpkin."

Miss Carlisle left her seat and came toward them. The crowd fell back a little. She did not speak to Mark, but stood near. It was enough. It kept up his fast-failing courage.

Mark raised the pumpkin from the plate. No tie was there.

Percy and his companions began to feel uneasy. Had Betty been too stupid to put her necktie into the parcel?

"Hello, Mark! your pumpkin's cracked clean across," said some one.

Mark looked. It was not a crack, but a cut. A piece had been taken from the top to form a lid, and so nicely adjusted as not readily to be seen. He took hold of the stem and lifted the cover.

A shout went up from the crowd. The pumpkin had been hollowed out, lined with tissue paper and packed full of lunch; and on the very top, resting on a folded Japanese napkin, lay a dainty necktie of fringed white silk!

"The school-teacher!" "The school-teacher!"

The crowd took up the cry, and sent it echoing about the room.

"Three cheers for Mark Grannis!" were called for. The cheers were given with a will.

None but Clinton's fellow-conspirators saw how pale he turned when Miss Carlisle's tie was found in the pumpkin, so absorbed was every one in Mark's unexpected turn of fortune. Yes—one other saw it, and saw the look of rage that crossed his face, and the consternation of his companions when Betty Morley's green cambric duplicate bow was found inside his costly purchase. Miss Carlisle saw, and stood close by his side when he cast the green tie to the floor, saying, "I'll never do it, never! I'm going home!"

"Gentlemen don't break their bargains," she said, quietly. "Every gentleman who purchased here to-night, accepted, in so doing, the conditions of the sale. Take my advice, Clinton, and make the best of what you think a poor bargain."

She moved away to join Mark, and help him unpack the pumpkin.

It was a goodly store that this homely fruit yielded: Delicate sandwiches tied with blue ribbon, slices of cake, oranges, bananas and luscious grapes. Mark sat like one in a beautiful dream, listening to Miss Carlisle's cheery talk, and feeling sorry from the bottom of his heart for poor Clinton, who, in an obscure corner, was laying slices of

Digitized by Google

corned beef, gingerbread and pumpkin-pie before the delighted Betty, but tasting nothing himself.

In the very bottom of his basket Clinton found a card, upon which was written, in a hand well-known to Swaleville youth:

"The best laid schemes o' mice and men gang aft a-gley."

ELLA BEECHER GITTINGS.

ITS MISSION.

The filmy wing that wafts the seed
Upon the careless wind to earth,
Of its short life has only need
To find the germ fit place for birth.

AT A CALIFORNIA SHEEP-RANCH.

In Three Parts.—Part III.

Waylaid by a Mountain-Lion.

Eagles, bears and mountain-lions are a great pest to California sheepmen in certain districts, and cause large losses every year. On the ranges of the coast mountains, where bands of sheep are moving over a considerable territory, they are not corralled at night, but merely "bunched," in as secure a position as possible, near the shepherd's camping-place.

Six sheep were lost out of the band which Bill Hughes was herding somewhat later than the time when Ham-fat and Jim tapped the bee-tree. There was now a moon, and for three nights we took turns in watching for the thief.

On the third night Bill succeeded in shooting a small female mountain-lion, which was doubtless the transgressor, for no further trouble was experienced while we were at that camp.

But about a fortnight later, when we had moved the band to another part of the range, some three miles to the northward, we had a more exciting experience.

The boys had been home to the ranch for a week, and rejoined us for a second visit. Ham-fat then discovered that an old pistol, which he prized highly, had been left behind. He must have the pistol at any cost, so, mounting old Nig, he set off at about three o'clock one afternoon to get it.

We saw no more of him until dusk. About seven o'clock the mule's hoofs were heard clattering on the stones down the trail, and a moment afterward we saw Ham-fat riding rapidly toward the camp.

"He's scared!" exclaimed Jim, eagerly.

"Keep quiet," said Bill. "Let's hear what he'll say. Don't let him know that we think he is frightened."

Up dashed Ham-fat to the very door of the hut; but we appeared to be busy with our affairs, and paid no attention to him. He was bareheaded, and looked wild as he slid off old Nig's back; but not a word was said, and after glancing first at one, then the other of us, as we moved around with our backs toward him, he coolly proceeded to take off the saddle.

Supper was ready. As we sat down, Bill remarked, in a fault-finding way, "Seems to me, Ham-fat, that you've got to riding that mule pretty hard lately!"

Ham-fat could contain himself no longer.

"I guess you would ride if you had a big mountain-lion after you!" he exclaimed.

"Did you see a lion?" I asked.

"Yes, I did, and I tell you he is a big one, too!" replied the lad, with truthfulness in every tone of his voice. "None of your little mangy she-lions!" he added, with a glance of contempt at Bill.

"Where did you see him?" I asked.

"You know that hollow way down the trail, where that old red-wood stub stands? Well, 'twas there. I was coming along, walking old Nig and whistling, when I heard the brush snap, and right there, just back of that old stub, in the weeds, was a big mountain-lion creeping out, wiggling his tail and getting ready to jump on me.

"I tell you he was as long as a fence-rail, and he would have jumped in a minute more, but old Nig saw him and made a spring, and then ran as fast as his legs could carry him.

"I had to hang on so tight that I didn't get a chance to look back till we had gone some way; and then I saw the lion standing out on the trail, looking after us."

There was little doubt that Ham-fat had been waylaid by some animal; though we made allowance for the magnifying power of a boy's eyes, under such circumstances.

That the animal was a mountain-lion was rendered probable by the appearance of one of these destructive creatures the second night afterward. We heard a disturbance among the sheep, a little before midnight. Bill ran out, but as it was very dark, he could see nothing. After firing his Winchester he came back to the hut.

Next morning we found one dead sheep and a trail, marked with blood-stains, showing where another had been carried off. The lion had stolen upon the sheep and, after throttling one and taking its blood, had seized another and decamped, probably frightened by the report of the gun.

"This is a pretty impudent old brute," Bill remarked to me, as we looked about next morning. "He will not come back till he's eaten up his sheep; but he will be back then. The nights are too dark now to watch and shoot him. I'm going down to the ranch to get the dogs."

He made the trip that afternoon and brought up an old half-breed mastiff, named Fan, and her full-grown pup, Tige, and also a trap and some strychnine. The herders make a very liberal use of poison in clearing the country of lions and wild-cats.

The trap was set that night, and baited with a part of the dead sheep; and other parts of it were poisoned and laid about.

Nothing further was heard from Ham-fat's lion, as we called it, for a week. But one night, shortly after we had fallen asleep, old Fan came into the shack, whining and growling in a peculiar manner. Bill immediately sat up.

"There's either a lion or a bear prowling about," he said to me in a low tone. "Fan never whines like that for small game."

We were camped at that time on a little level bench of the mountain, under a bunch of live-oaks; and the sheep were gathered every night in a small open, not more than fifty yards from our bunks.

The dogs continued to sniff the air, growling in a remonstrant undertone. Old Fan finally became so restless that Bill could hardly hold her by the collar. The sheep, too, began to get up out of their beds, and huddle closer to our camp.

"Now's the time," muttered Bill. "Sic 'em, Fan!"

Both dogs dashed out, barking savagely.

Jim and Ham-fat, wrapped in the sound sleep of boyhood, did not wake; but Bill and I, leaping from our bunks, hastily donned our clothes, expecting after a few minutes' chase to hear Fan's baying announce that she had treed the animal.

But instead of that welcome baying, so thrilling and unmistakable to one who has once heard it, there was borne to our ears a succession of spiteful snarls and yelps, which made it plain that the animal, instead of taking to a tree, had turned and given battle.

We stole out in the direction of the sounds with our guns, but had not gone far before sharp howls from the dogs told that they were getting the worst of the encounter.

"It's either a bear or a big he-lion," said Bill, confidently. "If it was anything else, Fan would certainly have run it up a tree."

Before we reached the scene of combat, the outcries suddenly ceased; and a few steps farther on we met both dogs.

Poor Fan was on three legs. She was covered with bleeding scratches, and a raking blow, apparently from a wide-taloned paw, had torn nearly all the flesh off one of her shoulders. Tige had been less bold in his attack, and though scratched, was not much hurt.

We knew it would be useless to look for the lion further that night, and returned to camp.

Next night the lion came back. We had bound up Fan's wounds as well as we could, but she could scarcely crawl about; and Tige was too young and timid to venture out alone. The movements of the sheep revealed those of the lion; but it was too dark to see him. Near morning, when we had fallen sound asleep, the brute came back, stampeded the sheep and succeeded in killing three, one of which, as before, was carried off.

Portions of the dead sheep were again treated with strychnine, and the trap set in another place with fresh bait; but our troublesome neighbor apparently had no liking for anything but living prey.

The boys, who were much disgusted at having been left to sleep the first night, were awake this time. They took an enthusiastic interest in all our schemes for making way with the lion; and a few mornings later Ham-fat declared at breakfast that he had dreamed we caught the lion in a "jerk-up."

I was obliged to inquire how that was done.

"Why, the way Jim and I catch sewellels," replied Ham-fat. Then, perceiving the utter ignorance in which I had grown up, touching such accomplishments, he went on to tell me that the sewellel is a kind of squirrel which resembles a large rat; and that he and Jim had turned a pretty penny by trapping them for their skins, which they sell as fur, and that they had caught dozens of them in "jerk-ups," or slip-nooses of strong twine, attached to spring-poles and placed skillfully about their burrows.

"I tell you what," continued Ham-fat, "I believe that if a 'jerk-up' could be rigged, strong enough, a lion could be caught the same way."

Bill laughed incredulously. "I guess if we wait for you to catch that lion with a 'jerk-up,'" said he, "we shall wait till he gets every sheep in this band."

"Well, I guess we could catch him that way as soon as you can catch him in your trap, or poison him, or shoot him, either!" cried Ham-fat, warmly.

"The idea of getting a lion to stick his head through a slip-noose!" exclaimed Bill, contemptuously.

"The way I'd do," argued Ham-fat, "would be to rig a kind of a brush pen out in the woods, with a hole leading into it on one side, and put a live sheep in it. Then I'd take a good strong lariat, and fix a noose around the hole and tie the other end to a stiff tree-branch, bent down so as to give a great jerk when 'twas sprung."

Jim, who was also in favor of a "jerk-up," argued that a coarse net of dark-colored twine could be rigged over the hole and attached to a line, leading to the "fid" that sprung the tree-branch so that when the lion leaped in to seize the sheep he could not miss pulling the fid out of the loop of the line that held the branch down.

The boys had a wide, practical knowledge of jerk-ups, and planned the device with great cunning.

Bill still pooh-poohed the whole plan. I had no faith in it, but as the boys were very much in earnest, and as there was nothing of much interest to occupy the day, I decided to help them set up their trap. It was worth all my pains, even if we caught nothing whatever, to witness the zeal and boisterous eagerness with which they embarked in the scheme.

Having selected a place under a large oak, on the border of the forest, in the direction from which the lion was thought to have approached the camp, we constructed of stakes a pen about six feet square, and covered it with brush to disguise it, so that it would appear like a little thicket. The hole leading into it and other details of the jerk-up were managed as Ham-fat and Jim had planned.

Bending down a branch of the oak to furnish motive power for the jerk-up proved the most laborious part of the undertaking. The united weight of all three of us, hauling down together, barely sufficed to bend it. Three times it broke away from the anchorage which we gave it.

To adjust the "fid" of the check-line also proved a very nice task. We spent almost all day in experimenting and devising new details for springing the snare. About forty feet of one of Bill's lariats of green hide was used as a noose for the jerk-up.

After supper, a sheep was caught and led out to the pen, to serve as live bait. After the sheep had been bound inside the pen, the noose and net were set at the entrance, and all was carefully covered around with leafy twigs. Little as I believed in the success of their snare, I could not but admire the painstaking skill which Jim and Ham-fat expended upon it.

We left the sheep in the pen and went back to camp. Several times during the evening we heard the poor creature, thus separated from the others, bleating for its mates.

"Good!" Jim would exclaim every time we heard it begin afresh. "That'll draw the old fellow."

No lion came that night, nor the next. Bill laughed. "You'll find that a mountain lion and a sewellel are two different animals," he remarked. "You cannot get a lion into any such silly trap as that."

The boys did not say much, but they punctually let the decoy sheep out each morning and led up another at dusk.

It was either the third or the fourth evening after the snare was set, that just as we were turning into our bunks we heard a yell. Old Fan, who was now a little better of her wounds, started up with a low, gruff bark, and Ham-fat shouted, "We've got him!"

In their excitement, he and Jim dashed out of the shack barefoot, and with very little clothing. Bill and I followed. Both dogs were now barking; but above their noise, there was plainly to be heard the sounds of a frightful snarling and yelling, in the direction of the jerk-up.

"Come on! Come on! Get your guns!" shouted Ham-fat.

I had no small trouble to get the excited boys back into the shack to draw on their shoes and jackets. We lighted a lantern, got the guns, and then, after shutting up the dogs, sallied out.

The whole band of sheep, terrified by the yelling, were pressing closely about the shack. We had proceeded but a few rods when we met the decoy sheep, which had broken loose, and was rushing headlong back toward the band. The frightened creature ran blindly into us; and Jim seized it by the wool.

There was little doubt that, by some fluke of good luck which sometimes attends the efforts of plucky boys, we had ensnared the lion; for its wild screechings and yells were continuous. Heard in the night, the cries were quite enough to make one's blood run cold.

He was caught, no doubt; but how securely caught was the question. With due regard to this uncertainty, we approached with caution from the rear of the pen.

Thrusting up the lantern on a forked stick, we were able to get a partial view over the top of the pen. Evidently the lion had attempted to enter the hole and seize the sheep, when like a flash the bent branch had sprung upward, and the tightening noose had caught the animal just forward of the hips. The recoil of the branch had been powerful enough to swing the beast into the air; and there he dangled, at least eight feet clear of any footing.

I never saw such a picture of ungovernable fury as this beast presented. He swung about like a pendulum, clawing the air, biting, snarling and spitting, while his eyes glared at us like balls of fire.

Every few moments he would double up his body, reach upward, grasp the riata line above him with his forepaws, and try to bite it in two with his teeth. When this task proved hopeless, down would droop the long, supple body again, while the brute gave vent to that ear-splitting, despairing scream, which no other animal is capable of uttering.

Somewhat awed by the savage spectacle, Jim and Ham-fat kept in the rear and said very little. There was danger that the animal would bite off the line. Telling Bill to throw as much light as possible from the lantern upon him, I waited until he had ceased his struggles for an instant, and then sent a bullet through his head.

When the animal was fully dead, we cut him down and removed the hide.

With the sudden cessation of those frightful screams, Ham-fat and Jim had recovered their self-possession, and on our way back to the camp, they executed several war-dances around Bill, poking his ribs and asking him what he thought of their plan now.

"'Twas just chance," Bill maintained, stoutly. "You couldn't catch a lion that way again in a hundred years."

Ham-fat declared that it was the same lion which had attempted to waylay him on the trail, and very likely it was.

From tip to tip, as hunters say, this lion, or rather panther, measured over eight feet, and must rank as a large specimen of his species. His recent diet of fresh mutton had put him in fine, glossy condition; and I was glad to conclude a bargain with Ham-fat and Jim to secure the skin as a memento of my sojourn at Dave Hughes's sheep ranch.

MYRON B. GIBSON.

The End.

SUNG FOR ME.

Wild bird, the song was truly sung,
With tender pauses in each line,
And though 'twas trilled by thy sweet tongue
The King knew that the words were mine.

Baltimore Telegram. —*Paul Rivers.*

For the Companion.

A JOLLY RED-HEAD.

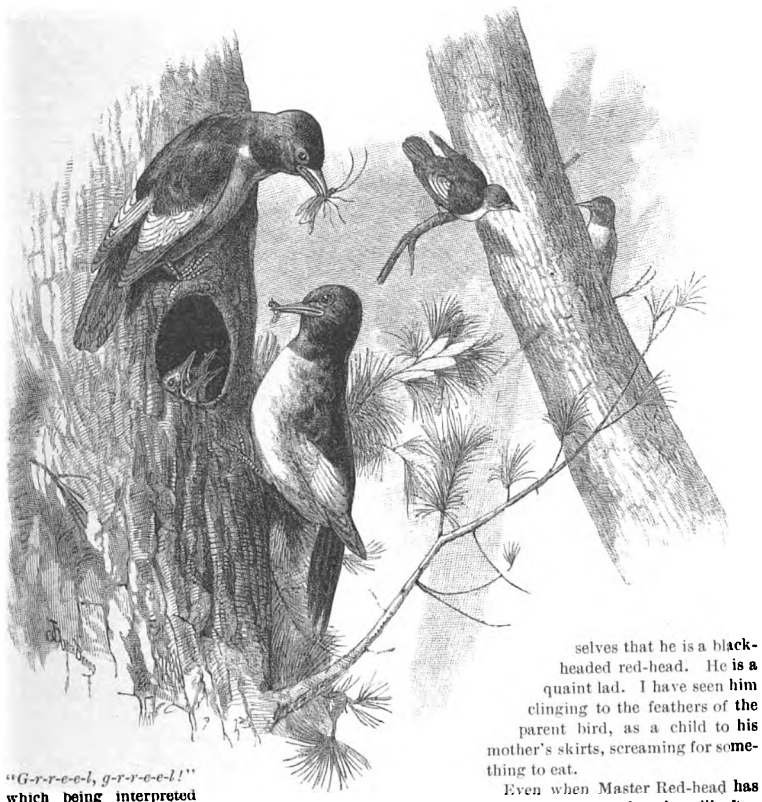
One of the most interesting birds of my acquaintance is the red-headed woodpecker. In Ohio he is the most abundant species of the woodpecker family, the flicker coming next in point of numbers. You may see him almost everywhere; in the city as well as in the country; in the lowlands and meadows, if there are a few trees, as well as in the uplands; in the open spaces and in the dense woods, and wherever found, he is the same jolly, companionable fellow. I suppose every boy knows this bird, which, as Mr. Burroughs prettily says, "festoons the woods" with red, white and blue-black. He may be readily identified by his crimson head and neck, making him look as if he had plunged up to his shoulders into a keg of red paint.

Like all other woodpeckers, he is a hewer of timber, chiselling out a parlor—or rather, perhaps, a nursery—in a dead limb or tree-trunk, where he rears his young and trains them in the way they should go. I have known him to drill his nest in a fence-stake, while the telegraph poles along the railroad, although they must be hard and tough, often afford him a nesting-place, and it is amusing to see him bolt from his cavity whenever a train dashes along.

It is to be regretted that our bird has not a more musical voice, and yet his well-known *g-r-r-u-k*, *g-r-r-u-k* and *g-u-r-r-l*, *g-u-r-r-l* and *kt-r-r*, *kt-r-r* are by no means disagreeable, but are suggestive of the good-nature and buoyancy of spirit that animate his bosom. If he is not much of a vocalist, he still seems to be a lover of music.

Listen to him as he plays a tune on that shell bark hickory-tree, or beats his tattoo on the slate roof. He evidently engages in this exercise, in part at least, for the sake of the musical effect, else why should he drum on the roof, where no insects are to be found, or upon an old tin pan that he has discovered out on the commons?

There has been some dispute as to how he produces this quick succession of raps, several writers contending that he does it by rapidly striking together his mandibles. This cannot be the true explanation, for I have often watched him at his rehearsals, and have always noticed that the sound varies according to the object upon which he hammers.



For instance, if it is a large hollow tree, the sound is coarse and resonant, as one would expect. If he beats upon a piece of partly loosened bark, his tune is sharp and penetrating. On a tin or slate roof the sound is precisely what it would be if you or I should pound rapidly upon the same object with a similar instrument. But how can he beat so fast with his bill? Just as a drummer-boy deftly taps his snare-drum so rapidly that you cannot count the strokes, and almost think that his drumsticks must be small boards rounded at the end.

Of all the woodpeckers that I have studied, the red-head is the most expert on the wing. Of course, he follows the fashion of the family when he flies, going in a kind of gallop from one perch to another. But other woodpeckers seem to regard flying as a serious business, and are therefore on the wing only as much as is necessary to secure food and escape from their foes.

Not so with our crimson-headed acrobat, who often performs the most amazing feats of scaling in the air out of pure exuberance of spirits. He

Digitized by Google

must have some valve of escape for his rollicksome nature. And so he frequently hurls himself out into the air as if shot from a cannon, performs some exploit, such as poising, whirling, darting straight upward, and almost turning a somersault, and then circles gracefully back to his upright floor of bark, crying exultingly,

"G-r-r-e-e-l, g-r-r-e-e-l!"

which being interpreted means, "Wasn't that a clever trick?"

Often, it is true, he makes a dash for an insect, just as the wood-pewee or the great crested fly-catcher does; but I think that many of his feats are performed for pure love of frolic.

I have watched a dozen or more of these birds engaging in their wing-exercises in a favorite woodland, which might have been called their gymnasium. They had selected a certain tree for a point of departure, and with loud chattering would dash away after one another, describe a graceful circle, and then plunge back into the tree.

At times their cries seemed to be half-angry. Still, the whole performance seemed so jolly that it reminded me of a company of children playing "base" or "black-man." These birds certainly have some sense of humor, and enjoy a romp as much as the most playful schoolboys.

One of their favorite pastimes is playing "hide-and-seek" about the trunks of trees. It is amusing to see two of them peep at each other a moment around the bole of a tree, and then jerk their heads back, precisely as you have seen children do. Besides, they often play "catch" or "tag," dashing pellmell after each other among the trees, until you wonder they do not dash themselves to atoms.

A pair of bluebirds had a nest in a box near my house last spring. They seemed to be greatly vexed by the presence of a red-head which was in the habit of coasting on the maples along the street. They would make a quick dash at him, but the "artful dodger" would slip dexterously around to the other side of the tree out of harm's way.

Sometimes, however, he would stand his ground, and present his long spear of a bill to his enemies as they flung themselves at him, and thus keep them at a safe distance; for no bluebird would care to impale himself on the end of a lance like that.

Still the woodpecker would occasionally lose a feather by failing to be quick enough to evade the swift assaults of his enemies. I do not know whether he sometimes makes a raid on other birds' nests or not. I hope not; but I have noticed that robins and bluebirds have a mortal hatred of him, especially when he comes into the neighborhood of their nests.

Speaking of bluebirds in connection with the red-head, reminds me of a curious freak of bird-behavior that I observed one day in July. I was strolling along the banks of a small creek, when I saw a male bluebird sitting on a limb of an apple-tree, while only a few feet away, a red-head was busy at work in a cavity of the trunk (which he had evidently himself drilled), throwing out the chips at a lively rate, and at intervals peeping from the hole to see if the coast was clear.

I drove both birds away, and then watched them at some distance. In a few minutes the bluebird was again at his post, while his companion had gone back into the cavity to ply his trade of carpentry as before.

What did it mean? Was the bluebird playing the rôle of sentinel for the red-head? Or was the woodpecker hewing out a home for the bluebird by way of accommodation? Or was the bluebird only biding his time until the cavity should be done, when he intended to drive the busy toiler away, and occupy the nest himself? I have never been able to come to a decision in the matter.

From youth to old age our bird is a cunning, tricksy spirit. Ah! yes, there is the red-head, junior—but his head is black instead of crimson; so that we may say without contradicting ourselves that he is a black-headed red-head. He is a quaint lad. I have seen him clinging to the feathers of the parent bird, as a child to his mother's skirts, screaming for something to eat.

Even when Master Red-head has grown as large as his mother, he will often run after her and shriek for his dinner. But when his stomach is full of tidbits, he and his playmates have rare sport tobogganing (though they usually prefer to go uphill instead of down) on the trunks of trees, playing hide-and-seek, and flying race.

LEANDER S. KEYSER.

FULFILMENT.

The best is yet to be,
The last of life, for which the first was made;
Our times are in his hand
Who saith, "A whole I planned."
Youth shows but half; trust God, see all, nor be afraid.
—*Robert Browning.*

AT THE BAR OF THE LORDS.

We have explained quite recently the case of Newfoundland, and have described the uncomfortable situation in which it finds itself by reason of the rights secured to the French by treaty, and of the restrictions imposed upon its own people by the same treaty.

The peculiar position of the colony, suffering under what it regards as an intolerable grievance, and yet wholly unable to help itself, was the occasion of a highly picturesque scene in the British House of Lords one day in April. The colony had sent to London a delegation of its most prominent public men to endeavor to dissuade Parliament from passing a bill introduced by Lord Knutsford, the Colonial Secretary, which the colonists of both parties regarded as highly injurious to their interests.

These delegates were permitted to appear at the bar of the House of Peers while that body was in session, and to speak to the House and the country in the name of the colony. There was a very distinguished company in attendance, including the Prince of Wales, and the scene was significant and impressive. The delegates spoke, one by one; they were heard attentively, and the impression they made was a good one.

It cannot be said, at the time we write, whether or not their protest will be effectual; but the event itself is interesting from two points of view.

The appearance of the delegates before one of the Houses of Parliament is a striking illustration of what is known as the right of petition in its most remarkable form. It is a form not unknown to the parliamentary procedure of this country, although the similar right as exercised in the United States may not be generally recognized as corresponding to it.

Delegates from Territories are allowed free access to the floor of the House of Representatives, although they are not members of it, and have no vote; but they are permitted at any time, when they can get the floor, to discuss matters before the House, even when those matters do not concern directly the people of the Territories they represent.

It is a privilege accorded to the Lord Mayor of London, by immemorial custom, to present petitions of the City of London to the House of Commons; and other petitioners have, from time to time, been admitted to the bar of the House, not to speak but to lay their written requests on the table.

But the more interesting phase of the Newfoundland matter is that in which the colony appears as a self-governing community, but as possessing no power and not even a voice in the matter of its most important relations, those to other communities.

Treaties which bind Newfoundland and every other colony are made by the British ministry, and that ministry is virtually appointed by the House of Commons, in which no colony has even a single representative. Canada, with four and a half million inhabitants, has not so much influence in choosing those who are to direct the foreign policy by which Canada is to be governed, as have the people of some small English town.

It is true that Canada does not at present find this situation an unpleasant one. She is entirely satisfied to pay for the privilege of her connection with England by allowing the home government to make treaties that control her.

But it is human nature to be contented with such a condition of affairs only so long as arrangements thus made by another power do not harmfully limit the free action of a community. Newfoundland was contented until the French treaties, as interpreted by Frenchmen, began to bear hardly upon its industries. Its loyalty is now strained almost to the breaking point. And this will always happen, in any liberty-loving colony, so soon as it seems to the colonists that their interests are sacrificed for the benefit of the general government, in the choice of which they have no voice.

For the Companion.

A-MAYING.

Deep in the coignes of forest and wildwood,
Under the shade of the wide-spreading trees—
Oh the wild joy that is thrilling my pulses
With rapturous swell to the summer's low breeze!
Naiads and elfins to-day are here dancing,
Satyrs and fauns and the nymphs are at play—
Friends, do you know me? I once dwelt among you,
Blithe, like the zephyrs, as boundless and gay.
How my cheeks glow with this deep sense of pleasure,
How my heart leaps with a passionate glee!
Give me your hands, for again I am with you,
Vanished my sorrow—to-day I am free.

NELLIE TALBOT KINKEAD.

TOWN IMPROVEMENT.

Among the social movements which have grown into a position of importance during the past ten years is what began as Village Improvement work. The movement has outgrown the comparatively narrow field in which it started, and has become city improvement on the one hand, and rural improvement on the other. Considering it, however, in its work in improving small towns, it has an influence quite beyond the mere effect upon the eye of the beautifying of the streets and surroundings of a place.

Properly directed, it becomes an excellent means of keeping at home the young people of country towns and the region about them, and preventing them from drifting away to the cities, where they often find their ruin.

The town, village, or rural Improvement Societies generally begin their work by planting trees, and this is a good way to begin, for nothing is more "improving," so far as it goes, than a good tree planted in the right place; but presently the society proceeds to other things.

In many towns in this country the Improvement Societies have been the means of laying needed sidewalks and establishing better roadways, and thus facilitating business in introducing some sort of drainage, and making the town cleaner, healthier, safer and more comfortable to live in, and in greatly stimulating public spirit and general good-fellowship, and legitimately "advertising" the attractions of a place.

The Village Improvement Societies are said to have received their inspiration from the Public Green Association of New Haven, Connecticut, which, about one hundred years ago, received contributions of money, of goods and of work from the citizens of New Haven, then a rural town, to "grade the green and plant elms." These very elms have since gone far to make the town attractive to residents and business men.

More recently, in several towns in the older half of the country, the interest awakened by Improvement Societies has led men who were born in the town, and who have become rich there or elsewhere, to present libraries, halls, churches and other desirable things to the town.

The establishment of an Improvement Society is a simple thing. No money is absolutely required to set it going, though money sufficient for necessary purposes comes in various ways, from small membership fees, fairs, lectures and concerts, and presently from individual subscriptions.

A case of peculiar interest is related in connection with this improvement work. In a town which had a large proportion of foreign-born residents, of diverse languages, engaged in quarrying and manufacturing, a society of this sort was organized, and the employers of labor were induced to "shut down" on a given day, on which owners and operatives joined in a great "improvement bee."

"Many hands made light work," it is related, "and all had a good time. From that day the people have all thought more of one another and more of their homes, which richly shared in these improvements, as did the sidewalks, roadsides and other public grounds."

This work of all classes, all together, for the common benefit, promoted good citizenship and willing industry as well as the embellishment of the town.

Sometimes young people fall into a way of depreciating their native town, especially if it is a country village, and of saying, "This is a good place to emigrate from." If their elders were to try to make their towns agreeable, sightly and progressive, is it not possible that their children would have quite another feeling?

If the older people are slow in organizing societies of the kind, it is quite practicable for the young people to take up the work and carry it forward, and they may derive much enjoyment from it while they also confer a public benefit.

The work is being carried into the public schools, and finds fertile soil in them. A School-House Yard Improvement Society may not only result in a great deal of fun for the pupils of public schools, but extend its influence to take in a whole town and its vicinity.

AMBITIOUS GIRLS.

A well-known literary man, who has the charge of a leading American newspaper, was asked lately whether he had gained through his position any new views of life in this country. His answer contains an important suggestion.

He said, "For one thing, I have been surprised by the enormous number of young women who are trying to become independent by earning their own living. This is as it should be. But the least satisfactory feature connected with the fact is that the most of them despise the commonplace methods of money-making, and try to earn it in some unusual, adventurous way. I constantly receive stories and essays written by young girls upon every subject but those which they understand.

"Our publishing firm, since one woman reporter went round the world, have been importuned by girls asking to be sent to 'write up' the Pacific Islands, Iceland, and even Africa. Most of these adventurous young women come from farms or inland villages."

Here is an incident to serve as a companion picture to this sketch of the editor's.

Two women in New Jersey, hearing ten years ago that the butter made in certain dairies in the South of France brought very high prices in London, saved their wages until they had enough to go to the district where the butter was made, and learn the secret of the French dairies.

They returned home, began with the manufacture of a few pounds each week in their father's house, and in two years were able to set their own price upon their butter in New York.

We would not discourage the ambition of any of our girl friends who wish to earn their living, provided they consult, when choosing their occupation, their own ability and knowledge.

If they are fitted by nature and study to be authors, artists, or even navigators, let them keep to their calling; but if not, why slight the homely, commonplace occupations which offer comfort, shelter and success in the quiet ways of life?

Superior butter commands a high profit in all of our cities. Many of our farmers' daughters can make ordinary butter; very few can make superior butter. How many educated American women are trying to succeed in honest trade, as their French sisters have done?

If circumstances require a woman to take upon her more of the world's work than that which comes to her as daughter, wife and mother, let her do it and be honored in the doing.

But let her remember that the baker who makes a good loaf of bread is more to be honored, and is of greater benefit to the world, than the artist who paints a poor picture.

Let her choose to do only that which she can do best.

FOUR-LEAVED CLOVERS.

A carriage full of girls was passing at a comfortable pace along a country road when one of the occupants, leaning forward from the back seat and touching the driver, cried out, excitedly:

"Oh stop! Stop! Let me get out! There's a four-leaved clover!"

The young lady who was driving stopped the horse, and followed with her eyes the rapid motions of her companion, who had leaped out and was scrambling up a bank by the roadside. It was covered by a thick mat of clover, but the seeker, without a moment's hesitation, laid her hand upon the stem she wanted, broke it off and returned to the carriage.

It was indeed a four-leaved clover, large and perfect, each leaflet prettily marked with a whitish V, and the extra one scarcely smaller than the others. She was immediately overwhelmed with questions and exclamations of astonishment. "How had she been able to see it in passing, surrounded as it was by a thousand other leaves so nearly resembling it?" everybody wished to know.

"Why, I couldn't help seeing it," was the laughing answer; "it stood right up and nodded at me!"

But the other girls did not think the mystery lessened by this answer. They had been looking in the same direction, and they had not seen it nod its luck-crowned head to them.

The lucky four-fold leaf, always a favorite, is just now especially popular. Its use as a decorative design in jewelry, upon silver-ware, and in painting and embroidery, has perhaps called attention to the green and growing original, which is by no means so easy to procure.

It requires sharp sight, a quick brain to notice what one is not at the moment looking for, often a considerable amount of time, patience and perseverance, before one can secure a four-leaved clover of one's own finding, to tuck away in a purse, a favorite book, or according to a recent fashion, to place inside a silver locket with one side of glass, and give to a friend.

But it is a pleasing quest, in which the seeker often discovers many lovely natural objects beside the one he is looking for.

Digitized by Google

He learns, too, how freakish Nature is in the disposal of her rarities. He may search the fields for weeks, and never see a clover leaf not divided by the regulation rule of three, or he may find clovers in fives, sevens, even nines and thirteens, but never one in four—and then, suddenly, when he has given up hope or forgotten all about it, he will chance upon not *one* four-leaved clover, but two or three or a dozen; for it is quite usual for them to grow in colonies, and sometimes a whole field of clover will display a marked tendency to grow by fours.

Whether such abundance makes the fortune of the lucky farmer who owns the field, we have never heard.

WORDS OF PRAISE.

Oliver Ellsworth, of Connecticut, who was one of the most conspicuous men of the country during the administrations of Washington and Adams, seems to have had at the beginning of his career no expectation of becoming eminent. His ambition was limited to gaining a living for himself, his wife and children.

But one day, while arguing a case in court, he heard a stranger say, "Who is this young man? He speaks well."

Those words made Ellsworth Chief Justice of the United States, Minister to France, and United States Senator. He went home after court was adjourned, told his wife what he had heard, and began to think of rising at the bar. In his old age, looked up to and respected as a Christian statesman, he used to say that these words were the turning point of his life.

But young Ellsworth was not only sensitive to praise, he was an industrious young man, who did many things which had no reference to the law because it was his duty to do them.

When, after graduating at Princeton, and having become a member of the bar at Hartford, he began to practise law, his father gave him an axe and a wood-lot.

"Oliver," said the old man, who was a pioneer, "if you wish to get ahead, you must work for it."

Oliver settled on the wood-lot, some distance from Hartford, cleared the land, split rails to fence it, built a log-house, and there received the clients who sought him.

When the term of court began, he walked down to Hartford, argued his cases, and then returned home to his wood-lot. On coming into court, the spectators observed that the young lawyer's hands were swollen and pierced with thorns. That fact did not discredit him with the farmers who served as jurors and witnesses. But after he heard the words of praise, he paid more attention to his books and less to his farm.

SAVINGS.

Within the past few weeks an ingenious toy safe has made its appearance, and has become instantly popular. It is a small cylinder in nickel plate, with an aperture just large enough to take in a dime. The safe will hold exactly fifty dimes, and cannot be opened until it is full. When, therefore, one has begun to save dimes, there is no stopping, or at least no getting at what has been saved, without breaking the holder, until five dollars have been put into it.

So many were the purchasers and users of this little affair that in some communities there was speedily a scarcity of silver dimes.

The idea is, of course, that when one has collected his five dollars he will not spend the money, but treat it as savings, and deposit it in a savings-bank.

We think that there are probably not many people outside of New England who know what an important part the savings-bank plays in this part of the country. In Massachusetts, for example, there are more than three hundred and fifty million dollars deposited in savings-banks; and all of it is in small sums, for the law does not allow any person to draw interest on more than one thousand dollars in any bank.

In many places out of New England—and there are few such banks except in the Eastern States—there is no institution where five dollars, when saved, can be put at interest.

It would be worth while for our friends all over the country to study the savings-bank system of New England, and see what a power there is in a great many little sums when combined in one big sum.

Think of it! The accumulated savings of the working people of Massachusetts would pay one-third of the national debt.

HAPPY QUOTATION.

An interesting scene in the French Senate is recalled by A. L. Sardou in his "*Petites Erreurs et Petites Ignorances*," showing how a presiding officer, with ready wit and good sense, spoke the right words at the right moment, and saved the body of which he was president from committing itself to an absurd and fanatical measure.

At the meeting of the French Assembly on October 6, 1849, after Louis Philippe had been dethroned and the Second Republic established, Citizen Thouret, a representative of the most ardent republicanism, complained bitterly because the *Moniteur* had called him "monsieur." He demanded that the official journal should hereafter give the title of "citizens" to the national representatives and to Frenchmen in general, and that the title of "monsieur" should be proscribed in the Republic as a relic of monarchy.

The president, the senior Dupin, allowed no time for the friends of Thouret to carry this extreme motion, but at once demonstrated the absurdity of it by addressing to them some excellent advice. "Call yourselves *messieurs*, and be *citizens*!" he cried, and the interrupted orator said no more. The Assembly was struck with the significance and good sense of the president's epigram. "As a matter of fact, though few were aware of it, Monsieur Dupin's words were not original," writes M. Sardou, "but he was happily served by his memory, which recalled to him a line from the '*Dialogue entre deux journalistes*,' a poem which that charming writer Andrieux read fifty years before at a public meeting of the Institute."

Notable Articles Next Week.

In next week's issue of THE COMPANION will be printed the first, by *Madame Emma Albani*, of a Series of Articles for

"The Girl with a Taste for Music."

Also the first of two Articles by *General John Gibbon, U. S. A.*, on

"Reading Indian Sign."

An account of the "SEA SERPENT," by one who has seen it, will be read with interest; also a striking Memorial Day Story, by E. W. Thomson.

LITERARY FACTORY GIRLS.

An aged clergyman, who can hardly be other than the venerable Dr. A. P. Peabody, sends to the *Atlantic Monthly* some reminiscences of one of the editors of the Lowell *Offering*—Miss Harriet Farley. The editorial connection of Miss Lucy Larcom with the same magazine—a magazine edited and written by factory girls—will be recollected by many readers. During the several years of Miss Farley's editorship she was the most copious writer for the *Offering*, and her articles indicated not only superior culture, but literary talent, taste and versatility that won more than approval—hearty admiration—from those best fitted to judge.

The *Offering* had a subscription list of four thousand, which meant fully as much as twenty thousand would at the present time.

It was in every respect on a level with the best magazines of the day. Its profits enabled Miss Farley—the daughter of a poor minister—to carry a brother through Harvard College, and to make generous provision for the comfort of the family at home.

The work attracted no little attention on the other side of the Atlantic. A volume containing a selection from its articles was published in London in 1849, and at a much later period, my friend President Felton, in Paris, while attending part of a course of lectures on English literature, heard one entire lecture on the history and the literary merits of the Lowell *Offering*.

During the palmy years of the *Offering* I used, every winter, to lecture for the Lowell Lyceum. The Lowell hall, one of the largest of its time, was always crowded, and four-fifths of the audience were factory girls.

When the lecturer entered, almost every girl had a book in her hand, and was intent upon it. When he rose, the books were laid aside, and paper and pencil taken instead; and there were very few who did not carry home full notes of what they had heard.

I have never seen anywhere so assiduous note-taking—no, not even in a college class where the notes might be of avail in an impending examination—as in that assembly of young women, laboring for their subsistence, many of whom in after life filled honorable, useful, in some instances conspicuous positions in society.

SELF-BETRAYED.

People who jump too quickly at conclusions sometimes have occasion to wish that they had not been quite so clever. "You ought to be ashamed to make fun of my hair!" cried a little girl whose curly locks are red. "Why, I didn't!" was the indignant reply; but the aggrieved one returned, "I heard you. You said, 'Isn't it horrid?' and you *must* have meant my hair!"

A good story is circling throughout Germany about a *Schusterbub*, or cobbler's boy, who was lately waiting outside the palace to see the Emperor come forth for his afternoon airing. Finding the delay tedious, he suddenly exclaimed:

"The booby isn't coming! I shall go."

A policeman at once caught him by the collar, and shouted, "Whom do you mean by 'the booby,' sirrah?"

"Why, my friend Michel!" whined the boy. "He was to have met me here, but he hasn't come."

The policeman of course accepted the explanation, and let him go, whereupon the boy retreated twenty paces, struck a derisive attitude, and yelled:

"And whom did *you* mean by 'the booby'?"

THREE PACES.

Convicts who were forced to drag about a ball and chain at the galleys could often be detected, when released, by their habit of trailing one foot after the other. John Boyle O'Reilly, condemned to convict life in Australia for his Fenian sympathies, had also in after years a habit which told a like sad story. Says a friend in his recent "Life:"

When walking abstractedly and mechanically, he always went a short distance, and then retraced his steps, no matter how wide a stretch he had before him.

It was always three paces forward, turn, and three paces back, exactly like the restless turning of a lion in a cage. One day I asked him:

"Boyle, what was the length of your cell when you were in prison? How many paces?"

"Three," he said. "Why do you ask?"

"Because, when you are absent-minded, you always walk three paces forward, and then retrace your steps."

"CONTRARY-MINDED."

The last Legislature of Kansas will be known in history as the "Farmer Legislature," because the House was composed very largely of men from the rural districts. Some of the members had had experience in parliamentary rules, but many of them were entire strangers to the technical language of law-makers.

One day during the session the regular speaker called one of his farmer friends to the chair to act as speaker *pro tem.* A motion was soon made to lay a certain resolution on the table. The speaker gravely put the motion as follows:

"All those who want the resolution to lay on the table say aye! And all who want to be contrary say no!"

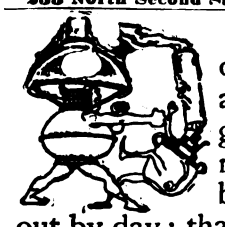
The ayes had it, and the resolution "lay" on the table as surely as if the motion had been put in the good old way.

A Sudden Change of Weather will often bring on a Cough. The irritation which induces Coughing is quickly subdued by "*Brown's Bronchial Troches*," a simple and effective remedy for all Throat troubles. Sold only in boxes. Price, 25 cents. [*Adv.*

"Silk Sponge" Underwear Fabric.
Of pure silk, referred to by "Shirley Dare" in New York *Herald*. Sample and catalogue for 5-cent stamp.
GEO. S. BROWN, Mfr., 19 West St., Boston, Mass., U. S. A.

How to OBTAIN A BUSINESS EDUCATION AT HOME.
By means of practical **Correspondence** instruction, as given by the CHAUTAUQUA SCHOOL of BUSINESS. Full particulars free. Address,
K. F. KIMBALL, Chautauqua Office, Buffalo, N. Y.

is guaranteed to rid any building of Water Bugs and Roaches or money refunded. A fatal food, yet non-poisonous. Insist upon having it. Scores of testimonials. If your druggist or grocer does not keep it, send 60 cts. for pound package to
HOUGHTON & CO., 25 Hawley St., Boston.



Raising the School House Flag.
We have just printed a new edition, in two tints, of the beautiful Illustrated Souvenir Poem, "Raising the School House Flag."
Has your school raised a flag?
If so, you are entitled to the Souvenir. Let your teacher sign the order, and we will send it to your school **free,** postage paid by us.
If your school has *not* yet raised a flag and yet wishes to, let us know it and we will mail you **free one hundred School Flag Certificates.** With these Certificates scores of schools have raised money for a $10 flag in one day's time. If you wish the Certificates one of the teachers must sign the order.

CITY LIFE FOR WORKING GIRLS.

Sewing.

Ready-made Clothing from Contract-Shops.

Wretched Wages!

Starved and Hopeless lives!

The leaving of country homes for employment in large cities, by our country-bred girls, brings to most of them severe privations and many real dangers. To show what these perils and privations are, as well as to describe the character of

some of the employments and the treatment of girls in shops in cities, is the purpose of this article and others that may follow.

Prices of Clothing.

Let us first look at the employment of girls upon ready-made clothing as found in the contract-shops of Boston. That we may obtain facts essential to an understanding of this very extensive business, we will stroll down Hanover Street, or any other thoroughfare largely given over to the exposure for sale of men's ready-made clothing. Some one of the many alert Hebrews who pace in constant vigil before their shop doors to entice purchasers, cries out:

"You buy something in my line? Look! Clothing cheap."

We stop long enough to note that the clothing swinging outside, and price-marked on staring cardboard, is indeed "cheap."

A pair of men's pantaloons, of fairly durable material and respectable in appearance, may be bought for two dollars and fifty cents or even less.

A complete black suit of diagonal stuff, men's size, the coat and vest bound with neat worsted braid, and the whole, while coarse of texture, by no means unattractive to look at, costs but ten dollars.

Complete suits for men, made up of shoddy though fairly durable checked cassimeres, lined and trimmed with good-looking material, and quite respectable in appearance, may be had for seven dollars and twenty-five cents, or less; while overcoats are offered in men's sizes for eight dollars and poorer ones for five dollars.

Goods and prices such as these are offered at every shop.

The Contract-shops.

A visit to the contract-shops where coats of all sorts are made up—it is believed that there are at least sixty of these places in Boston—will help us to understand how these seemingly well-made garments can be sold so low.

The proprietors of these shops, who are nearly all Russian or Polish Hebrews, contract with many of the large wholesale and retail clothing-houses to make up coats by the quantity at specified low rates.

The coats are cut, and then sent in bundles to the shops, there to be put together by men, women and girls.

The competition among these contractors in coat-making is very sharp. The goods are made up at the lowest possible price. This, with the profit the contractor seeks to make, compels the hiring of work-rooms in the cheapest old buildings that can be found in the worst sections of the city. Some of the shops are reached by six or more flights of stairs, nearly all of them wooden, and almost invariably foul with accumulated litter and dirt.

Entering one of the work-rooms during the busy seasons, we shall find it crowded with doggedly toiling men, women and girls, with here and there a boy. Compressed closely about the room are long tables on which men, mostly Jews in their shirt-sleeves, are trimming the cut work with shears. Near by are sewing-machines, either arranged on long benches or on small, separate tables, together with presses worked by treadles, which with the operator's aid hold down and push by a complex leverage great hot irons over the cloth that is placed beneath them.

The floor is strewn with litter and heaped up with bundles of work, making passage almost impossible and sensibly diminishing the restricted air-space.

When these shops are crowded, the air is fetid and fatal to health. The workers have an air of suppression such as characterizes a gang of prisoners.

The women and girls are of various nationalities. A number of the better dressed in the shops we are describing were Hebrews. There were also Portuguese, and some who looked like Italians. The majority, however, were of American birth.

Their ages were generally from seventeen to thirty; but there were women of fifty-five or more, and girls who were not over twelve or thirteen years of age.

They were, as a whole, poorly dressed. Many of the faces were drawn and haggard, and, with only here and there an exception, the expression was hard and sad.

How the Work is Done.

The labor in these shops is closely subdivided, though not so closely as it is in the very large establishments of a different order, which make all sorts of garments. In the average contract-shop of the grade we are describing, while the subdivision is not so minute, no worker has more than a small fraction of a whole garment given to her. The following will show the process in a general way:

The coats are first cut, as we have said, and then sent in bundles to the contract-shop with their linings and other "trimmings."

They are then trimmed by men to ensure the exact matching of the parts, and marked with chalk to show where the pockets, buttonholes, etc., are to be placed.

Next the pockets are stitched by a machine operator—usually a man.

Then treadle-pressed by a young girl.

Another machine operator, usually a man, sews the seams.

Then the linings and edges of the goods are stitched.

These stitched edges are pressed by a girl.

Here the whole garment is basted together, ordinarily by girls.

Then the edges of the coat are stitched or bound.

The shoulders are here specially basted by a girl.

The garment passes to that large class of overworked and underpaid girls—the finishers—going through several separate processes, all minute hand-work.

The basting-pullers—very young girls—then receive the work.

The buttonhole-makers follow, and bar-tacking by another girl.

The garment passes on to girls who press the edges through the treadle press.

A man then takes the whole garment, and treadle-presses it.

The buttons are then sewed on.

After which the bushel-girls look over the garment to see that no part is slighted, and with other garments it is done up in a bundle to be returned to the senders.

Processes differ, somewhat, in the various shops, but the above description shows with sufficient accuracy the average proceeding.

The hours of work in the shop are from seven in the morning, or shortly after, until six in the afternoon, or a little later. In some of the shops, through the effect, it is said, of a strike, the closing hour on Saturday is now fixed at five o'clock. Forty-five minutes to an hour are allowed for lunch, and the girls generally get a chance to heat their tea at the stoves.

Time was when industrious tailoresses who were experts in the making of ready-made garments could earn in the busy season fifteen dollars a week. To-day, even in the better class of custom-work establishments, the wages are more than fifty per cent. lower. In the contract-shops of the class we are describing, a coat-baster is fortunate if she can hold her wages for the few weeks during the busy season to an average of seven dollars per week.

Wages Given the Girls.

During the busy seasons when they can get work, thoroughly competent machine-operators, if girls or women, may earn on the average seven dollars a week, or possibly a little more. Bushel-girls hardly are able to earn five dollars weekly; while the expert finisher who is called upon to do a series of exacting small jobs in hand-sewing, exceedingly trying to the eyes and nerves, is fortunate if by working through nearly all of her lunch time, and up to a late hour at home in addition to her regular ten hours of shop-work, she is able to earn five dollars per week.

The finishers are commonly paid by the piece, the other workers, as a rule, by the week. The little basting-pullers will hardly earn two dollars a week.

The business of vest-making is largely followed in small shops controlled by women, and does not appear to be in the hands of Hebrews. In this line of work competition has apparently reduced wages in some departments a little below the prices quoted for coat-making.

These vest-shops appear to be free from many of the objectionable features of the coat-shops. Many vests are put out to be made at the houses of workers.

Wages for workers on pantaloons of the cheaper grades will, it is thought, approximate the contract-shop rates for coats.

It should be said here, that there are large independent establishments in Boston, confined mainly to the making of the better grades of men's garments, where the conditions as to wages and prospect of advancement are much better than those of the contract-shops, and where most of the objectionable incidental features we have indicated are unknown.

Diminished Wages.

The wages given above are such as may be earned by the most expert girls in the busy season. These are lowered by other conditions. In the coat-shops unsatisfactory work is unsparingly rejected, and fines are frequently imposed. Hours are strictly kept, and in some of the shops, perhaps in most, a worker who is not on hand at the minute of commencing work in the morning, is shut off from work on that day until noon, or for the whole day.

Cut-downs on wages are common, and these, with the causes of loss that have been named; the Jewish holidays, consuming eight or nine days of the busy season; and the long stretches of dull times between the busy seasons, when many of the workers can find little or nothing to do, reduce the average sums earned by girls and women far below the figures which we have given. These can be accurately given at from

$2 to $4 per week.

But this is not all. Add to the barren wages, the exacting oversight of the "bosses," forcing the workers to unnatural tension; the prevalent fetor of the air of the crowded shops; the abounding dirt; the enforced association of girls with men of unclean habits and gross speech; the drain upon the health; and the lowering of the moral tone of the girls and women, and you have a phase of life worthy the anathemas of a Hebrew prophet.

What the Girls Say.

The writer has talked with many of the girls, and the accounts which most of them give of their hard experiences throw added light on the statements already given.

One experienced coat-worker says: "We don't learn a trade, nowadays, we only learn a small piece of a trade. No girl in the coat-shop

where I work is free to so much as *look up* from her work. If she does she is talked to by the boss. I don't think any delicate girl can very long stand the strain of working in our shop. I know girls that have broken down, and some that it has killed. The girls do not dare to stop to learn any better trade; they *can't* stop—not for a day. If they do they can't pay for their rent nor their food."

Another said: "The coat-makers advertise decent weekly pay by the piece, but we girls can't earn it without killin' ourselves—and then you can't!"

An intelligent elderly woman, who has spent her life in coat-making and remembers the old times, says: "The contract-men get into the cheapest and dirtiest rooms they can find. They hire the girls for almost nothing and then drive them. My last boss was a hard taskmaster. His eye was on the clock and on your working all the time."

"Above the Average."

Another tells a more cheerful story: "I have worked at one coat-shop for nearly fifteen years. I am a baster. Can earn eight dollars a week when business is brisk. This is above the average. It's very tiresome handling the heavy overcoats, but I don't complain. No girl will do finishing if she can find any other work. Basting pays much better. Little American girls from twelve to fifteen work in my shop pulling bastings; two dollars a week is the highest any of them get. My boss is not so very strict. I think a self-respecting girl wouldn't be spoken to in a bad way by the men in my shop."

But the stories, most of them, we are sorry to say, give a darker picture. Here is another account:

"Ashamed to Tell Where They Live."

"I have worked at coat-basting at several shops for a number of years. They are all dirty. The bosses watch you, and you must work like slaves. The boss I'm to work for now has a way of his own of slowin' the clock so as to squeeze extra time out of the girls. Other bosses do it, too.

"The men workin' where I am now are all foreigners. They are filthy; their language is bad. No girl where I am can escape it. It's frightful hot in the shop in summer when we're crowded, and it's often cold in the winter. Many poor girls workin' with me won't tell where they live; they're ashamed to. They find rooms in attics, in bad localities. God knows how they can live! We get to work at seven sharp at our shop. If you're two minutes late they send you home for the day."

A Pitiful Story.

A vest-maker of life-long experience, who has also done coat-work, says: "I lost my health, years ago, in a contract-shop. It was three years before I could so much as use a needle. If my friends hadn't helped me I should have gone to the almshouse. Now and then a contract-shop boss tries to be honest and fair, but it's hard for him to do it where there is so much competition. There was a time when a girl who did right could do well at vest-making. Most of the girls who work at it now are working over-time and well into the night, and then they can't live half-way decent on their pay. There are those who talk of making much more than others, but if they earn more, they do it by working into the morning hours. They can't keep up.

Digitized by Google

"The girls can't make anything like what some of the bosses say they can. There was one poor creature over here that earned something like what the boss said she could. 'She's killing herself,' said I, and sure enough, she worked herself into her coffin.

"I knew others who just killed themselves trying to scrape a decent living. There's many that die of overwork. I am working now at vest-making at home. I can't earn four dollars a week. I am helped, or I couldn't live by my work."

Another.

A coat-finisher and baster of long experience, a very estimable woman, tells her story:

"I've wore out my life in the contract-shops. My bosses were most of them hard men, but one or two tried to do right. I was called one of the best coat-finishers, but I couldn't usually make five dollars a week unless I worked through my noon lunch-hour, and took home the coats to work on over-time; sometimes up to one o'clock in the morning.

"Once or twice I did manage to earn six dollars for a week, by the hardest sort of overwork, but I couldn't hold to no such wages—no!

"You see it's off and on. They give you the work or they don't, as they have it or as the mood takes 'em.

"The men that work alongside of you very often are men who use low language. You can complain to the Board of Health about some things, but you can't prevent your havin' to sit down to work all day by them nor hearing their bad talk."

This woman and a young associate were at last peremptorily discharged for protesting against wrong, and a taboo or boycott was placed upon them by the united action of the contract-men so that they were unable to procure work. A worker thus shut out from the shops is said to be black-listed. The story of this experience, with the final result, is graphically told by the young woman, who introduces her account as follows:

Black-listed.

"All that my friend has told you is true. The shops was often cold in winter, and in the heat of the summer when we was crowded, it was the rule for the girls to have sick-headaches every day. In the summer the worst shop where we worked last was like a sweat-box; when you'd come out of it you'd look like a corpse. Many girls broke down and had to give up.

"I was a finisher and part of the time I kept the books. Finishing is harder on a girl than any other work in some ways. It's a great strain on the eyes, 'specially when you have to work for your life. It's paid the least of any excepting the basting-pulling.

"The boss would ask a week-worker to work over-time in such a way that she couldn't refuse. She'd never get paid for it—'twas do it or leave. That boss was a hard, mean man. Sometimes he'd throw back work to you that was well done an' say 'twas no good; just to take you down, if he thought you was earning too much.

"Well, he got to carryin' on dreadful. He'd say what he pleased to all the girls, and I think all of 'em were tryin' to live right. At last he acted so bad that my friend, who is a married woman, sent for his wife, and she come down to the shop. Then my friend spoke out, and after she had done so, she turned to the girls and says, 'I call upon you all to bear me out and tell the truth you know.'

"Not one of 'em spoke a word, though they knew well what I knew, and had complained among themselves and to me about it in private.

"Poor things! We can't blame them too much; they were afraid for their lives they'd lose their jobs. Not a girl dared so much as say a word, and me and my friend was discharged there an' then.

"Well, we started out to get work. It was hard to find, but at last we was took into a shop, and got the worst pay we'd ever had, but we was glad to get anything. We worked two days and a half, and you could see we was doing work that the boss thought was fine. He was every way satisfied. But at the end of this time he come into the shop *wild*, and run up to where me an' my friend was sittin', took the work out of our hands an' flung it down.

"'Here, you get out of this! Your work's no good. You can't neither of you do good work. Get out!'

"We demanded our pay and left. One of the men hissed us as we went out. We was black-listed.

"We tried other places, and at last got into a big shop run by an American, but with a Jew for foreman and Jew women and men workin' there.

"Well, we was allowed to sit down, but we couldn't get work. The foreman would hand it out to others an' only now an' then give us some bit or other.

"The men would all get together an' watch us, an' laugh and jeer. We complained about it, but 'twas no use. They didn't want us in that shop and meant to starve us out, so we left.

"We tried other places, but could get no work. The contract-shops knew us by this time and were bent on breakin' us down. What we should have done I don't know, if some good women hadn't heard of us an' come to the rescue. They took hold and raised money to keep us while we were learnin' a new trade—dressmaking—and now we've learnt it and we're doing well. Every day we bless God for the change."

As the above statements reveal a condition of wrong and of cruelty that demands a remedy, a question or two may here be pertinently asked.

Who is responsible for the competition that takes advantage of the necessities of these defenceless girls and women?

Not the "bosses" only, or the storekeeper. They cater to a demand. But back of boss and storekeeper is the public, eager for the cheapest goods, and making demands for them with utter indifference to the outrages involved. It is useless, therefore, to cry out against the contract-shops. The public is responsible for the evil.

Where is the remedy?

As society will not protect itself, legislation should step in, and by wise laws regulate the exactions of competition, and save the burdened and unprotected wage-earner from its cruelties.

FLETCHER OSGOOD.

WILL.

There is no chance, no destiny, no fate
Can circumvent, can hinder or control
The firm resolve of a determined soul.
Gifts count for nothing; will alone is great.

For the Companion.

TRAPPERS AND HUNTERS OF THE INSECT WORLD.

III.—Trap-door Spiders.

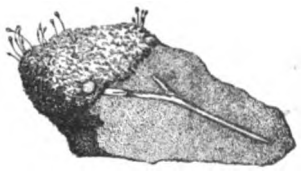
The animals that use trapping tools for the capture of prey are found, with few exceptions, in the order of Araneidæ, or true spiders. All spiders spin webs of one sort or another, for one purpose or another, but only a part of them use their spinning-work to trap their food. These are known as Sedentary Spiders; while those which stalk their prey in the open, or lurk for them in ambush like the lion, wolf and other vertebrate animals, are known as Wandering Spiders.

Among the web-making species, but lying close to the border between the two great groups, we find the Trap-door Spiders, whose spinning industry has won the admiration of all observers.

These Araneidæ are widely distributed throughout the tropical and semi-tropical parts of the world. Their representatives are to be found in every continent. It has recently been discovered, especially through the admirable studies of the French naturalist, Eugene Simon, that their species are much more numerous, and that there is a wider variety of habit among them, than had heretofore been supposed.

In the United States we have several representatives of the tribe to which Trap-door Spiders belong. Among these is the huge creature known popularly in the Southwest as the "tarantula;" but the typical species is the California Trap-door Spider.

Tourists in California are quite sure to have specimens of the trap-door nest sold to them as one of the curiosities of that land; and mounted specimens of the big tarantula are also offered, by the enterprising boys and "fakirs" of the country, as the creature that builds the trap-door nest.



Don't believe it! The tarantula has quite a different habit. It burrows in the ground, and does not build a hinged lid for its den.

The true maker of the trap-door nest is the animal whose scientific name is *Cteniza californica*, and which, when you come to look at it closely, is quite different in appearance from the huge, hairy tarantula. It is of this Cteniza that I am to write.

A full-sized trap-door nest is a tubular burrow in the ground an inch or three-fourths of an inch in diameter, which extends downward for a distance varying from seven or eight inches to a foot. This whole tubular space is lined with beautiful silk, almost as thick as an ordinary piece of silk cloth.

The mouth of the burrow is finished at the surface with a hemispherical door about one-eighth to one-fourth inch thick. It is hung by a hinge of thick silk to the surface, and is bevelled around the edges so that it fits into the mouth of the burrow like a stopper or cork into a bottle.

The edges and inside of this door are covered with silk. The outside is plastered over with dirt, so that, when the door is shut, one can scarcely notice the difference between the surrounding soil and the top of the lid.

It is this ingenious structure which has given the animal its popular name, the Trap-door Spider.

What are the uses of this trap? It serves to protect the inmate of the burrow from its enemies. These spiders, and all spiders, indeed, have many enemies, and the necessity to protect themselves has, no doubt, had much to do in developing their wonderful instincts and industry.

When the Trap-door Spider takes an outing, and is pursued by one of its enemies, it seeks refuge in its burrow, pulls down its lid, and hangs, back downward, with all its eight claws fastened upon the silken lining.

Thus it holds its door tight against raiding assailants. One will generally find in the edges of the lid two or three little punctures, which are marks made by the claws when the spider is thus barring its gates against intruders.

Even when the spider remains at home, it is apt to be visited by hungry creatures who are extremely fond of fresh spider meat. If the mouth of the burrow were open, these enemies would have no difficulty in crawling into it and securing the inmate. But a hinged door, that can be quickly shut on the first approach of peril, is evidently an admirable protection.

The nest is also used as a genuine trap to secure insects upon which the spider feeds. It has several methods of operating. Sometimes it sits at the mouth of its den with the trap-door thrown partly up, and its claws thrust a little over the edge. Ants, beetles, grasshoppers and other insects that are continually passing to and fro along the ground, when they happen near this ambuscade, are apt to peep into the opening, perhaps moved by curiosity, perhaps pursuing their natural search for food.

Such curiosity is fatal, for the lurking Cteniza shoots out her legs, grasps the victim and drags it into her den. If the insects do not come up to the nest, but only pass near by, the watchful spider leaps out, captures them and carries them back to her burrow.

Other species, again, and perhaps all species, have the habit of spinning a little silken carpet or rug just outside the trap-door. They then open the lid, fasten it back by a few threads, and stand on guard at the opening. Passing insects find their feet entangled upon the rug; and as they pause a moment to extricate themselves, they are pounced upon by the lurking spider and slain.

In other cases the underground burrow itself appears to serve as a trap. I have read several accounts of nests that were dug into the midst of formicaries of ants.

M. Simon tells of one, in North Africa, that was thus located within the premises of a large colony of the famous harvesting ant *(Atta barbara)* of Palestine and the Mediterranean. This is the insect to which Solomon alluded when he said, "Go to the ant, thou sluggard; consider her ways and be wise!"

Now ants are real Paul Prys, as we saw in the account of the trapping-pit of the myrmeleon, or ant-lion. One can hardly blame the little fellows for looking into such a pretty, silk-lined hall and gallery as that wrought by the cunning Trap-door Spider.

What a lovely place! How smooth this silken carpet! How beautiful the tapestry of these walls! How fair and delicate the covering of these ceilings!

Thus on and on the emmets wander, exploring the length and depth of this strange, beautiful underground palace, until they are startled by the grim shape that springs up from the inner recess, and repeats the old, sad tale of the schoolbook rhymes, "The Spider and the Fly."

Besides these uses, the Trap-door Spider's nest serves as a nursery. Within it the mother weaves her egg-bag or cocoon, which is simply a pretty silken sack containing the eggs. This is suspended like a hammock between the walls of the burrow.

In due time the eggs are hatched out, and a brood of a hundred or more Trap-door Spiderlings occupy the nest, with their mother, until they are old enough to set up housekeeping for themselves.

No doubt they have jolly times sporting along the silken chamber, tumbling over one another, playing all sorts of spider games, and feasting to the full upon juices of the insect prey which the mother Trap-door brings home.

Mother-love is much the same in the spider world as among other living creatures; and no one could be more devoted to the welfare of her young than the much abused and wrongly despised spider.

There are stories, which I do not wholly credit, that these spiderlings are not always good-natured and affectionate one toward another, but quarrel as one sometimes sees even boys and girls quarrel.

These quarrels are apt to end seriously. In fact, it has been whispered abroad that, once in a while, a big brother will eat a little brother or a little sister.

But such cannibalism has never been satisfactorily proved, and for one I am disposed to think the story a slander.

By and by, when Nature teaches the little fellows that it is time to leave the home roof and start in business for themselves, they may be seen, upon some bright spring morning, creeping from the open door and scattering throughout the neighborhood.

In a little while, if one will examine the vicinity, he will see miniature tubes, each not much bigger than a darning needle, penetrating the ground to a distance of one or two inches or more, every one a perfect miniature of the mother nest.

There is nothing more remarkable in nature than the fact that these baby spiderlings, without any education or experience, but acting simply from an impulse which is known as instinct, can construct an object so complicated and perfect as the Trap-door Spider's nest.

Even those species that make a double door, that is, a hinged lid on the outside, and a valve-like door opening both ways on the inside of the burrow, build an exact miniature of the maternal tube, in all its detail, from the very moment that they enter upon independent life.

It may be interesting to state briefly the manner in which a trap-door lid is made. In many cases, at least, the spider never changes the site of its home, but as it grows in size enlarges the burrow and the door thereto, to suit its growing proportions.

When a new door must be made, the little architect first of all weaves a silken patch across the mouth of its burrow. Then it scrapes up particles of earth and carries them in its mandibles or lower jaws to the silken patch, within which it drops them, and spreads them equally around.

This is next overspun with silken threads, and woven in closely. Then follow another coat of mortar and another layer of silk, until the proper thickness has been reached. The supporting threads are then cut away, and the edges smoothed and bevelled.

This process is continued for several years, if the spider lives as long as that, as it sometimes, and perhaps frequently, does.

The various layers of which the lid is composed may be separated by taking the trap-door from its hinge and moistening it slightly. If carefully manipulated, these layers peel off one after another like the folds of an onion skin.

The outer one is of course the largest. Each succeeding layer is a little smaller, until the last one is reached, which is the smallest of all and represents the first beginning of the door of the spiderling's burrow.

Baron Walckenær found as many as thirty layers. This process of analysis confirms the method of construction as observed by several naturalists.

One curious habit, practised by a Trap-door Spider of Southern Europe *(Nemesia cæmentaria)* and others, has been described by Mr. Moggridge. In many nests, burrowed through beds of moss and lycopodium, he found that the outside of the lid was covered with the plant growing on the surrounding space. Thus the door was concealed, and so thoroughly disguised that only with the utmost care could one distinguish it from its environment.

This naturalist demonstrated that the spider deliberately deposits these plants upon the door of its den, thus showing a remarkable degree of cunning in the practice of a habit which is known among naturalists as "mimicry."

Colored figures of these moss-covered doors are given by Mr. Moggridge in his book on "Harvesting Ants and Trap-door Spiders." One who for the first time looks at these disguised nests of Nemesia will wonder that such ingenuity can exist in so lowly a creature as a spider.

Another example of this mimicry of natural surroundings is shown by a species of Trap-door Spider that builds upon the trees of South America. Several years ago, while visiting the British Museum of Natural History at South Kensington London, I was shown specimens of these strange nests.

The spiders which made them had abandoned their ancestral habit of burrowing in the ground, and fixed their homes and spun their silken tube within the chinks or interspaces formed by the roughly fluted outer bark of certain trees.

The inside of the cells was lined with pure white silk, like the ground burrows of their congeners. But the outside was plastered over with a conglomerate of sawdust, gnawed from the surrounding bark, or brought up from the ground beneath. This so completely disguised the den that it could scarcely be distinguished from the plants on which it was fixed.

At the top of the tube was placed a trap-door of the style of these already described, and hung, like them, upon a hinge. Among the specimens of various sizes shown me were some with dainty little hinged lids not larger than the head of a pin. These were made by the baby Trap-door Spiders.

One can readily see how the builder of such a snare operates to capture prey. Trees are favorite resorts of numerous insects that constantly alight upon them, and run along trunk and branches. At the door of its well-disguised den lurks this tree-loving Trap-door Spider. No reasonable insect would imagine that the den was anything but a part of the tree. Why, therefore, should they avoid it?

Thus, as they pass to and fro, suddenly and mysteriously a bit of bark springs back, a living creature rushes forth, and the unwary traveller is snapped up and dragged into the dismal den to satisfy the maw of a hungry, ambuscading spider.

HELPING THE MAIDS.

During the War of the Revolution, while the American and British armies were contending in Pennsylvania, General Washington was in the neighborhood of Marietta, Lancaster County. General Lee, with two or three aides-de-camp, rode in advance, and stopping at a wayside inn, informed the landlord that General Washington and his staff officers would quarter at his house for the night.

This news, of course, caused great confusion among the inmates of the establishment. They wanted to do honor to the beloved commander, and bustled about to have all things in readiness upon his arrival.

"Here, you," said the genius who presided in the kitchen to General Lee, ignorant of his rank in the army, "just go out to that woodpile and split an armful for me. I must hurry up this fire, or I cannot get a good supper for General Washington."

The officer, enjoying the joke, obediently took up the axe, and soon the chips were flying in all directions. He was busily working away, when Washington and his staff rode up to the tavern.

"Why, General Lee," said the Commander-in-chief, "what in the world are you doing?"

"Oh," replied Lee, lifting his head, "I am helping the maids in the kitchen. General Washington and his officers are coming here for supper to-night."

Both generals burst into a hearty laugh, in which their companions joined; and even the landlady, who had set the general at work, enjoyed the joke after she had recovered somewhat from her mortification.

SUGGESTIONS

USEFUL PARTS OF PLANTS.

Name plants that are valued or cultivated for each of the following parts:

1. Root. 2. Trunk. 3. Bark.
4. Sap. 5. Buds. 6. Leaves.
7. Seeds. 8. Coma, or hairy seed-covering.

What root is a deadly poison, and yet is a common article of diet?

For the Companion.

MARGIE.

That lovely brook, I see it
Still flashing in the sun;
And she and I are children
Once more in Idlington;
And Margie on the bank there,
I see as she used to look,
Those summer days when she played with me,
On the borders of the brook.

What wonderful ships and shallops
I made for Margie then,
With leaves and grass for cargoes,
And sticks and straws for men:—
And what brave names we gave them—
"Orlando," "George-a-Green,"
"Sir Galahad," "King Pellemore,"
"The Cid" and "Sir Cauline!"

We cared not much for traffic,
Yet our captains and our mates
Brought often the honeys of Hybla,
And Tunis figs and dates;
But when love called, or honor,
We sent our vessels out
In aid of all who needed them,
With many a cheer and shout.

We wrote to Robinson Crusoe,
That we hoped, now Friday was gone,
He would come straight over and see us,
With all his goat-skins on;
And bring the poll-parrot with him,
So when they stepped on shore,
We should know them both and take them home,
Never to wander more.

As the seasons changed, so we did;—
In spring we dreamed of fame;
And in summer of autumn's riches;
And when October came,
We stripped the yellow gold-trees
And sent our ill-got gain
In caravels to Andaluce,
Across the Spanish Main.

That lovely brook,—I know not
Just where it comes from now,—
But in those days it wandered—
As Margie could avow—
Right out from far Cipango,
And merrily ran on
Till it came to the fairy fields this side
The valley of Avalon.

It heard in Sherwood Forest
Brave Robin's bugle-calls;
And carried off the music
To dash it on the walls
Of the city of Manoa;
And could be seen afar,
In clearest air from Samarcand,
And near to Candahar.

Sometimes I see the windings
Of that brook, as in a dream,
While it flows away to the sunset;
And here and there the stream
Is touched with a light so tender
That it seems to my loving eyes,
The course of a beautiful human life
Ending in Paradise.

And plans and schemes are the vessels,
And hope is the wind that blows,
And all good aims are the harbors,
And time is the tide that flows;—
And then again all changes,
And I see ourselves once more—
Dear Margie and a little boy
Playing along the shore.

HENRY AMES BLOOD.

For the Companion.

THEN AND NOW.

A singular picture of the manners of our forefathers is given in a letter from Lord Peterborough, who visited Pennsylvania in company with William Penn, then its owner and sole ruler.

"All the laws for the Province," says the English nobleman, "are contained in a small volume, and are so good that they have required no alteration since Penn first made them. There are no lawyers in the Province. There are four judges. Each case is stated to them fully by the parties concerned, and after the facts are clearly laid down on both sides, the judges draw lots as to which of them shall decide it. There is no appeal from this decision."

It is difficult for young people of the present day to understand the high simplicity and sincerity of life which prevailed among the early colonists in the Middle States.

"When a young man and woman loved each other and wished to marry," writes an old chronicler, "the men of the settlement gave a day's labor to help raise a log-cabin. The young husband hewed a table and chairs out of logs. One or two iron pots and pans completed the outfit for married life."

The children and grandchildren of such marriages have filled the foremost places in American history, such vigor and purity was there in the God-fearing lives of these people.

In the wilderness the lonely settler felt that God and the devil were always real and near to him. The great facts of his life—love, marriage and religion—were not wrapped or hidden in forms and ceremonies for him.

They are just as real and awful in their meaning now. But there is danger that the attention of young people will be so fastened upon things external as to overlook the truths underlying them.

A great sculptor, to commemorate the virtues of a doge of Venice, represented him lying dead upon his couch, while two angels thrust aside its curtains to reach him, in order to bear him to heaven.

The design was copied for succeeding doges, but each sculptor tried to surpass his predecessors in the drapery of the curtains, until in the tomb above the last of the Foscari, the dead ruler lies surrounded by exquisitely carved draperies, but the angels are left out altogether.

The sculptor failed to provide any means for the doge to rise to heaven!

Curtains are useful and beautiful things, but we must not let them cause us to forget or banish the angels.

BANCROFT AS A SCHOOLMASTER.

We think of the late Mr. Bancroft as an historian, a Cabinet minister and a diplomatist, but he was first known to his countrymen as a brilliantly successful schoolmaster. He came home from Germany in 1822 deeply impressed with the excellence of the German systems of education, and soon after, in conjunction with a friend older than himself, Professor J. G. Cogswell, established a boarding-school at Northampton on the German plan, with American improvements.

It was a novel, bold and wise enterprise. There was a farm belonging to the school, on which the elder boys performed some labor, and to every four pupils was assigned a piece of land to be cultivated wholly by themselves. There was a gymnasium also, and a good swimming-place in the Connecticut, and the boys were allowed to build for themselves a village, which they called Cronyville, where each of them built a shanty with a chimney and fireplace, where he could roast potatoes and apples, and invite his neighbors to a winter-evening feast.

The boys enjoyed long rambles in the adjacent country, accompanied by one of the teachers as guide, philosopher and friend, and every summer one or both of the principals went with the whole school on a pedestrian tour, extending their journey sometimes far up into Vermont or New Hampshire, or into the mountain region of Western Massachusetts.

At the same time the teaching was rational and thorough, much on the German plan, though without prizes, and with scarcely anything that could be called punishment.

The school became immediately popular. A German prince, the Duke of Saxe-Weimar, who visited it in 1825, two years after it was opened, found seventy-four boys there, and the principals had so many applications for admission that they were about to add a fourth building to the three already existing.

One of the pupils at that time was John Lothrop Motley, then an active, eager and pretty little boy of eleven, afterward so famous as an historian and diplomatist. The first letter he wrote home to his mother gives us a lively idea of the scene:

"DEAR MOTHER: I intend to have now the pleasure of writing you a few lines. I do not know when I have enjoyed myself so much as I did yesterday (Saturday). In the morning the gardens were distributed, and I worked in it an hour before school, and in the afternoon we worked a good while in them.

"After that we went to ride in a nutshell, otherwise a monster of a carryall with five seats in it; each seat holds five, so we had twenty-five in it, and another carryall behind us as full as it could hold. After we came back we went into water, and it refreshed us very much.

"I wish you would send me up some nankeen pantaloons, as my woolenet ones are so tight that they are uncomfortable, and besides that, woolenet is too thick.

"I should like to have you send me up my French dictionary. I am reading Hume's History of England, which Mr. Cogswell lent me, and think it very interesting. I wish you would write as soon as you possibly can.

"I have commenced Spanish, which I like very much. I think this is a beautiful place. From my bed I can see a branch of the Green Mountains; Mount Tom and Holyoke, too. I should like very much to go up them. Give my love to all at home, and believe me your affectionate son,

"J. L. MOTLEY."

It is to be regretted that this excellent school did not finally prosper. The number of scholars rose to a hundred and twenty-seven, but as neither of the principals was a practical man of business, the terms were fixed too low, and they lost heavily by bad debts in distant States.

They struggled along for seven years, and then Mr. Bancroft withdrew. Two years after his partner abandoned the enterprise, after having lost twenty thousand dollars. It was just the kind of school which the country wanted, and which it wants to-day.

THE "COURSE OF EMPIRE."

When Berkeley wrote, in his poem "On the Prospect of Planting the Arts and Learning in America," "Westward the Course of Empire takes its Way," the settlement of America had little more than begun. The expression was perfectly true at that time, and it remains true still. The centre of population and of political influence in the United States continues to move westward, just as for hundreds of years the centre of civilization and power has, with a few fluctuations and apparent backward waves, moved westward in Europe.

Just where the centre of population of the American colonies was when Berkeley wrote we do not know. Probably it was not far from the spot where the first census of the United States, in 1790, found it—just north of the thirty-ninth parallel of latitude on the eastern shore of the Chesapeake Bay, opposite the city of Baltimore in Maryland.

Since then, by the aid of the enumerations made every ten years, it has been possible to follow the centre of population of the United States on its steady westward march.

In the first ten years, from 1790 to 1800, it moved just forty-one miles, to a point eighteen miles west of Baltimore, still in Maryland. In the next ten years (1810), it advanced only thirty-six miles westward—the smallest advance in any ten-year period—and was found in Virginia, just west of the Potomac River.

Ten years more (1820) and it had moved fifty miles; ten years more (1830) it was thirty-nine miles farther west; in 1840, it jumped fifty-five miles; and in 1850, though it had gone another fifty-five miles, it was still in what was then the State of Virginia.

Not until 1860, the immense development of the West and the annexation and settlement of California having given it a long jump of eighty-one miles in the decade, did the centre of population enter the State of Ohio. It was now twenty miles south of Chillicothe, in that State.

The year 1870 found it still in Ohio, forty-eight miles northeast of Cincinnati; but in the succeeding ten years it crossed the Ohio River into the extreme northernmost point of Kentucky.

A bulletin of the census of 1890 shows that it has now marched forty-eight miles still further westward, and by an interesting coincidence is now well into the State from which the President of the United States now hails—Indiana.

It is located on the Muscatatuck River in Decatur County, Indiana, close by Westport, a station on the Cincinnati, Indianapolis, St. Louis and Chicago Railroad, and about ten miles south of the thriving city of Greensburg.

During all this period the centre of population has moved but very slightly either northward or southward. In 1790 it was in north latitude thirty-nine degrees sixteen and one-tenth minutes; it is now in latitude thirty-nine degrees eleven minutes and fifty-six seconds.

With the development of the Pacific States, and the probable future establishment of large populations on lands to be made cultivable by irrigation in the arid regions of the West, the centre of population is likely to make, before it stops at last, still farther westward strides.

It has still to go seventeen whole degrees of longitude before it reaches the centre of the *area* of the United States—excluding Alaska. This geographical centre of the country is in Northern Kansas, almost on the very line of latitude—thirty-nine north—which the centre of population has so persistently followed.

For the Companion.

MISERRIMUS.

This is the sole inscription on the stone which covers the remains of Rev. Thomas Morris, in the north walk of the cloisters at Worcester Cathedral. He was a Minor Canon of Worcester who refused to take the oath of allegiance to William III., and was consequently reduced to great poverty. He died at the age of eighty-eight, and at his request this single word was placed upon his tombstone.

"Most wretched one!" No, not to him belongs
Misery's preëminence in this sad world's sight
Who suffereth for conscience and the right,
As he deems right. To him the scourging thongs
Of adverse fortune and the countless wrongs
His fellows cast upon him are too light
Afflictions to endure forever. Spite
Has never hushed one note of heavenly songs.

But he that gains the plaudits of the crowd
For deeds unworthy, hears men name his sins
As virtues, and thereof wax emulous,—
He only that such shameful honor wins,
(Not this non-juring priest), should cry aloud
Past hope, "*Miserrimus! Miserrimus!*"

OSCAR FAY ADAMS.

HE DID HIS SHARE.

It was in India. Dinner was just finished in the mess-room, and several English officers were sitting about the table. Their bronzed faces had the set but not unkindly look common among military men. The conversation, at best, had not been animated, and just now there was a lull, as the night was too hot for small talk. The Major of the regiment, a clean-cut man of fifty-five, turned toward his next neighbor at the table, a young subaltern, who was leaning back in his chair with his hands clasped behind his head, staring through the cigar smoke at the ceiling.

The Major was slowly looking the man over, from his handsome face down, when, with sudden alertness, and in a quiet, steady voice, he said:

"Don't move, please, Mr. Carruthers. I want to try an experiment with you. Don't move a muscle."

"All right, Major," replied the subaltern, without even turning his eyes. "Hadn't the least idea of moving, I assure you. What's the game?"

By this time all the others were listening in a lazily expectant way.

"Do you think," continued the Major, and his voice trembled just a little, "Do you think you can keep absolutely still for, say, two minutes—to save your life?"

"Are you joking?"

"On the contrary, move a muscle and you are a dead man. Can you stand the strain?"

The subaltern barely whispered, "Yes," and his face paled slightly.

"Burke," said the Major, addressing an officer across the table, "pour some of that milk into a saucer, and set it on the floor here just back of me. Gently, man! Quiet!"

Not a word was spoken as the officer quietly filled the saucer, walked with it carefully around the table, and set it down where the Major had indicated on the floor.

Like a marble statue sat the young subaltern in his white linen clothes, while a *cobra di capello*, which had been crawling up the leg of his trousers, slowly raised its head, then turned, descended to the floor, and glided towards the milk.

Suddenly the silence was broken by the report of the Major's revolver, and the snake lay dead on the floor.

"Thank you, Major," said the subaltern, as the two men shook hands warmly. "You have saved my life."

"You're welcome, my boy," replied the senior. "But you did your share."

TOUCHING INCIDENT.

A group of emigrants was gathered in the long, dreary passage which opens on the bay at the Jersey City Station, and as the passengers waiting for the midnight train strayed that way they observed a stolid, pathetic look on each face, that told of some greater sorrow than the loneliness of a strange land. There were the aged grandmother, the father and mother, and a family of half-grown children—little men and women—who moved and talked and looked like their elders. But they were all silent now, and sat motionless on the hard benches on which their rude luggage was piled.

Between the father and mother was a rough bed, extemporized from shawls and comforters and a coarse cloth coat, and on that bed the youngest of the family was sleeping; but there was that in the aspect of the group that denoted such a deep sorrow that one of the passengers approached and asked:

"Is the child sick?"

The Danish people shook their heads—it was an unknown tongue to them. But one of the boys, who had picked up a few of the necessary English words from his fellow-travellers on the steamship voyage to this country, answered, without moving a muscle of his face:

"Yesh—shleeps."

An hour later an official stopped and looked at the group. Then he turned down, with no ungentle hand, the coverlid from what he believed to be the sleeping child.

"Why," he exclaimed, starting back, "this child is dead."

"Yesh," said the boy who could speak English, "shleep—dead."

And these people had sat by their dead for nearly eight long hours, racked with anxiety as to what they should do, distracted with grief, yet unable to express a word of their trouble to the many sympathizing hearts that were within reach of them.

They left the little yellow-haired girl baby, consigned to a foreign grave, and went on their way; but though they shed no tears, there was that in their blue eyes that told of a deep wound, and doubtless in their new home they will miss the quaint little figure in its blue woollen dress and round white cap and tiny wooden shoes—the Danish baby that lies alone under the shade-trees of Jersey City.

UNTRUSTWORTHY.

The seminary where Mrs. Langham's daughter was a pupil one night gave a reception, at which that lady was unable to be present. Her husband, however, was there, and solemnly promised before he left home to bring back information regarding the prettiest dresses worn by the girls.

"Now," said Mrs. Langham, when he returned, having left the daughter to spend the night with a schoolmate, "what was the handsomest dress there? Did Edith look as well as any of the girls?"

"Oh yes, yes; better than most," said Mr. Langham briskly.

"What did Jenny Sears wear?"

"Well, I should think Jenny had on a green sack, or something, and a kind of a blue cape over her shoulders."

"A cape and a sack, and at a reception! My dear, do think again!"

"Oh, I'm quite sure of it! I noticed her particularly. And then there was Belle Smith. She had a light blue dress, if I remember rightly, trimmed with purple."

Mrs. Langham regarded her husband in some scorn. Then she deliberately set a trap for him.

"My dear," said she, gently, "what did Edith wear?"

"Oh, Edith? That black and white check, to be sure, that she wears to school."

"That proves it," said she. "After this I shall know exactly how much to depend on your knowledge of dress. Edith wore a new white muslin. Never mind, dear! Go to sleep. We can't *all* be clever in every direction!"

WHAT HE GAINED.

Fairs given to raise money for charitable objects have long been recognized as among the quickest means known for emptying pocket-books and loading unwary purchasers with all sorts of things for which they have no use; and the prices demanded for the articles are said to be usually quite out of proportion to their value. A recent German paper gives an account of a man who strayed into a "Charity Bazaar," and had a trying experience.

He had made several quite unsatisfactory purchases, not knowing how to refuse the demands of the pretty saleswomen, and at last, to prove that he could make one sensible investment, he bought a small match-box, and carried it off in triumph and haste.

Examining it after he had left the booth, he discovered that there was no place on which to light the matches.

So, with the air of one determined not to be cheated, he marched back to the young lady of whom he had bought the box.

"There is a mistake here," he said. "You sold me this pocket match-box, and there is no place on it to scratch the matches."

"My dear sir," said the young lady, "you are quite right; I made a mistake. That is intended for a jewel-box, and costs fifty cents more, if you please."

"And what did you do?" asked a friend, to whom he related his tale of woe.

"If you've ever been to a fair," replied the other, in an aggrieved tone, "you know very well what I did. I paid the fifty cents, of course!"

NOT A CRIME.

The St. Paul *Pioneer Press* relates an anecdote at the expense of a clergyman whom we will call Doctor Brown. He is pastor of one of the churches of that city. He is noted for his good works as well as for his good preaching, and is always ready to take a hand in the enforcement of the laws against vice. One day he appeared at the office of the city attorney, leading by the hand a boy of about twelve years.

"Mr. Murray," said Doctor Brown, "I want you to have So-and-so, who keeps a saloon down in Fourth Street, arrested. He gave this boy a drink."

"Well! Ahem!" was the first characteristic utterance of the attorney, as he brushed his hand over his head and face. "What time were you in that saloon, my lad?" he inquired, turning to the boy.

"Just come out a minute ago," replied the urchin, modestly.

"Hum! Yes, yes! How did you come to go in?"

"Don' know. Just happened to."

"Gave you a drink, did he?"

"Yes."

And the boy wiped his face with an upward stroke of the palm of his hand, while Doctor Brown looked on with an expression of satisfaction. Mr. Murray scratched his head a moment, and proceeded:

"Ahem! Well, what did they give you to drink?"

"Glass of water," answered the boy.

"Why didn't you tell me that?" exclaimed the minister, turning very red in the face.

"You didn't ask me, sir," said the boy.

GRANDMOTHER'S PANTRY.

A correspondent of *The Companion*, who evidently has a "sweet tooth," waxes eloquent over the goodies made by our grandmothers, who, as he truly says, had few cook-books, but knew how to cook. He writes feelingly and well, but if he is a married man it is perhaps fortunate for him that his letter is printed anonymously.

It is long since some of us have seen any of the crullers of which we were so fond when grandmother made them.

She used to make, also, a toothsome little seed-cake, fragrant with caraway and anise seeds, with sugar on top, the like of which we have not seen since we used to slip into her pantry, and help ourselves out of the old blue stone jar in which they were always kept.

There was another and larger stone jar on the same shelf, in which she kept those big, puffy, twisted and braided doughnuts that neither looked nor tasted like the degenerate doughnuts of the present day.

Sometimes we chose a cooky instead, a cooky "as was a cooky;" not a thin, wafer-like, dry cooky, like the cookies of this generation, but a full inch thick and almost as large as a saucer—a cooky to delight the heart and still more the stomach of a hungry boy.

You remember, too, the big brown turnover with your initial on it. In these days of elaborate and unwholesome dishes you have never tasted anything better than that turnover.

You found many things in your grandmother's pantry that you never find anywhere now. And perhaps, with the exception of your own mother, you have never found any one so kind and patient and generous as grandmother herself was.

"DREENS FOR DINNER."

Into the nooks and corners
Of the fields on the dear old farm,
Tommy goes with his jack-knife
And a big tin pail on his arm;
Cutting the crisp wild lettuce,
Wisely and well he gleans;
Now we shall have for dinner
A savory dish of greens.

Here comes a gingham bonnet,
And a toddler deep within;
A big dull knife she carries,
And a little bright pail of tin;
In it are Johnny-jump-ups,
And wind-flowers airy and light,
With weeds and grass in bunches,
And blossoms yellow and white.

"Dear little girl!" cries auntie,
"She's brought a pretty bouquet.
Here is a vase for the posies,
And here are kisses for pay."
"It aint a botay," pleads Baby,
As she lifts the queer little stuff,
"It's dreens for oo' dinner, auntie,
'Tause Tommy, he didn't dot 'nough."

For the Companion.

SEVEN LITTLE TRUANTS.

Robbie was down by the willow-tree fishing for minnows.

It seemed to him a shame to be in school when the robins were singing, and the old apple-trees in the orchard were covered with beautiful, white blossoms.

He asked a robin if it would not be a good plan to go fishing. "Chee, chee!" sang the robin.

"That means 'yes, yes,'" said Robbie; so he hid his bag under a bush, and promised himself a good time.

By and by he heard a short, cropping noise close behind him, and turning he beheld a sight which caused him to say "Oh, my!" in a very dismayed tone.

There were grandpa's six Alderney calves standing at a respectful distance from him, and saying as plainly as calves can say, "We're playing truant too, Robbie. Isn't it fun?"

"To think I forgot to put up the bars!" cried Robbie.

Then he made a dash and the calves made a spring, all at once. But the bossies had each four long legs, and Robbie only two short ones.

"I guess those calves have come to stay!" he sighed, after he had chased them for half an hour.

Not a calf would go near the bars. Clearly they thought grandpa's orchard as nice a place as he did.

But help came to him at last in the form of his dog, Shep.

"Dear Shep!" he cried, heartily. "Good doggie! Help me drive these calves home!"

Shep understood, and started after the calves with such firmness and method that every bossie went baa-baaing over the rails in considerably less than five minutes.

"Splendid fellow!" declared Robbie, as he put up the bars.

"Ah, but a very naughty boy!" said a familiar voice from the wagon-house. "You've had a fine holiday with the calves, my laddie, and now you must go to school."

"Oh, Uncle Ned!" cried Robbie, hanging his head, while Shep's tail drooped in sympathy.

But there was no help for it, as Robbie very well knew. Uncle Ned popped him into the spring-wagon without another word, and started directly for school.

"Who told you I was there, Uncle Ned?" he asked, very soberly.

"Baa-baas and bow-wows!" replied Uncle Ned, with a twinkle in his eyes.

"Oh!" said Robbie.

That entrance into the busy school-room at half-past ten, and the ache in his poor, tired little legs cured Robbie of truancy. The bossies never had such a good chance again.

LILLIAN L. PRICE.

"If anybody wants some of this jelly let them speak now, or forever after be at peace," is what a little girl said after she had been to a wedding for the first time.

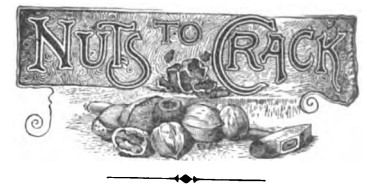
For the Companion.

LITTLE BROWN BIRD.

Little brown bird sat up in a tree,
Little brown bird sang "Fiddledy dee!
Five eggs, five eggs, all lying so close.
Five eggs, five eggs, but nobody knows!"

LITTLE Nellie climbed into Uncle Ned's lap, and began to search his pocket for a penny. Finding a silver quarter, she called out: "Oh, mamma! Uncle Ned has got a penny with a hen on it!"

DANNIE had never noticed the beating of his heart until one day when he had been running quite hard. His eyes grew round, and he said to his mother, excitedly, "Ma, there's something inside of me goes rub-a-dub-dub, rub-a-dub-dub."



A LITTLE neighbor girl came to us one day, and said, "Where is the 'hang up;' I want it."

"What do you mean?" we inquired, puzzled to understand her.

"I want the 'hang up' to swing in," said she.

Then we understood that she wanted the hammock.

LITTLE Harry went out to see the old hen and little chicks. The mother hen resented his interference, and flew at him in defence of her brood, when he ran into the house exclaiming, "Mamma, mamma, the old hen turned up her clothes at me."

Enigmas, Charades, Puzzles, etc.

1.

RIDDLE.

I am a word of letters seven,
But if you search all under heaven
You will not find, or grasp, or see,
That which you name when you name me.

Divide me now in three and four,
You'll find them both within your door,
Nor need to seek through endless space
When two words give you time and place.

J. S.

For the Companion.

"RIZ BREAD."

"Well, I don't care if them other girls are going to write about 'Thought,' and 'The Marble Stan's Waitin',' 'n' 'Genius' and all them other things. Mebbe my M'randy can't say much that's edifyin' on them subjects, tho' it's my opinion she could if she tried. But she can make beautiful riz bread, and she's goin' to tell them how to do it."

With this expression of faith in "M'randy's" powers, Mrs. McGillicuddy gave an emphatic twist to the garment she was wringing out of the suds.

The subject first under discussion was of no small importance in the village, for it related to the graduating exercises at the village High School.

With but one exception, the boys and girls in the class sought topics that would "sound well" and make a good show in the daintily printed programmes.

One of the young ladies began to write on "Twilight Thoughts;" another chose as her subject "Destiny;" another wrote at the head of the first page "Every Cloud has Its Silver Lining."

Of course each one soon learned what subjects had been chosen by the other members of the class, and loud were the complaints when it was known what Miranda McGillicuddy proposed to write about. It was agreed that the class would go down into history forever disgraced.

"But you see," said Miranda, "I don't know anything at all about these high-toned subjects that the rest of you have. I couldn't say one word about them that would be worth hearing, but I think I do know how to make bread, and I'm sure that many in the audience will be interested to know some of the quirks and the twists that turn out a handsome loaf."

"Well," said another, "I envy you the abundance of things you can say about it, but it's so awfully commonplace; why it's—it's as commonplace as—*eating!*"

Graduating day at last arrived, with its flutter of excitement, its flowers, its proud fathers and mothers and sympathizing friends, and its somewhat envious lower classes.

First came the Salutatory, which was listened to with marked attention, as would be the case even with a thoughtful paper on the "Identity of Identity and Non-Identity"—if it came first on the programme.

Then came an oration on "Greece," by a boy, followed by an essay on "Philosophy."

By this time there were signs of restlessness, and some quiet whispering going on among such as were not carefully polite. Fortunately music came in at this point, after which the audience were invited to listen to some "Twilight Thoughts." Then appeared the "Cloud" that was supposed to have a "Silver Lining," but which certainly cast no gleam over the audience.

This condition, strange to say, seemed to be intensified when "Hope" appeared.

At this point the presiding officer announced an essay on "Raised Bread," by Miss Miranda McGillicuddy.

The eager interest that came into every face in the audience was quite humiliating to those who had already appeared on the stage, and still more humiliating was the close attention that was suddenly paid to every word that was said.

The essay discussed the importance of good bread in a hygienic point of view,—the effect which a "flat" biscuit frequently has upon the disposition of the eater as well as upon his stomach; the nutritious and non-nutritious qualities of various kinds of flour, and the whole method of procedure, from the making of the yeast, through the successive stages of mixing, working, raising, reworking, moulding and baking, till that consummate flower of good housekeeping appeared—a light, nutritious and delicious loaf of bread.

Not one word was lost by the audience from beginning to end. The ladies were chiefly interested, perhaps, but men listened very attentively, too. When the reading was finished, the essay was given the heartiest applause of the evening.

After the programme had been finished, and the audience was preparing to depart, Judge Gildersleeve, chairman of the school committee, and the most important citizen of the town, rose to make a few remarks, and this was what he said:

"Before the audience disperses, I have a suggestion to make, chiefly for the benefit of those who may belong to the graduating classes of the future. If you wish, in preparing a graduating essay or oration, to interest your audience—and it is needless to say that you do—let your remarks apply to a period not later at least than a hundred years ago, and better still if they apply to a time not later than a hundred days ago. And let them be on a subject in which you are interested, and in which your audience is interested, however homely it may appear.

"It is not necessary that it should be on the proper way to bake bread, like the very interesting, practical and well-written paper to which we have just listened, or on the right way to make a bed, which would be another good subject; but it would far better be on these subjects, if you know what you are writing about, than upon Time, Genius, or the Ideal, even though you treat them thoughtfully.

"We are a practical people, and we like to be approached upon the plane of our every-day life. We are greatly interested in our schools and scholars, but we want to see you with your feet—both of them—on the ground, which precludes the possibility of your heads being among the clouds."

THESE FIGURES TELL THE STORY of the EVER-GROWING, EVER-GOING, EVERLASTING Steel AERMOTOR Where one goes others follow, and "WE TAKE THE COUNTRY"
This unprecedented success is due:
1st. To the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of sail surface, the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations proved that the power of the best wind wheels could be doubled, and the AERMOTOR daily demonstrates it has been done.
2d. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and
3d. To the enormous output of its factory which has made possible a reduction of prices so that it furnishes the best article at less than the poorest is sold for.
If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last ten times as long—IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB (The Tilting Tower) and THE WHEEL that RUNS when all others STAND STILL, or if you want a *wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e.* A GEARED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE ($100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and work, to the AERMOTOR CO., Rockwell & Fillmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

PAINT YOUR ROOFS WITH DIXON'S SILICA GRAPHITE PAINT.
Water will run from it pure and clean. It covers double the surface of any other paint, and will *last four or five times longer.* Equally useful for any iron work. Send for circulars. Jos. DIXON CRUCIBLE CO., Jersey City, N. J.

STARVING TREES.

Drought often kills trees the first summer after they are planted, but if a tree has been for some years firmly rooted it may lose all its leaves in midsummer, and yet be revived by the rains of the next winter and spring. A tree which is supposed to be killed by drought had better be nursed than mourned over, and should not be cut down as a hopeless case before the summer of the next year, according to *Garden and Forest*.

A tree which gives signs of perishing by drought ought to receive sympathy and assistance. The wilting, turning yellow and falling of the leaves are signals of distress. Usually the tree is starving. It cannot assimilate and appropriate solid substances, and as there is no water to dissolve its food it can neither eat nor drink.

But a tree of vigorous constitution, growing in its native soil, will endure a long and severe fast. Of course it will not grow while it is starved, and in time it will die. But it should not be cut down because it is having a hard trial.

The trees that are soonest injured by drought have in most cases nearly exhausted the soil in which they stand.

The treatment required is not merely a supply of water, but an improvement of the soil. Grass and weeds should be removed from the ground about the tree as far as the roots extend, and a rich loam or suitable fertilizer should be copiously applied and partially incorporated with the surface soil.

If enough water is then given it from time to time to dissolve the new supply of food, the tree is likely not only to live, but to grow much more vigorously than before.

Great numbers of trees in our towns grow very slowly, become enfeebled, and perish at last, not on account of the drought alone, but because of exhaustion of the soil and an inadequate food supply.

The people of a town ought not to remain comfortably indifferent while the noble trees which embower their daily walks are starving to death. They should take measures for their relief. Very often it would be better not to plant so many trees unless they are taken care of afterward.

In many instances, Arbor-Day planting is the ceremonious murder of beautiful young trees, which are put into the ground with songs and orations, and are apparently not thought of afterward.

UP THE LIGHTNING-ROD.

A reporter for the New York *News* called upon "an old Russian ex-seaman" who is said to be the most expert "rigger" in that city. The reporter wished an interview for his paper, on the subject of steeple-climbing and the like. He found his man pacing the floor of a loft on West Street, and quite willing to talk.

I remember well my first climb on land. It was when I was a young fellow, just arrived in New York. I was walking down Broadway, when I noticed a crowd standing in front of a church. As I afterwards learned, the church, with its fixtures, was being sold.

I mixed with the crowd, and pretty soon I heard a man near me say:

"If I was sure that cross on the steeple was brass, I would make a good bid for it."

I looked up to the top of the steeple, which was about a hundred feet high, and saw a big cross glittering in the sun. I noticed, also, a lightning-rod running from the cross. I was just reckless enough to determine to shin up that rod, and find out for myself what the cross was made of.

Before any one could stop me I was out of reach. The rod was pretty rough on my hands, and I did not reach the end of my climb without risking my neck; but I got to the cross at last, whipped out my jackknife, and scraped away. Having satisfied myself that the cross was made of wood, I slid to the ground, amid loud cheers from the crowd, and pushed my way back to my old position. Presently the man who wanted to bid for the cross came up to me.

"Tell me, young man," said he, "is that cross made of wood or of metal?"

"What would you give to know?" said I.

He slipped a five-dollar bill into my hand, and remarked: "I guess that will pay you."

"Thank you," said I. "The cross is made of wood—rotten wood at that."

That was the first money I ever earned ashore.

PUSSY'S WONDERFUL LEAP.

The old saying, "A cat has nine lives," has a good foundation of fact in the wonderful power of endurance shown by that animal. Not the least wonderful exploit credited to pussy is the following: In 1880, when the Washington Monument had reached a height of one hundred and sixty feet, an adventurous and patriotic cat had ascended the interior of the shaft by means of the ropes and tubing.

When the workmen arrived at the upper landing the next morning, and began to prepare for the day's work, pussy took fright, and springing to the outer edge, took a "header" of one hundred and sixty feet to the hard earth below.

In the descent, which was watched closely by two score of men, the cat spread herself out like a flying squirrel, and alighted on all fours. After turning over on the ground a few times in a dazed manner, she prepared to leave the grounds, and had proceeded almost beyond the shadow of the monument when a dog belonging to one of the workmen pounced upon her and killed her, she, of course, not being in her best running trim after performing such an extraordinary feat.

One of the men procured the body of the dead cat, smoothed out her silky coat, and turned it over to a representative of the Smithsonian Institution, who mounted the skin and placed it under a glass case.

The label on the case tells this wonderful story in a few words: "This cat, on September 23, 1880, jumped from the top of Washington's Monument, and lived."

SMALL MATTER.

It is always well to make the best of small accidents. This was the opinion, at any rate, of a certain colored barber, who, in cutting a gentleman's hair, snipped off the tip of his ear.

The customer leaped out of the chair with a wild shriek.

"Ow," he screamed, "you've cut off a piece of my ear!"

"Sho! Don't cah'y on so, boss!" said the barber. "'Taint 'nough for to affect de hearin'!"

A sure test of greatness is to be used as a standard, and when the country doctor or cheap city grocer tells the consumer that this or that Flavoring Extract is better than Burnett's, we consider it a victory for Burnett's. [*Adv.*

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

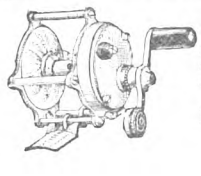
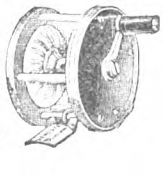
Cuticura Soap
FOR BAD COMPLEXIONS, RED ROUGH HANDS AND BABY HUMORS.
TRADE MARK.

BAD COMPLEXIONS, WITH PIMPLY, blotchy, oily skin, Red, Rough Hands, with chaps, painful finger ends and shapeless nails, and simple Baby Humors prevented and cured by CUTICURA SOAP. A marvellous beautifier of world-wide celebrity, it is simply incomparable as a Skin Purifying Soap, unequalled for the Toilet and without a rival for the Nursery. Absolutely pure, delicately medicated, exquisitely perfumed, CUTICURA SOAP produces the whitest, clearest skin and softest hands, and prevents inflammation and clogging of the pores, the cause of pimples, blackheads, and most complexional disfigurations, while it admits of no comparison with the best of other skin soaps, and rivals in delicacy the most noted and expensive of toilet and nursery soaps. Sale greater than the combined sales of all other skin soaps.
Sold throughout the world. Price, 25c.
Send for "How to Cure Skin and Blood Diseases."
Address POTTER DRUG AND CHEMICAL CORPORATION, Proprietors, Boston, Mass.



Aching sides and back, weak kidneys, and rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

DONALD KENNEDY
Of Roxbury, Mass., says:
Kennedy's Medical Discovery cures Horrid Old Sores, Deep-Seated Ulcers of **40** years' standing, Inward Tumors, and every disease of the skin, except Thunder Humor, and Cancer that has taken root. Price, $1.50. Sold by every Druggist in the United States and Canada.



The Second Summer is the most critical period of a child's life, because the
Pains of Teething
increase the susceptibility to disease and lessen the resistive power. A catarrhal attack, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to combat injurious influences.
"Tooth-Food"
will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger. This remedy is made of the nutrient elements necessary to bone growth, and is absolutely harmless. A bottle, with full description of the remedy and directions for its use, will be sent free to any address on receipt of one dollar.
THE REYNOLDS M'F'G. CO., CINCINNATI, O.
Your druggist should have "Tooth-Food," and before sending to us you had better ask him for it.

FOR HARNESS, BUGGY TOPS, SADDLES, FLY NETS, TRAVELLING BAGS, MILITARY EQUIPMENTS, etc. Gives a beautiful finish, which will not peel or crack off, smut or crock by handling; does not lose its lustre by age; dust will not stick to work finished with it. IS NOT A VARNISH. Contains no Turpentine, Benzine, Naphtha, Alcohol, or other injurious articles. **Sold by all Harness Makers.**

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

SCHOOLS OF MEDICINE.

The constitution of the human mind is such as to give rise to different schools in every department of thought and action—philosophy, science, theology, art, politics and medicine. All is not error outside of "orthodoxy." The bigot devoutly believes himself to have the truth, the whole truth, and nothing but the truth; the truly liberal man, while cleaving to his own sect, is not blind to the good and the true outside of it.

The old school in medicine has come to be known—though not of its own choice—as allopathic. Its system has descended from the remotest times, but has not remained always the same, either in its remedies or in its methods. In fact, as at present practised, it is substantially a modern system.

Science has largely revolutionized it. It is constantly availing itself of the discoveries of chemistry. The microscope has become one of its most important aids in diagnosis. The cell theory has fundamentally changed its physiological basis, while the germ theory has wrought almost equal changes in pathology. Antiseptic treatment, combined with the use of anæsthetics, has rendered perilous operations comparatively safe, as well as painless.

Of course, every school shares in the benefit conferred by science. The old-school system is purely experimental in its practice; it professes to use any medicine which is found to be practically effective.

The homœopathic school is based upon the theory that a drug which cures a disease always gives rise to similar symptoms in persons who are in good health. Hence Hahnemann's famous "*Similia similibus curantur*"—like cures like.

Very small doses are also essential parts of the system. The theory may be right or wrong, but actual trial is the test of homœopathic remedies, just as it is of the remedies employed by the old school. Homœopathists have already given to the old school some effective remedies. The two schools may in time unite.

The eclectic school employs only vegetable medicines. Essentially the same results may doubtless be obtained from them as from mineral medicines. Still, one class, wisely used, is as safe as the other. Of the two, indeed, vegetable remedies include the more virulent poisons.

OLD WORDS AND NEW.

Some of the words used by old-fashioned country people, and laughed at by those who hear them, are not corruptions of language, but merely survivals of old forms—forms so old that many educated persons have forgotten, or perhaps have never known, that they were once in good and regular standing as English words.

If an old woman "axes your pardon," she is speaking as the most careful English scholars spoke for hundreds of years, down almost to the end of the sixteenth century. Thus in Wycliffe's New Testament—about 1380—we read: "What man of you is, that if his sone axe hym breed, whethir he wole take hym a stoon?" And Coverdale's translation of the Gospel according to St. Matthew, published in 1535, has "Axe and it shall be given you."

So, too, when the same old woman says "piny" instead of peony, she is only following the ancient usage. In William Browne's "Britannia's Pastorals," printed in 1616, the poet contrasts "the ruddy piny with the lighter rose."

It amuses the school-girl of the present day to hear lilacs called "laylocks;" but Walter Savage Landor always said "laylocks," following, as his biographer tells us, a pronunciation "traditional in many old English families."

When an Irishman speaks of his "fader and moder" he is guilty of nothing worse than talking older English than we are accustomed to hear. "Worschipe thi fadir and thi modir," says Wycliffe's New Testament.

The London Athenæum recently printed a hitherto unpublished letter of the poet Gray, written in 1761. It has to do with the shipping of some goods to Cambridge, and contains two flagrant "Americanisms," so called. The goods, he says, may remain packed till he comes, "which will be in about three weeks, I guess;" and then he adds, "Mr. Gillam, I reckon, will stay for his money till I arrive."

Gray was one of the most learned men of his time, and a person of the most fastidious taste, yet he "guessed" and "reckoned" like any countrified Yankee. In other words these two "Americanisms" are simply English forms of speech which have gone out of vogue in the mother country, and which for that reason have a novel, "American" sound to the modern English tourist.

"Axe," "laylock" and the like are now vulgarisms, and as such are to be avoided, but it is well enough to know that they were once as well received in good society as their successors are at present.

TOO FAST.

James De Boe, a lineman on the Great Northern Railway, had been furnished by the company with one of the tricycles which are constructed to run on railway tracks. The machine works with a hand lever, and is capable of running about ten miles an hour.

One day De Boe stood beside his tricycle when a train, for whose passing he had been waiting, stopped near at hand. What seemed a brilliant idea came into his mind. He would take a turn with a section of No. 6 wire on one of the rear coach buffers, make the other end fast to his wheel, and save labor. If the speed became too high, he would cut the wire.

The train was a little late, and the speed soon ran up to twenty miles. De Boe noted with anxiety that the off wheel of the tricycle was jumping a foot clear of the rail every few seconds. He determined to cut the wire at once, and reached behind him for his pliers.

They were gone. The unusual motion had jerked them from the tool-box. The speed increased momentarily, and soon the tricycle was spinning along on two wheels. De Boe began doing his best to unwind the connection with his fingers, when suddenly the tricycle gave a gigantic plunge!

A telegraph lineman shot through the air like a meteor, and landed in a sand-bank beside the track; the tricycle, badly wrecked, landed a few feet further on. That the young man was not killed is almost a miracle, but save for a general shaking-up and a few scratches, he was none the worse for his thrilling experience. He will probably furnish his own motive power in the future.

QUAINT RIDDLES.

These curious riddles, which all have one answer and are familiar to the people of various parts of France, are quoted in the *Revue des Traditions Populaires*.

What goes from Paris to Lyons without moving or taking a step?
What goes to Paris without once pausing?
I am very long; if I rose up straight I could touch the sky; if I had arms and legs I could catch the thief; if I had eyes and mouth I could tell everything.
White, very white, it encircles the earth.
If I were not crooked I could not exist.
The queen's carpet, always spread, never folded.
What looks very long in the sunshine and has no shadow?
What arrives first at the market and first reaches home?
Answer, The road.

HE FED THEM.

A Cleveland correspondent sends to *The Companion* a story of a boy in that city who is commendably kind-hearted and ingenious.

He had some chickens of which he had made pets. He and his father went to their work early in the morning, and while the rest of the family were away for the summer, it became a question how the chickens were to be fed with proper regularity.

The boy was equal to the occasion. He took an alarm-clock, and fastened it securely to one side of the barn by means of two spikes. Next he hung a bucket of corn to a rafter, and connected it with the clock by a stout cord.

He wound up the alarm and set it at four o'clock. At that hour the alarm went off, wound up the string, and tipped over the bucket. And so the chickens were fed by clock-work.

MONEY ENOUGH.

The rich woman who was shocked to hear her daughter say, "A penny for your thoughts," when she ought to have offered a dollar, has a relative in California, of whom the San Francisco *Examiner* relates a "true anecdote."

She is not unknown in fashionable society, her wealth drawing about her a set of admiring followers. Lately she had some affection of the throat, and called a physician. After an examination, he said:

"Madam, I shall have to touch two or three of the affected spots with nitrate of silver."

"Oh, doctor, please don't do that!" answered the patient. "Use nitrate of gold; the expense is quite immaterial."

TOO MUCH HELP.

The Bangor *Commercial* prints a story of an Auburn girl who is likely to make an excellent newspaper reporter, in the natural course of events.

She came home from the grammar school, and asked her mother to help her with a composition upon a certain assigned topic. She sat down to write, and her mother began to dictate the composition, word for word.

"Oh, that's not what I want at all!" exclaimed the girl. "You just give me the facts, and I will embellish them."

GALLANTRY.

A Frenchman's gallantry to ladies is said to be always equal to an emergency. At a party, a gentleman of that race stepped heavily upon the toe of a lady, who looked up with an angry frown.

"Pardon, madame," he said, bowing low, "but I have forget to bring my microscope."

"Your microscope?"

"But yes; for to see ze leetle feet of madame!"

THROUGH THICK AND THIN.

In Eight Chapters.—Chapter IV.

Jack's Cadetship.

Within a week both Tony and Edgar Mount were gone. Nothing more was said about the money. Mrs. Scaife lived in peaceful unconsciousness that anything had happened, and a huge deed, signed with the Colonel's tremendous signature and big red seal, was proof that the land and tumble-down house at Lone Point were her own. Jack kept strangely silent about Tony. In his heart he felt aggrieved that his grandfather had not the same thorough belief in his friend that he had. He resented the smallest suspicion that any one might entertain, and even his mother's faith was not strong enough for him.

He would go down to Lone Point and talk to Mrs. Scaife for a few moments, then wander restlessly about the little living-room. There were Tony's nets hanging on the wall, and an old boat-hook that Jack had given him standing up in the corner, and there was the wooden settle, where the two boys used to curl up to talk about very important matters. The sight of these and other familiar things went to Jack's soul.

He would hurry back to Marrowbone, and fall to devouring his Scott; but in some way Tony's loss would make itself felt, even in the most exciting parts of "Ivanhoe" and "The Talisman."

Mrs. Randolph felt sorry for him, he seemed so lost and lonely.

Meanwhile Jack was growing up into a tall and handsome fellow of seventeen, and what to do with him was puzzling Mrs. Randolph more than anything in the world at that time. His school education was becoming more and more irregular as time went on.

In his early boyhood Jack's only ambition had been to be a soldier. Uncle Josh, who had seen as much service as Colonel Randolph, "'fo' de wah," as well as during the Civil War, was never tired of recounting his military exploits.

He had been "body sarvint an' aide-de-camp," as he loftily described it, to the Colonel when he was a young officer in the Seminole Campaigns in Florida. He had been at the storming of Chapultepec in the Mexican War, and, according to his own account, was by the Colonel's side among the stormers in that glorious day, although the Colonel declared that Uncle Josh always disappeared on the eve of an action, and never put in an appearance until the battle was over.

Nevertheless, he knew a great many stories interesting to a boy, and his embellishment of them, which did not impose upon Jack in the least, only made them more captivating.

But the old Colonel, who had resigned from the regular army in order to join the Southern army, had frowned upon all aspirations Jack might have had for going to West Point.

There was in him, as in all old army men, a peculiar sentiment attaching to the Military Academy, but it took on a strange perversion in Colonel Randolph's mind. He would not suffer West Point to be mentioned in his hearing, and ignored, as far as possible, the thirty years he had served under the United States flag.

For a time, as Jack grew older, and got beyond the influence of Uncle Josh's wonderful tales of military life, his desire to be a soldier seemed to be in abeyance. The Colonel, who could not realize that everything was not exactly as it had been "before the war, sir," insisted that Jack should live on at Marrowbone, "and farm his own landed estate like a gentleman." But Marrowbone was mortgaged, and there was no money to pay for a college course for Jack.

After Tony went away, the feeling that he was fast becoming a man took hold of Jack, and suddenly and strongly the old wish to be a soldier reasserted itself. He did not speak of it at first, knowing his grandfather's opposition to it; but not the less did he make up his mind that he would go to West Point and be a soldier, if he could possibly contrive it.

His mind being made up, he told his mother, and then only waited an opportunity to tell his grandfather boldly what he wished to do.

One night Jack was going through his usual purgatory of reading the newspaper to his grandfather. Suddenly his eye fell on a long article headed "West Point." Jack paused a moment.

"What are you waiting for, sir?" fretfully asked the Colonel.

"Because—because—here's an article I wish you'd let me read to you, grandfather. It's all about West Point, and here's a picture of it, too."

The old Colonel hesitated. Upon every other occasion that Jack had mentioned West Point, the old gentleman had shown the utmost irritability; but to-night it seemed different. After a pause he reached over for the paper, took out his double glasses, and peered at the picture.

As he studied out the familiar outline, his shrivelled hands began to tremble, and his stern old face took on a strangely gentle look. He was carried back to the days when he was a happy cadet. It was so long ago, and there had been so much bloodshed and battle and evil since!

After a long pause he handed the paper to Jack, saying, in a softened voice:

"Read it to me, boy; read it to me."

Jack began. The article was long and interesting. The Colonel listened to every word, his tall form leaning forward in his chair looking at the fire, with his hands clasped on his stick.

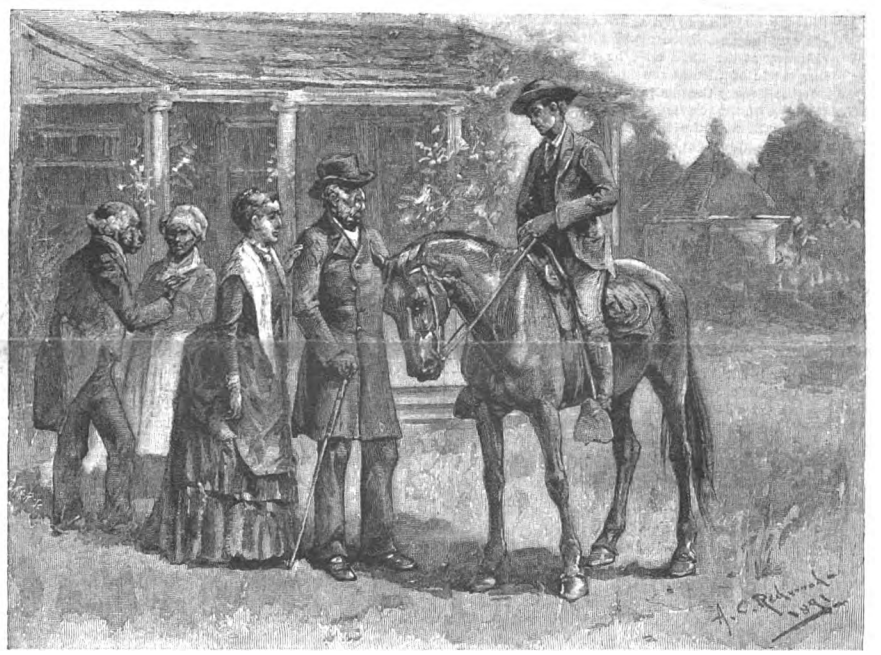
When Jack had finished it was nearly eleven o'clock. The fire was dying out, the candles had burnt low in the tall silver candlesticks, and the room was growing cold. Mrs. Randolph had gone, leaving Jack and his grandfather alone.

"Grandfather," said Jack, after a while, "I want to be a soldier—an American soldier."

"It was a great thing in days gone by," answered the Colonel; "but now we are a divided people."

"But we oughtn't to be a divided people any longer, grandfather, and if we serve the same country and march under the same flag, why, we'll not be divided any longer."

The old Colonel got up, supporting himself on his cane. He put his hand on Jack's shoulder.



"Ah, how natural it would be to see you in that gray cadet uniform! How it would bring back the old days! I fought against that flag from what I conceived my highest duty, but I never saw it, in battle or in peace, without a thrill."

The Colonel's eyes filled, as did Jack's, and after a pause, the old man said:

"Perhaps you are right, boy."

In a very little while the battle was won, as far as Colonel Randolph's consent was involved; but then came the getting of the appointment from the member of Congress from the district.

Here Colonel Randolph proved intractable. He didn't know Mr. Haycock, the representative in Congress, who lived in the next county but one. Mr. Haycock's father had been a wheelwright, and Mr. Haycock himself was a self-made man. The old Colonel expressed his opinion as follows:

Jack's Return.

"It isn't at all likely that Hezekiah Haycock's son, that I used to see as a red-headed boy in his father's shop, would care about obliging the grandson of Colonel John Marmaduke Randolph, of Marrowbone, and Colonel John Marmaduke Randolph doesn't care about asking favors of Hezekiah Haycock."

This form of reasoning did not appeal to Jack's more modern ideas, but he did not argue the point. On the contrary, he gave it up, apparently, with a suddenness and completeness that astonished his grandfather, but which put his mother on her guard. It was not like Jack to give up so easily what he had set his heart on.

Several days passed without West Point being mentioned. At last one day Jack's mother said to him: "Have you given up your wish to be a soldier, Jack?"

"Not a bit," he answered. "You just wait, mother, and see if I don't manage it."

A day or two after this Jack did not appear at breakfast. It was a clear, cold February day, and Jack was usually up early so that he could take a gallop over the plantation, and look at his rabbit traps, feed the dogs and attend to his chickens before going to school.

After breakfast, Jack still being missing, Uncle Josh reported: "I seed dat boy a-gallopin' outen de gate on Black Prince dis mornin' 'fo' six o'clock. I call arter him, 'Whar you gwine?' an' he holler back, 'I'm projectin' er little 'scursion, Unc' Josh!' an' I see by de way he laugh an' cut his eye roun' he was arter mischief. Dat boy sut'ny is de mischievouses' boy I ever see, mistis."

Mrs. Randolph knew that Jack was able to take care of himself; but Mam Betsy, going to make Jack's room up, came pattering downstairs to Mrs. Randolph with a note she had found pinned on Jack's pincushion.

"Dat chile done got in mischief!" she groaned. "I knows it, 'case I dream lars' night dat de back yard wuz full o' crows, an' dat's a sho' sign dat chile is arter trouble."

Mrs. Randolph opened the note. It ran:

DEAR MOTHER: As grandfather wouldn't write to Mr. Haycock about West Point, I concluded I'd go and ask him myself, as he is home from Washington for a few days. I dare say I can make him understand who I am. It's about sixty miles from here, but I think I shall get back to-morrow or next day. Don't you and grandfather worry about me; and I'm going to be a cadet at West Point, and I'm going into the cavalry, see if I don't; and I am, your affectionate son, J. M. RANDOLPH.

Mrs. Randolph, half-laughing and half-vexed, carried this note to the old Colonel, who was taking his morning walk on the piazza, as straight and stiff as usual.

The Colonel put on his glasses, and managed to get the gist of the note. Instead of blazing out in wrath, his grim features relaxed into a smile. Then a deep-chested laugh burst from him; but he said nothing.

All that day the Colonel was restless. He walked about the house, and then he sat down in the drawing-room with Mrs. Randolph. Every time he spoke it was about Jack.

"I wonder where the fellow is now? He must have stopped somewhere for dinner and to feed his horse. And suppose that Haycock man is not at home? You'd better be uneasy about that boy, madam; there's no telling when he'll turn up again."

"I don't feel at all uneasy, father," answered Mrs. Randolph, calmly. "Jack has excellent sense for a boy of his age. I am only afraid that he will be disappointed, that Mr. Haycock will not give him the appointment. Jack has no right to expect it."

This was more than the old Colonel could bear.

"Jack has no right to expect it, madam! Have you reflected that Haycock is the son of the wheelwright who used to mend my carts and wagons before the war, and who would have thought himself honored if he could have sat down in Colonel John Marmaduke Randolph's back hall? And that my grandson is John Marmaduke Randolph of Marrowbone? You forget these things, Mrs. Randolph."

"No, I do not," smilingly answered Mrs. Randolph. "But times have changed. Mr. Haycock has raised himself to be anybody's equal—and Jack is of no more consequence now than Mr. Haycock's son—and not half so well off."

"Times *hare* changed," growled the Colonel, indignantly, "when a Randolph asks favors of a Haycock, madam, and changed most abominably, too!"

The day passed slowly, the evening more slowly. The Colonel began to fret about Jack. So did Mam Betsy, who, shaking her head dolefully, predicted to Mrs. Randolph that Jack was no doubt "drownded in de crick," if Black Prince had not thrown him and broken his neck before he got so far.

Uncle Josh, on the contrary, took the most optimistic view.

"Dem Haycocks ain' no quality," he remarked, sagely, "an' when one ob de Randolphs in Marrowbone got de condescension for to go an' ax dat ar Haycock man fer ter gin him er re'p'intment at Wes' P'int, Mis' Haycock he gwi' say to little marse, 'Sut'ny, sir, sut'ny. I gin you de re'p'intment, an' anything else yo' wants. 'Taint fer no Haycock, sir, ter be onpleasant wid a Randolph, an' I take it kind ob you ter ax me.' Dat what dat Haycock man gwi' say, *I* know."

Meanwhile, Jack and Black Prince were traversing the fifty miles between Marrowbone and Mr. Haycock's home very merrily and comfortably. Jack made a two days' journey of it, stopping over night at a country tavern.

He was perfectly sanguine, as all young fellows are who know nothing of the world. He felt gayer, more cheerful as he rode along than he had done any day since Tony left.

Where was Tony now? he wondered. Not a

Digitized by Google

day passed, and scarcely an hour, that Jack did not think of his friend.

It was about four o'clock in the afternoon when Jack, after inquiring his way from time to time, rode up to Mr. Haycock's door. Jack, who had imbibed not a few of his grandfather's notions, half-expected to see Mr. Haycock, the wheelwright's son, in his shirt-sleeves, smoking a black pipe. But instead, Mr. Haycock was a gentlemanly, well-dressed man, who came forward politely as Jack dismounted.

"How do you do, sir?" he asked, offering his hand.

"If you please," said Jack, a little tremulously, for as he saw the man from whom he had to ask so much, for the first time a doubt of his success crossed his mind, "I am John Marmaduke Randolph, grandson of Colonel Randolph of Marrowbone."

"Ah," responded Mr. Haycock, pleasantly, "I know your grandfather well, though it has been many years since we have met—not indeed since my father kept the wheelwright shop at Randolph's Mill."

This open way of alluding to the wheelwright's shop rather staggered Jack, but he had sense enough to see the manliness of it.

"And, Mr. Haycock," continued Jack, his handsome face flushing up very much, "I have come to ask you something. I want to be a soldier. I hear you have an appointment at West Point to give away. Will you give it to me?"

Mr. Haycock stood looking at Jack, and smiling.

"How old are you?" he asked.

"Seventeen, sir. My grandfather wouldn't ask for me—so I thought I'd ask for myself."

"I haven't got a cadetship in my pocket, young man," said Mr. Haycock.

"No, but you've got it in your power," boldly answered Jack.

"Come in. You'll have to stay all night, I think, to rest your horse if not yourself," was Mr. Haycock's answer to this.

Jack accepted the invitation as frankly as it was given, and went into the house—a pretty, modern country house.

Things were rather different from the faded splendors of Marrowbone. The hall and staircases were carpeted, the chairs were all strong and new, and there was a general air of modern comfort about things of which Jack had seen but little in his life.

Mrs. Haycock presently appeared—a lady of refined look, who received him cordially. Mr. Haycock talked very interestingly to Jack of public affairs and public men in Washington, and was pleased at the intelligent interest Jack took in both.

Tea was served after a while, and Mr. Haycock and Jack sat up quite late, discussing everything except the West Point cadetship. Jack was shown to a comfortable bedroom, and next morning was downstairs bright and early.

Mr. Haycock talked as pleasantly as ever, during breakfast, and then Jack asked that his horse might be ordered. They were walking up and down the porch in the pleasant February sunshine.

"And, Mr. Haycock," said Jack at last, "can you do anything about the cadetship?"

Mr. Haycock glanced at Jack under his brows. The boy's face was quite pale; he had evidently been nerving himself for that question.

"Do you know that although the examination is not severe in the beginning, the course is very difficult—that it means four years of ceaseless struggle?"

"Yes, sir," answered Jack, doggedly.

"And that it means separation from your home for four years, with only one furlough in all that time, and after that—by the way, what branch of the service would you aspire to?"

"The cavalry, sir," answered Jack, his face brightening.

There was a pause. Then Mr. Haycock spoke.

"I'll give it to you. I have been asked for it by a dozen people, but I have not promised it to any one. I should be glad to oblige Colonel Randolph, but more than that, I see you have the material to make a soldier, and you will make good use of the appointment."

The change that came over Jack was startling. The blood poured into his face, and he clenched his hands with suppressed excitement. Mr. Haycock went on to explain to him the necessary forms, the time it would take before the appointment could be made out, and that he must present himself at West Point in May.

Jack could scarcely thank him, but his gratitude was so plain that Mr. Haycock understood it perfectly. Within half an hour Jack was on his way home, as happy as a bird.

On the fourth day after he had left home, Jack returned to Marrowbone. The negroes had seen him coming down the lane, and the old Colonel, Mrs. Randolph, Main Betsy and Uncle Josh were all standing on the porch as he dashed in at the gate.

He was so delighted that he began to hurrah as loud as he could the minute he caught sight of the group on the porch. In a few words, the success of his errand was told.

"I tole you so," solemnly remarked Uncle Josh. "Dem Haycocks was mighty proud to 'bleege de Randolphs."

Jack's mother was thankful beyond expression—and even the old Colonel, after a few growls about the army not being what it was once, and the service going to the dogs, condescended to show a part of the pleasure he felt.

About the same time, a letter arrived from Edgar Mount. It was written in his usual correct style, being more like the letter of a man of forty than a young fellow of eighteen—the stationery very elegant and sealed with a handsome crest. In it, after telling of what he had been doing since leaving Marrowbone, he added, "And I have been fortunate enough to secure an appointment to West Point, and shall present myself for the May examination."

Jack looked anything but pleased at the information. He could not forgive Edgar Mount readily, for he was a very impetuous, hot-headed fellow. And nothing had ever been heard of Edgar's two hundred dollars.

For the Companion.

ON THE BATTLE-FIELD.

Charley Wallbridge lay awake listening to the patter of Virginia rain on the worn and veteran canvas, to its drip in the full trench along the hut's side, to the regular breathing of his comrade, Private Bader, to the stamping of horses on the corduroy floor of Company K's stables, and the *sq-uush* of the stable guard's boots on his muddy round.

Toward morning, as the dark deepened, and Charley could scarcely make out the dull white of his carbine and sabre against the mud-plastered chimney at the hut's end, he fancied he heard a low rattle of distant musketry out where he had tried to descry the steeples of Petersburg through the mist of the previous evening.

A month with the Fifty-third Pennsylvania veteran volunteer cavalry had not quite disabused our young recruit of his schoolboy notion that the men of the Army of the Potomac, even in winter quarters, must live constantly within sound of the picket-line.

The boy was very miserable. His bones ached for the billowy feather-bed at home. Should he ever again undress for bed, he wondered, and sink away, unchafed and uncompressed by rough, stiff garments, to sleep? He pitied himself, thinking how his mother would cry if she could see him crouched so dreary in that drizzling March morning, pressed all the more into loneliness by the regular breathing of Bader—old veteran Bader—in the indifference of deep sleep.

Into the vision of home came his gray father's tired face, and little Harry's and Mary's and little Jane's, and the round cheeks of the crowing baby. It was no use; this cavalryman of sixteen, whose one sense of sin was in the recollection that he had passed himself off for eighteen at the recruiting-office in Philadelphia, shed some tears at the thought of the baby. Then he turned an ashamed face suspiciously toward his partner, for Charley would not have had the old soldier witness his breakdown for all the world.

Now came another gust from Petersburg, and this, Charley was almost certain, carried the crackle of rifle-firing on its wings.

"Bader! Bader!" he said. "Bader!"

"Can't you keep still, you Wallbridge?" came Orderly Sergeant Graveley's voice from the next hut of saplings and canvas.

"What's wrong with you, Charley?" asked Bader, turning to him.

"I thought I heard heavy firing out on the picket line; twice now I thought so."

"Oh, I guess not. The Johnnies won't come out such a night as this. Keep quiet, or you'll have Sergeant Graveley down on you. Better lie down and try to sleep, buddy; the bugle will call morning soon now."

Again Charley fell to his reverie of home. It was again the evening when his mother, folding her spectacles, told them, with an air of having considered what to say, that they might soon have to move away to the West.

Their father's business in his little store had not prospered. Some notes were coming due, and he had not the money to pay them, and they had been continued until the holders would continue them no longer.

Jack, the elder son, had gone away to New Orleans to seek his fortune, and nothing had been heard from him since the war began.

In this situation something must be done, and the father, in the sober account of the matter that he had given the children, had declared that if he had not been lame, he would have taken the bounty and volunteered, to give his family something to start on after the store was gone.

It was this which sent Charley so young to the war, though he had long desired to enlist. Three boys not much older than he had already entered the army. It was his duty, he thought, not only to his country but to his family, to volunteer. The combined Federal, State and city bounties paid his father's notes in that last dreadful winter before Richmond fell.

"All would be well with the business now, if only Jack would find his way home," wrote Mr. Wallbridge, "but oh, my dear son Charley, you have saved us at a fearful risk, and laid upon us a heavy load of woe."

As the boy thought it all over, the darkness was turning to gray, and carbine and sabre came out more and more clearly above the ashes in the mud-plastered fireplace. The chill of dawn crept into the hut, and for a time wind and rain ceased.

The quiet deepened; even the drip from the old canvas had stopped. Charley Wallbridge, tired of listening and soothed by the silence, was falling asleep. Suddenly a heavy weight seemed to fall far away—then another—another. The fourth had the rumble of a clap of distant thunder, and a concussion of air seemed to follow.

"Hey! Big guns! What's up toward City Point?" said Bader, sitting up. "I tell you, they're at it! It can't be so far away as Butler. What, on the left, too? That was toward Hatcher's Run. Charley, the Confederates are out in earnest. I guess you did hear the pickets trying to stop 'em. What a morning! Ha! Fort Fury! See that!"

The outside world was dimly lighted up for a

moment. In the intensified darkness that followed Bader's voice was drowned by the crash of a great gun from the neighboring fort.

"The Johnnies must have got in close somehow!" cried Bader. "Hey, Sergeant?"

"Yes!" shouted Graveley. "Scooped up the pickets and supports, too, in the rain, I guess. Turn out, boys; turn out and get ready for a wild day! Kid! Where's the Kid? Kid Sylvester!"

"Here! All right, Barney! I'll be out in a jiffy," answered the bugler.

"Hurry, then! I can hear the Colonel shouting already. Man, listen to that!" Four of Fury's guns crashed almost simultaneously.

"Turn out, Company K!" shouted Lieutenant Miller, running down from the officers' quarters. "Where's the commissary sergeant? There? All right! Give out feed right away! Get your oats, men, and feed instantly! We may have time. Ha! Here's the General's orderly!"

As the trooper galloped across the parade-ground, his horse-hoofs flinging back great chunks of mud, a group of officers ran out behind the Colonel from the centre of the high hedge of faded pine saplings screening the officers' quarters.

The orderly gave the Colonel but a word, and wheeling, was off again as "boot and saddle" blared out from the buglers, who had now gathered at regimental headquarters.

"But leave the bits out; let your horses feed!" cried the Lieutenant, running down again. "We're not likely to march till further orders."

In the cloudy sky the cannonade rolled about; it was broad day, but still so dull that long, wide flashes of flame sprang far out before every report from the guns of old Fury, and in the haze but few of the shells, shrieking along their high curve, could be seen bursting over Hancock's cheering men.

Indistinguishably blent were the sounds of hosts on the move, field guns pounding to the front, troops shouting, the clink and rattle of metal, officers calling, bugles blaring, drums rolling, mules screaming—all heard as a running accompaniment to the cannon.

"Fhwat sinse in the ould man bodderin' us?" grumbled Corporal Kennedy, an old Fenian dragoon from the British army. "Sure, isn't it as plain as the sun—and faith itself's not plain this dirthy mornin'—that there's no work for cavalry this day, barrin' it's escortin' the doughboys' prisoners, if they take any?—bad 'cess to the job! Sure, it's an infantry fight, and must be, wid the field guns plisintly helpin', and the siege artillery boomin' away over the throops in the mud betwigst our own bristworks and the inner line of our forts."

"Oh, by this and by that," the corporal grumbled on, "Gineral Lee's not the gentleman I tuk him for at all, discomfortin' us in the rain, and yesterday bein' an illigant day for fightin'."

"Hoo-ow! did you hear them yell? Fhwat? Who'd a thought it possible? Byes! Bader! Charley! Luk at the Johnnies swarmin' up the face of Fort Fury!"

Off there Charley could dimly see, rising over the near horizon made by tents, a straggling rush of men up the steep slope, while the shrill "hi-yi!" came from a multitude behind on the level ground that was hidden from the place occupied by the Fifty-third.

Literally in the next moment the force mounting Fury's glacis fell away, some lying where shot down, some rolling, some running and stumbling in heaps; then a tremendous musketry and field-gun fire growled to and fro under the heavy smoke round and about and out in front of the fort, which had never ceased its regular discharge over the heads of its defenders and immediate assailants.

Suddenly Charley noted a slackening of the battle. It soon dropped away to nothing, and now there was no sound of small-arms in any direction in the lengthening intervals of reports from the siege-guns far and near.

In ten minutes the Fifty-third had formed in close column of companies. The Colonel had galloped down at them and once along their front; then the command, forming fours from the right front, moved off at a trot through the mud in long procession.

"Didn't I know it?" said Kennedy. "It's escortin' the doughboys' prisoners, that's all we're good for this outrageous day. Police duty! Faix, I might as well be wid Her Majesty's dhragoons thramplin' down the flesh and blood of me in poor Ould Oireland."

Charley heard without heeding. Now they were upon the red clay of the morning fight, brought to halt in open column by the completion of an evolution.

After a little they moved off in fours, and dropping into single file surrounded some thousands of disarmed men, the remnant of the desperate brigades that Lee had flung through the departing night across three lines of breastworks at the great fort they had so nearly stormed.

Poor drenched, shivering Confederates! There they stood, not a few of them in blue overcoats, but mostly in butternut, generally tattered; some barefoot, some with feet bound in ragged sections of blanket, many with toes and skin showing through crazy boots lashed on with strips of cotton or with cord, many, stoutly on foot, streaming blood from head wounds.

Charley, brought to the halt, faced half round in the saddle, and looked with quick beatings of pity far and wide over the disorderly crowd of weather-worn men.

"It's a Louisiana brigade," said Bader.

"Fifty-three P. V. V. C.," spoke a prisoner, as if in reply, reading the letters about the little crossed brass sabres on the Union hats. "Say; is you-uns from Pennsylvany?"

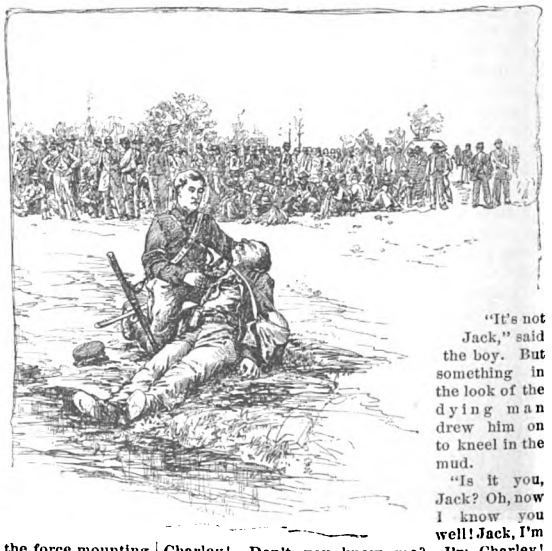
"Yes, Johnny, we come down to wake up Dixie."

"I reckon we-uns got the start at wakin' you-uns this mornin'," said the Southerner. "But say, ther's one of we-uns lyin' dyin' over yonder; his folks lives in Pennsylvany. Mebbe some of you-uns 'ud know 'em."

"What's his name?" asked Bader.

"Wallbridge—Johnny Wallbridge."

"Why, Charley—hold on! You aint the only Wallbridges there are. What's up?" cried Bader, as the boy half-reeled, half-clambered from his horse.



"Hold on, Charley!" cried Corporal Kennedy.

"Halt there, Wallbridge!" shouted Sergeant Graveley.

"Stop that man," roared Lieutenant Miller.

But, calling, "He's my brother!" Charley, catching up his sabre as he ran, followed the Southerner, who had instantly divined the situation.

The forlorn prisoners made way for them, and closing in behind, stretched round in solid array about the scene.

"It's not Jack," said the boy. But something in the look of the dying man drew him on to kneel in the mud.

"Is it you, Jack? Oh, now I know you well! Jack, I'm Charley! Don't you know me? I'm Charley! your brother Charley."

The Southern soldier stared rigidly at the boy, seeming to grow paler with the recollections that he struggled for.

"Not *Charley!*" he shrieked, hoarsely. "No, Charley's only a little fellow!"

He paused and looked meditatively into the boy's

Digitized by Google

eyes. "It's nearly five years I've been gone. He was near twelve then. Boys," lifting his head painfully and casting his look slowly round his comrades, "I know him by the eyes—yes, he's my brother! Let me speak to him alone. Stand back a bit."

The men pushed backward into the form of a wide circle.

"Put down your head, Charley. Kiss me! Kiss me again! How's mother? Ah, I was afraid she might be dead! Don't tell her I'm dead, Charley."

He groaned with the pain of the groin wound.

"Closer, Charley, I've got to tell you this first. Maybe it's all I've time to tell. Say, Charley, they oughtn't to have killed me, the Union soldiers oughtn't. I never fired—high enough—all these years. They drafted me, Charley—tell mother that—down in New Orleans, and I—couldn't get away.

"Al-al! How it hurts! I must die as soon as I can tell you. I wanted—to come home—three years ago—and help father. How's poor father, Charley? Doing well now? Oh, I'm glad—of that; and the baby? There's a new baby! Ah, yes. I'll never—see it—Charley."

His eyes closed, and he lay almost smiling happily as his brother's tears fell on his muddy and blood-clotted face. As if from a trance his eyes opened anxiously.

"You'll be sure—to tell them—*I* was drafted, conscripted, and I never fired at any of us—of you—tell all the boys, too."

Again the flame of life went down, and again flickered up for utterance.

"Well, there's this," he went on, "don't ever—hate—my chums—we-uns. They've been as good and kind, marching, wet and cold together, and it wasn't their fault. If they had known—how I wanted—to be shot—for the Union! It was so hard—to be—on the wrong side! But —"

He lifted his head, and staring wildly at his brother, gasped out once more:

"Mind, I never fired high enough!"

Then he lay still in Charley's arms, breathing fainter and fainter till no motion was on his lips nor in his heart, nor any tremor in his hand.

"Come, Charley," said Bader, stooping tenderly to the boy. "The order is to march. He's past helping now. It's no use, you must leave him here to God. Come, boy, the head of the column is moving now."

Mounting his horse Charley looked across to Jack's form. For the first time in three years the famous Louisiana brigade trudged on without their unwilling comrade. There he lay, alone, in the Union lines, under the rain, his marching done, a figure of eternal peace, while Charley, looking backward till he could no longer distinguish his dead brother from the clay of the field, rode on and on beside the downcast procession of men in gray.

E. W. THOMSON.

For the Companion.

THE TRIALS OF A TENDERFOOT.

Why is it that in all countries a new-comer is a target for the shafts of the scornful? In Australia they call him a "new-chum" or a "jackaroo;" in India a "griffin;" in California a "pilgrim," and in Colorado and elsewhere in the West a "tenderfoot."

I fancy he got the name of tenderfoot in Colorado, because, when the Pike's Peak rush broke out in 1859, so many men tramped seven hundred miles across the plains to the gold fields, and arrived with their feet considerably the worse for wear. A new arrival was known by his limping gait, and so the word tenderfoot came to be applied to any greenhorn, even though he came by the stage-coach, and had never a blister to show.

I do not know if the trials which I underwent in acquiring a sort of familiarity with the life of the Far West were more than others endure, but I do know that I shall never forget them.

To begin with, there was my partner—my first one, that is. He was a live Western man. I put in the capital, and he put in the experience, and it took three years to accomplish the interchange of these interests. It was to me a great trial, especially when one of his creditors sued me for twenty thousand dollars.

But I did not intend to touch on the darker side of things. I meant to begin with cooking. My partner most assuredly could cook; at least, he could make the best coffee I ever drank, and his biscuit was a marvel of lightness, though baked in a camp oven.

Those were two points on which he was firm, and under his tuition I, too, learned to make clear coffee, strong enough to float an egg, and camp bread as light as a snow-flake. He also taught me to boil potatoes long enough to make them properly soft.

But he stopped there. He fried his bacon instead of boiling it—an error which gave us both dyspepsia; and being naturally lazy, he never took the trouble to cook anything else but this monotonous food.

One day I had a lame foot, and stayed alone in camp while he and the hired man went off without me to the meadow, where they were putting up hay. I made up my mind to have a change of diet, and give them a surprise when they came back to dinner. Accordingly, as soon as the hay-wagon was out of sight over the hill, I began to rummage the camp stores for something else than the everlasting flour, coffee and bacon.

Our potatoes were already exhausted. Presently I found a large sack full of *frijoles*, or Mexican brown beans. I had more than once heard my partner say that these were very good, but he had never yet taken the trouble to cook any of them.

"Very well," said I to myself; "beans for dinner it is." I felt then they ought to be boiled, although I had indeed heard of baked beans, and I had a vague idea that they took rather longer to cook than potatoes.

"Here goes, then," said I. "I'll put them on at once. If they boil away to nothing, we can have bean soup, anyway."

But the beans did not boil to nothing. I took the larger of our two tin pots, in which we used to boil our potatoes while they lasted, and filled it as full of beans as it would hold. That was the way I had always done with potatoes. Then I went to the pail and poured in water till the beans were well covered. This also was following the same precedent, and on that principle I put on the lid, and set the pot over the fire. Then, selecting a novel, I lay down on the outside of my blankets to take a rest.

After a while it occurred to me to look at the beans. To my surprise, the lid of the pot was pushed up; the beans were rising in a sort of mound above the level of the top of the pot, and the water seemed to have all gone away.

"That's rather odd," said I to myself. "The potatoes never do that." However, I brought another tin pot, in which we used to boil the water for washing up, and putting about half the beans into that, I filled up both pots with water and put them on the fire. Then I took up the broken thread of my story. Some time passed—how long I cannot exactly tell—and then I dropped the book with a start, and ran to look at my beans.

Would you believe it? Both lids were lifted high off both pots by swelling masses of beans, and again all the water had mysteriously vanished.

I flew to the pots, and snatched them off the fire in time to prevent the solder from melting out of their joints. I knew if they stood on the fire without water in them that would happen. I had already melted the small coffee-pot into holes, and had a wholesome recollection of my partner's sarcasm over that performance.

I now took the coffee-pot we were using,—a big one,—rinsed it well, and put some of the beans out of both the other pots into it, filled it up with water, and set all three on to boil. But actually, in a quarter of an hour more those irrepressible beans had filled all three vessels to the brim, and they were swelling still!

In despair, I seized all the utensils we had on the ranch, down to empty tin cans, and deposited beans in them; and, to make a long story short, at noon, when my partner and the hired man came back to dinner, there was a ring of cooking vessels all round the fire, and there were beans enough boiled to feed a company of soldiers.

When I told what had taken place, they shouted with delight, till the antelope a mile away looked up from their grazing to see what was the matter, and it was many a long day before they let me hear the last of my new departure.

Then there was the bucking-horse business. Horses in civilized parts do not buck; perhaps they do not know enough. My first experience with a bucking horse was in Denver, where the keeper of a livery stable sold me a little black California bronco mare at a very reasonable figure, all things considered. I really think he took something off the price for the sake of seeing the performance which was to follow.

A tenderfoot on a bronco was called "a Denver circus" in those days, and, as in most circuses, the spectators generally thought it more funny than the performers.

As for me, I made a grand start, for the helpers at the stable tied my big double gun firmly across the saddle-horn, and my very big roll of blankets to the back of the saddle, and one held the mare down by the head, and another by the tail, I think, till I was fairly aboard. Then both let go together, and we sailed down Larimer Street.

I couldn't come off very well, for I was wedged in between the gun and the blankets, but I did not know how to guide the mare, and we plunged on and off the sidewalks, to the immense delight of a Denver crowd. Some one had left his yard door open, and was sweeping it out, when something prompted the mare to charge in full tilt upon him.

"Hallo there! Where in the world are you coming to?" he yelled, brandishing his broom.

I had just breath enough left to gasp, "Ask the mare!" when, at a thrust from the broom, she whirled around, and dashed back into the street as quick as she had left it.

I am proud to say that I did not come off on that journey; but I sold the mare back to the livery-stable keeper at a reduction, and got something that suited me better. The something had its faults, but it did not buck.

It was not until some time afterward that I again found myself, unintentionally, on a horse that could buck, and on this second occasion I had no gun and no roll of blankets to wedge me in.

It happened in this way. We had bought some cattle, and with the cattle a capital old Texas cowpony to herd them on. I was ambitious to become a cowboy as soon as possible, and I undertook the herding.

Not long after we arrived at the ranch I received

a box of things from home.

Among them were a neat pair of little sharp *spurs*. I was using, at the time, the common Mexican spurs with big blunt rowels universal in the West, to which all the horses there are accustomed; but I thought these sharp racing-spurs would be much more "high-toned." My partner fairly snorted with contempt at the sight of them. However, I buckled them on and sallied forth.

When I was well out of sight of the ranch I found a cow with an unbranded calf which I wanted to get up, and started swiftly to cut her out. Old Billy, the pony, dashed after her in his business-like way as usual, to head her; but I suppose it was not fast enough to please me, and I struck him with the new spurs.

The effect was most surprising. Billy seemed to disappear unaccountably from before my eyes, and I felt myself violently jolted from behind into space. I could see my saddle horn in front of me, and nothing else. The pony had fairly put his head down between his legs, humped his back and bucked.

"Whoa! Whoa!" I shouted, wishing those spurs had never come into Colorado. Then I seemed to shoot forward through the air, and the ground struck me very hard in the face. I turned a somersault, and found myself lying on my back.

I picked myself up as soon as I could, and there stood Billy, ten yards off, with his bridle hanging down, and looking as meek as a lamb. My nose was bleeding. When it stopped I mounted the horse again. He stood perfectly still.

I went back to the ranch and took off the spurs. My partner caught sight of my scratched face.

"Hullo!" he called out, "who have you been fighting this time? Have you run onto another buck antelope on the warpath?"

This was an allusion to another early performance of mine, so I could but answer, "No; I only tried to make a hole in the ground with my head."

"Ah, have ye?" said he. Then looking sagaciously at my feet, he added, "What have ye done with them little sharp spurs, eh? Guess you'll be content with common plug Mexican things now!"

I felt that I was still only a tenderfoot, and I wilted.

But I almost think that the worst crushing I ever received was over my buckskin breeches. I was very proud of them. I had killed the bucks myself and dressed the skins beautifully, as I thought, and cut them out to pattern and sewed them very strongly with an awl and a buckskin "whang" to make them extra stout; and after all, they did not remain soft, but as soon as they had been soaked in a thunder-shower and dried again became apparently as hard as sheet iron.

"You didn't get the right Injun tan on 'em," was my partner's disparaging criticism. "White man's tan aint of much account."

So I found a tame Indian, and got him to put a real red Indian tan on them. Red it certainly was, for the Indian did it with some wonderful root he found in the woods which dyed them nearly scarlet.

Unfortunately, as they had been already sewn up into breeches, the pulling and hauling and stretching of the Indian tanning process spoiled their fit. In fact, one leg came out much tighter and nearly six inches longer than the other, and insisted on remaining so; and then, in spite of it all, the first time I got wet again they shrank up to my knees and dried as hard as ever.

In my impatience I soaked them soft again, cut two small logs, and tightly forcing one log into each leg, left them to dry. They came off as stiff as a couple of lengths of stove-pipe, and felt like it; but as soon as I got them limber they shrank and twisted again.

One day I met a white man driving a wagon—the first white man, except my partner, whom I had seen for more than a month. He was a pleasant-faced man, and I rode eagerly up to him and began to talk. He seemed like a brother to me, who had been separated from my own kind for so long.

He looked at me with a certain quizzical expression; he hardly knew what to make of the sun-burnt face, the long hair, the wild pony, the heavy rifle across the saddle, and those high-colored buckskin clothes. Then he said:

"Stranger, I should like to ask you a question."

"Oh, certainly," said I, "by all means. Go ahead."

He looked dubiously for a moment at the formidable rifle, and observed, somewhat cautiously, "No offence, stranger, you understand."

"Of course not," I replied; "I'm only too delighted to find a white man to talk to. What is it?"

"Wal, stranger," said he, "allus meaning no offence, I should like to ask you, did you make them trousers yourself?"

I looked down at them instinctively—bulging at the knees, twisted in the seams, stiff and creased everywhere as only dry buckskin can crease—and I felt discouraged.

"Yes," I admitted, "I certainly did."

"Wal, stranger," said he, "d'ye know I thought so!"

I was "found out for a tenderfoot" again. It was the death-warrant of those trousers. That night I cut them up into buckskin strings.

R. B. TOWNSHEND.

WHERE SLEEP THE BRAVE?

Where sleep the brave to-night?
Ask the pines in a sunny land,
Ask the grasses that wave
O'er the dust of a gallant band
Laid in a hurried grave.
There sleep the brave to-night.

—*Pittsburg Dispatch.*

For the Companion.

THE GRAND ARMY OF THE REPUBLIC.

For thousands of years it has been a custom with soldiers in the field to form comradeships, one with another, two men agreeing to stand by each other in life and in death, in sickness and in wounds, and after death to execute each other's known desires.

There are traces of this relation in the Greek historians. The Roman soldier under Julius Cæsar called his comrade *commilito*, which simply meant fellow-soldier. It is such an established custom in the French army to form comradeships that we find Napoleon, on meeting a wounded soldier in a forlorn condition, asking him, "Where, then, is your comrade?" as if the relation were recognized in military law.

In an army this strong feeling of comradeship is not confined to the single chosen friend. It includes the company, the regiment, the brigade, the division, the corps, and even the entire army, binding a million men into such coherency that they can move and feel and act as one man.

It was wonderful to notice, in our late war, how strong and how universal this army feeling was. The common object, common perils, common sufferings, common triumphs, knitted close together the hearts and minds of that vast multitude of diverse men.

Finally, when victory crowned the four years' struggle, there was a common feeling of pride in the glorious result, which at once exalted and deepened the soldierly fellowship.

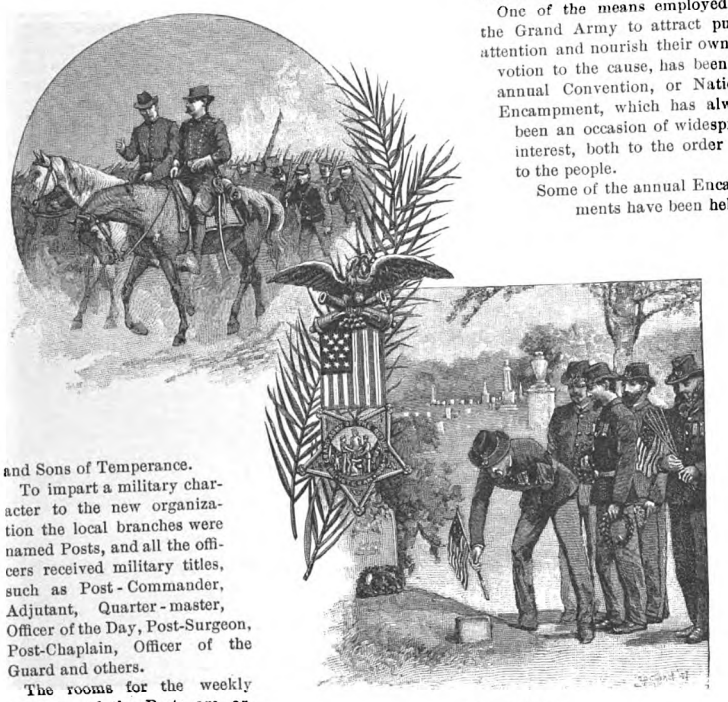
After two thousand actions in the field, small and great, after the enrolment of nearly three millions of men, and the death of three hundred and sixty thousand of them, the army was disbanded at Washington in 1865, and the soldiers rejoined their fellow-citizens in the peaceful pursuits of industry.

At that final review in Washington there was very little left of the "pomp and circumstance of glorious war;" but every soldier's face shone with the light of victory, and every citizen who had within him the soul of a patriot felt the truth of the motto that fluttered along the Capitol: "The only national debt we can never pay is the debt we owe to the victorious soldiers."

Already the desire was strong throughout the army not to let die the fellowships and friendships of the war. Clubs, circles, societies had already been formed, some composed wholly of officers, some wholly of privates, and some of both. The object of all was the same: To preserve the cordialities of the camp, to secure the fame of members by suitable memorials and records, and to give friendly succor to indigent comrades and their dependents.

Eleven months after the close of the war, at Springfield, Illinois, a scheme was conceived of uniting all who had served in the army or the navy, and had received an honorable dismission, into a national society or order, the name of which, it was finally decided, should be the Grand Army of the Republic.

The idea originated in the mind of an officer of the Fourteenth Illinois Infantry, Major Benjamin Franklin Stephenson. He thought of it before the war ended, while serving under General Sherman in one of his rapid expeditions.



Major Stephenson's comrade or tent-mate was the chaplain of the regiment, Rev. William J. Rutledge. Often these two gentlemen, as they rode side by side in the long marches, talked together of what would probably become, after the war, of the enormous numbers of men they saw tramping on, before, behind and around them—soldiers, wagon-men, camp-followers tramping, tramping in numbers that seemed unlimited.

They agreed that men so closely allied, and united by so many ties, so bound together by a common purpose, and by so many vicissitudes shared in common, would not willingly consent to a total severance of a connection so dear to their affections and their pride. The two friends agreed

Digitized by Google

that, if they came out of the struggle alive, they would endeavor to work out in concert some kind of organization for such an object.

This agreement they kept. After the war they planned a great society to be formed somewhat on the basis of the several social orders, such as the Freemasons, Odd Fellows, Knights of Pythias and Sons of Temperance.

Memorial Day.

To impart a military character to the new organization the local branches were named Posts, and all the officers received military titles, such as Post-Commander, Adjutant, Quarter-master, Officer of the Day, Post-Surgeon, Post-Chaplain, Officer of the Guard and others.

The rooms for the weekly meetings of the Posts are arranged like the lodge-rooms of the other benevolent orders. In a few instances the local Post became the owner of its own quarters, and fitted them up with some approach to luxurious accommodations, with library, billiard-room, dining-room, kitchen, sustained by the rents derived from other portions of the edifice.

Some Posts have gathered a highly interesting collection of warlike curiosities, such as banners, flags, field-glasses and captured weapons. Occasionally, a piece of field artillery, identified with the history of a Post, graces an alcove of its apartment.

The greater number of the Posts assemble weekly in a hired room, plainly furnished, and often used for other purposes on other evenings.

But not the less has the Post been to the retired soldier like another home, where he was sure of finding aid and sympathy, where the record of his services was deposited, and where he could meet his old comrades in social intercourse.

Each Post, moreover, being connected with the county organization, and that with the State and the national body, membership invites a man once again to a great national army, not inaptly styled the Grand Army of the Republic.

It must not be supposed that the founders of this powerful organization were actuated by sentiment alone. It was a thing of necessity that they should look for steady and systematic aid to the country which they had assisted to save.

Hence, the Order has taken the lead in stimulating and guiding legislation in behalf of the soldiers and their dependents, and Congress has shown itself attentive to its suggestions.

A vast amount of good, however, has been done by the local posts alone.

To the Grand Army of the Republic we are indebted for one of the most interesting and impressive of our ceremonial days—that on which the graves of the soldiers are decorated. The idea originated in the mind of a German who had served as a private in the Union army, whose name has not been preserved.

Early in May, 1868, he wrote to the Adjutant-General of the Grand Army, saying that in his native country it was the custom of the people in the spring to visit the burying-grounds, and place flowers upon the graves of their friends and relatives. He suggested that the Grand Army should designate a day for the decoration of the graves of the soldiers.

The idea met with favor, and General John A. Logan, then Commander-in-Chief of the Grand Army, promptly promulgated an order setting apart the Thirtieth of May for the purpose.

General Logan expressed the hope that the observance would be kept up from year to year, so long as one survivor of the war remained to honor the memory of his departed comrades.

Memorial Day has been observed with increasing impressiveness ever since, and the day is now a legal holiday in most of the Northern States east of the Mississippi River.

In 1871 the Grand Army could claim but thirty thousand members. In 1879 a great increase began, until the whole number of members approached four hundred thousand.

While the great object of this army of men has been to promote the measures looking to the relief and advantage of the soldiers and those dependent upon them, they have taken a leading part also in the erection of the innumerable monuments to the memory of fallen comrades which adorn our public grounds and cemeteries.

Other nations have heaped the most bountiful rewards upon the successful generals of a great war. We have, perhaps, not been sufficiently generous to the leaders in the war; but it was natural, in a Republic, that the rank and file of the army should be the chief recipients of national benefaction.

One of the means employed by the Grand Army to attract public attention and nourish their own devotion to the cause, has been the annual Convention, or National Encampment, which has always been an occasion of widespread interest, both to the order and to the people.

Some of the annual Encampments have been held in places remote from the centre of the country, but the local welcome has always been general and enthusiastic. The farther the soldiers have had to travel, the warmer has been the welcome they have received.

THE MIRACLE.

Wondrous the change,—from bareness into bloom;
From scentless air to redolent perfume;
From silence into song and soaring wing;—
How old yet new this miracle of Spring!

CLINTON SCOLLARD.

REVOLUTION IN CHILE.

The Republic of Chile, on the west coast of South America, has long been noted for its quiet and steady progress, its orderly government, and the intelligence and thrift of its people.

It has been its boast that for more than half a century no serious disturbance took place within its limits, and that it has all that time been free from such revolts as have from time to time shaken its sister South American republics.

Unhappily, this record of long-enduring peace and advancing prosperity has this year been broken. For more than three months the Chilean Republic has been suffering the affliction of Civil War.

On the Seventh of last January the fleet of the Republic—the most formidable naval force in South America—raised the standard of revolt against the President. It at once began warlike operations, bombarded cities and towns on the coast, and captured several of the most important ports.

Trouble had been brewing for five or six months between the President, Señor Balmaceda, and the national Congress. The President was charged with extravagance in the expenditure of the national funds, gross favoritism, usurpation of powers belonging to Congress, and an attempt to dictate the choice of his successor.

At last, at the very close of the year, Congress refused to pass the bills appropriating the salaries of the military and civil officers of the Republic. At about the same time President Balmaceda forcibly broke up the meeting of a political club at Santiago, the capital.

While the navy, manned by two thousand men, declared against the President, and was aided by considerable bodies of insurgents on land, hastily mustered, the President succeeded in retaining the support of the greater part of the army, and was credited with having at his back a force of thirty thousand men.

Early in May it was announced that the revolutionary party had succeeded in conquering and holding eight of the twenty-three provinces of the Republic, and that it had grown strong enough to demand recognition from foreign powers.

The Chilean revolution is the third which has taken place in South America within two years.

In November, 1889, the Emperor of Brazil was deposed, and a republic was almost bloodlessly substituted for the Empire in that vast country.

In the midsummer of 1890 a revolt took place in the Argentine Republic against President Celman, who, like Señor Balmaceda, was accused of financial mismanagement, and who was forced to resign. His office was assumed by Señor Pellegrini.

Both of these revolutions seem to have been justified by the circumstances of the two countries. Brazil was ripe for a republic, and naturally desired the same form of government enjoyed by her South American neighbors. The later revelation of the state of Argentine finances shows that the change violently made in that republic was a change for the better.

The South American republics have won a bad name for the frequency of their revolutions, and for the readiness with which their elected rulers aim at dictatorship. It is true that some of them have had revolts and civil disturbances now and then since their separation from Spain.

Yet the impression that they are almost always in a volcanic state of disorder is an exaggerated one. The civil disturbances in them are occasional. For the most part they proceed in quiet, and live under an orderly regime.

As years go on, moreover, the South American republics seem to be getting more stable, and to be learning the lesson of submission to law. They are less often distracted by the restless ambition of would-be dictators.

The revolution in Chile, considering the high character its people have so long borne, is certainly lamentable. But it seems to have been rendered unavoidable by the arbitrary course and high-handed conduct of President Balmaceda.

For the Companion.

MOTHER AND HERO.

The breeze, in pity, takes the flag
That marks a soldier's resting-place,
And lays it on his mother's grave,
Comrade in sacrifice and grace.

God knoweth best which offered more,
The heart that dared, the heart that brake;
But like affection hallows mounds
Where lie the martyrs for truth's sake!

GEORGE T. PACKARD.

THE FARMERS' ALLIANCE.

No political matter in the United States attracts so much attention at present as the Farmers' Alliance movement. It is regarded as the basis of a third-party movement, and in several States it has, in recent elections, shown a greater power than either of the old parties. In Kansas, where it is said to have one hundred and forty thousand members, it recently elected a United States Senator, and controlled the acts of the lower branch of the legislature at its last session.

It has definitely entered the field of politics, coöperating with other associations, such as the Farmers' League, which have similar objects.

We will endeavor to set forth the state of the case as it appears to the Alliance, without expressing an opinion as to either the grievances or the remedies proposed.

Looking at the movement in the most general way, the cause of the formation and growth of the Alliance is the unsatisfactory condition of the agricultural interest, and the conviction of a great many farmers that legislation, State and national, has been directed toward helping on the development of all other industries except agriculture, and that government has, indeed, so shaped matters that the expense of all this development has come out of the farmers.

The farmers complain that the prices that are obtained for their products do not pay the expense of handling them; that the high cost of transportation, and the necessity of farming after improved methods in order to compete with their neighbors, has forced farmers to go into debt, and that the conditions introduced or permitted by legislators have forced the farmers to pay exorbitant and ruinous rates of interest.

They find in the vast number of mortgages on American farms not a proof of want of thrift on the part of the people who borrowed the money which is secured by these mortgages, but that conditions were induced by legislation of the wrong sort, or by want of legislation of the right sort, which made it impossible for the farmers to avoid giving these mortgages.

They also believe that the bad state of their industry has been in considerable part due to combinations, trusts and systems of speculation; and that these trusts and combinations, as well as speculation in future values of farm products, should be discouraged or prohibited by law.

They believe that money should be made as plenty as possible, and to that end favor free coinage of silver, the abolition of the national banks and the substitution for the national bank-notes of a legal tender currency issued directly by the United States treasury.

A great many members of the Alliance also favor some means of lending the farmer government money at cheap rates of interest. The so-called "sub-treasury scheme," which proposes, in effect, that the government shall receive the farmer's products, particularly grain, and advance him a certain percentage of its value in certificates which shall circulate as money, is a part of this plan to secure the use of the government's resources to the farmer.

The Alliance may also be said to favor the government ownership of railroads. Those who do not go so far as this, generally favor such legislative control of the means of public transportation as shall make them more serviceable and less expensive to the farmers.

The Alliance also directs its efforts against the charging of usurious rates of interest, and demands more lenient terms for the mortgaged farmer who is unable to pay his debts.

The Alliance State platforms in general have demanded the prohibition of the ownership of land by aliens.

These are in the main the grievances and purposes of the Farmers' Alliance. Their purposes the members propose to accomplish by electing their own representatives to legislatures, to Congress, and to all official positions.

The principles of the Alliance are undoubtedly in opposition to the general plan upon which government in the United States has been administered in the past, which is that legislation should interfere as little as possible with the relations of citizens one with another, and that government should keep out of business enterprises so far as possible. The farmers, however, believe that those principles have been perverted to their injury, and therefore they demand the changes that have been described.

OF ONE BLOOD.

A year or two ago a desperate fight took place between the workmen of three coal-mines in Pennsylvania. There was no cause for it but the difference of nationality between the gangs. Poles and Hungarians were arrayed against the Irish and Germans.

A superintendent who had lived many years among the miners said to a visitor, "There is no hope that they will ever be reconciled. It is a contest of race; the antagonism is in their blood. An Irishman and a Hungarian hate each other by instinct, as a dog does a cat. We can never hope for peace in the mines."

In the first week of February in this year a mine was submerged at Jeansville. Most of the miners at work, some of them Irish, and some Poles and Huns, were killed by the foul air.

All operations were stopped, and a rescue-party of sixty men set to work to discover the bodies of the victims. The whole country-side was moved with horror and pity.

On the twentieth day it was found that four of the men were still alive, having been imprisoned for nearly three weeks without food in a "breast" or hole in the mine, four feet square. They were Hungarians and Poles.

The rescuing party, Irishmen, Americans and Germans, in a frenzy of zeal pushed into the narrow gangway leading to this living tomb, and six times were driven back, fainting, by the deadly black damp.

Each man knew that he remained in the gangway at the peril of his life, but not one turned back. At the eighth attempt they reached the breast, and found the men still breathing. They could not walk, and the gangway, two hundred feet long, was too narrow to allow of their being carried out.

The rescuers devised a plan. They lay down on their backs in the long passage. The feet of one man touched the head of another, and so, stifled by the fatal damp and nearly covered by water, they passed the unconscious victims over their own bodies to the mouth of the gangway.

Outside the opening, Catholic priests and Protestant clergymen, physicians, nurses, laborers and delicate women in great numbers, stood waiting breathless. By and by the line of rescuers appeared. The men were covered with mud and blood, their miners' lamps burning in their hats. But they carried the rescued men, and were met with sobs and tears of joy. By one impulse the great crowd began to sing the doxology:

"Praise God from whom all blessings flow."

Irishmen and Hungarians, Americans, Poles and Germans thanked God in their hearts together that these poor brothers of theirs were still alive. For beneath all race difference, God "hath made of one blood" all the peoples of the earth.

PLAYGROUNDS.

"Are you not afraid to have your son associate with such rough boys?" asked a lady the other day, as she pointed to a noisy game of base-ball in an adjacent field.

The father's answer was to this effect: "No; I am not afraid so long as I see them playing an honest game in the open field. They occasionally use words that I am sorry to hear; they occasionally have an altercation that is too violent; and now and then, but not often, there will be a fight.

"But, generally speaking, no great harm is done, and the good greatly preponderates. It is when they are not playing, and stand about idle and listless, and are thrown upon their mental resources for entertainment, that I begin to be afraid, and as soon as possible I get Johnny away."

There was sense in that father's remarks, and some parents in New York are acting upon his idea this spring in quite a vigorous and original manner.

They have formed themselves into a society, the chief object of which is to provide many more small playgrounds all over the city; not mere gardens and grass-plots, with gravel paths and flowery borders. These, too, are excellent in their place, and there are already many such in the city; but this society means to provide playgrounds where boys and girls can really play, and play as hard as they like, with no one to tell them to keep off the grass, and with not much grass to keep off.

The secretary of this society sketched the outline of an ingenious scheme the other day at one of the meetings. He said that a large plot of ground in Second Avenue near the East River had been given to the society for an indefinite period rent free, and this they intended to flood with water in December, and use it for a skating pond during the winter.

In the spring the water will be let off, and the

Digitized by Google

plot covered with nice clean sand, upon which will be placed some simple and safe gymnastic apparatus, and a teacher provided to show the children how to use it. This is only one of many ideas which the society have under consideration.

In a town where there are good and convenient playgrounds and bathing places, the superfluous energies of the young are apt to be expended innocently and beneficially. Where such places are not provided, we ought not to be much surprised if the young people occasionally get into mischief.

IN HIS POCKET.

Jeremiah Mason, the celebrated lawyer, possessed to a marked degree the instinct for the weak point.

He was once cross-examining a witness who had previously testified to having heard Mr. Mason's client make a certain statement, and it was upon the evidence of that statement that the adversary's case was based.

Several questions were asked by Mr. Mason, all of which the witness answered with more or less hesitation. Then he was asked to repeat once more the statement he had heard made. Without hesitation, he gave it, word for word as he had given it in the direct examination.

A third time Mr. Mason led the witness around to this statement, and again it was repeated *verbatim*.

Then, without warning, he walked to the witness stand, and pointing straight at the witness, said in his high, nasal, perfectly unimpassioned voice:

"Let's see that paper you've got in your waistcoat pocket."

Taken completely by surprise, the witness mechanically took a paper from the pocket indicated, and handed it to Mr. Mason.

There was profound stillness in the court-room, as the lawyer slowly read, in his cold, calm voice, the exact words of the witness in regard to the statement, and called attention to the fact that they were in the handwriting of the lawyer on the other side. He then gathered up his papers with great deliberation, remarked that "there seemed to be no further need of his services," and left the court-room.

"Mr. Mason, how under the sun did you know that paper was there?" asked a brother lawyer.

"Well," replied Mr. Mason, "I thought he gave that part of his testimony more as if he'd learned it, than as if he'd *heard* it. And I noticed, every time he repeated it, he put his hand to his waistcoat pocket, and then let it fall again when he got through."

It was a simple explanation, but a very shrewd conclusion.

GOOD ROADS.

During the legislative year which includes the past winter, the governors of no fewer than six States of the Union have invited the attention of the legislators of their States to the subject of the improvement of wagon roads, and in two or three States acts have been passed looking toward a more systematic method of constructing and maintaining roads in country districts.

The practice in a great part of the country is to leave road construction and repair to the people of the individual "road districts," each of which is in charge of a road-master, who usually has no practical knowledge of the science of road-making. Once a year, for two or three days, the people turn out and help him pile up gravel or dirt in a sort of ridge upon the portion of the highways which is most out of repair, and the work is done.

Not unfrequently the roads are made worse by this process instead of better.

The Americans are a practical people, and have begun to realize that it is economy to have roads built according to a general system, under the superintendence of practical men who have learned the business of road-making.

Farmers and teamsters well understand the fact that a good road is worth money to them, because upon it they can sometimes carry twice as much weight at a wagon-load, with the same expenditure of horse-power, that they can carry on a bad road.

Furthermore, a road, once well built of macadam or other permanent material, requires less than one-quarter as much labor and expenditure to keep in repair as a common dirt or loose gravel road requires.

The country roads of to-day are often bare and unattractive. If well laid out, scientifically made, and lined with trees and shrubs, so as to bring out the natural beauties of the region, they might be an embellishment and advertisement of the country they serve.

GENERAL DU CASSE.

General du Casse was active in all the campaigns of the French Revolution and of the Empire from 1792 to 1814, and won his military rank on the battlefield. As described by his son in his "*Souvenirs d'un aide-de-camp du Roi Jérome*," he was a man of rugged character, gifted with much wit and mental ability, and as an officer he was energetic, tolerant in many things, but inflexible in regard to discipline.

His subordinate officers were allowed no carelessness in the matter of military bearing. One day he saw pass his window M. Paira and M. de Bonnemains. One of these young officers wore spurs; the other did not. The next day this order was posted:

"M. Paira, sub-lieutenant, is under arrest for twenty-four hours, for having appeared in spurred boots, being an infantry officer; M. de Bonnemains, sub-lieutenant, is under arrest for twenty-four hours for having appeared in boots without spurs, being a cavalry officer."

When Charles X. visited Amiens, etiquette demanded that the Mayor of the town should go to meet him, and present him with the keys of the city on a silver plate, with an appropriate address.

The Mayor, M. Daveluy-Ballincourt, was at a loss as to what he should say to the King, and with the civil and military authorities he waited upon General du Casse, asked his advice, and received this reply:

"You have a very simple duty to perform, sir. It is to say to the King, as you present the keys, 'Sire, I have the honor to place in your Majesty's hands the keys of your loyal town of Amiens, and I beg your Majesty to hunt for the gates!'"

Amiens had, in fact, neither walls nor gates; only a citadel overlooking the town.

A Yachting Serial.

Next week's COMPANION, the Monthly Double Number, will contain the first chapter of an entertaining Serial Story of Yachting Adventure, by Herbert D. Ward, entitled

"The Captain of the Kittiewink."

SNOW INDOORS.

The same causes which produce a fall of snow in the open air—namely, a subjection of a moist atmosphere to a temperature cold enough to crystallize the drops of moisture which are formed—may, of course, take place under artificial conditions.

La Nature, a French journal of science, relates that a gentleman who was walking rapidly along the street on a cold, fair day, and had, by violent exercise, brought himself into a condition of profuse perspiration, took off his tall hat in saluting a friend.

As he did so, he was astonished to feel what was apparently a slight fall of snow upon his head. Upon passing his hand over his head, he found several unmistakable flakes of snow there.

It is supposed that the freezing outer air condensed the moist warm air within the gentleman's tall hat so suddenly that a veritable snow-storm, of miniature proportions, was produced upon his head.

A similar incident is related by the same journal. During the past winter, on a very cold, clear night, an evening party was given in a *salon* in Stockholm, Sweden. Many people were gathered together in a single room, and it became so warm, in the course of the evening, that several ladies complained of feeling ill.

An attempt was then made to raise a window, but the sashes had been frozen in their place, and it was impossible to move them.

In this situation, as it was absolutely necessary that air should be admitted, a pane of glass was smashed out. A cold current at once rushed in; and at the same instant flakes of snow were seen to fall to the floor in all parts of the room.

The entrance of a frosty current into an atmosphere which was saturated with moisture had produced a snow-fall indoors.

ALMOST STARVED.

In one way and another we are all frequently reminded of the uncertainty attaching to human judgments. A grown man, in the full possession of his faculties,—as we commonly speak,—certainly ought to know when he is hungry. Yet an experience like the following, related by "Taverner" in the Boston *Post*, is probably not very exceptional:

I was engaged yesterday morning in preparing part of an interesting chapter in my new work on the origin and development of the bonnet. I had got as far as the head-dress worn by the Athenian matrons to the theatre, and was naturally much engrossed with the work, when an inward monitor, in a still, small, but yet unmistakable voice, suggested "lunch." I looked at my watch—it said three o'clock!

Now I always take luncheon at half-past one, never, in any emergency, later than two. But three o'clock! I felt ill and faint.

I started for the club, feeling like Rip Van Winkle when he came home for his lunch twenty years late. I passed a friend, and tried to slink by without his noticing, but I could see that he looked upon me sadly and askance, as if I were in some way a stricken wether of the flock.

I went in and sat down. Somehow every one else seemed to be late. I looked at the clock, it was exactly twenty-five minutes of two. I looked at my watch again. It was still three o'clock. It had stopped during the night.

Now mark the result. I instantly recovered from the starvation from which I had been suffering, and began to converse in my usual cheerful and intelligent manner. But I did not mention the extraordinary behavior of my watch, which I now reveal only in strict confidence.

A CORRECTION.

Some words are so generally misapplied that many people imagine them to be quite correct and even elegant in certain instances when they are really out of place.

"Will you tell me how near to the station this car goes?" asked a mild-featured old lady of the conductor on a suburban horse car.

"What station?" inquired the conductor, with an air of great forbearance. "Do you mean the police station? We don't go anywhere near it."

"No, I meant —" began the old lady.

"Oh, I suppose you mean the fire-engine station," interrupted the conductor. "Well, we go within about five minutes' walk of that."

"I meant the railway station," ejaculated the old lady, with a considerably flushed countenance.

"Oh, the *depot*," said the conductor, in a tone of great superiority. "We pass close by it."

"Thank you," said the old lady, politely, and the conductor evidently felt that she was suppressed, and he had administered a needed lesson in English.

AN ORIENTAL JOKE.

The Oriental races are not without a sense of humor, which is often of a very grim sort. A European traveller, who was visiting the court of the Imam of Muscat not long ago, relates the following:

I had heard that no ruler of Muscat for the last hundred years had died a natural death, and was interested when, in our conversation, the Imam himself introduced the matter of this extraordinary fatality among the sovereigns of his country.

"Is it true," I ventured to ask, "that no Imam for a hundred years has died in his bed?"

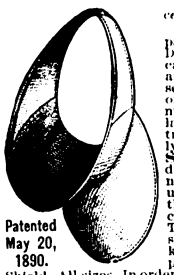
"Certainly not," said he, with a perfectly grave face. "Let me see—four of them have died in bed."

"And they were not assassinated, then?"

"Well," he said, "it is true that they were found under the mattress instead of on top of it, but they unquestionably died in bed."

They had been smothered by their heirs apparent.

"Brown's Vermifuge Comfits," or worm lozenges, will be found a very beneficial medicine. They are pleasant to the taste, free from coloring matter, and no child will refuse to take them. 25 cents a box. [*Adv.*



All Sizes

What do you want of a lamp? If to bother the care-taker, don't get the "Pittsburgh." It gives more light, and burns less oil than any other central-draft lamp. Will you write for a primer?

Pittsburgh, Pa. PITTSBURGH BRASS CO.

SIGSBEE'S SEAMLESS SHIELDS.

Patented May 20, 1890.

Sales this year over 50 per cent. greater than 1890.

One of the most troublesome parts of a lady's apparel is the Dress Shield. They are hot, causing profuse perspiration and annoying odors. Dresses set uncomfortably on account of this cumbersome attachment under the arm, and every lady has experienced much trouble by her shields constantly ripping out. The **Sigsbee Shields** overcome all of these difficulties. They are worn next to, or underneath, the undervest with equal comfort, thus keeping the corset and corset cover sweet and clean. They conform perfectly to the shape of the arm, do not wrinkle. Instantly adjusted. Impervious. The only perfect Dress Shield. All sizes. In ordering, give measure of arm-seye. Price, per pair, 35c. Sold by Dry Goods Dealers everywhere. Sent by mail, postage prepaid, on receipt of price. **SIGSBEE MANUFG. CO., Ayer, Mass.**

The New Stocking.

Waukenhose

Nature's Foot. Hose to Fit.

Knit to Fit the Foot Perfectly at All Points.

Saves discomfort; no wrinkles, no cramped toes. (Notice the shape.)

Saves darning; the big toe, having room enough, stays inside the stocking.

A sure relief for those afflicted with ingrowing nails, corns, bunions, or unnatural heat and perspiration of the feet.

If your dealer hasn't them we will mail 2 pairs Soft Lisle or 3 pairs Fine Cotton on receipt of $1.00.

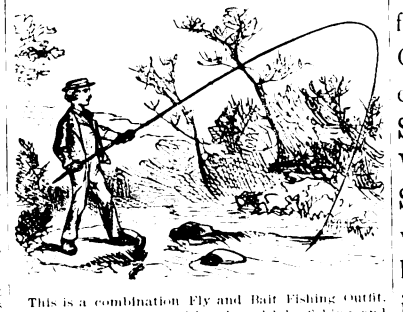
Mention size shoe worn. (*Men's only.*)

WAUKENHOSE COMPANY, 76 Chauncy St., Boston, Mass.

LINEN DRESS FOUNDATIONS.

Richardson's Linen Dress Foundations are the best for all materials.

They do not cling, they do not split, they do not shrink.



They slip on easily and, in use, are equal to silk.

Made in shades to match all the fashionable dress fabrics, 32 inches wide, at 25 cents per yard.

James McCreery & Co.,

Broadway and 11th Street, NEW YORK.

For Spring Fishing.

This is a combination Fly and Bait Fishing Outfit. It is designed for general brook and lake fishing, and for the money cannot be excelled.

The Rod is a fine one, in 3 sections, 9½ feet long, with lance wood tip, double ferrule, brass cap to butt, and ringed throughout.

The Outfit contains, with the Rod, 1 Pat. Reel, 45-foot Linen Line, 6 Snelled Hooks, 2 Fly Hooks, 1 3-foot Leader, 1 Float, 1 Bait Box and 1 Box Split Shot.

Price, $1.00. Postage and packing 24 cents.

THE YOUTH'S COMPANION, Boston, Mass.

Challie-de-Laines.

NEW GOODS.

Fully Half Wool.

A Pronounced Success!

These goods are of a fine texture, soft and flexible, and drape perfectly, making an inexpensive and serviceable dress at the same time, the styles, finish and general effect are not excelled by the most expensive fabrics (cream grounds). We are showing an extra large assortment of styles from which to select, 22 inches wide,

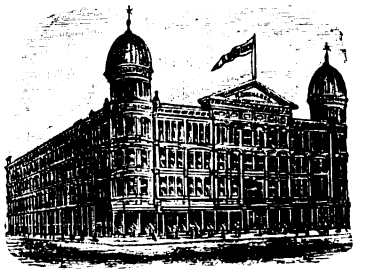
20 cts. per yard.

Postage on 12 yards, which is an ordinary dress pattern, is 15 cts. Send for samples.

JORDAN, MARSH & CO., Boston, U. S. A.

Spring, 1891.

"TOILE DU NORD"



PRODUCED BY THE

PARKHILL MFG. CO.,

FITCHBURG, MASS.

Improved in quality and maintaining its high standard of perfection of manufacture, durability of colors and elegance of style. *It is the most desirable Wash Fabric in the country for general family use.*

Samples furnished on application.

O'NEILL'S

6th Ave., 20th and 21st Sts.,

NEW YORK.

Importers and Retailers

OF

FINE MILLINERY, DRY GOODS, ETC.

"Spring and Summer Season."

We beg to inform our many friends and patrons through THE COMPANION that we are now exhibiting the finest lines of Spring Millinery, Costumes, Wraps, Jackets, Dress Goods, Silks, etc., in this city. Pay a visit to our Mammoth Establishment, or if you do not live in the city send for our illustrated catalogue (now ready), and see what inducements we are offering. We are sure we can please you, both in quality and price.

THE GIRL WITH A TASTE FOR MUSIC.

By Madame Emma Albani.

My first thought, in giving advice to a young girl desirous of becoming a singer, would be to warn her of the very great obstacles to be surmounted, to give her an idea of the courage and patience which are necessary to success, and to ask her if she was perfectly sure that she was destined and fitted for this career.

If her voice really warrants cultivation, and if she has the necessary determination, I would then say, "Go ahead, and godspeed!" I succeeded, and why should not she succeed also?

At the same time it often seems to me as if many pupils of vocal culture in our days begin, and are permitted to begin, in the wrong way. They often begin too late; and more than this, not enough weight is placed upon what I consider the absolute necessity of a thorough, all-round musical education. I was particularly fortunate in this respect, and I attribute a great deal of my success as a singer to the fact that I was well trained in all the other branches of music. When I was eight years old I was thoroughly conversant with nearly all the classical piano-forte music and could play most of the Beethoven and Mozart sonatas. When I left Albany and went to Paris to study, I was seventeen years old, and although my whole idea was to study music, strangely enough I had no idea of becoming a singer.

I studied in Paris the piano-forte and organ-playing, composition and also the voice. Dear old Duprez, my master, finally told me that I ought to give up all the rest and devote myself solely to singing, and this I determined to do.

At that time, Prince Poniatowski, the well-known Polish musician and composer, told me that the French school was not suited for my voice, and insisted that I should study in Italy. It was finally decided that I should go to Lamperti, the celebrated Milanese master. With him I remained nine months. This may at first seem a short time, but it must be remembered how much and how thoroughly I had studied before.

If a student has the real genius of song, it will show itself very soon under proper teaching. If she is destined to sing she will sing; and although it is very far from my idea to recommend slovenliness or shirking, it is also true that the mere training of the voice can be overdone.

Assuming that the beginner has reached the point where her public career is about to begin, the time comes when some really valuable advice can be given. Up to that time her master will be her helper and guide. She must, of course, take the greatest care of her health, for anything which is bad for the general health of the body is also bad for the voice, and vice-versa.

It is especially necessary that the stomach and digestive organs should be in a thoroughly good condition, and for this reason a singer should avoid all indigestible food. Nuts, cakes and candies are especially bad for the voice, and a strengthening, simple diet is the best to adopt.

A great deal of exercise and fresh air are absolutely necessary. For an opera singer, who is probably getting plenty of active exercise on the stage, I consider driving to be the best open-air exercise; and there is never a day, no matter what the weather may be, that I do not drive for an hour and a half, making a special point of this on singing days.

With regard to clothing, the chief thing, of course, is not to catch cold. Singers should be careful not to muffle up their throats, for this only makes that precious organ the more susceptible to exposure. Conversation is to be avoided on singing days; but otherwise it is an excellent exercise for the voice, and to be recommended within moderate limits.

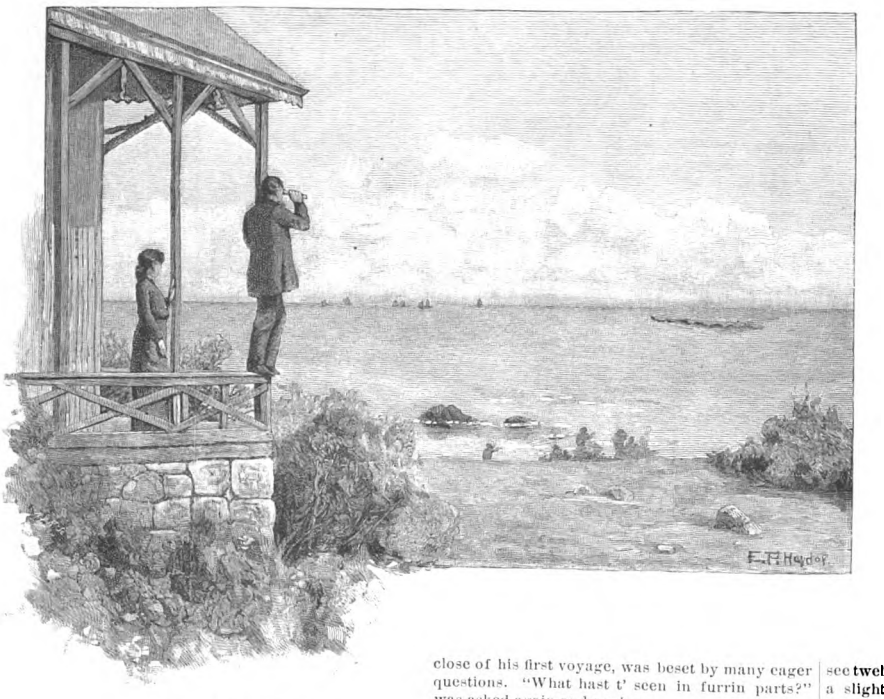
These simple precautions are not difficult to follow. They do not inconvenience to any great extent, and they repay tenfold.

The first appearance of a beginner will always be a very trying occasion, but to her her art must be sacred, and she must live up to its highest canons. Not only must she show what she has learned, but also what she is herself. The voice itself comes from God, and the acquirement of vocal technique is a mere matter of routine. It is in the singing itself, the phrasing and the declamation, that the artist shows what is her very own—her artistic personality.

Probably the young cantatrice will be intoxicated by her first applause. It is indeed the most grateful of all tributes to the artist; but she must not be induced by this to think that she is perfect. Artists should never cease to study; and they will find that, however well they sing, it is always possible to improve.

I have been particularly fortunate in the degree of success I have obtained during my career, but this has not debarred me from constantly studying. Even now, in my oldest operas, I often find that an improvement may be made in the manner of singing some of the passages and phrases.

If young artists will do this, they may not be able at first to find what they want; but by perseverance the right expression will be found, and it will even come sometimes quite unexpectedly when they are before the public. This will surprise them, but it will also be a delight and a reward for many anxious hours of study.



It is a very necessary thing for a singer to take a vacation every year, during which time all singing is absolutely given up. I have a pleasant place in Scotland, Old Marr Lodge, near Brynmarr, where I spend two months every year, August and September. This place is fourteen miles from Balmoral Castle. I was highly pleased and flattered when, one day last year, the Queen drove over and called upon me and stayed for a cup of tea. She has often assured me of the great pleasure which she took in my singing, but I feel especially complimented by her visit.

Although vacations are undoubtedly necessary, both for the student and for the finished singer, still they should not be too long, for in that case ground would be lost which it might be a laborious matter to recover.

Before closing I want most especially to speak of Wagner's music in its relation to the singer, because I wish most positively to deny the theory that it is in itself injurious to the voice. Of course much of his beautiful music is very difficult to sing. The intervals are new and unusual, and there are many very long sustained notes and *cantabile* passages which must be sung carefully. But I maintain that to a properly trained singer, and there is the whole point of my argument, Wagner's music need have no terrors.

If a young and inexperienced artist attempts to sing these parts, it is very likely that the result will be injurious. The school-days are only just over, and the voice has not yet learned how best to make use of its freedom. It is always best to begin with simple tasks in any art or profession; but in the case of a singer, when a few years have brought experience and self-reliance, she should be able to sing anything without injury to her voice, always provided that it is properly trained in the first instance.

In closing I wish to say that if these few words of mine give any help to any of my aspiring young compatriots, I shall feel that my trip to America has indeed served a doubly successful purpose.

Watching the Sea-Serpent.

SIXTY YEARS AGO.

In the Autobiography of Chester Harding, the celebrated portrait painter, lately published, we get a glimpse or two of boy life and character as they appeared fifty or sixty years ago.

In 1824 the artist was in England, painting portraits of the nobility with great success, and he noticed a certain difference between the behavior of English and of American boys, as well as between the ordinary English and American holiday crowd.

He found the English people, both young and old, better behaved, better-tempered, and much happier than the Americans. He never saw any wrangling among the poorer class of people, but, on the contrary, a social and friendly disposition which he thought did not exist in the United States. In America, he said, on any holiday like an election or general training, "The lower classes of society considered themselves licensed to get drunk and render themselves as beastly as possible, and I hardly remember an instance of a holiday of the kind to pass over without a fight, and sometimes a dozen of them."

In England he observed nothing of the kind, neither in the streets, nor at the fairs, nor at any other place of amusement. If in passing a crowd in the streets, he happened to run against an English boy, or tread upon his toe, the boy immediately pulled off his hat and begged pardon. It was not so at home, he remarked. If a passer-by "happened to encroach upon the rights of one of our republican boys, he would let fly a volley of mud-rockets at him," and hurl offensive oaths.

A statement of this kind cannot but surprise readers of the present generation, who see nothing of the kind on public occasions in America. Joseph Jefferson, however, in his Autobiography confirms Mr. Harding's statement, attributing the improvement in the behavior of our boys to the common schools.

Mr. Harding gives an anecdote of a boy whom he employed in his Boston studio, which seems to indicate a lack of knowledge of at least the language of good manners.

Upon coming into his studio one day, the boy handed him a card, and said that the gentleman who left it wanted to pay Mr. Harding something.

"But," said Harding, "he owes me nothing."

"Well," replied the boy, "that was what he said; but I can't remember what it was he wanted to pay."

"Was it his respects?"

"Oh, yes, sir; that was it."

For the Companion.

THE SEA-SERPENT.

With here and there a marked exception, scientific men admit, at least, that they are not justified in denying the possibility of the existence of such monsters as the "sea-serpent," while many declare in emphatic terms their firm belief that such creatures do exist.

The common incredulity regarding them reminds me of a story which seems so much to the point that I will repeat it. It was something like this.

A Scotch sailor lad, returning to his home at the close of his first voyage, was beset by many eager questions. "What hast t' seen in furrin parts?" was asked again and again.

In reply he said that he had been where rum flowed in rivers, and where tall mountains were made entirely of sugar. At this point his imagination failed him, and he came down to solid fact, telling of the shoals of flying-fish which he had really seen in tropic seas.

His aged mother, at this point, felt constrained to reprove her son. Raising her horn-bowed spectacles, and frowning indignantly, she exclaimed, "Nae! Nae! Jock; mountains of sugar may be, and rivers of rum may be; but fish to flee ne'er can be!"

So thousands to-day, who are gullible in regard to many impossibilities, join the incredulous and smile knowingly whenever they hear any allusion to the sea-serpent.

Said a lady to me, not long since, "There are those who will never believe in it until they handle it, and then they won't." Was she not right?

I confess that I blame no one for a disbelief of most of the stories concerning sea-serpents which appear in print. Their falsity is stamped upon their face. While granting this, I stoutly claim that when one has thrown aside as worthless all the yarns of sailors and the stories of landsmen upon which rests the taint of suspicion, there still remains a residuum of evidence which cannot justly be ignored.

My own firm belief is based both upon what my eyes have seen, and upon the unimpeachable testimony of many men, some of them under oath, whose word upon any other subject would be taken without a question.

Bronzed fishermen, whose lives have been spent in their dories, captains of coasters and steamers who have grown gray upon the ocean, officers high in rank in both the American and British navies, as well as sagacious business men, whose eyes and judgments are not easily deceived, alike bear testimony to what they have seen; and yet in many minds the doubt still remains.

Men have even become unwilling to meet the ridicule bestowed upon those who have the hardihood to declare that they have seen a sea-serpent. This feeling was expressed by an old sea-captain, who exclaimed, "If I should see a thousand sea-sarpints, I never'd tell on't."

Another, Captain Cooper of the English ship *Carlisle Castle*, after his experience in reporting what he had seen upon one of his voyages to Melbourne, said in disgust:

"I don't see any more serpents. It is too much to be told that I can't tell the difference between seaweed and a live body. If twenty serpents come on the starboard, all hands shall be ordered to look to port. No London penny-a-liner shall again say that Austin Cooper is a liar and a fool."

I have myself received two or three letters from persons who admit that they have been restrained by this fear from reporting what they have seen.

But now for my story. For fifteen summers I have spent several months, each season, in my cottage at Pigeon Cove, at the extreme point of Cape Ann, Massachusetts.

Here I am really ten miles out at sea, where the water is so deep that large steamers come almost within a stone's throw of the rocky shore. Here it has been my delight, day after day, to sit upon my piazza and watch every changing feature of sea or sky, and to admire their beauty or grandeur in calm or storm.

I have thus learned, with a quick eye, to detect any strange appearance of animal life which breaks the surface. By this long experience I was better prepared than most men would be, to judge in regard to the nature of the exhibition which I was permitted to see.

It was about one o'clock on the afternoon of August 12, 1886. The day was exceedingly clear, and the sea almost like a polished mirror, so calm was its surface.

Dinner was out of the way, and I was seated upon the sofa, engaged in study, when I heard some one approaching with rapid steps. It proved to be Mr. Calvin W. Pool, town clerk of Rockport, who was surveying in the vicinity.

A knock at the door and the hurried exclamation, "There is some strange thing out here; I think it is the sea-serpent!" brought me to the piazza with marine glass in hand.

Mr. Pool returned quickly to his transit instrument for further observation, and I mounted the rail and fixed the glass upon a moving object, but a little more than an eighth of a mile from land, slowly plowing its way northward along the shore, in a line parallel with it, and turning the water as a plow turns the sod.

My position was about fifty feet above the sea level, and but thirty-six from the rocks which form the shore.

My opportunity for securing a good view was excellent, and I certainly improved it to the best of my ability, not taking my eyes from the strange visitor while he remained above the surface. I saw it approaching, passing and departing, and had no question that I was looking upon the veritable sea-serpent.

Its movement was not like that of the true serpent, which is always lateral, as it must be from the construction of its vertebræ, but a vertical one, reminding me of the leach or bloodsucker of my boyhood.

The distance over which I saw it pass was perhaps a mile and a half, and the head was almost constantly in sight, visible, but not distinctly seen, since it was partially obscured by the water which was thrown over it as its muzzle or cranium cut the surface. This foamy water was so noticeable that several exclaimed, "His head is white!"

Back of the head I could distinctly see twelve or fifteen feet of the body, which showed a slight vertical movement, while back of this, where the movement was greater, the depressions were below the surface and the elevations caused a dozen or more ridges.

I attempted to count these, but their movement made it impossible. The centres of these elevations were certainly six or seven feet apart, so that I am sure the whole length of the body could not have been less than one hundred feet, although in my desire to speak within bounds, I reported it as not less than eighty. The tail, which I was eager to see, did not come into sight.

I am constantly asked, "How did it look?" I can only reply, "It looked like a huge sea-serpent and like nothing else."

As to its size, it is difficult to speak, since I do not know that the largest diameter was visible. An empty barrel, floating by, will reveal its full size, but ballast it well and but very little will be shown.

My best judgment, after careful consideration, is that its head, which was at no time raised entirely out of water, was as large as a ten-gallon keg, and the body, at the thickest part, fully as large as a flour-barrel. The surface of the body seemed as smooth as the head of a wet seal, and there was nothing to indicate that it was propelled by fins or flippers. There certainly was no sign of a dorsal fin.

The back was of a dark brown color, and it appeared to be somewhat mottled with a lighter shade. It is possible, however, that this effect may have been produced by the varying depths of water above it.

As the head moved through the water, wakes were caused on each side as by the cut-water of a passing tug; and from my elevated position I could distinctly see the movements of the body between them, as they widened out more and more.

There was also a wake, less marked, behind the rearmost hump. These wakes were noticeable for some time after the creature had passed.

There was no turning from a direct course, and the speed was not more than four or five miles an hour. The rate of progress gave ample time for a good view. When the creature had reached a point about a half mile to the northeast of us, the undulatory movement seemed to cease, and the

Digitized by Google

body to be for a moment extended along the surface, after which it disappeared.

When I took the glass from my eyes, my little lawn was covered with people, friends and strangers, who had come, as if by magic, to obtain a sight. They were not counted, but I am sure there were not less than fifty. Most of them were obliged to content themselves with their own unaided vision, and many did not reach the spot in season to secure the best view; but all were agreed that they had seen with more or less distinctness a genuine sea-serpent, and rejoiced in the sight.

Mr. Pool's glass magnifies twenty-five diameters, and upon subsequent consultations, I found that we agreed perfectly as to the general appearance, as well as upon many minor details.

At his request and that of several of my neighbors, I immediately wrote a letter to the Boston *Journal*, giving a brief account, which was telegraphed over the country and very largely copied and commented upon by the press.

While many of the papers accepted my account as worthy of credence, others met it with ridicule, and others still made suggestions as to what it might have been. These suggestions have been carefully considered over and over again, and I am compelled to say that to accept any one of them would require a far greater stretch of the imagination than to believe as I do.

Says one, confidently, "It was only an old spar or log." Another, "It was a mass of seaweed, slowly floating by. Such things have often deceived people; but further investigation has proved them mistaken."

But let me ask a question. Do floating objects go with the tide or across it? It was high water that day at ten o'clock in the forenoon. At one, therefore, the tide must have been three hours out, and setting strongly to the eastward from Ipswich Bay. The creature of which I write moved in a northerly direction, directly across the current.

Again, inanimate objects moving with the tide do not cause even a ripple; but in this case the foam was thrown up, as by a vessel "with a bone in its teeth." With these two facts in mind, I think no one would maintain that I was deceived by anything which was simply floating with the tide.

But you say, "Was it not carried by the wind?" No; this was impossible, since, as I have said, it was a dead calm, and the sails of distant schooners were hanging idly, without a breath to fill them. I hazard nothing, then, in saying that neither wind nor tide could account for the phenomenon which received my careful scrutiny.

The suggestion is made that it was a grampus. Well, let us see. I am familiar with this small species of whale and have often seen a school, as each broke the surface, spouted, revealed a dorsal fin two or three feet long, and then disappeared, to come up and repeat the operation again and again.

Is there any resemblance in all this to the steady, forward movement which I witnessed for at least ten minutes?

"It must have been a sword-fish," you say. It is true that the sword-fish often swims for a long distance just below the surface; but the fisherman always sees a dorsal fin, while the head and most of the back are not visible. If the largest sword-fish were to show his whole back, it would hardly present a tenth of the length which I saw, and would be quite devoid of the undulations which were so marked a characteristic of this appearance.

But how about porpoises? Some have mistaken a shoal of them for the supposed sea-serpent.

These animals I have seen in their merry gambols, now one, now three, now ten perhaps in sight, at once, each tumbling "on his own hook." How absurd to suppose that one porpoise would or could, without a tumble or a leap, cut the water for ten minutes, and each remaining individual follow this self-appointed leader in a direct line!

Twice, since that memorable August day, have I taken pains to watch a school of porpoises with the same glass and at about the same distance; and in both instances there was not in their positions the least semblance to a line, and each invariably threw up the spray as he broke the surface. There was not only no resemblance to what I saw, but the effect could hardly have been more unlike what I have described than it was.

"But Mr. Murray saw flocks of birds on Lake Champlain which others had mistaken for a sea-serpent."

Perhaps he did. I think I recall some of his stories; but seabirds do not fly here in the middle of August, and if they did, how preposterous to suppose that they would be ten minutes in going a mile and a half on a calm day! The rate at which they fly is from forty to one hundred miles an hour, while that which I witnessed was but five or six. Let a duck, for instance, slow up to the latter rate, and how long could he sustain himself upon the wing?

It is equally preposterous to suppose that any flock of birds could at that short distance, and at midday, deceive fifty people into supposing that they were beholding a monster partially below the surface.

"Granting, then, that what you saw was none of these, what do you really think it was?"

Certainly not a snake—the ophidian of the naturalist—but just what I cannot tell. The doubting scientist admits that monsters which might properly give rise to the name sea-serpent did exist in ancient seas, and that their fossil remains may be seen in every great museum; and I am not yet convinced that descendants of the plesiosaurids, the zeuglodonts or other monsters of the different geological periods do not still exist.

I am not sure but that in the equatorial valleys, at depths of from ten to twenty thousand feet, they might have escaped the destruction of the frozen æons which devastated the land and shallower waters.

It is not necessary, however, to insist that such is the case. Species, families and even genera, new to science, may inhabit these profound depths.

It is said, by way of argument, that no remains have been found. Grant it. Who knows what uncouth beings of immense size inhabit these submarine recesses, and who would expect that dying, their remains would be cast upon distant shores, to be dissected by the zoölogist's knife?

There they live and feed; there they fight and gambol, except as occasionally some straggler makes his way into shallower waters, and, in an hour of quiet calm, disports upon the surface, exciting the wonder of the fortunate beholder and the envy of those less favored.

Such a creature may return again, undisturbed, to his native haunts, by and by, to die and to leave his bones by the side of kindred, there to lie, unmoved by wave or currents upon the ocean's oozy bed.

I have now read scores of sea-serpent accounts, and while I should discredit many at a glance, many yet remain which I cannot ignore. They can be explained only upon the supposition that there exists in the ocean a variety of gigantic forms of animal life as yet unclassified.

I have an impression that at least three distinct forms, unlike any known fish, reptile or cetacean have been described. One of these is serpentine throughout; one has a short neck, with flippers on either side, well forward, and a long, tapering body behind; and a third is a "serpento-turtleological" sort of a creature—a serpent with a turtle annex, or if you choose, a four-flippered turtle with a long serpentine prefix.

It is vain, however, to speculate until more knowledge is secured; and this cannot be obtained to order. Opportunities for original investigation are certainly very limited, and a belief in the existence of the creatures must rest upon the testimony of comparatively few in any one decade. But the accumulated testimony of the centuries will stand.

GRANVILLE B. PUTNAM.

For the Companion.

READING INDIAN "SIGN."

By Gen. John Gibbon, U. S. A.

First Paper.

It is now nearly forty years since, as a young lieutenant stationed in Florida, I received my first lesson in reading Indian sign.

To appreciate the difficulty of communicating with Indians, let those who are unacquainted with the ordinary means employed, fancy all the individual names in a community suddenly obliterated. Under such circumstances some means would have to be adopted by which individuals could be designated.

As no one could refer to Mr. Smith, Mrs. Jones, or Miss Thompson by name, each one would have to be designated by some personal peculiarity. Mr. Smith, for example, might be called, if he were cross-eyed, "The man who looks two ways." Mrs. Jones, if she happened to be the possessor of a pug nose, would be "The woman whose nose looks at the sun;" and so on.

Now this is exactly the plan followed by Indians, —not in designating each other, for they have names to use,—but to white men, ignorance of whose names compels the Indian to manufacture appellations for the occasion.

They will speak of one white man as "The man who got off his horse." A colonel who wears an eagle on his shoulder they will call "The man whose spirit is a bird;" an old man, "The man with a gray beard;" and a major-general, "The man with two stars."

If the fact is recalled that the Indian is entirely ignorant of either writing or reading, we at once perceive how much more difficult communication becomes. Each tribe has its distinct language, and generally the native tongues are as far apart as English and French. Hence, in communicating with one another, the necessity of the sign language which is used in common by almost all the Plains Indians.

In forming this language, much the same principles are followed as govern the language of our deaf-mutes; and I have been assured that Prairie Indians have, in visiting deaf and dumb asylums, often understood the language used there.

These signs are interpreted literally by the Indians when conversing. I recall an amusing instance of this in an interview which took place between Captain Casey of the army and Billy Bowlegs, chief of the Florida Seminoles. Captain Casey had not seen Billy for some time, but had heard that a son had been born to him recently. Captain Casey spoke the Seminole language imperfectly, and therefore, when acting without an interpreter, was accustomed to help himself out with "signs."

He congratulated Billy upon the birth of a son, holding his hand about two feet and a half from the ground. Billy expressed surprise, and said, "No, it was a mistake."

The captain then called in an interpreter to explain what he had heard. Billy's face lit up, and he said that indeed he had a son, but—placing his hand about eighteen inches from the ground—not as large a one as the captain had intimated!

It is a matter of surprise how accurately information may be conveyed by sign language alone when one is skilled in its use. Some years ago, when an interpreter serving at the post of Fort Washakie was riding some distance from the post, he met an Indian who could not speak a word of English, and whose language the interpreter could not speak. Yet the Indian informed him of the recent death of Captain Clarke, of the Second Cavalry, many hundred miles away.

The feat seems to be almost incredible until we reflect upon the importance of individual names in conveying personal information. The death of any individual could easily be made known by simply giving the sign for dying or "going under," which is made by holding the left hand in front of the body and waving the right underneath it.

But the Indian could not say, "Captain Clarke is dead," unless Captain Clarke was known to him and the man to whom he was talking, in some way by which he could designate him; and this proved to be the fact. Captain Clarke was known amongst the Plains Indians as "the chief with the white hat," from his practice of wearing a head-covering of that color while on duty on the plains.

An Indian who is travelling, and desires to leave behind him information for those who come after, will take pains to leave "sign" on his trail easily recognized as belonging to him, or at least to his tribe. Each tribe has a special way of making moccasins, and an imprint of a foot in soft ground will give information to those who know it. If the Indian passes through brush, he will break down twigs to show where he has passed, or, on the prairie, pile up a heap of stones. Of course if he wishes to leave no sign he takes great pains to avoid doing any of these things.

An Indian who is looking for sign will closely examine everything as he goes along; and the sign must be very faint indeed which escapes his eye. A blade of grass pressed to the earth hours before he sees it is sufficient to attract his attention.

This close observation and his quick eye is what makes the Indian the best trailer in the world, whether what he is after is an enemy, game, or a runaway horse.

It is amusing to watch an intelligent Indian when, transported from the scenes of his wild life, he enters civilization and sees so many things which are new to him. His outward appearance is stoical in the extreme, and he says little; but his eyes are always on the alert, and he closely notes every object within their range.

In 1876, when our troops were approaching Custer's battle-field on the Little Big Horn, my Crow scouts in front discovered Indians and gave chase to them. Before they could overtake them they succeeded in crossing the Big Horn River; but in their flight one of them dropped some article which, being picked up by the pursuers, revealed the fact that the Indians they were pursuing were not Sioux, as they supposed, but members of their own tribe who had escaped from Custer's battle-field.

Previous to that, in the same year, and while my column was moving down the Yellowstone to form a junction with General Terry's, my Crow scouts reported that there were Indians in front, and that

they had given chase to them and followed them some distance. Later, one of the Crows picked up a little package containing a piece of cheese and some crackers dropped on the trail of the fleeing horsemen, and announced that those they had followed were white men.

I was expecting every hour to get news of General Terry, and felt very sure that these men were couriers from him. This turned out to be true, and that night messengers from him reached my camp.

Skilled frontiersmen who study these things under the Indians would have drawn the same inferences as the Crows did in these two cases. But white men unskilled in the ways of Indians would simply have reported "Indians in front."

Although all Indians are skilled in the use and interpretation of signs, the so-called "sign language," while generally used east of the Rocky Mountains, is very little in vogue on the Pacific Coast. There the common medium for conversation between Indians of different tribes and with the whites is a jargon called Chinook, a curious conglomeration of words said to have been invented by the Hudson Bay Company officials and afterward generally adopted by both whites and Indians.

In this language an American is called a "Boston man," while an Englishman is known as a "King George man." The number of words in the language is said to be very few, and the meaning of words is varied by the intonation placed upon them; but poor as the language is, it seems to serve the purpose of enabling people to communicate with one another.

It is very amusing to witness the meeting of two long-separated whites who lived on the Pacific Coast in early times. They almost invariably drop their own language and converse in the Chinook jargon. All this "sign" lore was a closed book to me when the incident occurred by means of which I received my first lesson in sign-reading.

THE PERSECUTED PARSON.

Once there lived in Boston a certain famous and learned preacher. Being a preacher of the Gospel, he was a good man, of course; but I grieve to say there was one unhappy fault which marred his amiable Christian character.

He did not love cats—not even innocent kittens! He detested and despised them all as worthless and futile creatures, and seemed to have doubts of the wisdom of Providence in creating them in such immoderate profusion.

As few persons suspected this hidden fault, he was loved and honored by good people, even before he was cured of his regretable antipathy; and just how he was cured, and rendered more worthy of respect and affection, my story will tell.

The house in which the minister lived had, before his coming, been occupied by a nice dog-and-cat-loving family, who had removed to a distant part of the city, taking with them all their pets. One of these, a pretty Maltese pussy, did not like the change, but pined with homesickness; and at last made her way, no one could tell how, to the parsonage.

She was kindly received by the family, but promptly returned to her mistress, only to remain while shut up and watched. For a week or so she passed back and forth, like a weaver's shuttle, between the two homes. Then her forsaken mistress became discouraged, and gave her up.

Her new mistress was kind, and the children of the family made much of her, yet she was not altogether happy. She found that the nursery, an old haunt of hers, had been turned into the minister's study, and perceived that the minister was not friendly enough to encourage her to any intimacy. Yet she insisted on maintaining her old territorial rights, and would take neither hints nor rebuffs from him.

A wonderfully good-natured and playful creature was Araminta,—that was her new name,—and whenever the reverend gentleman undertook to expel her from his sanctum, she would lead him a pretty dance, taking the eviction in fun, as a bit of clerical sportiveness.

One day, when the minister had an unusually important discourse to write, and was unusually nervous, he sternly put his tormentor forth, and locked the door. Araminta stopped just outside and mewed piteously and persistently, till the minister's good wife banished her to the yard.

Indignant, but not conquered, the culprit scampered around the corner of the parsonage, climbed a tree, and from its branches leaped upon a balcony just outside the study windows.

It was a November day—rainy and east-windy. The minister, disturbed in his writing by a wild, plaintive mew, looked around, to see a poor little cat-face peering in upon him and his cozy quarters, lighted and warmed by a pleasant wood fire.

The appeal of the faithful creature was too much for the minister. His unkind anti-pussyite prejudices, already much undermined by Araminta's charms, gave way altogether. He sprang up, opened the window, and said gently, "Poor pussy, come in out of the cold!"

She came, you may believe, and a moment later was purring on the hearth-rug, casting on her clerical friend a grateful glance now and then. She had conquered, but she was not proud.

After that capitulation, Araminta had the freedom of the study, and not even when, some six months later, she came as a happy mother, lugging her offspring by the nape of the neck, and depositing kitten after kitten, to the number of four, in the waste-paper basket, was she sent away.

It was the minister himself who went. He took his vacation rather early that summer.

GRACE GREENWOOD.

SUGGESTIONS

EXAMINATION OF TURF.

Cut a six-inch cube of turf from the lawn and carefully examine it.

How many kinds of grass and weeds can you find in it?

Note how their roots are interlocked.

What insect life can you find?

Have insects any permanent homes there?

Note the variety of mineral forms.

For the Companion.

PAN IN THE ORCHARD.

He carved a flute of elder green,
And notched it well and true,
Then pursed his lips and puffed his cheeks
And merrily he blew.

For it was spring-time holiday,
A sun-tanned boy was he,
With russet freckles on his face
And a patch upon his knee.

The apple-boughs above him flung
Their tangled sprays on high,
With one dark, bristly blue-jay nest
Rough-sketched against the sky.

He knew the secrets of the grass,
The burden of the hour,
He saw the fierce, bluff bumblebee
Towse many a clover flower.

Orphaned and poor as poor could be,
The years before him lay
Dark billows of an unknown sea,
No light-house on the way.

And yet, and yet his elder flute
Could bring him comfort true;
He pursed his lips and puffed his cheeks
And blew, and blew, and blew!

MAURICE THOMPSON.

For the Companion.

SIGNS OF HEIRSHIP.

The French journals a year or two ago contained reports of a singular lawsuit, which possessed many features of dramatic interest. Two claimants appeared, each professing to be the only son and sole heir of the owner of a small estate in Brittany.

Monsieur Jean Paulin, the former owner, now dead, was born upon the farm and grew up in the village. When a very young man he had emigrated to Canada, and had married there. The modest rent of his farm in France was sent to him by an agent.

Twice he had made a visit to his old home, on the last occasion only a year or two before his death, and had renewed the loving friendships of his boyhood. He was bright, active and popular. All the village knew and liked him, and when he returned to Canada he was greatly missed.

Every one knew that he had an only son, Louis, who had never been in France. Now that Jean was dead, two men, each calling himself Louis Paulin, and representing himself to be Jean's only son, wrote from different parts of Canada to claim the estate.

The matter was brought before the court in Brittany. One of the claimants appeared. He produced certificates of his mother's marriage, and of his own birth and baptism; he answered fluently all questions concerning M. Paulin, and showed a perfect familiarity with his opinions and thoughts. But his own appearance, manner and character were so unlike those of the dead man, that it seemed incredible that he could be his son.

Upon the day of trial the papers of the other claimant appeared in evidence. He also had proofs of his legitimate birth. It was plain that one of the reputed heirs was a cheat and impostor. But which one?

Suddenly, the second contestant appeared in the court-room; a young man, but with every feature of M. Paulin. There were his figure, his laughing blue eye, the kindness and good-will which all his neighbors knew so well beaming from his face. It was their old friend returning to them. So marked was the resemblance that before the lawyers could begin their arguments the real son had virtually won his case.

The old maxim that "blood tells" is as true of the spiritual as the physical life of man.

Doctor Prince, a venerable minister of the Presbyterian Church, once told of a sermon which he heard preached by a young man in the wilds of Arizona. The ideas, the argument, the construction, and the habit and peculiarities of thought betrayed in it reminded him so strongly of a noted founder of a sect that he sought out the preacher after church was over.

"Did you ever meet Alexander Campbell?" he asked.

The young man laughed. "I was his pupil for several years," he replied.

These anecdotes emphasize the fact that a man's parentage in body and in soul are generally apparent to the world about him. Suppose he has professed openly, to have chosen God for his Father? He may have certificates of membership with a church; he may be perfectly familiar with Christ's words and works, and quote them fluently and incessantly; but if he is a son of God, there will be some likeness to his Father in his nature, his actions and his thoughts. The likeness may be feeble and poor enough, perhaps, but it will be real. No discerning man will mistake it. The self-deceived or the impostor do not possess this test of kinship with God, though they may chatter volubly of His doctrines and works; but in the words and thoughts of the true son shines always some gleam of the mysterious life given to him by his Father.

IN THE PIANO CORNER.

The piano responds, almost like a living thing, to the care given it, and the owners of new or old instruments may find a few hints acceptable. Variations in temperature affect the delicate works so decidedly that the corner of the room farthest from the register or stove should be chosen for its abiding place, and, if possible, the keyboard should be turned away from the source of heat. It is not necessary to close the lid every night, and, in fact, no piano should remain closed for months at a time, as is often the case. On closing the house for the summer vacation, always see that the inside of the case is dusted carefully, and before shutting it spread several layers of paper over the wires, to absorb any dampness that may gather. The duster should be a piece of softest old silk or cheesecloth, conscientiously used, and never dampened for use.

Piano-covers are now but little used, although the "uprights" are often fancifully draped with rich scarfs of silk or plush. The real piano-lover does not make a table for bric-à-brac of its top, for to the cultivated ear any object placed upon the instrument injures its tone more or less.

Do not pile music-books on the piano, nor leave them in unsightly heaps around it, but have a music-table. Pretty and inexpensive ones are to be found in the furniture stores, but in default of one of these, any boy or girl could arrange one similar to a dainty affair which I have seen made from an old-fashioned wash-bowl stand rescued from the attic.

The wood was painted black and varnished, a neat cover lay across the top, and curtains of yellow China silk on small rods inclosed the lower part, where piles of sheet-music lay safe from dust, yet quite accessible.

If your volumes of Beethoven's sonatas and Chopin's nocturnes happen to be in paper covers, they may be saved much longer from falling apart by glueing to the binding, at the middle of the back, a broad ribbon, which is tied around the book when it is closed.

For keeping open bound volumes, I have found a simple music-weight more convenient than the patented wire holders, which too often nip out pieces from the leaves. Make a muslin bag twelve inches in length by two in width, and fill it with fine, dry sand. Close tightly, and make an outer cover of silk with fringed ends, tied with narrow ribbon. This cylindrical roll lies in the rack and holds the pages flat, while permitting them to be easily turned.

The adjustable piano-lamp is a most desirable adjunct for evening practice, but an ordinary lamp, with wide-spreading shade, can be mounted on any substantial pedestal, arrangement at the desired height being the main consideration.

If you cannot have a "music-room," at least make the piano corner as attractive and suggestive as means and taste will allow. A few good photographs of the great composers, a shelf filled with sketches and biographies, and perhaps a good plaster copy of the "Singing Boys of Della Robbia," or of any favorite musical subject, will all be helpful.

SELF-SUPPORTING.

It is pleasant and hopeful to note that so many of the young women of America are learning to value the mental powers and the education that will make it possible for them to support themselves if the necessity for doing so should arise. The daughters of comparatively wealthy men are not infrequently found assisting their fathers in the office or counting-room as typewriters or accountants.

Many so-called fashionable ladies make their own dresses and hats, we are told, having gone through a regular course of instruction in the art of millinery and dressmaking. An instance recently came to the notice of the writer that has in it a lesson for women who give no thought to the state of dependence to which they would be reduced if their parents or husbands should die, leaving them unprovided for.

A lady who had a beautiful home and three little children, and whose husband was supposed to be comparatively wealthy, one day found herself a widow and almost penniless, her husband having been engaged in unfortunate speculations just before his death.

The lady's friends were profuse in their offers of sympathy, while wondering "what in the world she would do now."

She knew just what she would do. Within a month she had opened a millinery establishment that at once became very popular and profitable, for the bonnets she had worn in the past had been such models of elegance that her fashionable friends were glad to take advantage of her good taste. They never dreamed that she had made those bonnets herself, nor did they know that she had privately given herself a very good business education.

She was successful from the first, and the praises she received for her cleverness and good-sense would have turned the head of a less sensible woman.

BIDEL AND SULTAN.

The professional career of Bidel, the famous lion-trainer, was one of wonderful courage, force and perseverance. It was characteristic of the man that when great physical exertion became impossible to him, he devoted his energies to forming a mutual aid association among men of callings similar to his own. The beginning of the end of Bidel's practice of his profession was a terrible struggle with his African lion Sultan, of which he gives a thrilling description in his autobiography.

"After my performance at Neuilly," he says, "my wife and I were to drive to Asnières and take possession of our house there. I who had started with so little was to realize one of my dearest dreams. I was to cease to be a wanderer, and to possess at last a home of my own. I longed for the evening to pass. The performance would last less than an hour."

But the most perilous moments of Bidel's life were to intervene before he started for Asnières. He entered the cage as usual. The first, second, third and fourth lions and two white bears were brought forward, then returned to their cages, and he was left face to face with Sultan. Sultan was never good-humored.

"This evening," writes the trainer, "I saw at once that he was uncommonly savage. As usual I presented the gate. He crouched in a corner, refusing to leap.

"I cracked my whip. He growled, I continued to urge him. He growled more angrily, showed his teeth, and lashed the air with his tail. Suddenly I was seized with an intolerably sharp twinge of rheumatism. My left leg tortured me. What should I do—retreat? I did not consider it for a moment. I should fight. I took a step forward. Another sharp pain seized me, bent my left knee, and I fell.

"Then I doubted not that it was all over with me. The tamer fallen is the tamer conquered. With one bound Sultan was upon me, his heavy paw on my chest, cutting my flesh, scratching my face, tearing me. I did not cry out. I knew the necessity of being calm; the slightest false movement and I was lost. The beast was panting with fury, his mouth open; I seized his throat, and with all my strength twisted the skin to strangle him. He paused, his muscles relaxed.

"Suddenly he turned his head. Two of my employees, the brave and faithful Manetti and his son, had entered the cage and were attacking the lion with an iron bar. I lifted myself, half-rose, then jumped to my feet. I stood! That meant safety. I was again master. I marched on the rebel, and with a gesture forced him to return to his cage. It had been a bad moment, but it was over. I would have gone on, but the public protested, 'Enough! Enough!' and I was given over to the doctors. They found seventeen wounds."

For the Companion.

POOR AND YET RICH.

No wealth on earth except that godlike gift,
A happy nature and unbroken health,
And sweet contented heart-thoughts which can lift
The soul to Heav'n itself, if this be wealth.

No joy on earth except it be to watch
The ev'ning crimson tingeing earth and sky;
Or burden of the wild-birds' song to catch
When scented night-winds hum their lullaby

No rank on earth except his rank who stands
Free, pure before his God and asks to know
That perfect justice at His mighty hand
Omniscient mercy only can bestow.

No hope on earth except that time shall free
His soul at last to pass beyond death's portal,
Where wealth and joy and rank and hope shall be
The heritage of all who once were mortal.

MARGARET THOMAS.

TWO MISUNDERSTANDINGS.

A lake steamer was on its way from Marquette to Saginaw. Among the passengers was an inquiring English tourist, who came on board at Marquette at dark, and immediately turned in. After breakfast, he came on deck with a very ill-defined notion where he was, and at the first opportunity he accosted the Captain, who was anything but the affable personage of whom we hear so frequently. "Beg pardon, sir," he said, "but can you tell me the name of the lake I'm on?"

"The Lake Huron," replied the Captain, shortly, and passed on about his duties.

The passenger looked puzzled for a moment, and then, supposing he had been misunderstood, followed the official.

"I beg pardon; did you say —"

"It's the Lake Huron," said the Captain, brusquely, wondering if the passenger was hard of hearing.

"Yes, I know," persisted the anxious inquirer; "but what's the name of the lake I'm on?"

"The lake you're on is the Lake Huron," roared the Captain, thoroughly exasperated at such stupidity, and not at all conscious of the double meaning conveyed in his speech.

The passenger looked after the retreating official in angry astonishment.

"The lake I'm on is the lake I'm on," he soliloquized. "What beastly impertinence! of course it is! The lake I'm—"

Then he paused; the solution of the mystery flashed across his mind, and he laughed so heartily that it put him in a good humor, and presently he hunted up the irate Captain, and straightened out matters to their mutual satisfaction.

A parallel incident refers to the adventures of a man who went to a certain railway station in New Jersey to buy a ticket for a small village named Morrow, where a station had been opened only a few days previously.

"Does this train go to Morrow?" asked the man, coming up to the office in a great hurry, and pointing to a train on the track, with steam up and every indication of speedy departure.

"No; it goes to-day," replied the ticket-agent, curtly. He thought the man was "trying to be funny," as the saying goes.

"But," rejoined the man, who was in a great hurry, "does it go to Morrow to-day?"

"No, it goes yesterday, the week after next," said the agent, sarcastically, now sure that the inquirer was trying to make game of him.

"You don't understand me," cried the man, getting very much excited, as the engine gave a warning toot, "I want to go to Morrow."

"Well, then," said the agent, sternly, "why don't you go to-morrow, and not come fooling around here to-day? Step aside, please, and let that lady approach the window."

"But, my dear sir," exclaimed the bewildered inquirer, "it is important that I should be in Morrow to-day, and if the train stops there, or if there is no train to Morrow to-day —"

At this critical juncture, when there was some danger that the mutual misunderstanding would drive both men frantic, an old official happened along and straightened out matters in less than a minute.

The agent apologized, the man got his ticket, and the train started for Morrow to-day.

NOT DISAPPOINTED.

One of the proprietors of a large furniture store in New York City was surprised one day, shortly before Christmas, to find an old lady seated in one of the large easy-chairs which stood in the front part of the store. She was evidently a country woman. "Can I do anything for you, madam?" he inquired, politely. "No, I thank ye," replied the old lady, with easy assurance. "I jest thought I'd drop in and rest a bit in one of these comfortable chairs, and eat my dinner."

With this she opened her satchel, took from it a piece of newspaper, which she spread over her lap, and began to arrange her lunch on it—generous slices of bread and butter, home-made sausage, doughnuts, a turnover, and a piece of green cheese.

Gently rocking back and forth she began to eat, as if what she was doing was the most natural thing in the world.

It was not in the proprietor's heart to tell her that she had made a mistake; that his store was not a place for the public to eat lunches in; so he stood by and said nothing, half-amused, half-vexed at the occurrence.

"These are terr'ble nice chairs and things," the old lady continued, complacently looking about. "I s'pose ye haint ben to dinner, likely's not? Do hev some of my lunch. Phronie's put me up 'bout twice more'n I shall eat."

With a polite "Thank you," the proprietor accepted the old lady's offer of bread and sausage, took a chair beside her, and began to talk.

Two or three clerks passed along, and looked at the novel scene with smiling faces; but the proprietor did not smile or notice them by word or look, but listened to his companion's words with deferential attention.

"Phronie didn't want me to come to the city alone," she said, "but I wanted the priv'lige of buyin' my Christmas things myself, and I haint had a mite of trouble. I don't s'pose I shall buy nothin' at Tiffany's, but I've always hearn a good deal about it, and I kind of want to call there. Can you tell me jest how to find the place?"

"I have an errand at Tiffany's," said the proprietor, "and I'll go with you."

"I'm much obliged to you," said the old lady, carefully gathering the remains of her lunch in the newspaper, which she replaced in her satchel. "I've always hearn that New York folks was polite, and now I know 'twa'n't no exaggeration."

The gentleman put on his hat and accompanied the innocent country woman to Tiffany's, where he took pains to have her see many of the beautiful things in the fine store.

"I've had a splendid time!" the old lady said, as he bade her good-by at the door of a dry-goods store, where she was to continue her shopping. "I'm much obliged to you, an' I'll tell Phronie that New York folks are jest as nice as I expected they was."

"Dear old lady!" said the man of business, in telling the story afterward. "Her faith in the politeness of the people of this city did me good. I spent the pleasantest hour for many a day in that innocent old country woman's society. I've been thankful many times that I didn't snub her and send her to the right-about for sitting down in my store to eat her lunch, as was my first impulse."

FOND OF WASHING.

A correspondent sends to *The Companion* an account of a pet raccoon, of "the variety called the wash bear." It belonged to one of the officers of a ship in which our correspondent was sailing, and had a passion for rubbing something between his paws, as a person would use soap in washing the hands. One of our regular sources of amusement, she writes, was to place a bowl of water with a piece of soap floating in it, in Mr. 'Coon's neighborhood, and then stand off to await results, which were never long in coming.

As soon as the 'coon perceived the basin he would draw near, peer into it, discover the soap, and almost smile with delight. Then squatting on his hind-legs he would begin to dabble his fore paws in the water and to rub the soap between them, so supremely happy, that the sight of him was enough to provoke laughter.

Finally the suds would rise to the edge of the bowl, and seriously inconvenience him in his work. A pause always ensued, while the 'coon gave the subject grave consideration. He had had enough experience to know that to proceed further was dangerous.

At last, desire overcoming prudence, he would scramble upon the basin's edge, trying to find a hold with his sharp claws on the smooth surface. Then operations would begin anew, and soon he would be once more lost in beatific enjoyment. But his bliss never endured very long.

Suddenly there would come a loss of balance, and wild efforts to regain it; then a splash, followed by a great commotion amid the soapsuds and water; and finally the reappearance of the 'coon, white with suds, drenched and blinded, making for the nearest hiding-place as soon as he could see his way.

After a season of retirement, during which he was evidently endeavoring to recover his self-respect, he would emerge and carefully steer clear of basins of water with enticing cakes of soap in them for the rest of the day.

Let twenty-four hours elapse, however, and he would be no more proof against the temptation than before, the performance being an oft-repeated one to the never-failing amusement of the spectators.

VAGUE DIRECTIONS.

There are some old-fashioned cooks who not only never spoil the broth, but who cannot possibly give any one else the secret of making it. Such was Aunt Huldy, who often tried to share the recipes for her pies and puddings, but always in vain. "Give ye the receipt for my sponge-cake?" she would say. "Of course I will, dear. Give me a piece of paper, and I'll set it right down for ye. There 'tis!"

"But, Aunt Huldy, you say, 'a little water.' Now how much do you mean?"

"Why, some folks don't use any at all. They jest depend on the eggs and sugar and flour. But I like a mite myself. It gives that sort of dry taste, you know."

"But how much, Aunt Huldy?"

"Oh, just a little! Sometimes I pump a mite into the bowl, when I'm cookin' near the sink."

At another time a young and painstaking housekeeper was trying to learn the process of bun-making.

"A pinch of cinnamon and a few currants" ended Aunt Huldy's directions.

"But how many currants?" was the puzzled inquiry.

"Oh, I don't know," said Aunt Huldy, placidly. "Here and there a traveller. You don't want to have 'em look too thick."

When Aunt Huldy is reminded that the ignorant or inexperienced cook can scarcely be expected to understand her directions, she looks as if such incompetence was much to be pitied, and can hardly conceal her impatience.

"Poor creatures!" she has been known to say. "Why, I guess I could ha' told whether mince-meat needed a little more biled cider if they'd gin me a taste of it in my cradle!"

VALUABLE INVENTION.

A gentleman who has made several important mechanical inventions, and has been for some time engaged in perfecting a new journal-bearing for railway cars which shall prevent the danger of fire from overheating of the axle, that is, from what is technically known as a "hot box," had not long since an interview with an official of a company which was to take up the invention.

The interview took place at the home of the inventor, and his daughter, a young lady well on in her teens, sat in an adjoining room, where she overheard all that was said.

Although she listened intently she did not understand all the details of the conversation; but that she was much impressed by what she did hear was shown by the fact that the next day she confided to an aunt that the family was on the eve of a great success.

"I heard papa telling Mr. Blank all about his new invention last night," she explained, "and Mr. Blank said there was a fortune in it."

"But what sort of an invention is it?" her aunt inquired.

The girl put her head thoughtfully on one side for a moment.

"I am not quite sure," she answered, trying to recall the talk which she had overheard the day before, "but I think that papa has invented a new kind of hot box."

DAISY'S CALENDAR.—V.

The stars are asleep and the sun is nigh,
There's a chorus of birds and a smiling sky,
And Daisy, my girlie, it's none too early
To make a beginning for M-a-y.
Not every one can skip and run
In the soft, sweet air and the friendly sun;
So gather a basket of flowers and buds,
And give tired hearts a taste of the woods.
Oh, gather and give the whole month thro',
For Memorial Day they will bloom anew;
And then, if we find a lonely spot,
A mound unmarked, or a stone forgot,
'Tis there, with a tender sigh, we will lay
The rarest, fairest flowers of May.

EUDORA S. BUMSTEAD.

For the Companion.

MR. GUY'S FIRST MEMORIAL DAY.

Mr. Israel Guy walked through his spacious greenhouse, gave some orders to the gardener, and then opened the door that led out toward the street.

"O-h, what lots of flowers!"

It was a small voice, but it reached Mr. Guy's ears. He turned, and saw a little girl, in a faded blue gingham and a brown straw hat, standing on the sidewalk just opposite the greenhouse door. In spite of her shabby dress, the child was attractive, for looking at her beautiful face, framed in a mass of flaxen hair, one forgot all else. That must have been why Mr. Guy, who never noticed children, said to the little girl:

"So you like flowers?"

"Oh yes!" she answered, and then she stepped nearer, smiling up into his face. "It is nice to have so many flowers to give to the soldiers, isn't it?" she said.

The gentleman started. It was Memorial Day, to be sure, but he had scarcely thought of it before. He was a young man who was always absorbed in his own business or pleasure, and he never gave much thought to other people or things, certainly not to Memorial Day.

"Doesn't it make you very happy to have so many flowers to give on Decoration Day?" she urged.

He made no answer, for he did not wish to tell this generous-hearted little girl that in all his life he had never given a single flower in honor of the dead soldiers. So he drew her gently inside the gate and through the greenhouse door, saying:

"Come and see my flowers."

In the presence of the beautiful blossoms, where she could touch and smell them, the child's rapture was unbounded. She flew here and there and everywhere, talking all the time.

"I had a little rose-bush," she said, "and it had one bud on it, and I was so in hopes it would open by to-day, and then I was going to carry it up to the hall for the soldiers. But it died, and did not open at all," she added, while the blue eyes filled with tears at thought of her disappointment.

Meantime Mr. Guy was engaged in filling a small basket with choice roses and other flowers, the gardener looking on in astonishment. Never had Mr. Guy been known to cut his roses so recklessly as now. Many a precious blossom went into that basket. At last, he held it toward the little girl, saying:

"There are some flowers for you to carry home."

"All for me?" she exclaimed. "Oh, I will take them up to the hall! How good you are!"

"You will keep some for yourself, will you not?" the gentleman asked, as he watched her fingering the beautiful blossoms with such real pleasure in her face.

"Oh no," she replied, "I would rather give them all for the soldiers! They will have so few flowers, this year, every one says. But these will help a great deal, won't they? Unless—unless you don't wish me to give them away," she added, quickly, a shade of sadness falling upon her face, as she saw that Mr. Guy looked a little disappointed at her being so ready to donate her gift.

"They are yours," he said; "do what you please with them."

Then he asked her name, and where she lived, and he discovered that her father worked in the great silver-plate manufactory, of which he was the chief owner.

Lucy Whipple was her name, and after she had tripped off with her basket of blossoms, Mr. Guy ordered a large basket of flowers to be carried to the hall, as his own donation on this Memorial Day. Then he selected a number of small plants in bud and blossom, which he directed to be sent to Miss Lucy Whipple, at the address she had given, while the gardener wondered what had "come over young Mr. Guy."

EMMA C. DOWD.

GERTRUDE C——, after looking thoughtfully at her small rubber boots, remarked, "Why, the pimples are almost all gone off of my soles!"

LITTLE Charlie H—— was eating lime-drops, making wry faces the while. Finally he said, "Whew! These lime-drops are *as sour as gall*."

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

One-half of a noted statue
In Egypt my *first* may be.
My *second's* contracted from "other,"
My *third*, when I say it, means me.

My *fourth* is an Arabic prefix.
My *fifth* sees the earth once revolve.
A time to pay tribute my *whole* is;—
On soldiers its duties devolve.

S. S. D.

2.

NOVEL COMBINATIONS.

Transpose the words in the first column to flowers, whose "sentiments" are given in the second. All are nine-letter words and, with the exception of the first, in the singular number. These flowers are to be written down in regular order—one underneath the other. The central row of letters will give one of the year's holidays.

1. Moses Cary; curiosity.
2. Cut up Bert; riches.
3. I club Nemo; folly.
4. Coops rise; love at first sight.
5. I'm stern, pa; warm feelings.
6. Solid Gaul; ready armed.
7. Act on, Iran; disdain.
8. E. lost time; I surmount all difficulties.
9. Deep wells; female fidelity.
10. Miss Jane E.; elegance.
11. Tandy cut F.; indifference.

COUSIN FRANK.

3.

DOUBLE CROSS-WORD ENIGMA.

In harsh, not in mild;
In green, not in wild;
In soar, not in sink;
In rose, not in pink;
In tile, not in crown;
In scowl, not in frown;
In ode, not in hymn;
In feed, not in trim;
In one, not in six;
In add, not in mix;
In kiss, not in blow;
Now the answers you must know,
For they show what "our boys" possessed,
Also for what they should be blessed.

4.

AN ESCUTCHEON.

Across.

1. Recollects.
2. A small association, or circle of friends.
3. One who leads a wandering or pastoral life.
4. A right line which joins the two ends of an arc of a circle.
5. A song of exultation.
6. The pin of a sun-dial.
7. A Scandinavian poet.
8. Extremely cold.
9. A kind of rampart.
10. A boy that attends an omnibus.
11. A letter found in the name of four of the months of the year.

Central letters, read down, will spell the name of one of our holidays. AJAX.

5.

ENIGMA.

Twenty Letters.

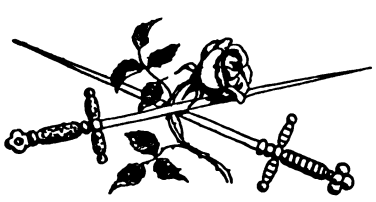
"Father, tell us 17, 16, 18 the story
Of 1, 2, 3 4, 5, 6, 7, 8 9, 10, 11, 12, 13, 14, 15, 16, 17 18, 19, 20;
2, 16, 18 it filled the land 18, 15, 8, 2 glory;
18, 2, 19, 1 they killed 3, 7, 11, 2 16, 8, 2, 12, 5 for."

"Filled the land 18, 15, 1, 2 glory, children?
Nay! 18, 15, 8, 2 sadness it 18, 7, 13 filled!
Ask 17, 16, 1 why they killed 6, 19, 11, 2 16, 1, 2, 10, 20.
We'll forget 1, 2, 7, 8 they 18, 3, 5, 10 killed.

"We'll forget the 17, 15, 4, 2, 8 of sadness,
19, 9 18, 6 bring our 18, 20, 10, 7, 8, 2, 14 7, 4, 19, 15, 17
To adorn the graves of soldiers.
Long may peace triumphant 5, 12, 15, 4, 17."

An Acrostic.

Meadow-treasures, leaves and ferns
And blossoms in my lap you lay,
Eager-eyed with wonder asking, why
We keep Memorial Day.



Many, many years ago, dear, long
Before you saw the light,
On the field of battle, bravely men
Were struggling for the right.

Rosy-cheeked, light-hearted boys and
Gray-haired sires stood side by side.
In the same dear cause they fought,
And for the same old flag they died.

All because they loved their country,—
Theirs, my dear, and ours, you know,
Laid they down their lives so nobly
Many, many years ago!

Do you wonder that we love them?
And you will love them too, you say,
And among the flowers that thousands
Bring to deck their graves to-day,
You above some sleeping soldier
Will your meadow-blossoms lay!

For the Companion.

MORE VANITY THAN PATRIOTISM.

"Angie Bright and I are going to walk together in the procession. She will wear her red silk dress, and I will wear my blue one, and we shall carry hot-house bouquets just alike that cost a dollar apiece. I'd be ashamed to carry apple-blossoms, or pansies, or anything so common!

"I think Angie and I ought to march at the head, but those twin Draper girls are taller, so they'll go ahead of us. I don't know as they are any better, if their grandfather *did* die in the army.

"They'll have on those everlasting brown and white ginghams, and their best hats are nothing but chips."

Vain little Cora and Angie Bright were as gay as two peacocks, but I am sorry to say they passed the time of the march in uncivil comments on the plainer dresses of the other girls.

At the cemetery they paid no attention to the exercises, but made sport of the rusty, black dresses of some soldiers' widows, and giggled aloud while the chaplain was reading the prayer, so that an officer told them very sharply to "Keep quiet or clear out!"

There came up a sudden shower as the procession left the cemetery, and the Draper girls whisked their waterproofs on in a minute, but the girl-peacocks were badly soaked before they reached shelter. An old soldier who had noticed how vain and pert they had been, said gruffly:

"Sarved 'em right!"

DUSTING.

Every housekeeper knows how hard it is to persuade a servant that attention to trifles increases the family comfort. Dusting is a trifle, compared with more important domestic work; but not one servant in fifty knows how to dust, and almost as few of their mistresses. The simply knave how to "provoke the silent dust." The *Illustrated American* shows how dusting should be done:

In the first place, the bunch of turkey-tail feathers hanging behind the door, alleged to be so useful for removing dust, should not be allowed to remain in a well-kept household. If you need to remain in a well-kept household. If you need to see your reflection will prove that it serves only to distribute dust, filling it with a few specks, after each flick, filling one's lungs, while again to vex the cleaner.

Now, if one's *manage* is carefully directed, it should not be necessary to sweep every portion of the house more than once in seven days. But when the broom is introduced, every small piece of furniture, with all the bric-a-brac, should be first thoroughly wiped with an unstarched cotton sheet and then covered with an unstarched cotton sheet and then covered with an unstarched cotton sheet and then covered

BAD BARGAIN.

"He that will not when he may," is likely to repent his indecision for many a long day afterwards. A lady who had spent a weary hour in "beating down" the salesman at a Turkish shop in Paris, returned the next day prepared to purchase. "I believe you said twenty francs," she began, taking out her purse. "Ninety, madame!" answered the smiling Turk. "But you came down to twenty!" "Ah, that was yesterday, madame! Everything goes up again in the night!" Says the *Lewiston Journal:*

A miserly old man one day went to a blacksmith's shop, and asked the workman to weld the handle on the blade of an old-fashioned, brick-oven shovel.

"You jest mend it while I go down to the corner," said he, "an' I'll get it when I come back-er-long."

The smith mended the shovel, and left it standing near his anvil. Presently the owner returned.

"Wal," said he, "how much is there to pay on that 'ere little job?"

"Six cents," was the reply. The old man stood for a moment with his head dropped forward, and his eyes on the floor. Then he spoke:

"I'm sorry I hed it done!"

"All right," said the blacksmith. "That's easily remedied." He raised his hammer, struck the iron a blow, and unwelded it. "There," he continued, "it's all right now."

This time the old gentleman dropped his head and looked at the floor for full five minutes. At the end of that time he said solemnly:

"I'm sorry you done that."

"Well, you were sorry it was done, and now it's just as it was when you brought it here," was the reply.

"I can't kerry it home that way," said the owner of the article. "The folks want to use it. I guess you'll hev to weld it again."

"All right," said the cheerful blacksmith, and in two minutes the work was finished.

"Wal, what's to pay on it now?"

"Eighteen cents. Six for mending it the first time, six for unwelding, and six for mending it again."

The bill was paid without a word, and the shovel carried home to the "women folks."

THE WORST HE COULD SAY.

Some people are by nature so gentle and so kindly disposed that they seem unable to speak severely about any one. "Uncle" William Snow was a man of this sort. "He never seems to see any harm in anybody, no matter what they do," said the neighbors.

His life had not been an easy one. He had been obliged to contend with ill-health and comparative poverty, while looking out for several shiftless and incapable relatives.

One of these, a cousin several years older than William, was crippled by a fall, and became perfectly helpless. His temper had never been of the best, and this accident gave him what he regarded as a perfect right to indulge his feelings at all times.

When, after months of patient nursing and care, he began to recover the use of his limbs to a slight extent, his temper, instead of growing better, seemed to become worse every day.

Passers-by often heard his voice raised to an angry pitch, as he berated poor William for some fancied neglect, but no one ever heard a word of complaint from the gentle man's lips.

At last a neighbor, who had heard one of these dreadful tirades, stopped William on the street the next day, saying, "Now, William Snow, what does possess you to let Dan'l go on so? I declare, you look all beat out this morning, and no wonder. Now own up, don't it seem to you he grows crosser every day, the better he gets?"

"Why, I presume Dan'l suffers more'n we realize," said William Snow, with his usual gentleness; "though I must say," he added, apparently against his will, "I *have* thought sometimes, lately, that Dan'l was increasing a little in his disposition!"

BEAR AND CUBS.

The surgeon of a vessel sailing from England to Hudson's Bay, in 1812, made this entry in his journal for July 25th. Of course, what the doctor calls the silver bear must be the white polar bear of Arctic regions.

This day, while sailing through straggling ice, one of the men on the quarter-deck observed, at a few yards' distance, a silver bear and her two young cubs. The captain immediately ordered the jolly-boat to be lowered, and muskets, etc., to be got in readiness; and all things being prepared, the first mate, with three or four men, set out in pursuit. We were all leaning over the deck, waiting with the greatest anxiety for the interesting scene that we expected to witness.

They had not got many yards from the vessel, when I beheld a very affecting sight. The mother, observing their approach, and aware of their intention, set up a most doleful cry, and presently clasped her two young ones within her two forepaws. First she would look at one, then at the other, and again resume her piteous cry.

Seeing the men come still nearer, she got the cubs on her back and dived under water to a considerable distance; when exhausted, she made to the ice for shelter. This she did several successive times.

The men who went out for the purpose of shooting her were so justly affected at the sight that they humanely returned to the ship without discharging their muskets. Still, however, the poor bear apprehended danger. After getting on a detached piece of ice, she again clasped her young ones with the greatest tenderness, and continued her heart-melting cries.

OUT OF THE QUESTION.

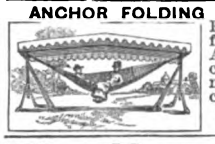
Many pleasantries are written and spoken about the capriciousness of female servants, but it is doubtful if, as a class, they approach in captiousness the male domestic servants employed by the rich. Good male servants are hard to get, and proportionately hard to please.

A gentleman had engaged an English *valet de chambre* at good wages, and everything had apparently been satisfactorily arranged, when the man said:

"Might I hask, sir, if I'm to wear livery, sir?"

"Yes."

"And what color will the weskit be, sir?"



"Red."

"Ow, indeed! Then I cawn't take the place, sir. I'm much too blond, you know, for to wear a red weskit, sir!"

For Throat Troubles, Coughs and Hoarseness "*Brown's Bronchial Troches*" are a simple, yet effective, remedy. Containing nothing injurious, they will not disorder the stomach like cough syrups and balsams, For forty years they have been recommended by physicians, and are known all over the world as one of the few staple cough remedies. Sold only in boxes. [*Adv.*

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

HYPNOTISM DANGEROUS.

That most of the marvellous phenomena exhibited by hypnotism are real there can be no doubt. Under its influence teeth can be extracted without the slightest consciousness of pain. Equally painless are the most difficult surgical operations, though lasting for an hour or more. Apparent cures can be effected by merely suggesting to the hypnotised patient that he will be well on waking. All this, and much more, is true, however impossible of explanation it may be with our present knowledge.

It is now seen, however, that the practice of hypnotism is not free from danger. In France legislation has already been invoked to confine it to medical use. In the *Times and Register*, Norman Kerr, M. D., F. L. S., questions whether it should have a recognized place even in ordinary medical practice. As to the genuineness of the phenomena he has no doubt. The following are his suggestions in brief:

1. Only a limited number of patients, especially of the Anglo-Saxon race, are capable of being hypnotised.

2. In many persons hypnotism disturbs the nervous equilibrium, and this disturbance, if frequently repeated, may lead to deterioration of brain and nerve function—to physical degeneration, intellectual decadence and moral perversion.

3. The hypnotised condition is itself an unhealthy one, a disorder of nervous function akin to hysteria.

4. Even if a cure is accomplished, it is only by an exchange of malady, a graver diseased state being substituted for a less serious one.

5. Though pain and distress are relieved, it is doubtful if the disease is really cured. The greatest success claimed for hypnotism has been in nervous affections, and Doctor Kerr's observation is that in this class of ailments an apparent temporary improvement is commonly followed by an aggravation of the disease.

6. The dangers involved are very great. In many cases the seances have to be repeated for a long time. At each sitting the patient comes more and more under the control of the operator, and at length is brought into a state of mental serfdom, infinitely worse than days and nights of pain.

7. The practice may give rise to a subtle affinity between the subject and the operator, dangerous to both.

8. The operator may take a criminal advantage of the lethargic state of the subject. Such cases have occurred.

"SOCIETY DOGS."

There is a homely old ballad by Augustus of Châtillon, written in French, which sets forth the sufferings of the poor in wintry weather, and contrasts their condition with that of the petted animals of the rich. One stanza runs somewhat like this:

"Is there aught that makes one weep
Like the greyhound's mantle warm,
When the poor have scarce a shred
From their backs to fend the storm?"

Not only does the greyhound, which is naturally a thinly clad and somewhat "shivery" animal, now wear a mantle, but so does the pug and even the spaniel, which is provided by nature with a warm coat.

Probably the spaniel's added fleecy mantle makes him uncomfortable, but he must wear it nevertheless, because fashion requires it.

Recently there was printed, in a Parisian fashion journal, a perfectly sober and genuine budget of fashions *pour chiens du monde*—that is, "for society dogs." The proper costume for a dog for all sorts of occasions and for the various hours of the day is carefully prescribed. Here are some of the requirements:

"*Morning costume.*—Blanket of white and blue flannel, pointed with red, or else of red flannel pointed with gold.

"*Carriage costume.*—Toilette of blue broadcloth or plush. Velvet collar decorated with numismatic medals. For cold days, a fur collar, or a fur edging for the blanket.

"A leash or leading-string in old silver is absolutely required if Tootoo is to be taken out of the carriage, and led about when calling or attending garden-parties.

"*Promenade costume.*—Overcoat of ribbed cheviot. Mantle coming well up around the throat.

"*Reception costume* (for five-o'clock teas).—Indoor cloak of Indian cashmere or velvet, ornamented with pearls or a bouquet of roses. Crest or coat-of-arms to be embroidered on the back—but *never* on the sides. To wear the armorial bearings on the dog's sides is an obsolete fashion, and indicates that the dog belongs to the very provincial country gentry.

"*Travelling costume.*—Blanket of swanskin, checked or white, and very simple."

There is also given by this authority a "wedding costume for dogs," but the costume is not for the wedding of the dog; it is for the wedding of the dog's mistress. It is made of satin or white velvet, richly embroidered and decorated with silver and pearls.

All this care to keep dogs' garments in fashion is not only a foolish waste of money, but is no doubt at the same time distressing to the dogs.

NOVEL BEAR-HUNT.

The *Literary Magazine* of London for March, 1789, contains an amusing account of bear-hunting in Sweden under the personal direction of Prince Charles, who afterward reigned as Charles XII. The disposition of the Prince began to show itself very early, even before he lost his father, by his fondness for the chase and for hunting in the most dangerous manner. He even invented a new method of catching bears alive, and it was not without exposing his life to great peril that he put it in practice. By this method he caught three bears in one hunting-match.

The young prince remarked that these animals, when hard pressed by the dogs, trusting rather to their strength than to their swiftness, often stopped, raised themselves on their hind legs, and darting on the fiercest of the dogs, strangled them by squeezing them between their breasts and their fore-paws.

He conceived, therefore, that it would be the best method to attack them with wooden poles hooked at the end, which he ordered to be made on purpose.

Five or six of the boldest hunters, among whom he always was one, armed themselves with these poles, and while the dogs stopped the bears, they seized them by the neck, and held them until others with ropes entangled their hind legs in such a manner that they could not stir. "He then made their forefeet be tied, and forced them to walk upon those behind, conducting them thus in triumph to Stockholm."

CURIOSITY.

It is a very excellent thing to be friendly and sympathetic, but unwise to be obtrusively and impertinently so. A lady, getting upon a train early one morning, took a seat near a woman who began to eye her curiously.

The first lady was naturally very pale in complexion, and had sometimes been annoyed by sympathetic interest in this peculiarity.

Presently the second lady addressed her.

"Poor creetur!" she exclaimed. "How pale you be."

The lady simply raised her eyelids a trifle.

"Now there must be something the matter with you," the other went on. "Do tell me what you've been a-doing."

"I have been totally unconscious for eight hours," the first lady remarked.

"Gracious! How did that happen?"

"I was asleep!"

BUSINESS-LIKE.

Editors, as every one knows, are a very busy set, with no time to waste upon long-winded callers or unnecessary formalities. The Atlanta *Constitution* cites a typical illustration.

A Georgia editor, who is also a real estate agent, a building and loan association director, an attorney-at-law, clerk of the Town Council and pastor of the village church, was recently called upon to perform the marriage ceremony. He was in a great hurry; in fact, the couple surprised him in the middle of a heavy editorial on the tariff.

"Time is money," said he, without looking up from his work. "Do you want her?"

The man said yes.

"And do you want him?"

The girl stammered an affirmative.

"Man and wife," cried the editor. "One dollar. Bring me a load of wood for it—one-third pine, balance oak."

SHE LEFT THEM.

The Lewiston *Journal* says that a nervous woman was on board a Maine Central train the other day, on her way to Auburn. At every station she jumped up and asked, "Is this Auburn?" although the newsboy had assured her often that she should be notified when that place was reached.

At last the place was reached, the name of the station was called, and, as it happened, the newsboy was near at hand.

"Do I—do I—do I leave the cars here?" inquired the anxious passenger.

"Yes, ma'am," answered the newsboy, "unless you wish to take them with you."

The lady looked several volumes at him, and slammed the door as she went out.

"REST OF THE TALENT."

A church society near Boston had given an entertainment for the benefit of one of its numerous charities, and at the end of the evening one of the gentlemen in charge was paying several people for their services in connection with the affair.

Finally he approached the boy who had blown the organ, and said, "Well, Willie, how much do we owe you for your work this evening?"

The boy looked at him in genuine surprise. "Why, Mr. W——," said he, "don't the rest of the talent give their services?"

"How long do you keep your eggs here?" an uneasy customer asked of a waiter at the restaurant. "That depends," said the waiter, "on how long it takes to get them eaten up."

Burnett's Cocoaine has earned a just reputation for promoting the growth and preserving the beauty of the human hair. Instead of possessing the heating and rancid qualities of all animal preparations, such as bear's grease, etc., it is a cooling vegetable oil, extremely agreeable and cleanly. [*Adv.*

THROUGH THICK AND THIN.

In Eight Chapters.—Chapter V.

The Wreck off Hatteras.

Tony, who was away somewhere on the coast of the Carolinas, wrote often to his mother, and sent her so much of his wages, that Mrs. Scaife wondered how he managed to clothe himself.

Jack's first care, after obtaining the promise of his appointment, was to write to Tony. The time was short between February and May, when he was to present himself for examination at West Point; for in due time the appointment came.

One afternoon, about dusk, as Jack came into the house after his usual afternoon ride on Black Prince, he heard a strange voice in the library. He opened the door, and there, in the ruddy light of the fire on the broad old-fashioned hearth, were the old Colonel, sitting in his great chair, Mrs. Randolph, sitting opposite him, and the bluff, bearded Captain Staveley, standing between them.

Jack recognized him instantly.

"Why, Captain Staveley!" he cried, advancing; "how is Tony—*our* Tony?"

There was a slight pause. Captain Staveley did not answer at once. Something cold and chilling fell upon Jack's boyish heart. Why did Captain Staveley hesitate and look so pityingly at him?

"Tony was the bravest boy—the bravest boy—"

The Captain stopped, with a huskiness in his voice. Jack had begun to turn pale.

"But how is he now? What has become of him?" he asked, becoming paler.

"'Twas off Hatteras," said the Captain in the same voice, and then stopped. Mrs. Randolph got up and put her arm around Jack. There were tears in her eyes.

"Dear Jack," she said, "Tony died bravely—died like a man—"

"That he did," broke in the Captain. But at the words of his mother Jack looked at her strangely, and turning deadly pale, dropped silently into a chair.

Mrs. Randolph still kept her arm around him. In all her life she had never seen Jack show such emotion as this.

"Tell him about it, Captain Staveley," said the old Colonel, whose heart was touched by Jack's silent agony of distress. "A braver death was never died."

"'Twas off Hatteras," began the Captain again, "and 'twas in the February gale. You don't know what a gale is off that coast? Well, I hope you'll never know. We had been in it for three days, and Tony had done the work of two able seamen. We had twelve men on board when the storm came, but when we launched the last boat, as I'll tell you about by and by, we only had seven souls left.

"The storm was a-ragin' Sunday night, and such a storm I never saw. Rain, snow, hail, sleet; the men's hands and feet were frosted and their ears frozen, and two of 'em died of exposure before Wednesday night. The rigging was coated with ice an inch thick. However, it didn't make any difference by Monday night, because the foremast and the mizzenmast was both gone, and all the canvas had been blown out of the bolt-ropes. The mainsail was a new one—but after twenty-four hours of that storm, there was nothing left but some rags flapping about.

"The vessel—she was named for my wife, the *Mary Staveley*—was a stanch craft, and although we rolled in the trough of the sea for more than sixty hours, she didn't spring a leak until just toward the last.

"We could hear the fog-bell all the time nearly, and it makes a seafaring man's heart sink when he hears that bell a-clanging and a-clanging through the icy fog and darkness, and he can't get away from the sound of it.

"Sometimes we could see the revolving light at Hatteras Inlet, but most of the time we could hardly tell day from night, it was so thick with snow and fog, and the wind screaming like all the fiends let loose.

"We did nothing in them three days but keep her off shore. There was a life-saving station close by, but no life-boat could 'a' lived in them seas. When a great black wave would rise out of the awful gray mist, and look like it was going to fall and bury us, we'd just throw ourselves flat and hold on to whatever was handy. And every day, during that storm, a man was swept overboard."

The Captain paused, as if overcome by the horror of it. Jack, with white lips and staring eyes, was drinking in every word.

"In all that time Tony Scaife never gave up. Sometimes the men would stop working—for we could keep the ship off shore as long as we had the mainsail, and the steering gear held out—and say they would give it up and die—for they hadn't had sleep, you know, and beyond a certain point most men's courage gives out.

"But Tony's didn't. He said to me once, 'Cap'n, if you're saved and I'm not, give my love to my mother—and Jack Randolph.'"

At this a sob burst from Jack—the first sound he had uttered.

"I had taken a sort of fancy to the boy. He was an honest, straightforward fellow, and anxious to learn, and he seemed to have something on his mind—he wasn't light-hearted like most young fellows who are earning good wages and getting along finely. I asked him once or twice, but he wouldn't tell me, so I let him alone afterwards.

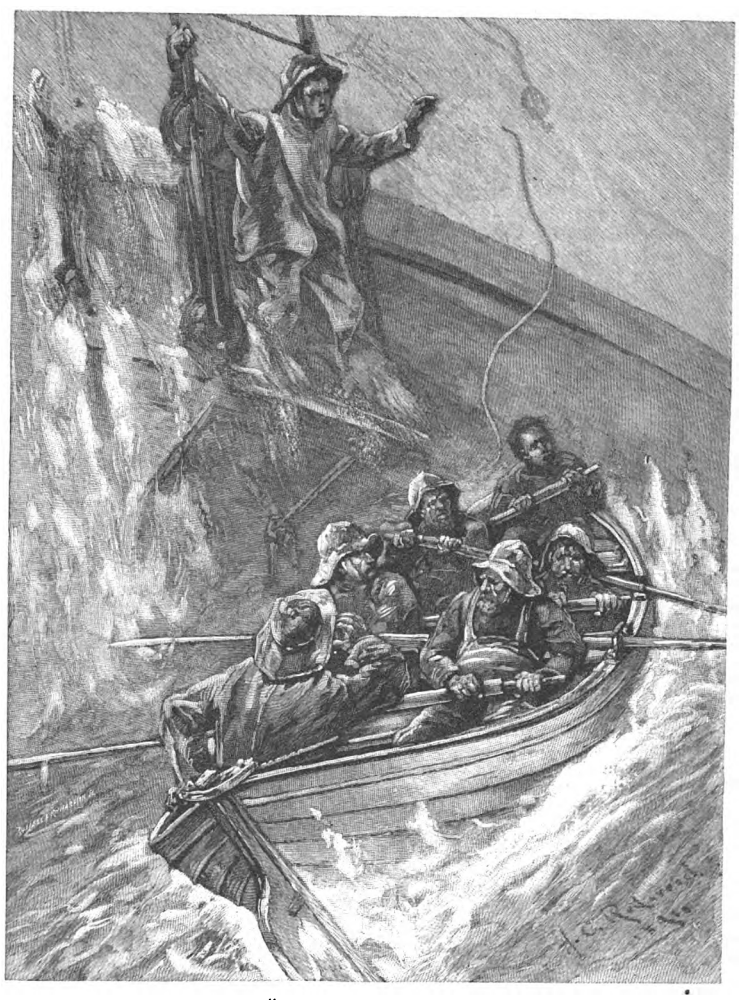
"But in that storm I saw that Tony had the true grit. His hands was bleeding and he wasn't a strong fellow for his age, but he did a man's work.

"At last on Wednesday night the mainmast went by the board, and then we lost the rudder. We were driving head on the shore; and once on them Hatteras sands, with the waves beatin' over her, the vessel would go to pieces in fifteen minutes. Well, I went down below and got some papers and my wife's picture, and when I came up, the men was making ready to launch the boat—the smallest one.

"We had three boats, but two of 'em got stove long before that. Just as I got on deck I felt a grinding, and heard a scraping noise, and the vessel, that had been dashing along like a wild horse, stopped and shivered.

"That there shiver makes a seafaring man shiver, too. One of the men ran below, and found the water was pouring in. He came up with his face as white as a sheet, and said, 'Cap'n, the ship's bottom is going already, sir—gone!'"

The Captain stopped for a moment in his recital, and taking out his handkerchief, wiped his damp forehead and sighed heavily. The three listeners hung upon his words; the Colonel leaning forward, his chin on the ivory head of his old-fashioned stick, and Jack gazing before him with a sort of pallid horror in his face. The Captain after a while continued:



"When I see that cockle-shell of a boat, and them six men beside myself, I cried out aloud, 'Lord, have mercy on us!' and Tony said 'Amen!'

"We got her over the side—'twas a miracle, sure—and we rigged some sort of a line, and five of the men got in her—and she was full then, and the gunwale precious near the water. But for that matter she was dashed about so that she seemed all under water to me.

"I told Tony to go next—we went hand-over-hand down the line—but he wouldn't. He was buckling a buoy around himself. I had one on already, and he pushed me to the side.

"I went over, and the men dragged me into the boat.

"By that time the vessel had listed to one side fearfully, and her cabin windows on that side were under water. I called out to Tony, 'Look out for the rope!'"

"Look out for the Rope!"

The Captain's voice rose in a shout. He was unconsciously acting over the awful scene.

"And Tony—cast off the rope!"

The Captain paused again. With a tone of anguish in his voice, he said:

"I should have scrambled out of the boat if I could. I called out like a crazy man, 'What did you do that for? Jump overboard!' for he had the life-buoy on. And he shouted back,—I can hear his voice now over the wind and the waves,—'I thought you said, "Let go the rope," and there's so many in the boat!'"

The Colonel raised his hand and wiped away some tears. Mrs. Randolph covered her face, and Jack uttered a groan. The Captain kept on, in a trembling voice:

"You see, the boat was so full, and he thought I meant him to take his chances with nothing but that there buoy. That's why he threw the rope off. But God knows I never said it.

"And that was the last I saw of Tony. I don't know how it was that miserable little cockle-shell lived through that sea, but some way it did, and then the life-savers got out to us with a good strong life-boat, and I saw the ship go off the sand with a plunge head-foremost into deeper water—and Tony went down with her."

"Does his mother know?" presently asked Mrs. Randolph, weeping.

"I'm a-going to tell her now," answered the Captain, "and maybe she'll want a woman with her—poor soul."

"I will go," said Mrs. Randolph, rising.

In a little while Mrs. Randolph and the burly, kind-hearted Captain set off in the dusk for the widow's cottage at Lone Point. Jack remained, still, silent and almost dazed by the blow that had fallen upon him.

Within an hour came a message from Lone Point—the widow wanted to see Jack.

Jack started out on a run for the lonely little house, a mile off. He arrived, pale and breathless. The widow was sitting up before the fire, with Mrs. Randolph on one side of her, and the Captain on the other.

"I believe you and I are the two that Tony loved best in the world," she said, as Jack clasped her hand. Even at the moment of her keenest agony she was still patient, still calm. It was from her that Tony got some of his patience and courage.

All night long Mrs. Randolph and Jack stayed with the poor mother. At daylight Jack went home and threw himself on his bed in his own room and slept heavily. When he woke there was a weight upon his heart. He would never see Tony again.

As the days went by after that, Mrs. Randolph spent much of her time with Mrs. Scaife. But the poor know how to bear their sorrows, and in a little time, grieve as she might, Tony's mother was pursuing her humble life as she had done before Tony went away.

Everything remained in the cottage just the same. "Because it's possible—it might happen so once in a hundred years," she said, piteously, "that Tony might have been saved after all."

Jack could not even cherish this faint hope. He mourned for his friend as dead.

Mrs. Randolph was glad that the change to West Point was impending, since Jack took Tony's loss so much to heart; and at last, in May, the day came when he had to say good-by to Marrowbone, and to all his early life.

His last visit was to Lone Point. He walked all over the sandy stretch of ground, and went in the cottage under the three melancholy pines. There was the widow, quiet, patient as ever. Jack left her and walked back to Marrowbone, with a heavy heart.

"I didn't think I could love any fellow as well as I loved Tony," he said to himself.

His mother met him at the door with a bright face.

"Jack," she said, "here is something to give you joy. You know Edgar Mount's money?"

"Yes," said Jack, flushing with anger at the recollection.

"Well, just now, as Mam Betsy was pulling the mattress off the bed in the blue room, where Edgar slept, she came across a roll of something. It had fallen down, and had been caught between the mattress and the bedstead itself. It was

Digitized by Google

Edgar's money; and there it has stayed, although the bed has been made a dozen times since. So Tony was honest after all."

"I knew it just as well before this as now; but all the same, I thank God!" answered Jack.

The Colonel knew of the discovery, and there was a sort of mournful rejoicing among the three people who had believed in Tony's honesty.

"I shall send the money to Edgar," said Mrs. Randolph, "and I shall write and tell him about Tony. I wonder if Edgar could do anything as heroic as the way that Tony died?"

"I think," remarked Colonel Randolph, in his grave way, "there was as much heroism in the way Tony lived, as the way he died. He worked like a slave, and did without everything to buy his mother that poor home."

The morning of Jack's departure came. Both the Colonel and Mrs. Randolph restrained their feelings. It would be time enough to grieve for Jack after he was gone.

Uncle Josh and Mam Betsy made characteristic farewells. Mam Betsy held Jack in her arms and charged him solemnly:

"Read yo' Bible, honey, use plenty o' soap an' water, an' go on yo' blood. An' ef any dem impidint boys at Wes' P'int is sassy ter you, jes' tell 'em yo' gran'par is Cun'l John Marmyduke Randolph, an' yo' gran'mar was a Berkeley, an' yo' gret-gran'mar a Tyler, an' you b'longs to de quality, an' I lay dey let you 'lone arter dat!"

"An' give my respec's to de commandant," loftily announced Uncle Josh. "I recommembers him when he warn' nuttin' but a little second lieutenant, wid a chicken downy muffstach on he lip, an' me an' ole marse wus orficers an' gentmun; an' ef you wants to know nuttin' 'bout military life, jes' write an' ax Unc' Josh, honey; he kin tole you all 'bout it!"

So Jack started off for his new life.

The third day after leaving home he found

himself walking across the noble plateau of West Point, on his way to report to the adjutant.

The first person he ran across was Edgar Mount.

"Why, how are you, old fellow?" was Edgar's cordial greeting. Jack returned it rather coolly. The memory of Edgar's conduct to Tony still rankled.

"And by the way," remarked Edgar, airily, "the fisherman was honest after all—and was lost at sea afterward, eh?"

Jack stood still and gazed at Edgar with speechless indignation. Then he turned abruptly and walked away. So did Edgar, whistling.

MOLLY ELLIOT SEAWELL.

(To be continued.)

For the Companion.

MRS. DARROW'S POORHOUSE.

Mrs. Darrow, who was sometimes disrespectfully called "old Bets," hurried through the gate that led into her small yard, and unlocked her door with unusual energy.

She untied her rusty black bonnet, carefully brushed away some imaginary dust, opened a closet door, took out an old-fashioned bandbox and deposited the bonnet in it.

Then she folded her thin woollen shawl neatly, put it in its proper corner of the upper bureau drawer, and then replaced her well-worn alpaca dress with a dingy calico wrapper.

She was tall and thin, with a hard-set face creased by innumerable wrinkles, that made her appear much older than she really was. Her abundant dark hair, thickly streaked with gray, was pulled back tightly from her forehead, and held in an unbecoming knot by an old "tusk comb" that had been her mother's.

There was not a soft line in Mrs. Darrow's whole contour, and she seemed the embodiment of angles and unyielding hardness.

She was a widow, now. Four years before poor old Job Darrow had meekly and not unwillingly given up the ghost. In spite of the years that had elapsed since then, people still talked of the hard time he had endured in his unhappy and unlovely home, where only the barest necessities were doled out to him, though he was a skilled, sober mechanic, and earned good wages. His wife had persisted in putting the greater part of his earnings in the savings-bank, lest he and she should come to the poorhouse.

She had nursed this fear of ending her days in the poorhouse, until it had become a mania with her; and after her husband's death had given herself up wholly to the notion.

No suffering or destitution could be great enough to enlist her sympathy. She worried the dealers from whom she bought her scanty supplies by her "tastings," which often amounted to nearly as much as her purchases; and by her haggling, penurious ways and fault-finding.

On the morning of which I write, Mrs. Darrow's face wore an air of triumph. Her eyes shone eagerly, and her thin lips were as near a smile as it was possible for them to be, after the long years in which smiling had become a lost art to them. As she hastily buttoned her wrapper, she muttered to herself:

"I'll settle the matter right now, I guess. I'll go over and drag it away before they know what I'm up to, and I'll get some tramp to cut it up for me as soon's I can. I'll give him the soup-bone in the cupboard, and that corn-bread, since it's so hard and dry I can't eat it. It seems like a shame to give that bone to a lazy, good-for-nothing tramp, but I'm afraid I'll have to. Well, there's one comfort about it—that pole'll make stove-wood enough to last me at least three weeks, and not cost me a cent, either."

At this point in her soliloquy she tied a faded gingham sunbonnet upon her head and walked out of her house, the air of triumphant satisfaction merging into defiance. She crossed the street and approached the house of her neighbor and one-time friend, Mrs. Rebecca Johnson.

Directly in front of Mrs. Johnson's small house a disused telephone-pole was lying. It had been blown down and broken by a severe storm several weeks before, and Mrs. Darrow had looked upon it with covetous eyes ever since.

Morning, noon and night she thought of the pile of stove-wood into which it might be converted, until it seemed as if she could never really rest again unless she possessed it.

This morning her grasping spirit had urged her to go to the manager of the telephone exchange and ask permission to use the pole.

To do her justice, it had cost her a hard struggle to go. She was so grudging herself that she felt sure he would refuse and perhaps insult her; but in spite of this fear, she at last plucked up courage to go.

"Mr. Ingram, one of them telephone-poles has fell down in our street—broke in that big storm, you know. 'Taint any account, and it's dreadfully in the way; do you care if I hire a man to move it?" she asked, nervously.

Mr. Ingram looked up somewhat absently. He was very busy at the moment, and a good deal worried over the complaints of poor telephone service, with which he had been besieged since the night of the storm.

He looked at Mrs. Darrow, her shabby but clean dress, her thin, restless hands, her many wrinkles, and the sight touched his heart.

"Oh! you mean another one of those broken poles, do you? In your way, is it? Certainly, madam, you can have it removed if you choose. I should have had it done myself, as soon as I got through repairing damages. I shall be glad to have it disposed of, I'm sure. Good morning, madam!"

And so, before she fairly realized it, Mrs. Darrow had been bowed out of the office.

Her conscience did not upbraid her for having given him to understand that the pole was in her way, when it was really in front of her neighbor's house across the street. She even indulged in a sly chuckle, as she thought of the chagrin that would fill Mrs. Johnson's heart when the pole was taken away.

What mattered it if her neighbor really needed the pole for stove-wood? She was not responsible for Becky Johnson's poverty. So, reasoning with herself, with cautious steps she approached the coveted pole and attempted to lift one end of it.

But she had either overrated her strength or underrated the weight of the pole. She could hardly stir the heavy piece of wood.

In the midst of her efforts Mrs. Johnson happened to glance out of the window, and saw Mrs. Darrow trying, as she supposed, to steal the telephone-pole in broad daylight.

Now the very next morning after the storm, as Mr. Ingram passed her house inspecting damages, Mrs. Johnson had asked him to give her the pole, and he had cheerfully given it to her; but he had forgotten all about it a moment afterward—a fact which Mrs. Johnson did not know, of course.

Accordingly, when she saw Mrs. Darrow vainly trying to drag the pole away, her wrath arose at once.

"Kate, Kate!" she called to her stout daughter, "come here quick! There's Betsy Darrow going to drag off our telephone-pole, and I'd just hired a man to come and cut it up to-morrow! Run out and take it away from her! If it wa'n't for my rheumatiz, I'd go myself, and give her a piece of my mind, too. Hurry up, can't you?"

Kate hastily wiped the dishwater from her hands, ran out of the house, and began to reproach Mrs. Darrow.

"What are you coming here and trying to take away our telephone-pole for?" she said, excitedly.

"'Taint your telephone-pole! Mr. Ingram gave it to me," retorted Mrs. Darrow.

"Well, of all the—the—whoppers, that beats 'em," said Kate. "Ma! ma! here's Mrs. Darrow saying Mr. Ingram give her the pole, when

we can prove he give it to us!" she screamed out to her mother.

At this apparent falsehood on Mrs. Darrow's part, Mrs. Johnson's indignation overcame her fear of physical pain, and she hobbled to the door in response to her daughter's call.

"Betsy Darrow, you know's well as you're a living woman, that Mr. Ingram never give that pole to you in his born days. He give it to me, and don't let me see you touching it, much less trying to haul it away," she called out, angrily.

"You go set down again, Becky Johnson. I reckon I know what I'm a-doing. This pole belongs to me, and you and Kate and all your kin aint going to keep me from taking it."

"Well! if that don't beat all! I guess we'll see whether you take that pole or not. Kate, set down on it!" commanded Mrs. Johnson.

Kate sat down on the pole, laughing derisively as Mrs. Darrow strained and tugged till her naturally pale face became purple in hue.

"Keep on a-setting, Kate!" urged Mrs. Johnson; and Kate obeyed, till from sheer exhaustion Mrs. Darrow gave up the unequal contest.

"Kate Johnson, if you don't get up off that there pole, I'll have you arrested, sure's you're

alive!" she threatened. But Kate only laughed the more, and settled her hundred and fifty pounds more firmly on the disputed pole.

"I don't think any policeman is going to meddle with me for setting on my own ma's property," she said, spiritedly.

"'Taint your ma's property! I tell you it's mine, and you'd better get up this minute, before I drag you along of the pole into my yard," said Mrs. Darrow, as she gasped for breath.

Finding that threats were futile, she seized the long, slender upper section of the pole and began to drag it across the street.

Seeing this, Kate sprang up and pulled the pole from her enemy with such force that she fell in a heap under the pole, on the ground.

Mrs. Darrow felt that her opportunity had come; so, while Kate struggled to arise, she seized the large end of the pole, and in one mighty effort succeeded in lifting it from the ground.

But her strength was not sufficient to bear the weight, and the pole fell upon her feet with such force as to crush them both very badly.

She uttered a sharp cry, and sank down so sick and faint that she could scarcely hold up her head.

"I reckon you're tickled nearly to death, Becky Johnson, sence you see me sitting here like a rat in a trap, crippled for life very likely, all for trying to get what rightfully belonged to me. But if you think I'm going to holler and faint and cut up as some women would, you're much mistaken," she said, defiantly.

The next moment she had dropped over in a dead swoon.

By this time Kate had come to her assistance.

"Oh, ma! she looks as if she's dead! Call to Mr. Sanders to come quick! He's digging a cistern in Walter's back yard. I'm afraid to fool with the pole any more; I might hurt her worse than ever."

With great excitement and feelings of pity, not unmixed with the thought that Mrs. Darrow was receiving her just deserts, Mrs. Johnson obeyed.

Mr. Sanders came, and in a few minutes the unconscious woman was laid on Mrs. Johnson's best bed.

"'Taint worth while to carry her home. There's nobody there to take care of her, and she'll need lots of taking care of before she's through with this, I reckon," said Mrs. Johnson, her warm heart beginning to swell with sympathy, as she looked at the white face that had been so dear to her in her girlhood.

Then followed days and weeks of suffering; days in which Mrs. Darrow was a helpless, irritable burden, bemoaning her fate that a surgeon had been called, and that the time had at last come when she was going straight to the poorhouse.

Kate was her patient, tender nurse, bearing silently all her fault-finding and penuriousness. But Mrs. Johnson's spirits boiled hotly within her, until at last her indignation reached a climax.

"See here, now, Betsy Darrow, I've took just all I'm going to from you! I look at you and wonder sometimes if this can be the sweet-tempered, merry, free-hearted girl I used to love more'n I loved myself. If you'd 'a' died before you grew into a cross, stingy, mean woman, no more like that sweet girl was than a wild rose is like a cuckle-bur, you would have been fit to meet your good old mother, and we could all have loved Bessie's memory.

"Do you remember how we used to call you Bessie, then, instead of 'old Bets,' and how you put your arm around me as we stood in your pretty room in the old farm-house the day you was married, and said you'd never quit loving me as long's you lived?

"And you talked of the good you was going to do for others; of church work and Sunday school, and such like. Yet here you lie, with your life as bare and ugly as a wore-out field. No, it doesn't even amount to 's much 's that, because the old field would warm up when God's sun shined on it, and the birds might light on it, and the posies come up and cover its worthless blotches. But you, Betsy Darrow, what is there warm or sweet or of use to others about you?"

Here Mrs. Johnson paused as if to give the sick woman a chance to defend herself, but as no reply came, she began again.

"The Lord has been good enough to give you plenty of money, and you've been piling it up in the savin's-bank for years, to keep from going to the poorhouse, and after all you've got there!

"Yes, this is a kind of a poorhouse you're in now, but Kate and I are happy in it—or we would be if it wasn't for your grumbling.

"And you're in a powerful poorhouse when you're at home, a real mean poorhouse, too, where there aint even comf'table victuals, nor fires, nor anything else worth living for.

"I 'low you can't find a poorhouse worse than you're own; the law wouldn't permit it. So the time has come for you to spend some of the money you've been a-hoarding. I can't buy the delicate, nourishin' food you need, though you're welcome as the air you breathe to the best I've got, if it was only fitting.

"So you've got to open your heart and your pocket-book, and buy jellies and soups and fruits and oysters, and wood enough to keep roaring hot fires, 'cause that telephone-pole is burned up, and I haven't money to buy more. And if you're afraid Kate and me will get some of the benefit, you can be carried over home. But whether you go or stay, you've got to buy the things you need!"

Mrs. Johnson said this with such firmness and so much with the air of loving authority that she had used to her friend in the old long ago, that Mrs. Darrow felt a queer upheaval within her heart, and a sudden rush of sweet memories of the dear, glad, innocent days of her girlhood.

"You're pretty hard on me, Rebecca, but I

Digitized by Google

guess I deserve it. I never thought before what a regular poorhouse I was a-living in all the time, while I was saving and pinching to keep from going to one.

"And—and Rebecca," she said, pausing tenderly over the name by which she used to call her friend, "do you think if I begun clean over again and tried to live as a woman ought, that God could forgive me and love me again?"

Unmindful of her rheumatic limbs, Rebecca dropped upon her knees by her guest's bedside, and with a great sob put her arms around the lean, long neck.

"Oh! I know He would, Bessie—He'll make you all over again, if you'll only let Him."

She kissed the wrinkled face, as the old-time love that so long had slumbered burst into life again.

"Seem's like you've been gone all these years, and just come back, dear Bessie," she whispered.

"I feel 's if I had been having a long, miserable nightmare, and 's if you just come and waked me. Rebecca, you don't want to send me home now, do you? I sha'n't be so cross to Kate after this. Somehow it made me feel bitter and jealous to see how much you loved each other, and how happy you was, even if you was poor. And I was mean enough to think you was glad I got hurt with the telephone-pole."

"O Bessie! how could you?" interrupted Mrs. Johnson.

"But I was though, and I wished I'd never seen the old pole; and now here I am thanking the Lord for letting it smash me into your house. My mother used to say:

God moves in a mysterious way,
His wonders to perform.

"He used that blessed old telephone-pole to change my heart and bring me back into His fold.

"O Rebecca! how glad I am!"

MEN'S LIVES.

Men's lives like oceans change
In shifting tides and ebb from either shore,
Till the strong planet draws them on once more.
—*E. C. Stedman.*

For the Companion.

ATTACHING TARLIBERRY.

Up at eight o'clock, breakfast at quarter-past, to the office at half-past, work all the forenoon, luncheon at one, back at the office at two, work all the afternoon, home at quarter to six, study all the evening, bed at ten. And begin all over again to-morrow.

And all over again the next day, for this was the way Henry Manson passed every week-day in the year, excepting the fortnight's vacation which he took whenever nobody else cared to take his, so that it either came so early as to resemble a dinner which stops short at soup, or so late that it seemed like getting into church just in time to hear the benediction.

Henry was junior clerk for Pettigrew, Pitts, Pepper & Co., wholesale grocers, who occupied a dark, coffee-scented, granite warehouse in a dark, coffee-scented, granite street, where the roadway roared with enormous trucks, and the sidewalk rattled and banged beneath contrary currents of boxes, barrels and puncheons in a continual state of violent transmission from cart to store or from store to cart.

Inside were more boxes, barrels and puncheons piled as high as the ceiling all over the broad floor. In one corner was the office, and in one corner of that was a desk at which Henry was almost always to be found, writing away at bills and invoices, from morning till night.

It was weary, monotonous work in itself, and worse, promised no future. Henry might continue to write at that desk for years, and then be no further advanced than now; for in the great city were hundreds and thousands of young men anxious for employment, who could do his task as well as he could, and he had never had any opportunity to show himself capable of better things.

Notwithstanding, he drudged faithfully on every day, in the hope that his chance would yet come, and toiled every evening over books which would fit him to take advantage of it whenever it might be offered.

The chance came, as chances generally do, quite unexpectedly, and in a way totally different from any Henry had ever imagined.

It had been a hard day in the office. Two of the clerks were absent, and two more were out on special work, throwing so much more labor on the rest; while the bookkeeper, who thought it due to the dignity of his position never to be in a good humor, was in an uncommonly bad one, even for him, and everybody seemed overworked, irritable and discontented.

Henry felt particularly despondent, for he was behindhand with his own duties, and having made several blunders in performing the unfamiliar tasks of the absentees, had been severely scolded by the bookkeeper.

"It's no use," thought Henry. "I might as well give up and try an easier business like coal-heaving, or a better-paid one like car-driving, or a more dignified one such as canvassing or distributing samples of soap."

The poor fellow, who was half-tired out and wholly discouraged, attempted a smile at his own sarcasms, but abandoned the effort before he had fairly begun.

"Manson!" called Brierley, the bookkeeper, at that moment. "This way!"

"Yes, sir."

"Mr. Pepper wants you," continued Brierley, surlily. "He's in his private room. Come, don't keep him waiting!"

Henry went out, greatly wondering what could be the matter. Neither Mr. Pepper nor any other member of the firm had much intercourse with the subordinate clerks, and a summons to the private room was exceptional.

"Probably I'm to be discharged," said Henry to himself.

He tapped lightly the door of the little inner room and then entered, with a great effort to look unembarrassed and as if it were a perfectly common thing for him to be there.

Mr. Pepper, a stout, dark man with glittering black eyes and speech so concise that all his remarks seemed intended for ten-word telegrams, turned around in his swivel chair to face the junior clerk.

"Saw you studying a commercial law treatise," said he, without the slightest preface.

"Yes, sir," answered Henry, puzzled at this peculiar beginning of the interview. "But not in office hours."

"Been through it?"

"Yes, sir."

"Understand it?"

"Fairly well, sir."

"Know about attachment process?"

"I think I do."

"Good. You're the only man in office who does, then. Brierley doesn't—just asked him. Well! I want you to go to Damascus Centre. Right now. Train starts in twenty-seven minutes. Have to look alive."

"Yes, sir," said Henry, who, completely taken aback by the suddenness of this extraordinary commission, was all at sea as to what he might be expected to do.

He soon learned. Mr. Pepper, using about one-third the number of words any other man would have required for the same purpose, explained that Jonas Tarliberry, who kept a general store at Damascus Centre, and who owed the firm a considerable amount of goods bought on credit, was on the point of failure.

Now, since Tarliberry's stock was but just sufficient to satisfy his indebtedness to Pettigrew, Pitts, Pepper & Co., and certain other houses were also his creditors, it was necessary to use all despatch in order to put a first attachment upon his goods. None of the firm chanced to be able to go; and time being wanting to procure an attorney's services, the first available man must be sent.

"You're the one," snapped Mr. Pepper. "Know what to do? Yes? Then do it! Here's a signed blank writ—fill it up yourself. Don't let anybody get ahead of you. Don't spare money. Here's some. Now, off you go!"

Henry found himself half-way to the railroad station before he fairly came to a clear understanding of what had happened, and of the swift change in his situation brought about within the past few minutes.

"This is my chance, and I'm going to improve it!"

So, in high spirits he dashed into the station and up to the ticket window. Two men were already there.

"One to Damascus Centre," said the first.

"One to Damascus Centre," echoed the second.

"Hallo!" thought Henry, surprised. "Travel up there seems lively to-day."

His turn coming, he stepped to the window, saying, "One to Damascus Centre, please."

The two men turned around on hearing this request, and appearing to recognize him, exchanged a glance. Henry at once understood that his errand would not be accomplished without opposition, for he, too, had recognized them.

One was Browning, of Mace, Nutt & Co., the other Cutter, of Nash & Cutter, both rival grocery houses, and beyond doubt, likewise creditors of Jonas Tarliberry. They were certainly bound upon the same mission as he.

Browning and Cutter did not speak, but hurried away to the train. They went into the smoker, while Henry, entering another car, sat down to think what he should do.

"Those two seemed to have joined forces," mused he. "Of course, then, their claims are not so large but that there will be enough to satisfy both, and they mean to help each other. And both will unite to fight me, for if I get in my demand first there will be nothing left for either of them. Well, we'll see!"

With a stylographic pen he proceeded to fill in the blank writ Mr. Pepper had given him, which was already signed by the judge, as is sometimes done. The amount of the claim was nearly six thousand dollars, and Henry knew that if he saved such a sum to the firm his future fortune would be bright, while the failure to secure it would forever end all his hopes of advancement.

"But I won't fail," he declared. "I'll get there first if anybody gets there at all."

He examined the roll of bank-bills which had been given him, to ascertain what his resources might be. To his astonishment he found that he had two hundred dollars.

"Gracious!" ejaculated he. "I'm really not to spare money, sure enough. And it means, too, that Mr. Pepper thinks I'd have trouble. Very likely he knew that the other houses would have the same information he had."

Clearly, the first thing to do was to find out all about Damascus Centre, and the conductor was evidently the man to ask. Henry found that Tarliberry's store was four miles from the Centre station at a place called Mosher's Mills, and that there was no regular means of conveyance between the two villages.

"You'll be lucky if you find a team. Damascus Centre's a little bit of a village, and why we stop there I never could see. Sometimes you can get a man to drive you over to the Mills, and sometimes you can't—more can't than can, generally speaking."

"But what shall I do if there isn't a team?"

"Walk, I suppose," replied the conductor, indifferently. "You'll have companions in misery, anyway. There are two men in the smoker who've been asking me the same question. The three of you might keep one another company—if you happen to fancy it."

The conductor walked off winking. The "two men in the smoker" had manifestly given him some idea of the situation of affairs.

Henry sat through the rest of the journey in an unpleasantly nervous frame of mind, longing to do something, and yet it was quite obvious that he could at present only wait to see what might turn up.

If his rivals obtained the only conveyance, what was to become of him? And if there were no conveyance at all, what then?

It seemed to him that he would gladly sacrifice a year's salary for the monopoly of any sort of vehicle which would get him to Mosher's Mills half an hour ahead of that pair in the smoker. His first work at the Mills would be to find a constable to serve the attachment, and this might take more time than he could spare.

Before long the engine whistled, and a look at his watch told him that this must be Damascus Centre. He rushed out of the car, and standing on the lowermost step, made ready to swing off the moment he could safely do so.

Yet, quick and prompt as Henry was, he forgot the very simple, self-evident fact that the first car of a train reaches the station before the last car does.

When he sprang upon the little platform at Damascus Centre he saw Browning and Cutter running across the upper end, and tumbling into a dilapidated old carryall which he instantly perceived to be the only carriage anywhere in sight. He darted toward it, shouting to the driver to wait for him.

"Go on! Go on!" cried Browning.

"Don't stop!" screamed Cutter.

"I'll jes' hol' up a minute and see wut he wants," answered the driver, coolly. "'F I kin git 'nuther pass'njer, why, I'm a-goin' t' take him."

"Never mind. Here's five dollars apiece for these two empty seats inside here. Now, remember, they're ours," exclaimed Browning. "No room here, young man," continued he, laughing, as Henry ran up. "We've a fancy for seclusion and extra seats."

Henry was very angry. "Of all the mean, contemptible tricks —" he broke out.

"Don't get excited, my lad!" sneered Cutter, lighting a cigar. "Haven't you ever learned that all's fair in war and the grocery trade?"

"And that yours isn't the first unfortunate attachment?" added Browning, chuckling.

Henry had already turned away from them, resolved to act instead of talking. Showing a five-dollar bill to the driver, he said:

"If this is the price of seats in this thing, I don't object. There's room in front with you, isn't there?"

"*In* course!" answered the man, beaming with joy and seizing the money. "Up with ye, sonny!"

"Here!" roared Browning and Cutter, both together. "None of that! We've bought —"

"Ye've bought four seats, but ther's a fift' one fur sale, an' it's sold," interrupted the driver, grimacing at Henry. "Naow ye've got what ye paid fur, an' so's he! Git up, Jake!"

He swung his whip, and the horse moved off with its inharmonious load.

The driver, whose name proved to be Elmer Cummings, was in a not unnatural state of exhilaration over a trip which was putting more money into his pocket than he would have earned in a fortnight under ordinary circumstances.

"Sakes alive!" he kept saying. "Wasn't it luck that I happened to be daown t' the deepott this partic'lar day? Ye see, I don' make no reg'lar business o' kerrying folks t' th' Mills—only, when work's light, I jes' hitch up an' come for th' sake o' th' aoutin', an' pick up anythin' thet offers. 'N I guess I know what you three's after."

Henry made no reply.

"Tarliberry, aint it?" said Cummings.

Henry nodded absently. To tell the truth, he was much more intent on overhearing certain whispers passing between the two men inside than on listening to Cummings's idle ramblings. He did not believe that his troubles were over yet.

"Thet's it, is it? 'Tachment, likely? Be ye a constable or depperty sheriff?"

Henry shook his head. The pair behind appeared to be forming some plan, to judge from the very earnest tones of their repressed voices.

"Aint, eh?" continued Cummings, slyly. "Then ye expec' to find one at th' Mills?"

"Why, yes. Isn't there one there?"

"Oh yes, there's one, only —"

At this moment Henry caught one or two words of the talk going on within—enough to understand what the enemy were plotting.

"Very well," he said to himself. "If that's their idea, why, I must beat them at their own game."

The making of this decision prevented him from noticing the queer expression upon Elmer Cummings's hard features, which would otherwise have led him to draw that astute person out a little.

"Do you own this carryall?" asked Henry, hastily.

"Sartin."

"What will you take for it?"

Cummings looked surprised at first, then meditative, then cunning.

"Wal, I haint never thought o' tradin'," he began.

"Quick! Will you take fifty dollars?"

"Wal —"

"Yes or no?"

"Yes, I s'pose," admitted Cummings, "sence ye press me so hard. But p'raps them others —"

"Sold, isn't it?" snapped Henry, as abruptly as Mr. Pepper himself.

"Yes, sold!" sighed Cummings, with the sadness and hesitation of a man losing heavily by the transaction, instead of getting four times what the crazy old trap was worth.

He was pocketing the proceeds of the sale, when Browning threw aside the curtains, saying:

"Want to sell your horse and wagon, driver?"

"They're sold!" interposed Henry, jubilantly. "They belong to me now."

"What? Belong to you?"

"Yes, sir, I've just bought them. And, excuse me, sir, but I rather prefer riding alone."

Browning was beginning a series of violent remarks, when Cutter broke in.

"I say, driver, did he buy the horse, too?"

Henry was aghast. Before he could speak, Cummings replied, "No, nothin' but the kerridge."

"We'll buy your horse then! How much will you take for him?"

"What'll ye give?" asked Cummings, grinning with pleasure at this promised accession of more wealth.

"Seventy-five dollars! Do you take it? Sold!" sputtered Cutter.

The driver had ducked his head, more from astonishment than anything else.

"I'll give a hundred!" exclaimed Henry, alarmed.

"Too late! Browning's a witness to the sale. You're held to your word, driver," retorted the brisk Cutter, who saw that Cummings would like nothing better than to make the two parties bid against each other.

But Cummings had plainly, if unwittingly, nodded to Cutter's inquiry, and could not draw back from his bargain.

"Now, young man," remarked Browning, while he and his companion unharnessed the horse from the shafts, "we'll leave you in undisturbed possession of your carryall—and much good may it do you!"

With this the victorious couple mounted double on their unwilling steed and trotted off, waving their hats and giving three cheers as they vanished over a hill.

Henry, sitting in stupid despair upon the front seat of his horseless, useless vehicle, was desolate as Marius among the ruins of Carthage, but, unluckily, not solitary like Marius, for Elmer Cummings was still there, and with really magnificent impudence offered to buy back the carryall for seven dollars and fifty cents!

"Ye see," giggled he, "'taint wuth so much to me as 'twas to you, an' besides, I've got to hire a hoss to git it hum with."

Convinced that he was in the company of one of the greatest rascals he had ever met, Henry had a strong desire to tell Cummings exactly what he thought of him, but soon saw that he must not offend a man who might still be of some assistance. So, with a violent gulp, he swallowed his feelings, and asked:

"How far is it to Mosher's Mills?"

"'Bout three miles—yes, strong three."

"How am I to get there?"

"Don' know."

"Can't you —" But he broke off what he intended to say, for he saw a man in a light wagon driving up in the direction he wished to go.

"Hullo!" he cried, running to the wagon. "Will you take me to the Mills? I'll pay you well for it."

"Guess so," replied the man, a substantial-looking person of a far more intelligent, respectable appearance than Cummings. "Won't take any pay, though. Jump up! I'm going straight there."

Henry mounted the wagon, bursting with joy. He turned to fling a denunciation or two at his late driver, but was arrested by the singular expression of combined bewilderment, surprise and amusement upon that estimable person's honest face.

"Good-by, young sir!" Cummings called out. "I'll tell ye naow what I was a-goin' to tell ye a

Digitized by Google

spell back. Ther' aint but one cunstable to Mosher's Mills!"

Off drove the wagon. Henry was considerably puzzled at the parting speech of Cummings, which seemed to contain some important meaning, although on the surface it was but a very commonplace remark.

One constable was amply sufficient for his purpose, and he felt sure that the fine horse which drew him would reach the Mills long before the overweighted beast ridden by Browning and Cutter.

Indeed, the pair were overtaken within a few minutes. Henry, being only a boy, could not resist the temptation of taunting them.

"Good-by, gentlemen!" he exclaimed, bowing politely as he passed. "I'm sorry I can't wait for you; I have business ahead!"

Browning and Cutter did not answer. They stared with amazed eyes, not at Henry, but at the man with him, and then laughed until they nearly fell off their horse. Until out of sight they continued this inexplicable merriment, which appeared to grow more uproarious the longer it lasted.

Henry turned to examine his new acquaintance, in order to discover what there might be in his aspect to produce such a remarkable effect upon all who saw him. He found the man already keenly examining him.

"Who are you, anyway?" asked the man. "What's up?"

Henry told his errand, described his adventures, and ended by inquiring:

"Can you tell me who the constable is?"

The man smiled rather oddly.

"Well, I'm the constable."

"You?" shouted Henry, delighted. "Then you will please take me to Tarliberry's and serve this attachment."

"Can't do it."

"Can't? Why not?"

"Nothing — only — well, I'm Tarliberry myself!"

The whole journey had been a succession of disagreeable happenings for Henry, but this was the worst of all. He merely stared, unable to speak.

"Yes," continued Tarliberry, "I'm Jonas Tarliberry, storekeeper — also constable. So, you see, I can't very well put an attachment on my own goods, now can I?"

Henry still said nothing. Even beyond his disappointment and vexation, he felt truly sorry for this kindly, good-natured man, whom he was endeavoring to deprive of his property, although to secure the payment of a just debt. He finally managed to stammer something to this effect.

"Bless you," said Tarliberry, serenely, "I don't blame you a bit! I've been unfortunate, and can't pay my bills, so your firm's perfectly right to protect itself; and as for you, why, you're a good boy, and only doing your duty. To be honest, I'd rather your house should have the first chance."

"Then would you —"

Henry stopped short. The proposal he had in mind was too impudent for utterance. He didn't believe that even Elmer Cummings could have made it.

"Why, yes," answered Tarliberry, still serenely and without changing countenance. "Somebody's going to attach, whether or no, and I'd as lief it should be you as those other fellows—in fact, I'd a little rather, for I've taken a fancy to you, and I never admired either of them overmuch."

He calmly turned the horse around and began driving back.

"What! Are you really —" cried Henry, "really going to —"

"Yes, really going to hunt up another constable," answered the good Tarliberry.

They again passed Browning and Cutter, who laughed even harder than before.

"They're laughing a little too soon," commented Tarliberry. "They think I'm playing some trick to get you out of the way, whereas —"

"Whereas," interjected grateful Henry, "you're actually helping me to ruin you!"

Not quite that, however. The constable was obtained and driven to Mosher's Mills, where Browning and Cutter were rushing about, trying to devise some means of procuring assistance. They distrusted their senses when they saw Tarliberry escort Henry and the constable into his own store, and there receive service of the little strip of paper which had cost our young friend so much tribulation.

They could do nothing but go home, completely defeated and too angry to speak.

Henry parted with genuine sorrow from his generous debtor, whom, before he went, he had cause to employ in his other capacity of an officer of the law, for he chanced to see Elmer Cummings sneaking along with that identical carryall sold at such an exorbitant price.

Mr. Cummings was instantly arrested on a charge of theft, and so terrified that he gladly compromised by paying back the purchase-money, less the seven dollars and fifty cents which he had offered for the old machine.

"I was too mighty smart that time," muttered the humbled Cummings, "but I was gettin' rich so fast I jes' lost my head, like a good many other folks in the same box."

Mr. Pepper said little to Henry, good or bad, on receiving his report, but Henry became the firm's collector the very next day, to the great disgust of bookkeeper Brierley.

Nor did Tarliberry suffer for his magnanimity, for Henry's account of it touched even business-like Mr. Pepper, and the country merchant was treated so leniently that he soon got upon his feet again, and, happily, has remained standing firmly upon them ever since. MANLEY PIKE.

SELF-PUNISHED.

As on the earth the mists it yields to heaven
Descend in rain,
So on his head who e'er has evil given,
It falls again.

For the Companion.

PATSY DOODY'S PLAY PARTY.

"It seems just like yesterday," said grandmother, with a complacent pat and stroke down each side of her smooth, white hair. "Patsy was just about the size of Kate, there, and my next neighbor, although the trout-run, as 'twas called, and Judge Barnes's meadow lay between her folks' place and ours.

"If she had any other Christian name than Patsy, I never heard it, though some said Patsy was a boy's name. My Patsy was a girl; and it wasn't till she went to Toronto to school, that I learned how her last name was twisted by our country tongues into Doody. Then I read a letter from Patsy to her mother, which ended: — 'Your Loving and Respecting Daughter, Patsy d' Eudé.'

"I felt very uncomfortable then, for every note I'd ever written to my little friend at school had been directed to 'Miss P. Doody.'

"I'm running right away from the party though.

"I remember it very well because it was the first evening party I was ever invited to, and seemed to me very brilliant and important. I had such a nice, grown-up feeling, too, when I yawned in my mother's face the next day, while she was setting up a stocking for me to knit; just as Kate did just now when she was telling about Isabel Edmondson's german last night.

"I felt very young, however, when she sent me to bed for my disrespect.

"Our first notice of the party was when Imri, the Doodys' man, rode up to the gate one morning and left with my older sister, Smyrna, a small, three-cornered note tucked mysteriously into its own corners, and addressed to Miss Marcella Cushing. I know every word of it. 'Patsy's mamma hopes that Marcella's mamma will let her little girl come to a play party, between six and nine o'clock on Saturday.'

"Patsy herself came for my answer within the hour, and stayed to eat seed-cakes and cider-apple sauce out of my broken dishes in the orchard, while we talked over the coming good time. At last we gave each other a little excited hug, and Patsy had to go home.

"I remember I had a pink and white sprigged muslin, made with two full, straight skirts, one above another, the top one reaching to my knees and the under one showing just the wide needlework on my pantalets at the ankles, about which pink ribbons were tied that crossed on the tops of my feet and fastened on my slippers.

"The crowning glory of my toilet, however, was to be my stockings. Aunt Sarah Lampson had brought them over from South Clayborne the day after she heard of the party.

"They had been dipped in some red dye left over from Aunt Lampson's last carpet rags, but being cotton they failed fully to take the bright color, and were tossed into a drawer as useless, but too good to throw away.

"The color they did take was a soft pink, and it was to me the prettiest I had ever seen. But any color for stocking, except red for winter, white for summer, and black for old ladies was unheard of in those days.

"However, the fashion was not so great a matter with me then as prettiness. Whatever splendor of attire might adorn the others, I was sure of having something quite new and beautiful in stockings; and the secret of it I kept even from Patsy.

"At four o'clock on Saturday Nancy gave me my bath in a big washtub by the kitchen fire, preparatory to the party. It was a happy moment when she drew on those pink stockings, smooth and neat, and tied them just below my knee with my best garters.

"As I hadn't any brother, and my father died when I was a baby, Imri was to come for me. Smyrna and Nancy wrapped me in mother's long 'circular' for fear of my taking cold in my bare neck and arms, and lifted me up to Imri on the big, brown horse. With one gentle kiss from mother I rode away to Patsy's.

"Patsy herself came running in to see me, while 'Tilda Slosson, the Doodys' 'help,' was undoing the folds of the circular. I was wild with delight.

"Patsy looked to me like a fairy. Her dress of white Swiss muslin, crisp and light, was made with skirts shorter than any ever before seen in Clayborne, and you couldn't see the lace ruffles on her pantalets at all.

"Her feet were in white slippers, and the long braids of her dark hair were tied with a white ribbon to match the sash.

"I forgot all about myself and ran to give Patsy a little squeeze of admiration. She welcomed me very prettily, but looked at me in a queer way, and then asked:

"'Did you dress yourself, Marcella?'

"'No indeed!' I answered, half indignantly. 'Nancy was very particular to do it every bit herself, and mamma and Smyrna said my hair was combed *beau*tifully.'

"Patsy laughed and kissed me, and said it *was* beautiful, but she didn't seem to notice my pink stockings.

"'Tilda pulled out and smoothed one or two of my yellow curls, but she seemed to me to wear an unpleasant look.

"Meanwhile Patsy was waiting to take me to her mother. She took me by the hand, and led me into the parlor.

"Mrs. Doody glanced at me and then at Patsy as we came into the parlor.

"I was very fond of Mrs. Doody, who was very kind to me, and I wondered a little that she did not say some of the pleasant things about my looking nice which she often said. Then I heard her say to Patsy, who whispered to her:

"'Never mind, dear—her dress is long.'

"This I thought very queer, since Patsy's was so short.

"I sat down to wait for the others, who came in by twos and threes, laughing and chattering with excitement as they added themselves to the lengthening row of dangling slippers and shoes.

"The rooms seemed dazzlingly bright, with candles everywhere; and right in front of the big, old looking-glass an astral lamp was reflected with its glass globe, like a great white eye glowing and watching us. Each candle wore a gay ruff of fringed gilt or silver paper, which added to its glitter.

"Soon there was a flutter along the line of dangling feet as Fritzoria Prince and his brother and sister came in.

"Fritzoria was the boy we all liked best. He had hard red cheeks like a winter apple, round blue eyes, and a clear white collar tied under his brown chin with the brightest blue ribbon bow. It almost made the great eye in the looking-glass wink to look at it.

"Down in my childish heart I had a fondness for this kind-hearted, merry boy, who had often carried me across the trout-run from Babble's Rock, and I even hoped that my lovely stockings might win him to choose me sometimes when he had to pay forfeit and 'bow to the prettiest, kneel to the wittiest, and kiss the one he loved best.'

"His sister Seraphina was dressed in a pink dress much pinker than mine, with common white stockings. I thrust one of my feet out a very little as she went by. Charles Louis Prince came in last. He was given to pinching the girls' bare arms, and had often twitched my curls and Patsy's long braids when the teacher was not looking.

"I was very happy at that minute, and looked with admiring recognition at Seraphina. But she just looked my way, gave a great stare with her small, black eyes, and then, without speaking to me at all, whispered something to Charles Louis, at which they both went tittering over to sit by Mary Ellen Cole.

"Mary Ellen had on a green silk with stripes five inches wide, made of her mother's back breadths, and she looked just like Mrs. Cole, except that her hair wasn't done up in a bob behind.

"I felt rather lonely on the big sofa, and wished I had gone farther up the room; but just then Mrs. Doody turned her head, and, seeing me all by myself, came and sat down so that her soft brown dress spread out quite over my feet in the little breeze she made.

"It was not at all pleasant to me to have the most beautiful part of my costume hidden from view in this way; but I was too bashful to push off the dress.

"The twins, Fan and Nan Gould, coming in, Mrs. Doody beckoned to them to sit by me on the other side, just as Patsy stepped out into the room to begin the first game.

"Hanging up by the looking-glass was a long, twisted cane of red and white candy, 'For which,' Patsy explained, 'you are all to guess riddles; and the one that guesses the hardest riddle gets the candy.'

"We began with:

Riddle come riddle come rouse,
Round and round the house,

as every one used to do, and guessed all sorts of riddles, till at last Patsy asked, 'When is a door not a door?' Every one shouted, 'When it is a jar!' But I remembered the answer that Patsy's grown-up brother gave us when he was at home at Christmas, so I spoke up: 'When it is an egress,' though I did not know an egress from a negress.

"That was the answer, and the wonderful candy crook was mine!

"None of my little friends had taken any notice of me, and an uneasy consciousness was growing upon me of being left out, when this triumph came, and Patsy smiled gaily upon me as I stepped out to get the prize.

"All at once her bright face clouded, and she spoke to Fritzoria, who took out his jackknife, cut the string and brought me the prize before I had gone but a few steps on what I intended for a sort of triumphal march.

"I was consoled for one disappointment in the pride and happiness of having Fritzoria wait on me, but my heart sank when, as I smiled up to say 'Thank you!' in my prettiest manner, I saw that he was not looking at me at all, and he hurried back to his seat, at which Charles Louis and Seraphina giggled again, and I wished I was at home with Smyrna and mother.

"Fan and Nan were very kind. They snuggled up close to me and said, 'Don't you mind those Princes! It isn't *your* fault!'

"I felt somewhat better with their fat hands holding each of mine, and Mrs. Doody smiled more kindly than ever; but she had to go out to see about something, for 'Tilda Slosson was beckoning in the hall. Away up in the looking-glass I could see the great white eye of the astral lamp glowering at me.

"Then we played some more games, but nobody chose me, and I began to feel choked, especially when Mary Ellen went out four times to be 'it' when we played 'Here we go, round the barberry bush.' Her hair looked redder than ever in the green striped silk she wore, and she looked at me so scornfully that I felt cold chills down my shoulders.

"What could be the matter? I began to wink very rapidly; I couldn't help it. Then I swallowed nothing at all three or four times, and this seemed to give me a little relief.

"Then Mary Ellen Cole stumbled over the corner of a rug, and melted into a sort of flutter of striped silk on the floor; and though I was too well-bred to laugh, this little accident somehow made me feel better.

"All the time I knew I was looking as nice as any one there and was as quiet as a mouse, for all my poor little pride and vanity oozed away at the first signs of neglect. I would have been glad enough of any of the signs of good-fellowship to which I was used.

"Even my dear Patsy seemed somehow different—as if she pitied me, and the playmates of Babble's Rock were quite far away.

"At last the game of 'Open the gates as high as the sky' was begun. I knew very well that we were just fourteen boys and fourteen girls, so that I could not be left out. I had given up all idea of Fritzoria, and was glad to be right in the fun with any of them. 'Two by two they ranged themselves until only Fritzoria was left to choose.

"He got up and came toward me as far as the door, and then popped out of it!

"One dreadful minute I sat still, till the astral lamp blinked at me through my tears. Then I ran out of the parlor and upstairs to the bedroom.

"I pulled out the big circular from the piled-up bed, muffled it about myself as well as I could, and started, with hot tears pouring down my face, for the stairs, with a wild idea of darting out of the front door into the darkness and home.

"I don't know how I did it, but somehow I tripped on the cloak and went headlong down the stairs. When I came to myself I was lying in Mrs. Doody's lap in the parlor, and I heard a hum of voices, very far away at first, then nearer. Somebody said, with a little sob:

"'It *was* cruel, there now! And she's my dearest friend!'

"I knew Patsy's voice, and also another, that said, 'Well, my mother don't want me to play with beggars that can't afford clothes!'

"I heard the striped silk rustle as Mary Ellen moved away.

"'They don't always have much money, but I never knew them obliged to go without anything needful. Her feet are too small or she might have had a pair of Patsy's,' said kind Mrs. Doody.

"'She's got the prettiest little feet of any of you!' spoke up a boy's voice, 'and I was coming to march with her as soon's I'd got a drink, and when I got back she'd fallen downstairs!'

"I felt better right away. Fritzoria's protest seemed to set things right. So I tried to sit up, and said, 'I want Patsy!'

"When she came I whispered, 'What do they mean? What was your mother wanting to lend me of yours?'

"'Why, stockings; what else could they be?'

"Poor Patsy looked bewildered and quite red in the face. 'Don't you mind, Marcella,' she said. 'Everybody wants to play with you now. They're sorry they minded your bare skin!'

"'Bare skin!' I cried. 'Why, Patsy, see my lovely stockings Aunt Lampson gave me!'

"I put out one foot eagerly. As I did so, I saw for the first time that Nancy had drawn the thin pink stockings so tightly over my plump ankles that the stockings looked exactly like none at all. The people had never seen pink stockings before, and my pretty hose had been the cause of all my sorrow and misfortune.

"Even Patsy supposed I had come half-dressed to her party. Her exclamations and laughter when she discovered her mistake soon brought the others about us, and the joke was explained.

"In spite of a blue bump on my forehead, I was the happiest child there till I was given into Imri's care once more.

"'She's not to blame, Mis' Cushin', fur bein' late,' said Imri to mother, 'for none of 'em would go till Marcelly'd said good-by. I never see such a fav'rit!'

"But I knew 'twas because they wanted to make up, and there wasn't anything to 'make up.'"

Grandma took off her glasses and wiped them just as the lunch-bell called the children away.

THE GIRL WITH A TASTE FOR MUSIC.

By Miss Emma Nevada.

The young girl who is so fortunate as to possess a voice cannot be too careful of it. If she intends to follow the career of an artist, it is not too much to say that every action in her life must be considered with reference to its effect on that precious organ. The temperature of her rooms, the food that she eats, the garments that she wears, the employment of her time must all be regulated so that no harm shall come to her voice.

It is surprising how susceptible to these influences a high soprano voice becomes. The owners of mezzo-sopranos and contraltos have less sensitive throats, but even those require many precautions if they are to be kept in good order.

Overheated rooms are bad, as a too high temperature has a weakening effect, and moreover predispose the singer to catch cold. Daily exercise in the open air, when the weather is favorable, I have found positively essential.

As to food, the regulations prescribed by the doctor at Ems, now one of the most renowned health stations for the care of the throat in Europe, cannot be improved upon. Nothing must be taken either very hot or very cold; the food must be simply tepid, to avoid the shock of great heat or cold to the vocal cords.

All raw fruit is forbidden on account of the acids which it contains, and which are very injurious. In fact, all sour eatables and beverages must be given up, and all sweets and pastry as well. Mustard, pepper and all spices in general are strictly forbidden.

Plain, wholesome, strengthening food, including stewed fruits of all kinds, alone is permitted. Nor is it well for a vocalist either to sit up late, or to spend too much time in bed in the morning, except, of course, after a performance, when she requires a thorough rest.

On the day preceding the evening on which she sings, she ought to talk as little as possible, confining her utterances strictly to necessary monosyllables. Under all circumstances she ought never to talk much, and never in the open air, in a carriage, or in a railway car. The strain on the voice is most injurious.

Nor ought she, with a view of sparing her throat, to carry on a conversation in a whisper. The tone is unnatural, and, like all unnatural things, is harmful.

One of the leading Italian teachers of singing always advises her pupils to remain in bed during the day preceding the evening on which they are to sing; but such a proceeding would be impossible for me. I always go out on such occasions for at least an hour, taking a brisk walk if the weather is pleasant, or a drive in a close carriage if it is stormy.

The daily period of study should never exceed an hour, and that should be subdivided into exercises at different parts of the day, each lasting for fifteen minutes only.

"How many hours a day do you practise?" is a question that I have often been called upon to answer, the popular idea being that a prima donna spends the greater part of her leisure hours at home in singing away with all her might.

Such a process would be far more likely to break a voice than to improve it. There are some exceptionally robust organs that require exercise to finish and perfect them, but they *are* the exception.

Contrary, too, to the popular impression, a singer should accustom herself to dispense as much as possible with warm or heavy clothing. The throat should not be muffled or heated in any way. Furs should be worn as little as possible. The becoming and fashionable boa is positively injurious, and should be, in all cases, discarded.

Heavy flannel underwear, reaching up to the throat and down to the wrists, is also harmful, especially when the young singer has begun her professional career. The warm flannel undervest must be laid aside when the vocalist dresses for the concert-room or for the stage, and the sudden change is apt to be most injurious.

On the other hand, the feet should be carefully guarded from cold and damp. One great professor in Paris is apt to be very angry with those of her American pupils who, being naturally proud of their pretty feet, persist in walking in thin-soled boots or shoes through the mud and wet of the Parisian streets in winter.

The student of singing must give up balls and evening parties of all descriptions. Dancing, late hours and the night air play havoc with the voice as well as with the strength. Each indulgence in such amusements will cause the pupil to waste several days of invaluable time.

A curious detail about professional singers is the fact that each one of them takes a different article as a refreshment to the throat during a performance. One singer drinks champagne. Another will swallow a raw egg. Others prefer strong *bouillon*, or will take a tumbler of brown stout.

Italian singers, as a rule, drink cold coffee and water, but one famous tenor indulges during the evening in a salted cucumber. One young prima donna munches water-crackers all the time that she is not actually on the stage.

An old Italian gentleman whom I once met in Florence told me that Malibran, whom he had known well during her brief, dazzling career, was in the habit of taking, every evening that she sang, a bowl of onion soup toward the middle of the performance. She had it made at home, and brought cold to the theatre. Her maid used to heat it for her in her dressing-room.

One evening she was attended by a maid whom she had just engaged. Malibran gave her new attendant many and minute directions respecting her bowl of soup, especially enjoining upon her to have it ready at the wings for the prima donna to take at a certain point in the performance.

The opera was "Norma." The heroine and *Adalgisa* were in the act of singing their grand duet, and the audience was hanging breathless on each of *Norma's* impassioned notes, when, to the horror of Malibran, her too-zealous maid appeared upon the stage, bearing the bowl of smoking soup, and walked directly toward her with the words, "It's all ready, ma'am—please take it while it's hot!"

Fortunately she was seen by the stage manager, who rushed after her and whisked her behind the scenes before the audience had had time fully to comprehend the situation.

Another odd thing about opera singers is the difference in their ways of demonstrating stage-fright. One great prima donna will stand on one foot and moisten her lips nervously with her tongue. Another will kick her train energetically, whether or not it happens to be in her way. A certain celebrated baritone always pulls down the cuff of his left sleeve, and sings a great deal too slow. And I, on such occasions, invariably sing much too fast.

For the Companion.

READING INDIAN "SIGN."

By Gen. John Gibbon, U. S. A.

Second Paper.

In the summer of 1849 the inhabitants of Florida were horrified by several murders, committed by the Seminole Indians on Pease Creek, just on the southern border of the settled portion of the State. The news spread like wildfire among the scattered settlers, and they at once began to collect their families at central points, and place them behind stockades for protection.

The Indians, alarmed at the rash act of a few of the tribe, and knowing what would probably be the consequence, fled south, leaving a wide band of territory unoccupied by either white or red men.

General Twiggs, with a considerable force of troops, came over from New Orleans, and Tampa Bay and vicinity assumed a warlike appearance. Troops were scattered along the frontier to protect the settlements. Every one wondered what was to be the next step, and whether or not a new Florida war was to be inaugurated.

Before pushing columns of troops into the Indian country, it was desirable to open communication with the chiefs, Sam Jones and Billy Bowlegs; but the Indians remained quiet and aloof, and no white man dared show himself on the neutral strip which separated the Indians from the white settlements.

The post of Fort Brooke, on Tampa Bay, was occupied by two companies of the Fourth Artillery. At this post was also stationed Capt. John C. Casey, of the subsistence department. He had gone there two years before, afflicted with consumption, and was supposed to be in a dying condition.

He was one of the most distinguished officers of his time. A few years before he had been stationed in Florida, and had then made a close study of the language and habits of the Indians, and had become an authority in regard to them.

He was known to have great influence with the Indians themselves, and for the benefit of those interested in the study of our present Indian question, it may be well to remark that he gained this influence by a very simple, though unfortunately an unusual, process. He never deceived them; never told one of them a lie, and never made a promise which he did not fulfil, if it was within his power. If, from any change of circumstances, he was unable to keep a promise he had given, he always told the Indians of his inability to carry it out, and did not leave them to find it out for themselves.

By this simple means he acquired the confidence of the whole Seminole nation, and it was only necessary for Captain Casey to assert a thing for them to receive it with perfect faith. He never hesitated to trust himself in their hands; and when his friends protested against his rashness, he would laughingly reply that he always carried his means of defence with him in the shape of a case-knife, and that if any discontented rascal in the tribe should attempt to take his life, he had the means of punishing him.

"Besides," he would add, philosophically, "I have but a short time to live anyway, and a few months more or less does not make much difference."

The knowledge and influence acquired by Captain Casey were now about to bear remarkable fruit.

The great question was, how to open communication with Billy Bowlegs. While all were waiting and considering how it was to be done, a Spanish fisherman, named Philipie, who had a cabin some distance down the coast, made his appearance at the post, bringing with him what proved to be a very important "document."

On a little piece of stick about eight inches long were fastened, with deer sinew, at right angles with the stick, four or five white crane feathers, so as to represent a little white flag. On the top of the stick, fastened on with a string of small white beads, was the small twisted end of a piece of smoking tobacco.

Philipie gave this account of the flag: On hearing of the Pease Creek murders, he was alarmed, and being near the Indian frontier, thought best to leave his cabin, and seek safety at one of the neighboring "keys," or islands.

But after a day or two he returned, to see if any Indians had been about his place. He found this flag displayed on the corner of his cabin. He had no idea what it meant, but supposed that it was of importance, and accordingly he carried it to the post.

He took it to the commanding officer who sent for the old negro interpreter, Sampson. This man could only say that it evidently meant peace and a desire for a "talk;" but as to any further information, or as to whom it came from, he was entirely at sea.

It was then taken to Captain Casey, who looked at it long and earnestly, and then sent for Sampson. He could only repeat what he had said already.

"But who sent it?" asked Casey.

"I don't know."

Suddenly an idea struck Casey, and turning to Sampson, he said, "Sampson, suppose that, when I was down the coast several months ago, I had left a present of tobacco and beads for Billy Bowlegs, would that have anything to do with it?"

Old Sampson's face lit up all over, and he said, with eagerness, "Why, of course! Did you do dat, Captain?" Being assured that he had, and that, being disappointed in meeting Billy, as he had expected, he had left a package of tobacco and beads with "sign," to show where it was hid, Sampson said at once:

"That is what it means. He says he has got your presents, and wants to hab a talk wid you."

With this as a starting-point, Casey sent for Philipie, and closely questioned him in regard to his discovery of the flag.

"Did you see any other 'sign' about your cabin?" Casey asked.

"Yes," he said; "I saw some moccasin-tracks in the sand."

"What else?"

"Well, nothing of any importance, though the Indians appeared to have amused themselves by marking on the cabin door with a piece of burnt stick!"

Casey pounced upon this last piece of information. Philipie evidently thought the Indians had been amusing themselves, but Casey knew better, and after a good deal of cross-questioning, he wormed out of Philipie that the charcoal marks consisted of a wide circle, with marks on each side of it, somewhat like this:

I I I O I I I I

There were three marks before the circle, and four after it.

"What day was this?" asked Casey.

Philipie gave him the day, and the Captain, eagerly seizing his diary, sought out the date of full moon. The day Philipie said he found the flag was just three days before full moon. The case was now as clear as day, and four days after full moon the messengers would be at the same place to receive his answer.

Taking the little flag in his hand, Casey went to General Twiggs, and informed him he had received a message from Billy Bowlegs. General Twiggs was more than surprised, and asked, "How? When? Where?" Casey showed him the flag and told its history, adding, "If you will give me a vessel and three or four men to go eighty miles down the coast to Philipie's cabin, I will engage in three days to bring you a message from Billy. The moon was full two days ago."

General Twiggs demurred about sending so small a party to so dangerous a point. Casey assured him there was no danger, and that he felt as sure of meeting peace messengers at Philipie's cabin as if his own mother had written him a letter to say she would be there to meet him. At last the General consented to give him what he asked.

Hearing of the intended expedition, I sought Captain Casey, and asked permission to accompany him. The request was granted, and that afternoon, we, with two or three soldiers, Philipie and Sampson, were gayly running down Tampa Bay in a small sailing-vessel, having been assured by some of the doubting Thomases that we would never return, and that Casey's confidence in the Indians was carrying us rashly into danger.

I had the most implicit confidence in Captain Casey's sound judgment and intimate knowledge of the Indian character—a confidence destined to be rudely shaken for a time in the next forty-eight hours; but for the present everything bore the brightest of hues.

A fair wind favored us, and the next afternoon we cast anchor opposite the cabin, but well off the shore. We were a day before the time, and for once Casey showed himself restless and anxious. He was evidently thinking, "I have been very confident; suppose my prediction should fail?"

We could see no sign of a living thing on shore; and as time hung heavily on our hands, Casey, toward sundown, proposed we should take the small boat, go to one of the keys on the opposite side of the bay, and try to get a deer.

Taking the boat's crew and Philipie with us, and leaving Sampson on the schooner, we rowed across the bay and landed. With our guns, Philipie and I started to hunt. Casey, who could not walk far, remained in the vicinity of the boat.

I had separated from Philipie, and had been gone about an hour when I was suddenly startled at hearing a shot in the distance, followed by a yell. Another and then another followed, and I realized the fact that the shots and yells were in the direction of the boat.

My first thought was that Captain Casey had been taken with hemorrhage of the lungs, and was signalling us to return; but the rapidly repeated shots and yells filled me with the greatest alarm. Turning back I hurried toward the boat.

Digitized by Google

On the shore of the island I met Philipie, who was quite as much excited as I was, and could suggest no explanation of the alarm. Together we hurried our steps along the shore, and finally reached the place where we had left the boat.

It was gone! Hurrying forward, we turned the point of the island and reached a place where we could indistinctly make out through the gathering darkness the mast of our vessel as she lay at anchor across the flat, a mile away.

My experience is, that most men are a good deal more scared by imaginary fears of danger than by real ones, probably because most men are constituted like most other animals—especially rats, and will fight well when cornered.

At all events I was now thoroughly alarmed, and the worst of it was that I could derive no consolation from my companion. He was even more frightened than I was, for he knew the danger, or, what amounts to the same thing, he thought he knew it. In answer to some tremulous suggestion of mine he broke out with:

"Captain Casey has too much confidence—too much confidence! He go ashore to meet those Indians, they kill him and then come round here and kill us."

I glanced over my shoulder to see what chance there was of a retreat, and found we were standing in front of a thick, tangled mass of mangrove bushes. In front was a channel, through which the tide was running in like a mill-race, and beyond a wide, shallow flat extended across to where our vessel lay at anchor.

"How wide is this channel?" I asked.

"A hundred yards,".he replied.

"How deep?"

"Two, three fathoms, and full of sharks!"

We were in a corner, and I really think I began to grow brave. And now in the darkness we stood and trembled and listened, and I know my mind was taken up with thinking: "Suppose those Indians have killed the Captain, as Philipie says; what chance is there for us to escape, with no food, no drink, and no boat to get away, while the Indians have our boat with which to get at us?"

With this was mingled a feeling of bitterness that after all the croakers were right, and the Captain's rash faith in the Indians had sacrificed his life and perhaps ours.

It was now so dark that eyes were of little use; but our ears were intently bent to catch the slightest sound. After a while they caught the sound of row-locks.

The stroke seemed regular. Surely Indians could not row that way; and just as surely, the sound was coming toward us.

We strained our eyes in breathless silence, and soon distinguished the welcome sound of our men's voices. We hailed the boat and were soon aboard, and as we turned our bow toward the vessel, all our fears vanished. We were told that Sampson had made the alarm, and Casey, knowing what it meant, and anxious to see the Indians, had decided to take the boat and return to the vessel.

A few minutes' row put us aboard, where the Captain related to me with evident satisfaction that he had had an interview with three messengers from Billy Bowlegs, who informed him that he had correctly interpreted the meaning of their flag of truce.

Our freshly broiled mullet tasted sweet that night, as did the sound sleep which followed. The next morning I went ashore with the Captain, and shook hands with the three dusky messengers of peace.

Their message from Billy was to the effect that he was sorry for what his bad men had done, and wanted Captain Casey to meet him at Charlotte Harbor at some early day, and have a talk over the trouble. The Captain explained that now General Twiggs was in command in Florida, and that the Indians had better arrange to meet him. But to this the messengers demurred, saying the chiefs wanted to see the Captain first, and talk over their troubles with him.

When we were done with the general talk, Captain Casey addressed the messengers somewhat to this effect: On account of the murders committed by some bad men in the tribe, both whites and Indians are troubled, and both seem to be preparing for war. The whites and Indians had both fled back from the frontier, and all were suspicious and distrustful. Now he wanted the Indians still to have confidence in him and his good intentions toward them, and to show the whites that they had, he wanted one of their number to get on board of his boat and go with him to Fort Brooke, see General Twiggs, and take back to Billy Bowlegs any message he might have to send.

One of the number, a tall, fine-looking subchief who was in charge of the party, at once stepped forward and said, "I will go with you."

We were soon aboard the vessel, and with light hearts set sail for Tampa Bay. The next day we landed at the Fort Brooke dock, and as we walked up to General Twiggs's quarters accompanied by our messenger, Fuss-eh-na-hah,—the croakers called him Fuss-any-how,—the news soon spread that Captain Casey had returned, and a live Seminole with him.

In a few days Fuss-eh-na-hah started back to the Indian country with his message to Billy Bowlegs.

Captain Casey's success was so complete that all his friends were much elated, and for a week scarcely anything else was talked about in the garrison and neighboring town of Tampa.

Captain Casey died at Fort Brooke, December 25, 1856; and on the same vessel which carried his remains to New Orleans, Billy Bowlegs and the remnant of his tribe left Florida for their new home west of Arkansas. They spoke feelingly of their dead friend as the truest and best white man they had ever known.

TO A GENTLE OLD POET.

"Long days be his, and each as lusty sweet
As gracious natures find his song to be!
May age steal on with softly-cadenced feet,
Falling in music, as for him were meet,
Whose choicest verse is harsher-toned than he!"
—*Lowell.*

For the Companion.

DIRECTIONS FOR A TRIP TO EUROPE.

THE pleasure of a trip abroad is enhanced by a little preparatory work, by a knowledge of what you want to do and to see, and a careful counting of what you can afford; in fact, by a definite and intelligent plan.

As money is to play an important part, perhaps it may be well to lay down the general rule that while seven dollars a day is not an extravagant estimate for all expenses during a comfortable trip, five dollars a day may be made to go almost as far, if economy and common sense are used.

In the case of young men who can walk a great deal, go to third or even fourth-rate hotels, and "rough it" in many ways, this estimate is too generous by one-half; and so it is in the case of a traveller who does not travel, but settles down in some quiet, out-of-the-way city for months at a time. But for the average tourist much more can be spent if he insists upon the luxuries and elegancies of American travel.

Money.

Money is taken abroad in several ways. The best is by buying a letter of credit, putting into it all you can afford to spend after your ocean passage both ways is paid for. By a recent arrangement, all bankers' charges, exchanges and such expenses can be paid in America before leaving, and if you exact it, your money will be paid to you in English gold or its full equivalent.

Over and above your letter of credit, you should carry about twenty-five dollars in coin for immediate use upon landing and upon shipboard. This, too, should be in English gold, or in the coin of the country whose port you enter.

A second method of carrying money is to buy a Cheque Bank book of cheques, and a third is to procure English drafts, or even English bank-notes; but the risk of carrying bank-notes is evident, although the plan is perhaps the cheapest and most convenient, if successful.

Baggage to be Carried.

The next important question is that of baggage. The wise man solves this by having as little as possible. Some luggage one must have, and in order to make its care as light as possible, I should advise a small steamer-trunk to hold all the outfit needed for the passage. For a trifling sum it can be left with the steamship company till you write for it to be forwarded to the ship in which you are to return.

In addition, if you are a woman, make a bag large enough to carry a dress, a cloak, underclothes and toilet accessories, and you will be thankful many times that you are not hampered by a second trunk. The bag will be carried for you everywhere for a few pennies; you need never touch it to transport it, and yet, since it goes in the carriage with you, there will be no charge for extra baggage. This is quite a saving in Europe, where the largest allowance for baggage is sixty pounds a head, and where, in some countries, there is no allowance at all, every pound that goes as baggage being paid for at costly rates.

All articles of baggage should be plainly marked with your name and address, leaving the change of destination to be shown by tags. They should all be sent to the ship many hours before that fixed for sailing.

You will need a steamer-chair, and can get one marked with your name and delivered at the vessel for two dollars; but you can also hire one from the Ocean Chair Company for one dollar, and when the trip is over you are not burdened with it.

By far the best rule for the European tourist is the one laid down by experienced travellers: "The wise man and his luggage are never parted."

Choice of a Steamer.

One important consideration will be the choice of a good line of steamers, and a good ship on that line. There are so many rivals now, each claiming so many advantages, that advice in this matter is hardly possible. I can only say that if money is not plenty, I should choose an unfashionable line.

As a rule, the second-class ships of a first-class line are less crowded than their superiors, and this gives more deck room and better service.

You should engage your passage early—some three months ahead for a summer trip. On the fashionable lines you may cross "out of the season,"—that is, not in summer,—and you have then more room and lower rates.

The season seems to be growing longer each year, but the most crowded vessels go out in June and July. During August they are not so much crowded, and this is a delightful month, with but one drawback—the prevalence of ocean fogs.

Returning, the vessels are fullest in September and October, though the weather in November is as likely to be as fine as either of these.

Cost of Passage on Steamships.

From December to March nearly all companies reduce their rates, in some cases twenty per cent., and a large party buying return tickets can make even lower terms.

In all steamers the prices vary with the position of the room, and in vessels which charge three hundred dollars for their best rooms, you will be able to get tickets for one hundred and fifty dollars the round trip, if you will take something less choice.

Fig. 2.

It may be well to state that by buying return tickets a saving of ten per cent. is effected, and you are not bound by them to return at any specified time. By writing to the company's agents, the tickets' limit may be extended; but the writing must not be neglected, or you may lose the money you have paid.

Berths in the centre—amidships—of the vessel are most desirable, and outside rooms are preferable, since nothing can compensate for the lack of fresh air; but in bad weather, when all port-holes must be closed, the inside rooms, with their ventilators, are most comfortable.

At all times an inside room with one companion is better than an outer one with three, as is generally arranged for. It is no joke to try to dress four at once in a tiny box, which, moreover, is entirely lacking in all stability.

All first-class tickets entitle the holders to all privileges of table and deck, so the wise man or woman will not throw away money on the state-room, unless very susceptible to sea-sickness.

For those who desire a very cheap passage, there is an intermediate or second-class cabin at rates varying from sixty dollars to eighty dollars the two trips. Travellers by this do not go to the first-class table, and there are often certain restrictions as to deck liberties. However, the second cabin is on all good lines clean and comfortable, and apart to objection to doing anything "second-class," there is nothing to prevent an agreeable passage at this low rate.

By whatever line you choose, try to select a vessel with a reputation for steadiness and a dry deck. The first will give you comparative freedom from sea-sickness, if anything can, and the second will ensure you many hours of fresh air on deck.

Dresses for the Trip.

Women will need something of a special toilet for the trip; and as far as the voyage is concerned, this will consist mainly of wraps. Take what you may of these, you will still wish you had taken more when that fierce wind begins to rush through rugs and shawls as if they were thin paper.

The ship dress should be navy blue flannel if you happen to have an old dress of this sort. If you do not, use what you have, provided it is dark, all wool and old—for there is no telling what may happen to it on deck, where the brass is always being cleaned or the paint retouched; or at the table, where a sudden lurch may send a waiter flying down the room only to deluge you with the contents of tureen or gravy bowl.

Women will need a hood, or a cap with a visor, for the deck, being careful to tie the cap on with a veil or warm nubia. The visor is almost indispensable to protect the eyes from the glare on the water. You can hold no umbrella open on the deck. In the fierce breezes women will need a rug to hold down their fluttering skirts. The illustration (Fig. 1) gives an idea of a convenient form for this rug.

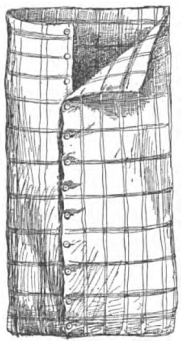

Fig. 1.

You can make it into a bag by sewing it across the bottom after having folded it as shown. Then put buttons and buttonholes along the lapped edges. Spreading this bag upon a steamer-chair, you can slip into it, feet first, and button it over, thus securing your feet against cold, and your skirts against the wind.

It is well for a lady to wear to the ship the costume she intends to use as a travelling dress, changing it for the ship dress as soon as she arrives on board. Tie the hat up in brown paper so that the sea air shall not fade its colors nor uncurl its feathers, unpack the steamer-trunk and arrange its contents for use at a moment's notice.

This plan is much wiser than leaving these duties until one is off, when one may be too sea-sick to attend to them. For the same reason the steward should be seen early, and a seat secured at table near the door, if possible.

Ladies will need, in their steamer-trunks, warm flannels, woollen bed-slippers, stout shoes and rubber overshoes,—for walking on a wet deck,—a dark balmoral, a rubber bag for hot water, some small wall-pockets to be tacked or pinned to the back of the sofa, and a bag (Fig. 2) to hang inside the curtains of the berth in which to keep watch, handkerchief, pins, brush, scissors, and such necessities.

Medicines.

For travel on shore one will probably wish to take some medicines, but these may go into the second trunk or bag, as the ship's doctor will furnish all that will be needed on board. The only private stores I should suggest would be mustard plasters, quinine pellets, a little brandy, and some lemons and oranges. For the shore, you may add to these arnica, ammonia, and a strip of court-plaster wound around a pair of tiny scissors. To carry these you will find a medicine pocket, made of cloth or chamois, like the illustration (Fig. 3), most convenient; the whole to be rolled and tied when not in use. Many people burden themselves with private stores of eatables; but this is quite unnecessary for all first-class lines provide good tables, and the trouble is too much eating rather than too little.

Fig. 3.

Fees vary with the class of patrons the line can boast, but as a rule it is well to give the steward and stewardess each a good fee, say five dollars to each, if your party does not exceed four, one dollar to your waiter, and about the same to the cabin-boy and bootblack. Upon unfashionable lines less will be sufficient, unless some unusual service is asked.

Travelling Dresses.

A woman's travelling dress should be some dark all-wool material, neatly made but very simple. Gray is an excellent color, and so is dark blue. To it should be added the ever-useful blouse waist of foulard or cotton goods, which will be needed in the warm valleys on the continent; but do not forget the flannel skirts and underwear for the cold mountain tops.

Slippers, umbrella, ulster, overshoes, and a moderate supply of underclothing will all go into the big bag, as well as a second dress for *table d'hôte* dinners and dress occasions.

This last should be of some pretty material made "dressy" by ruchings at the wrists and open neck, but it needs little or no showy trimming.

Underskirts should be of Ceylon or wash flannels, though some ladies use black silk ones altogether. Do not load yourself down with underclothing, boxes of trinkets, stationery, perfumery, and the thousand knicknacks we all love. Washing is so quickly done in Europe that there is no need to carry large supplies of linen, and the other things become great burdens.

I should recommend most heartily the carrying of two pairs of stout, well-fitting American shoes, made by a careful shoemaker. You will get none like them in Europe—combining comfort and beauty.

Do not be afraid to travel second-class on the continent, and third-class in England. In Italy alone is the first-class very much more desirable; and in any country where there is a fourth-class the third is good enough for short trips.

In the matter of guide-books there is no dissenting voice in the praises sung to Badaker's; they are expensive, but are worth their price if only as reference books after you get home. However, cheaper ones will answer fairly well, and they are in convenient form.

For sight-seeing guides in Paris, Rome and London, Hare is almost indispensable. He seems to bring so much of what the best minds have thought and seen in each object of interest. But in every one of these cities you will find some small work devoted to the locality, at a price within the reach of the most modest traveller.

ANNIE R. RAMSEY.

For the Companion.

MENDING BAG.

This shows an extremely simple, but useful, mending bag. The plain sateen front and back pieces are each made by covering a piece of cardboard eleven by nine inches (narrowed to seven and a half at the bottom), and a narrow strip, three and a half by seven and a half, is similarly covered for the bottom; the three pieces are then joined by overhand seams on what is to be the inside of the bag.

A piece of figured sateen or cretonne, twenty-one by thirteen inches, is given an inch-wide hem across the top, and is drawn up closely with long running stitches at the bottom, and sewed to one end of the narrow bottom piece; each side of the gathered piece should now measure eleven inches, and be sewed to the corresponding sides of the plain front and back. This finishes one side or end of the bag. The other end is finished in the same way.

Across the inside of the back piece is placed a full pocket, eight inches deep, to hold balls, spools, etc. The top is finished with a shirring for an elastic band beneath a narrow standing ruffle. Above the pocket are tacked flannel needle-leaves and scissors straps. Sometimes an interlining of wadding is placed beneath the inner cover of the back piece, and the whole used as needle-book or pincushion. Sometimes the pocket is omitted and a third piece, just like the front and back, is fitted in between the two to divide the bag into two equal or unequal compartments.

Small brass or silvered rings—or home-made ones of wound wire, covered with knitting silk or floss in closely worked double crochet—are sewed

Digitized by Google

to each upper corner of the front and back, and three more are sewed crosswise to the hem of each side piece—one in the middle and one four inches from each corner ring.

A narrow, stitched band of the plain sateen is run through the rings, and the ends are neatly joined. This forms the means of suspension and also allows the bag to be opened easily and widely when in use. The lettering is worked with silk or floss in colors to match the figures in the side pieces.

Such bags, though handy to use for any family mending, are especially convenient for stockings, which may be dropped into them every week as soon as dried, there to wait in company with thread, yarn, needles, etc., till mending day arrives.

COMMON GIFTS.

Common the grass in its glowing green,
So is the water's glistening sheen;
Common the springs of love and mirth;
So are the hollest gifts of earth.

THE CAPTAIN OF THE "KITTIEWINK."

In Seven Chapters.—Chapter I.

Decision and Departure.

"But —"

Doctor Parkhurst leaned forward persuasively, and regarded Mrs. Maynot with the authority of an intimate family adviser.

"No, no, Doctor!" interrupted Mrs. Maynot. "I couldn't stand it. Such a separation would be too cruel, and I have just nursed him through —"

"Tut, tut, wife!" broke in Mr. Maynot. "What's the use of calling in a doctor if you don't follow his advice?"

The case stood thus: Harry Maynot was an only child, and had just recovered from his third attack of measles. This disease seemed to have left him good for nothing. He could not study, and had not the heart to play. The old family doctor had just recommended a trip to China in a sailing-vessel by way of cure, and Mrs. Maynot, who regarded the sea as the great enemy of mankind, and especially of mothers, was shocked at the proposal.

The Maynots lived in the thriving New England village of Sweet Fern, and were what is called well off, but not rich. The problem of a sick boy and a sea-voyage was a serious one.

"Now be a sensible woman, Mrs. Maynot," began the Doctor again. "Your son won't be worth a pound of pickled herring unless he has ozone to breathe. Ozone doesn't grow in an asparagus bed. It's to be found on the salt water. The boy must go to sea, if he is to be good for anything."

Doctor Parkhurst spoke forcibly, and Mrs. Maynot gasped.

An uncertain rap at the library door brought the little group of troubled people to sudden self-possession.

"Yes," began the Doctor, composedly, "the cranberry crop will undoubtedly be the best known for years."

A tall, awkward boy walked slowly into the room, looking inquiringly about. In one hand he held a morning newspaper, and in the other he carried a little terrier, which barked at the Doctor with the air of a dog that has discovered a rat.

"Well, my boy!" The Doctor came forward and lifted one hand to the boy's shoulder, while with the other he tried to ward off Trot, the terrier, who was greedily tugging at the flap of his trowsers. "What a tall boy you are getting to be! You need color and flesh. Flesh, sir, and color! I may as well tell you I'm going to make a sailor of you, and send you to China!"

"You don't mean me to be a sailor, do you?" said Hal, slowly.

There was not much dismay expressed in the boy's tone. He was, like many boys, very much interested in what he knew nothing about, and looked at life on the ocean as the ideal of manly adventure.

"Well, not exactly a real sailor, Harry," answered his father, with a twinkle in his eye. "I don't think your mother would let you ship as anything less than captain."

The boy failed to catch the joke.

"I a captain! Well, Go Gresham, you know, is a captain. His father owns a forty-footer. He runs it." Harry spoke with more animation than he had exhibited for months before.

"I should like to go to sea," Harry went on, decidedly. "I saw a nice notice of a boat for sale to-day. I was just reading about it."

"Let's have it," said his father, encouragingly.

Harry placed in his father's hand the following alluring advertisement:

FOR SALE: The stanch, safe cruiser *Kittiewink*, thirty feet on water line. This yacht is not a mad racer, but a safe boat. The anxious mother may sleep peacefully with her son on board. She is fully found. Her sails are not too large. This bargain does not ship water every time a zephyr ripples the sea. Come and see her with pocket-book in hand. You will buy at sight. The owner lays off the ferry-landing in Marblehead, always aboard.

When Mr. Maynot had finished reading this breezy and rather unparsable notice, Harry heaved a deep sigh, and looked wistfully at the Doctor.

"Oh no!" cried Mrs. Maynot. "Anything but a crazy boat that will capsize if you look at it!"

"Come, my dear Mrs. Maynot," said the Doctor, gently, "listen to reason. Perhaps the boy has struck just the right thing. Wouldn't you rather he stayed on this coast than that he should go to China? Isn't a safe harbor every night better than Cape Horn?"

"Yes," admitted the mother, faintly, "but —"

Her husband and the Doctor continued to represent to Mrs. Maynot the advantage of their plan, and after a few more "buts," she surrendered.

"If this boat is a good one, the only thing needed is a safe and responsible sailing-master," mused the Doctor.

"I have sent for the man we want," replied Mr. Maynot, sententiously.

In a few minutes an elderly man, with a distinct nautical shuffle, and with a red handkerchief tied in a sailor's knot over his throat, walked into the room.

"How long is it, Phin, since you gave up the sea?" Mr. Maynot opened the subject promptly.

"It's five year come next November, sir."

"Do you think you have forgotten how to handle a boat?"

The reply came slowly, with inexpressible sarcasm:

"When you forgit ter spell 'can,' I'll forgit ter box my compass. I aint given to boastin', but I can steer a ship from Salem to Fernandina with my eyes shut."

The two gentlemen exchanged meaning glances.

"You may put the paper on the table and leave the room, Harry," said Mr. Maynot. "And you, my dear," turning tenderly to his wife, "hadn't you better look after the boy a few minutes? The Doctor and I want to have a few words in private with Captain Scrod."

Phineas Scrod, ex-captain of the stanch brig *Susan Jinks*, departed that noon to inspect and, if it was found a fair purchase, to buy the *Kittiewink*. If the yacht were purchased, Doctor Parkhurst agreed to share the expenses, and to send his son Algernon to keep Harry company.

Two days of great anxiety passed. Captain Phin had disappeared without a word. Hal nervously weeded his father's garden, assisted by Non Parkhurst and Trot, the terrier, who, wishing to help his master, invariably pulled up the peas and left the purslane.

On the morning of the next day a postal-card, blotched and scrawled, came with the mail. This was handed around the family with much interest and curiosity. It was deciphered as follows:

Baut the Kittiwink for 487.50 cents. Will sleap on bord tonite and begin fixin Her up. i think she's a bargane and A dandie.—PHINEAS SCROD.

"Goin' to take all this a-yachtin'?" asked the Marblehead driver, somewhat impertinently, as he dragged a huge Saratoga, two other trunks and four valises down the gangway upon the bobbing float.

"Certainly," replied Mrs. Maynot, with dignity. She sat down upon the Saratoga, and looked for the boat. Mr. Maynot, Doctor Parkhurst, the two boys and Trot were looking, too.

Where was Scrod? Who could pick out the *Kittiewink* from this maze of craft?

Harry approached a gentleman who wore a New York Yacht Club cap, and whose uniform blazed with gilt.

"Excuse me, sir," Harry said, "but can you tell me which boat is the *Kittiewink*?"

Harry waved his hand impressively toward several large yachts flying their pennants at anchor before him.

"Is she a new Burgess or a Fife?" inquired the gentleman, courteously.

"No, sir, I think not. She is—ah—a fore-and-aft sloop."

Harry struggled with the only maritime term he had learned from his friend Go Gresham, of the forty-footer. The gentleman laughed outright, and said he thought perhaps that yacht had not yet come into harbor.

"Hullo! Good-mornin' to you all! Is that yourn? All them trunks! Ha! Ha! That's a good un on you."

The voice was unmistakable; but how account for this independence of tone? Phin was a changed man. The trim brass-buttoned suit and the sea air had transformed him from a shuffling gardener into the master of his profession. Where he once obeyed he now commanded. His employers regarded him with curiosity and deference.

"But where's the yacht?" cried the united family.

"Yacht! You aint got no yacht! You own a ship! No teaspoon about her. Thar she are!"

"Thar she are!"

Phineas extended his hand loftily, and to the consternation of the two boys, he pointed out a black sloop, not a biscuit's throw from the landing.

There was no impressiveness about the *Kittiewink*. In fact, she was particularly ugly; and to Hal's mind her bow resembled that of a Chinese junk, as shown in the illustrations in his physical geography.

The *Kittiewink* was nothing less than a sword-fisherman turned into a yacht; any sailor could see that at a glance. The contrast between this dingy, black boat, built for business, and the smart pleasure yachts flitting gracefully about, was certainly severe. But the old sailor, in spite of the boat's extreme want of beauty, recognized in her a depth and beam and sea-worthiness that could outstand a dozen fancy playthings or racing-machines of her inches.

Skipper Scrod could not have made a better choice for his purpose, if he had searched the coast from Machias to Martha's Vineyard.

The boys gazed on the idol of their dreams in silence. Who could brag about that thing before them? Their pride was shattered as if by dynamite. They even felt ashamed to be seen on the float. Hal actually dropped a tear, while Non hurriedly choked down his disappointment.

"Look here! Don't do that!" exclaimed Scrod, anxious over his purchase, and taking Hal by the arm. "I tell you she can't be beat. Here's somethin' you can count on, and your folks'll set easy. She's built for sea, and these here boys will be safe, while city swells on fancy yachts are wreckin' an' drowndin' an' scarin' their mas."

The two fathers nodded approvingly at Phin's outburst, and the boys tried to cheer up. The *Kittiewink* was better than no boat at all; besides, they realized that there was a difference between five hundred dollars and four thousand, the cost of many a yacht of her size.

"You can't squeeze these chists down the manhole," said Phin, looking dubiously at the baggage. "I guess we'll empty 'em on the wharf, and I'll take the necessaries aboard. Here, Hal, hold this painter, while I heave some bags into the dory."

"I don't see any painter," said Harry, looking helplessly about for some one with a pot and brush ready to be held.

"Don't laugh at him," said Scrod, politely, looking around the landing. "He haint been salted, but he'll learn. Here, this is the painter." He thrust a rope into Hal's hands. "That holds the dory. Hold on to it now, and don't drop the painter overboard!"

What a delightful bustle there was, putting things in the old craft! Upon certain points Mrs. Maynot insisted. Whatever else was left, she had bought two life-preservers. These *should* go; also a dozen cans of her own tomatoes, and a soapstone.

Scrod threw the soapstone into the dory, grumbling, "It'll come in handy for a sinker, maybe."

To Hal had been assigned the bunk on the right side of the boat—the starboard side—which meant that he was regarded as the owner or captain.

"Two bells! Will ye take a little chowder aboard, mum?" Skipper Phin called to Mrs. Maynot, who was sadly watching the party from the shore. The only answer he had was a faint groan, and the barking of a very hungry terrier. But the boys' fathers accepted the proposition with eagerness.

Phin had been a ship's cook in his prentice days, and the chowder was perfect.

To be occupied in the cabin of any boat for the first time carries some sort of an interest with it, and sustains the emotions; but to sit down to eat—ah! there is the test.

"Say, Non! I feel a little dizzy. Isn't it queer?" said Hal, after about two mouthfuls of soup and one of hardtack.

"So do I," echoed Algernon Parkhurst, sadly.

Phineas, from the forecastle, winked at the elder men.

"I don't know what is the matter," continued Hal, with an air as if he had been insulted.

"Neither do I," seconded Non, with a curious growing dislike to food in general and chowder in particular.

"Let's go on deck," said Hal, apologetically.

So these young seamen tried to escape their inevitable fate. They went forward of the mast, where there could be no disturbing odor of the dinner, and looked about for employment. They noticed a strange-looking can, resting upon a coil of rope with an air as if it were not to be disturbed. That was enough to "stump" any boy.

"Let's throw it overboard and see it float," suggested Non, eager for any diversion.

They cast off the rope from the bitt, and holding one end, threw the white can into the water.

Pretty soon they tried to pull the can in; but the rope tugged in their hands furiously. Had a shark swallowed the can? Perhaps they had hooked the sea-serpent!

"Something awful is the matter," gasped Hal, straining with all his might. "O Phin, come up here, quick!"

One never waits at sea for the second call, and Phin rushed to the deck. At a glance he took in the situation. The boys had cast off the mooring of the *Kittiewink*, and had not the skipper grasped the slippery cable at the last moment, the boat would have drifted on the rocks. In a trice the sailor, with several strong overhand pulls, had brought the cable in again, and fastened it securely on its bitt.

By this time the two fathers were on deck. Then said the skipper to the boys:

"Look a-here now! You might ha' wrecked her or stove her in. Don't you boys touch a line aboard her without my orders until you learn somethin', or I'll cast the job up. Yer fathers 've gin you to me to keep, an' I'll keep you or I'll go."

This episode went a long way to confirm the two fathers' good opinion of Phin.

Phineas now prepared to row the gentlemen ashore. Trot ran out to meet them as they landed.

"Where are the boys?" asked Mrs. Maynot, looking up from her book.

"I told them to stay on board. Really, Molly," said Mr. Maynot, soothingly, "I thought it would be easier for you not to say good-by."

The novel dropped to the floor of the boat-house. Trot seemed to understand that he, too, had been deserted, for he set up a series of baleful yelps.

Phineas Scrod was already rowing back rapidly. The *Kittiewink* swung with the wind at her mooring. The two boys waved their caps and yelled to keep up the general courage; but Mrs. Maynot did not turn. She walked slowly away with her face to the land. She could not bear to look at the *Kittiewink* again. Neither her husband nor her Doctor knew how to comfort her at that moment.

At this melancholy crisis there was a piercing squeak, a splash and a gurgle. Trot had jumped from the landing and was swimming madly after the receding boat, with half-choked yelps. The boys' shouts had intensified his growing conviction that he was wanted elsewhere than at Sweet Fern. Thus was another member added to the crew of the *Kittiewink*.

HERBERT D. WARD.

(To be continued.)

For the Companion.

CLOUDS AND STEAM.

Clouds consist simply of water divided into minute globules or drops. They differ in no essential respect from the steam emitted by a tea-kettle, or the mists and fogs that fill river valleys at sunrise. These forms of water are all produced in the same way.

In the boiling tea-kettle, the space not occupied by water is filled with invisible and transparent water vapor. When this comes into contact with the cool outer air, some of the vapor is condensed to liquid water, and a cloud of steam is formed. This white and opaque steam is not seen very near the spout, because the vapor there has not yet been sufficiently cooled to condense.

If the cover of the kettle is lifted, the boiling water seems to be covered by a cloud of white steam; but this cloud did not exist before the cover was raised. It has been formed by the sudden cooling of the vapor. In a glass boiler which is either completely sealed, or provided with only a narrow outlet for the vapor, the space above the water is perfectly transparent and apparently empty.

Morning mists and fogs are formed by the cooling of the moist air during the night.

A cloud is produced by the cooling of a rising current of vapor-laden air, or by the meeting of two bodies of air of different temperature. A given volume of air, or, more strictly, a given space, whether it contains air or not, will only take up a certain quantity of water vapor at a given temperature.

If the temperature is raised, more vapor can be taken up; if it is lowered, some of the vapor will be condensed.

The law connecting temperature and maximum amount of water vapor is such that a hot and a cold body of air, neither of which is saturated, or contains all the water it is capable of holding in a state of vapor, may, when mixed, become more than saturated, so that some of the vapor is condensed.

If condensation is very rapid, visible drops are formed and considerable quantities of liquid are produced.

This occurs in the retort of the chemist, the "worm" of the distiller, and occasionally on a gigantic scale in nature, giving rise to what is called a cloud-burst, as in the remarkable flood at Johnstown, Pennsylvania. In other cases the globules formed are so small that they are not separately visible, and do not fall to the earth, but apparently remain suspended in the air, forming steam, mist or clouds.

It was once hard to understand how such drops of water, which are of course heavier than air, could be thus supported by the air, apparently for an indefinite time, and an ingenious but false

Digitized by Google

hypothesis was made to account for this seeming violation of the law of universal gravitation.

It was assumed that the globules of water were hollow. A hollow globule would bear some resemblance to a soap-bubble or a balloon, and this resemblance, together with the known properties

of soap-bubbles and balloons, might seem, to a careless thinker, to explain the suspension of clouds.

But the argument was entirely fallacious. The balloon rises because it is filled with a gas which is lighter than air. The soap-bubble is filled with warm air from the lungs, which is also lighter than the cool surrounding air; but the hollow cloud-globule, if it existed, could only be filled with air of the same temperature as the air in which it floated.

Of course the globule could not be empty of air, for in that case the tension of the film of water, together with the pressure of the external air, would cause it to collapse at once. Indeed, the air within the bubble would necessarily be at a higher pressure, and therefore would be denser and heavier than the air outside.

It is quite true that a hollow globule would not fall as rapidly as a solid one containing the same quantity of water, because it would offer a larger surface to the resisting action of the air. But the same effect of lessened speed of descent may be obtained with a solid globule—if the term "solid" is permissible in speaking of liquids—if it be only small enough.

To make this clear, suppose a little sphere or drop of water, one-eighth of an inch in diameter, to be falling through the air. The resistance which the air offers to the drop's motion depends upon the speed of the drop, which is constantly increasing. At last the speed becomes so great that the resistance of the air is equal to the drop's weight.

After this no further increase of speed occurs, but the drop continues to fall with this constant velocity.

Now consider another drop, whose diameter is but half that of the first, or one-sixteenth of an inch. The weight of the small drop is eight times less than the weight of the other, but its surface is not eight times, but only four times as small as the surface of the large drop.

In other words, diminishing the size of the drop does not reduce the retarding action of the air as much as it reduces the weight or the force which causes the drop to fall.

Hence, the constant or maximum speed, at which the resistance of the air is equal to the weight, will be less in the case of the smaller drop than in that of the larger. See this illustrated the next time you observe a thunder-shower or other heavy rain. Notice that the large drops come down much faster than the small ones.

If a drop is very small, the greatest speed which it can attain in falling will also be very small.

A similar rule holds good of solid particles mixed with water or another liquid. The largest particles settle first, then those next in size. The smallest may remain suspended for weeks, even when the liquid is not at all disturbed, while the slightest motion of the vessel will cause the smallest that have fallen to rise and make the liquid turbid.

This principle is utilized in separating particles of different sizes and obtaining exceedingly fine powders, such as "prepared chalk," which is made by mixing ground chalk with water, pouring off the liquid after the coarser particles have fallen, and drying the fine powder which the liquid ultimately deposits.

But we have by no means succeeded in arguing away the law of gravitation; we have only reduced the velocity of fall of the cloud-globules. Fall they must, and fall they do at this diminished speed. Why, then, do they apparently remain suspended in the air?

For a very simple reason. We see a great cloud hanging motionless over our heads, but we cannot see the individual globules, and have no reason to assume that they are motionless. It is clear from what has been said above that they must be in motion.

The form of the cloud, and that only, is at rest. The material of which it is composed is not only in motion, but is constantly changing. New drops are being formed in one place, and old ones are being converted into invisible and transparent vapor in another.

In the space occupied by the visible cloud, the temperature and other conditions are such that all the water present cannot exist as vapor, but some of it must assume the liquid form. These conditions may hold in a certain limited space for a long time, while all around the air is unsaturated, so that stray drops that reach the frontiers of the cloud are re-evaporated and become invisible.

A striking example of this is seen in the clouds that hang almost constantly about high and cold mountain-peaks. The cloud of yesterday and that of to-day are not composed of the same water-drops, but the cloud-form persists as if chained to the peak.

Something like this occurs in the case of all clouds which show any degree of permanence. Of course very many, if not most clouds, change visibly and rapidly.

These changes are partly due to real change of substance, and partly to the disturbance of the cloud-form by winds and currents of air.

LAWRENCE B. FLETCHER.

MARBLE.

So flawless white it is, like stainless snow,
Did not some power supernal, long ago,
In icy ages, ere yet man was known,
Fix a snow-mountain in eternal stone?

CLINTON SCOLLARD.

UNIVERSITY EXTENSION.

Many readers of *The Companion* may have seen the words "University Extension" in the newspapers, with a vague idea of their meaning, and with no idea at all that either the phrase or the movement to which the term is applied, has any interest for themselves.

Some of these readers, probably, have to make their way in the world, with no money and a limited amount of education. They have, it may be, finished the course in the public school and, while some of their classmates have gone to college, have been compelled to lay aside their books and begin work in shop or mill or farm, to earn food and clothes.

But the hunger for knowledge still is keen and unsatisfied within them; and they envy their companions whose money opens for them the Universities, with their wealth of books, of appliances for study, and their corps of learned teachers.

It was for poor boys such as these that the Universities of Oxford and Cambridge were founded hundreds of years ago. These institutions received enormous endowments; but the cost of tuition and living in these colleges became so great that by degrees only wealthy young men received the benefit from them.

A year or two ago this fact was brought so strongly before the English Universities that a plan was devised to extend the education given in these great seats of learning throughout Great Britain, so that any poor boy, willing to study at night or in his leisure hours, could follow any course of study which he might elect, under the auspices of their professors.

In a word, if the moneyless classes could not go to the University, the University would come to them.

As this work has been taken up by some of the larger colleges in this country, a brief description of its methods—or rather of one of its methods—will interest any boy or girl who wishes to educate himself.

The poor lad, in a village or inland town, consults with his fellows until a class is formed. On application to the University an instructor is sent, who lectures on the chosen branch of study. If the branch of study be a scientific one, he brings the appliances for illustration.

The price charged for admission to the lectures is merely nominal. Books are furnished to any of the hearers who wish to become students; the papers which they write upon the subjects discussed are examined and corrected by the teacher.

Classes numbering from two hundred to a thousand young men, clerks, shop-men, mechanics and laborers were instructed last winter in sanitary science, history and literature by teachers sent out by one of our universities.

How many such classes will apply for instruction during the coming winter?

The work, although good in purpose, has its defects. The pupils must be careful that they are not satisfied with a scrappy, shallow knowledge of the subject which is brought before them.

A little learning is never so dangerous as when it falls upon a soil of indolence and vanity.

For the Companion.

THE PERFECT JUNE.

Take all the rapturous glow of Summer's morn,—
The noontime splendor, and the sunset fair
With majesty; the soft, embracing air,
Whereon glad Zephyrus winds her fluted horn.
Take, if thou wilt, the rose so lately born,
With elfin hues and odor rich and rare;
Take all the sum of cheer the long hours wear
Without surcease, and leave the earth forlorn
In Winter's clasp; take all, yet leave, we pray,
To us that precious wealth, that hope, that faith,
That there still lies beyond this blighting clime
A rarer joy no ill can take away;
For us the perfect June that knows not death,
The largess of Eternal Summer time?

GEO. NEWELL LOVEJOY.

WHY EUROPEANS EMIGRATE.

It is in the spring and early summer that the immigration of foreigners—mainly Europeans—to this country usually reaches its largest volume.

In the last week in April, for instance, no less than eight thousand emigrants are said to have sailed for the United States from Queenstown alone, comprising in about equal numbers Englishmen and Scotchmen, Irishmen and continental Europeans. Nearly a half a million emigrants reached our shores in the year 1890.

While the number of emigrants coming here from year to year does not steadily increase, the fact that so large a number of foreigners, drawn for the most part from the lowest European classes, is poured in upon us constantly, gives rise to an interesting as well as a difficult problem.

Why do so many Europeans every year cross the Atlantic, to find homes and seek their fortunes in the New World? The answer to this question may be read, for the most part, in the condition of the several countries which they thus abandon.

It is because the struggle of life is hard, and sometimes impossible in their own lands, that the lower class of Europeans come here.

The miserable condition of the Irish peasantry—a condition which has existed for many generations—need not be described here. This is reason enough why Irishmen should come over by the thousands.

In a lesser degree, similar reasons operate to induce the poorer classes of English and Scotch to emigrate. Compared with this country, wages are low and work is hard to get in the British Isles. The chances for a poor man to rise to affluence and good position are rarer. Both in the factory and on the farm the Englishman finds better opportunities here than at home.

The Germans come hither because in their own land they are ground down by heavy taxes, subject to severe military conscriptions and long military service, and besides being restricted in their liberties, find themselves unable to thrive amid the crowded and eager populations of the Fatherland.

The notable increase of Italian emigration to our shores is to a large extent fostered by emigration agencies and companies, who make contracts to supply foreign labor cheap in this country. The Italians who come under this regrettable system are, for the most part, from the least thriving and least intelligent part of Italy.

They are tempted to come by the promise of higher wages and greater comfort. That this Italian emigration has serious evils for us is shown by what has happened in New Orleans.

The Norwegians, Danes and Swedes come to us in considerable numbers, over fifty thousand having landed on our shores last year. They do not suffer great oppression or hardship in their own countries, but have always been an adventurous people, inclined to seek new homes, and ambitious to work in places and under conditions favorable to the largest success.

Emigration hither is undoubtedly greatly stimulated by the accounts received in Europe from the foreigners who have already settled on our soil, and who send home news of the opportunities existing here, the large degree of political and social freedom enjoyed, the peace, security and ever-swelling prosperity of the Republic.

It is too true, moreover, that the criminals of Europe, eluding justice in their own countries and seeking safety from punishment, look upon this country as a sure asylum, and without serious hindrance from their own governments swarm across the Atlantic in large numbers.

This country has always boasted of welcoming to its shores the poor and oppressed of all nations, but certainly it is no part of the duty of this country to receive and cherish the paupers, the diseased, and the criminals cast off by foreign countries. While we are ready to welcome honest, able-bodied, peaceful and willing workers from whatever clime, we have the right to protect ourselves from vagabonds, thieves, lazy do-nothings and assassins.

OVERCOMING.

Less than two years ago an English gentleman died who was the father of a large family, a member of Parliament, a prominent county magistrate, the owner of large estates, and an active, public-spirited man in all local and national matters.

So loyal were his friends to him that they never made public mention of the one great misfortune of his life. It was never even hinted at in the newspapers. In fact, it was only after his death that those who had not seen him knew that it was but the misshapen block of a man that had lived this active, manly life.

He was born with neither legs nor arms. After his death his story was told: How he resolved when but a boy to act and live as did other boys, without regard to his horrible misfortune; how he persisted in studying every book, in learning every game, in joining in every amusement possible to him with his companions. How, to the last year of his life, he held himself to be as responsible as other men, and bravely paid every tithe of duty to God and to his fellows.

Even in lesser matters in life he pressed to the front. He was the most genial, witty guest at social dinner-tables. Strapped to his horse, he hunted foxes in Yorkshire or tigers in India, and with his brothers made long journeys in other parts of the world. Everywhere his cheerfulness and gaiety gave new life to duller souls.

What weight of pain he carried beneath this courage only God knows.

Is there no lesson for us all in the life of this gallant gentleman?

Every boy or girl has some drawback, some difficulty to combat or, harder still—to bear. It may be deafness, an ugly face, a vicious temper, deformity, or a dull brain.

Be sure that every other human being has his difficulty, too. Ignore your own, forget it when you can, and above all get above it. "Make of your petty grief a pedestal on which to stand."

Epictetus would have sent no words of wisdom down through the ages but for his lame leg. John Bunyan would not have dreamed the dream which has helped the English-speaking world if he had not been shut up in a jail. If Father Damien had not died a leper, his life could not have given to many a sincere heart fresh strength and courage.

DANGEROUS.

In one of the large towns of Pennsylvania a suit was recently brought by a workingman against the proprietor of a cigar shop, for permanent injury done to the health and reason of his son. The shopkeeper, regardless of warnings and protests, persisted in selling cigarettes to the boy, a child of ten years, until the use of them brought on paralysis and softening of the brain.

So common are permanent affections of the throat, stomach and nerves from the use of cigarettes by boys, that the State of Pennsylvania has made it a criminal offence to sell them to minors. In the records of insanity in that State for ten years it was shown that among boys under twenty the excessive use of tobacco ranked third among the causes of disordered intellect.

The lad who reads these words, if a smoker, will probably admit that there is but little pleasure in smoking the cigarette. Certainly he will do so if he is frank. He smoked at first because he fancied it made him look like a man; afterwards because the habit could not be shaken off easily.

Let us recommend to his attention the story of the farmer's boy who inherited a bleak tract in Western Pennsylvania and worked it with scant results for twenty years.

Then oil was found in it, in such quantities that the young man became rich. He did not try to educate himself or to spend his easily-gotten wealth wisely, but went to the city, and wasted it in the most absurd extravagances. At times he literally flung his money away to the passers-by.

So insane was his extravagance that in a few years he had lost all and was penniless. He died in the almshouse in Philadelphia.

God has given to the average boy a capital far greater than wells of oil; health, a sound digestion, an active brain, the courage and happiness of youth. When he walks the streets puffing his cigarette he is in danger of wasting his capital almost as senselessly as did this poor lad when he flung coin to the passers-by.

Judicious men and women who see him smoking are not moved to admiration by his manliness, as he fancies, but simply regard him as silly and untaught, and pity him for the ignorance which may bring upon him such incurable ill during his whole life.

SOLDIER AND SQUAW.

A well-authenticated story of the slaughter at Pine Ridge is that of an Irish soldier who, kneeling with his comrades behind a bank, was shot close to the heart.

"Fath," he exclaimed, "I'm shure it's all over wid me! Rowl me round, boys, an' make a fince of me."

The next moment he was dead. They obeyed him, and used his body as a rampart.

Another incident is told of the same fight worthy of note. A squaw retreated backward before the terrific fire of the white soldiers, holding both hands behind her.

She fell at last pierced with many bullets. It was found that she had sheltered a baby with her wounded body—a baby, ugly and copper-colored like herself. She was killed. The child was saved. It gives the story more meaning, perhaps, to know that it was not her own.

Could not these red and white-skinned human

Digitized by Google

beings, in both of whom such heroic courage and self-sacrifice were possible, have found better occupation than murdering each other?

The same problem has arisen in every war since the beginning of the world.

"The Romans," says an old writer, "kept their legions removed from fire for fire, lest coming closer they should look into each other's eyes, and recognize brothers and friends where they had thought to find enemies."

BOLD AND TRUE.

Griffith M. Cooper was a member of the Society of Friends who deserves to be remembered as a man fearless in action and scrupulous in speech.

When living in Western New York, some fifty years ago, he found that the Cattaraugus Indians, in the southern part of Erie County, were being led by the Ogden Land Company, a rich corporation, to give up their lands for less than they were worth.

He began to agitate the matter, and finally so impressed the Society of Friends that they promised to pay him a modest salary and care for his farm while he devoted his time to advising and shielding the Indians. For ten succeeding years he spent a great part of his time on the Cattaraugus Indian Reservation, or in journeys connected with Indian affairs.

At length the victory was won. The Land Company ceased its efforts, and a treaty with the United States Government left three thousand Indians in full possession of their domain.

He was absolutely incorruptible, and could point out at least one man on the other side who had offered him sixty thousand dollars if he would go home to his farm, and let Indian affairs alone.

His plain speaking was a habit of daily life.

Mr. Giles B. Stebbins says of him that he once went to Washington in the interest of his principles, and had an interview with Martin Van Buren, then Secretary of State.

Mr. Van Buren had heard the Ogden Land Company's statements, and was influenced in their favor. He gave their version of a certain matter, though he was aware that there were facts which would refute it.

"Martin," said the plain-spoken Quaker, "what does thee say that for? Thee knows it is not so when thee says it."

Van Buren repeated this to a friend, with the remark: "I like that Quaker. A man with the courage to tell me, in so frank and friendly a way that I don't tell the truth, I greatly respect."

CITY AND COUNTRY.

According to the new census more than eighteen million, two hundred thousand of the people of the United States reside in cities and large towns of eight thousand inhabitants or more. Of the total population of the country twenty-nine per cent. live in these large places.

We say say, roughly, that seven-tenths of the people live in the country and three-tenths in cities. The proportion of city population is constantly increasing. In 1880 only sixteen persons out of a hundred resided in these larger places; in 1870 there were twenty-one; in 1860 twenty-two; and in 1850 twenty-three.

The number of towns having eight thousand inhabitants increased during the last ten years from two hundred and eighty-six to four hundred and forty-three. There are no less than forty-seven such towns in Massachusetts, and almost seventy per cent. of the population live in them.

It is evident, not merely from these facts but from common observation, that the cities are drawing heavily upon the country, and that the prosperity of the people who devote themselves to agriculture, the basis of all industry, is steadily diminishing.

This is a melancholy fact. Everything that it is possible to do to counteract the tendency should be done. Great as the country is and varied as are its resources, the products of the soil are of many times greater importance and value than anything else.

Moreover, as cities grow and agriculture declines political and social evils increase. City life is vastly attractive to young people who have passed their childhood amid rural surroundings, but for the pure joys of a peaceful life the country is much to be preferred. So have sung the poets since the world began, and so the universal experience of the human race teaches.

UPTON'S TACTICS.

The late General Upton, whose work on "Tactics" made his name known to every soldier throughout the United States, was noted for his nervous energy, tireless application and strict discipline.

While commandant of cadets at West Point, he was frequently crowded out of his house by company relatives of his dead wife. On such occasions he often did a bed in the rooms of his friend the Adjutant, Captain King, who, in his "Trials of a Staff-Officer," tells an amusing anecdote illustrative of the General's character.

"The first time it came was but the pattern of all that followed. We talked for half an hour or so, then Upton quietly arose, took from his breast pocket a small Bible, seated himself near the lamp and read in silence awhile, and then, when ready for bed, he knelt in prayer, and continued on his knees a long time. . . . Upon me it left a fervent and earnest in his faith as he was in every detail of his duty."

The cadets did not like him,—they "seldom do like an officer who is thorough in the performance of his duty,"—and disliked him "the Christian officer." They also suspected secret drinker when he could hear but not detect the vapors.

But no word or sign betrayed that the command had heard the words. It was no fair and honest trial that the graceless wags were compelled to respect the man, though his relentless discipline caused them to dislike his commandant.

General Upton had been wounded three times in three different engagements. He went into the war a second lieutenant, and came out of it a lieutenant-colonel in the regular army and a brevet major-general; but he never alluded to his wounds, and rarely mentioned his service in the field.

NOT BUTTER.

A bright woman, who makes it a point to find out in what subject the person to whom she is introduced is interested, and to use it to lead the conversation speedily to it, had an amusing experience, which she relates with great glee. A dinner was given by an intimate friend, and she whispered hurriedly to her hostess, who had introduced her to be a pretty, naturally grave man who was to take her in to dinner, "What does he like to talk about best?"

"Butter!" said the hostess's lips, with a moaning smile.

It seemed a strange subject, but the tactful guest made the best conversation around to it, and as she afterward said, "talked as if to know good butter when one saw it, and to be able to get one of the most important things in the world."

Her companion did not seem interested, and the dinner progressed, dessert and then came to an end. Another effort, and then the lady gave up the task, and devoted herself to her neighbor on the other side.

The "butter" man was obliged to leave, pleading another engagement, and the hostess came over to the guest to the evident regret of his hostess.

"He's too bad he could not stay longer, and talk to you," commiserated the hostess to her friend. "He's such a charming man. I knew you'd be just the one to get him interested in butter, and I said then I thought we could all reap the benefit."

"Charming! That man!" repeated the guest, with a look of amazement at the mouth, though it packed my brains to make the 'butter' question attractive?"

"Butter!" ejaculated her hostess, in dismay. "Oh, and Buckley? I supposed of course you knew he was a high authority on the subject! What must he have thought?"

"I fancy," replied her friend, dryly, "that he thought he had had all an advisory board for some agricultural show."

DON ALPHONSO.

The little King of Spain is very frank and unrestrained in his expression of opinions, and sometimes makes personal remarks about his subjects of a sort seldom indulged in by older and more diplomatic kings. He is very mischievous, but his attendants, in keeping him out of mischief, have to take great care not to "injure the dignity of his Most Catholic Majesty." "Harper's Bazar," from which this sketch is taken, says that a footman who put out his arms and caught the King one day when the little fellow tripped, and was about to fall headlong down-stairs, was dismissed from his post for having dared to touch, with his plebeian hands, the royal person. True, the Queen rewarded the man with a large sum of money, and gave him another situation, but even she could not retain him in the household.

On Good Friday, according to a custom which has prevailed in Spain since the sixteenth century, seven criminals received pardon. As soon as the Cardinal Archbishop of Toledo stepped down from the high altar, where he had sung mass, to the table on which were laid seven rolls of parchment.

Each roll contained the full pardon of a prisoner, but the King knew nothing of this, and had, a few hours previously, received the regent's signature. Placing his hand on these rolls, according to custom, the chaplain asked the Queen

"Seven, does your Majesty grant pardon to the prisoners?"

With a tender glance at the little boy, whose hand she held, she replied:

"In the name of the king, my son, I grant to these prisoners, as I look to God to grant His pardon and mercy to me and my son."

The rolls were then placed on the high altar, and after a prayer and benediction, delivered to the Minister of Justice.

AN ANCIENT "SELL."

Not many travellers visit Carrara, where the finest of marble is constantly being quarried, as it has been for so many centuries, but, once there, much may be found in the way of legend and scenery to occupy the curious mind. Innumerable stories float about the place, says a writer in Once a Week, concerning the existence of hidden treasure.

Gold has often been found in the neighborhood of the town, and not very long ago a crock of gold coin was unearthed beneath one of the streets.

A well-to-do citizen was the owner of a quarry which was, in one of his vaults, situated upon an old, deserted quarry, within which, half-buried in the rubbish, lay an enormous block of heavy marble, on which, on closer inspection, a number of letters, rudely cut, were discernible under a crust of dirt. With some difficulty he managed to spell out the words, "Blessed is he who finds me, and keeps me."

The man at once jumped at the conclusion that he had stumbled upon hidden treasure, and that fortune was made. He rushed home and collected some of his friends to aid him in the recovery of the treasure, and by their united efforts they succeeded in turning the heavy stone over. Another rude inscription met their eager eyes.

"Thanks, my friends. I was weary of reposing so long in one position!"

NORMAN HUMOR.

Superstitions about rocks, which were once popular among the peasant classes of Europe, are dying out. The familiar legend is of a rock which, moved at a certain time by some strange whirlwind, crushes or rolls aside, and discloses treasure hidden beneath, the time usually being peculiarly inconvenient for witnesses, as for instance "on the stroke of twelve on Christmas Eve." A peculiar story of this kind is still told in Normandy. M. Julien Tiersot writes of it in the *Revue des Traditions Populaires*:

In the neighborhood of Canfleur-eux there is a stone which the country people say, revolves every year at the hour of noon on the summer solstice. A walk in the country in the spring at the hour of noon is an agreeable diversion, and the accidental stranger readily consents to go and see the marvel-ous stone.

The stone does not revolve. It covers the stone and well. Time passes. It is afternoon.

"But the stone is not moved!" he says.

"Wait!" they answer, and heard the Angelus sung or, if the sullen bell is silent, one would wait for every, for an hour if, by the Angelus, it never rang.

"Brown's Household Panacea" will quickly relieve pain and soreness from cuts, bruises and burns. Also an excellent remedy for internal pain.

Ladies' Underwear should be made from Kino Percale Cambric, Lawns and Nainsooks. Send stamp for samples. King Philip Mills, Worth St., N. Y. [Adv.

HOME STUDY Thorough and practical instruction given by mail. Circulars free. Eastman COLLEGE, Poughkeepsie, N.Y. Business Forms, Penmanship, Arithmetic, Grammar, Correspondence, Shorthand, etc., taught by mail. Low rates. Distance no objection. Announcement Free. Address, BRYANT & STRATTON, Main St., Buffalo, N. Y.

$350 to $450 A Year. Howard Seminary, West Bridgewater, Mass. A Home School of High Grade for Girls. 25 miles from Boston. Thorough, Progressive, Homelike. Send for Catalogue. REV. CHARLES C. FORD, Principal.

LEAD PENCILS. DIXON'S "AMERICAN GRAPHITE" are the best. Send 16 cents for samples worth double the money. Mention this paper. JOSEph DIXON CRUCIBLE CO., Jersey City, N.J.

The Robt. Mitchell Furniture Co., Cincinnati, O., make and sell School Manuals in all the Hard Woods at prices ranging from $6.00, and ship them by freight to any railroad station, ready to be put in place by an ordinary carpenter.

Also Office Furniture, Settees, Assembly Chairs and Tables will be furnished on any address upon receipt of four cents in stamps. Address THE ROBT. MITCHELL FURNITURE CO., Cincinnati, Ohio.

TELEGRAPHY Fifteen's manual of complete instruction, with 30 correspondence lessons, 20 pages of telegraphic practice, Operator Relay, Batteries, etc., etc. Sent FREE. J. H. Bunnell & Co., 20 Cortlandt St., New York.

New England Conservatory. Founded by Dr. E. Tourjee.

Next School Year begins September 10, 1891.

MUSIC. Systematic instruction in Pianoforte, Voice, Organ, Violin, Flute, and all other wind and string instruments. Solfeggio, Theory, Harmony, Composition, Musical History, Elocution, Sight-Singing, Chorus-Practice, Concerts, Recitals, Lectures, Personality and Lyric Action. PIANO. Thorough course in Practical Piano and Organ Tuning in all its branches. FREE ARTS. Thorough instruction given. Literature and Languages. Physical Culture. A comfortable Christian Home for young women. Practice rooms, Library, Reading Room, Gymnasium and Calisthenic Hall in the Conservatory Building. Students may enter at any time. Expenses moderate. Tuition, $5 to $15 per term. Advanced Students receive instruction free in Harmony, Musical History, Concerted Music, etc. Eight Free Scholarships. Year-book, containing full information, also special Calendar, containing full list of Free Advantages, sent free on application to CARL FAELTEN, Director. L. S. ANDERSON, Business Manager. New England Conservatory, Franklin Square, Boston, Mass.

Lundborg's

LUNDBORG'S have been known for thirty years as the most fragrant, refined and lasting Perfumes made in America. In fact, they were the first really high-grade Perfumes that were manufactured in this country, and from the beginning have kept their recognized place. You have only to think a moment to recall how many Perfumes with extravagant claims have come and gone, have been more or less successful for a short time and then have vanished,—to realize what it means to be able to say that LUNDBORG'S have been the recognized standard of excellence for more than a generation.

No detail in the manufacture of LUNDBORG'S PERFUMES is too small to receive the most painstaking care, and every feature of the different processes in making them has been improved upon as greater experience has presented the opportunity; often increasing the expense but always with the end in view of maintaining their standard, "The Best."

The newest of LUNDBORG'S PERFUMES is SWISS LILAC, which has enjoyed a great popularity in the few months it has been on the market. If you have never tried this odor, Messrs. Ladd & Coffin, Proprietors and Manufacturers of LUNDBORG'S PERFUMERY, 24 Barclay Street, N. Y., will gladly mail you a sample to try, on receipt of 5 two-cent stamps. Ask for LUNDBORG'S PERFUMES when you buy again, as they are for sale everywhere.

LUNDBORG'S OPAL COLOGNE is treated with Ammonia, is very refreshing and invigorating for the Toilet or the Bath, and, inhaled from the bottle, possesses all the merits of smelling Salts.

THE PATH OF PEACE.

It is so hard to walk earth's toilsome way
Ever while slow moons wane, or slow increase,
So hard to follow Duty day by day,
Leading us to God's peace!

O weary grows the heart and worn the feet
In the dull round of uneventful cares,
Yet there's a thought might make our service sweet,
For God our toil prepares.

Lift up thy tired eyes! No cloud is spread
Betwixt thee and His heaven serene and pure.
He holds His hand above thy humble head,
Thy happiness is sure.

Then keep the courage of thy morning prime,
And bravely bear the cross He lays on thee,
'Tis but a little space of troubled time
In His eternity.

Remember, only in this pathway lies
Thy safety,—once beyond its sheltering bound,
What choking mists, what bitter tempests rise,
Where never rest is found!

Hard may be Duty's hand, but lo, it leads
Out into perfect joy, where pain shall cease;
God sees thy striving, and thy patience heeds,
And thou shalt find His peace.

CELIA THAXTER.

For the Companion.

SHIPWRECKED.

Late in December a little coast schooner, laden with pine lumber, set sail from a port in Mississippi bound to Philadelphia.

The crew consisted of the captain, mate and four seamen. The only passenger was the Captain's wife, a young girl, recently married. Those who know her state that she was "a little, insignificant, uneducated woman, not noted for beauty or cleverness, but very fond of her husband and a good Christian."

On leaving the Gulf of Mexico and reaching the open sea, the schooner encountered several storms, the second of which forced open her seams. A leak followed. The pumps were set to work, but the water entered the hold faster than it could be pumped out. The cargo was then thrown overboard.

One storm followed another. The masts were swept away. The pumps were worked day and night, and bravely succeeded in keeping the shattered hull afloat.

It was now that the Captain's little wife took her turn with the crew, working as hard as any man, singing and joking to keep up their hearts when they saw no chance of escape.

On the eighth day the little vessel ran into a heavy gale of sleet and snow. Her decks were sheeted with ice, and the wet clothing of the crew was frozen to their bodies. The Captain and one of the seamen fell ill, and the sufferings of the others were almost intolerable. The Captain's wife nursed the sick men. She prepared the food, and even took her turn at the pumps. Her courage and hope never failed.

"You will reach home if you keep up courage and trust in God," she told them a thousand times. The men were ashamed to give up while this little woman held out.

On the fourteenth day a heavy sea washed away their last barrel of meat. The wet, mouldy bread was soon exhausted, and then the agonies of starvation began.

The little woman was so weak that she sometimes fell like one dead on the deck. But her courage rose with the desperate need. She went from one man to another, cheerful and laughing, talking to each of his home, his wife and children, praying aloud with such a happy fervor of faith that the superstitious sailors were both awed and made hopeful.

"She talked with God," one of them said. "She talked with God all the time. I knowed He was beside her, and heard her."

Days of hot sunshine followed, in which the horrors of famine and thirst increased. Ship after ship passed along the horizon, without seeing the little hulk to which these poor wretches clung.

But at last a steamship bore down on them. They were taken on board and tenderly cared for; they were carried to a foreign port and then sent back to their homes.

The Captain's wife, when her work was done, sank into a stupor and lay near death for many days.

This record of an heroic woman is taken almost literally from the reports of the men whose lives she had helped to save.

Many women will read it, who, like her, are "not noted for beauty, talent or knowledge." It will probably never be their lot to endure suffering from storm or hunger or thirst. But each one, however insignificant, will have companions in her voyage through life whom she can save from misery and crime by her cheerful courage and faith.

There are shipwrecks more to be dreaded than any on the high seas, and when such a disaster overtakes a man, no surer help can reach him than that of a sister, a wife or a mother who loves him, who hopes for him, and who "talks with God."

LOFTY OBSERVATORY.

When it was proposed by I. Vallot that a scientific observatory should be erected on Mont Blanc, at an elevation of fourteen thousand five hundred feet, the scheme was regarded as visionary and almost ridiculous. It would be impossible, it was said, to engage in any kind of work at such an altitude. But Vallot overruled all opposition.

The building was constructed at Chamounix. It was then taken apart, and each timber marked so that the parts could be readily fitted together on the mountain. One hundred guides volunteered their services to carry the different parts of the building to the point fixed upon as the site. The material was tied up in one hundred and eleven loads, and the work of transportation was begun.

It was a tedious undertaking to carry the cumbersome packages up the ascent. Each man required three days to convey a load to its destination. The first man started on June Sixteenth, and on July Thirty-first the last section of the building and the last of the ninety packages of scientific instruments had reached the site of the observatory.

Vallot selected five of the hardiest mountaineers as masons and carpenters, and set out for the summit. Two tents were set up for the temporary shelter of the party. Although it was midsummer the mercury stood nine degrees below zero at night, and rarely rose above zero at noon. The workmen were clad in Arctic costume with heavy woollen gloves and caps, a style of dress not the best adapted for working, but they were able to labor from seven o'clock in the morning until seven at night.

In two days the foundations were completed, and on the third the framework was in place, despite the heavy wind which threatened every moment to overthrow it.

The work, however, was extremely exhausting in the rarefied air. One and then another workman was disabled, and before the building was finished all descended for a rest. On August Thirty-first the party reascended, accompanied by M. Vallot's wife, an enthusiastic mountaineer.

The building was completed within a few days, lightning-rods were added, and a flag was unfurled to the breeze. The building is divided into two apartments, one for scientific work and the other for the use of tourists.

WHY HE WAS AT HOME.

When the Confederate army was pouring through Richmond, on its march toward the Peninsula, the soldiers received constant and substantial tokens of the good-will of the people of the region. Women and children thronged the sidewalks, pressing on their defenders everything which the scanty Confederate larder could supply, while from many of the houses gloves, socks and comforters rained down upon the companies. Mr. T. C. DeLeon, in "Four Years in Rebel Capitals," gives an incident connected with this march, of the sort which is calculated to move the roughest soldier's heart.

The Southern soldier was ever a cheerful animal, with a general spice of sardonic humor. Refreshed inwardly and outwardly, the men would march down the street, answering the waving handkerchiefs at every window with wild cheers. Nor did they spare any amount of chaff to those luckless stay-at-homes encountered on the streets.

"Come out'r that black coat!" "I know ye're a conscrip'! Don't yer want 'er go for a sojer?" "Yere's yer chance ter git yer substertoot!"

These and similar shouts, levelled at the head of some unlucky wight, brought roars of laughter from the soldiers, and from the victim's unsympathetic friends.

At one house a pale, boyish-looking youth was noted at a window with a lady. Both energetically waved handkerchiefs, and the men answered with a yell; but the opportunity was too good to lose.

"Come right along, sonny!" was the cry. "The lady'll spare yer! Here's a little muskit fur ye!"

"All right, boys!" cheerily responded the youth, rising from his seat. "Have you got a leg for me, too?" and Colonel F—— stuck the shortest of stumps on the window-seat.

With one impulse the battalion halted, faced to the window, and came to "Present!" as their cheers rattled the windows of that block. That chord had been touched by which the roughest soldier is ever moved.

OVER THE FALLS.

The Rockomekos were a warlike tribe of Indians inhabiting a portion of the Androscoggin valley in what is now known as Canton, Maine. The white settlers of the region, both up and down the river, were kept in a state of constant anxiety and terror by marauding parties from this tribe. Cattle were stolen, log-cabins burned, and the lives of the settlers often threatened by the Rockomekos.

One day in the fall of 1688 the settlers at Brunswick were thrown into a condition of wild alarm by the report, brought by an old hunter, that the Rockomekos were coming down the river to attack them. They made what preparations for resistance they could. The strongest house in the settlement was barricaded for use as a block-house, and to this place arms and ammunition were brought.

Watchmen were stationed beside the river to sound the alarm when the Rockomekos were seen. The excitement extended not only to the Brunswick settlement; all the pioneers along the river feared an attack.

Their fears were not ill-founded. The Rockomekos, the whole tribe,—men, women and children,—started down the Androscoggin in their canoes.

Late one afternoon about this time two young men, Joe and Ben Smith, out on a week's hunt, were returning to their camp, when they came upon two Rockomeko braves, hastening along the river bank through the woods.

"Them fellers mean mischief," Ben remarked to his brother. "Let's keep 'em in sight for a bit."

The young men had heard nothing of the meditated attack on the Brunswick settlement, but they had sufficient acquaintance with Indian character to regard these two braves with suspicion. Ben, who spoke the Indian tongue, questioned them as to their destination and designs, but to all inquiries the Rockomekos returned evasive answers.

According to the custom of the times, Joe and Ben had a liberal supply of rum at their camp, and each carried a bottle in his pocket. Knowing that the "fire water" would loosen the Indians' tongues, the young men invited them to drink, an invitation rarely refused by a red man.

Under the influence of the ardent spirit, their tongues became loosened, and they told the young men all they wished to learn. The whole tribe was on the way down the river in canoes, they said, and the two Indians had been sent on to build fires above the Pejepscot (Lewiston) Falls, to show their friends where to land and camp for the night.

Ben and Joe, as soon as the Indians were stupefied, proceeded down the river below the falls. There they built two huge fires on a knoll where the Indians, descending in the canoes, could see them, and then waited and listened. The night was dark and cloudy, and without a thought of danger the hapless wretches in the canoes paddled down the river toward the blazing fires.

Suddenly, above the roar of the falls, rose shrieks and cries of distress. The Indians knew their danger, but too late! The canoes were drawn in by the quick waters, and carried over the falls. Not one redskin came out alive. Such was the destruction of the Rockomekos, which caused great rejoicing among the white settlers of the Androscoggin valley.

For the Companion.

ONE DAY IN JUNE.

A bride went forth with her flowery train,
One rose-hung day in June,
And the birds and the sea and the pealing bells
Seemed singing the same glad tune;
And the young bride, seeing but hours of bliss,
Said, "Who could weep in a world like this!"

A widow went forth with her mourning train,
On the selfsame day in June,
And the wind and the sea and the tolling bells
Seemed chanting the same sad rune;
And the widow, seeing but desolate years,
Said, "Who could laugh in this world of tears!"

HARRISON H. HARKESHEIMER.

A STABLE-BOY.

Baron Ward began his career as a Yorkshire stable-boy, and became one of the cleverest financiers, diplomatists and ministers of the day. The story of his life, as related in *Blackwood's Magazine*, suggests one of Dumas's romances. The Duke of Parma was fond of horses, and kept a magnificent stud. He used to visit the stables every morning. One morning his attention was called to several horses which had just arrived from England. The stables were not in good order, and he overheard some one say: "We would not stand this kind of thing in Yorkshire."

"Was it you who spoke?" asked the Duke, turning round quickly, and seeing a young Englishman.

"Well, I did say something, your Royal Highness."

"What's your name?"

"Ward, please your Highness. I came with the horses for your Royal Highness."

"You said, 'We would not stand this in Yorkshire'?"

"That's about it, your Royal Highness," answered Ward, tugging at his forelock.

"What do you mean?"

"Only, please your Royal Highness, in Yorkshire I thinks we know how to keep horses."

The Duke turned away; but shortly after Ward was appointed the Duke's personal groom. The groom always rode behind his master until they were out of Parma; then, by order of the Duke, he would draw near, and reply to questions about the management of horses and stables. One day all Parma was astonished. The young Yorkshire stable-boy was appointed Master of Horse.

The Duke was a keen judge of character, and had a liking for Englishmen. He kept Ward as his personal groom, and often talked with him on subjects unconnected with the stables.

Ward acquired courtly manners with such facility that the Court of Parma was astonished; but his Yorkshire plainness of speech adhered to him. One day the Duke reviewed the Parmeran troops.

"What do you think of their drill?" asked the Duke of his Master of Horse.

"I don't think much of it," answered Ward, bluntly.

"What do you know about military matters?"

"I have been in the Yeomanry six years, your Royal Highness, and have seen a good deal of soldiering in Yorkshire."

"Do you think you could make these men drill better?"

"I am sure I could."

Shortly after this conversation Ward was placed at the head of the military department, where he at once introduced economy and efficiency. Then he was made finance minister, and immediately there was a great improvement in the revenue of Parma. Rapid and romantic as was this stable-boy's rise, he showed so much shrewdness and good sense that he was popular even with those he had supplanted.

The Duke sent him on a diplomatic mission to the Court of Vienna. The Emperor of Austria made him a baron, and as Baron Ward he returned to England to represent the Duke of Parma. English ministers took to him; his elevation had not thrown him off his balance; he showed tact, and retained his simple manners.

In 1854 the Duke of Parma was assassinated, and his widow imagined that Ward intended to seize the sovereignty. His house was surrounded by Austrian soldiers, and he was banished from Parma. The Austrian Government welcomed him, and treated him with the greatest consideration. The change, however, was too great; he fell into a state of dejection, and did not long survive his exile.

WHERE WAS THE MONEY?

A man and his wife rented a suite of rooms and proceeded to furnish them, says a writer in the New York *Times*. One of the carpets was unsatisfactory in some respect, and the dealers of whom it had been purchased sent a man to look at it. The woman, Mrs. L——, was on her way out when she met the man on the stairs. He explained his errand, and she gave him the keys of her rooms. "I will be back in five minutes," she said, "and meantime you can decide what had better be done."

She was hardly in the street before she remembered a roll of bills which she had left in a glove-box on her dressing-table. Her first thought was to return, but she said to herself that a responsible firm would send nobody but an honest man on such an errand, and she hurried on.

Within ten minutes she was back, and met the man at the door. He explained what it would be necessary to do about the carpet, and passed out. She entered the apartment, and almost mechanically raised the lid of the glove-box. The money was not there.

She hurried down the stairs and overtook the carpet man just as he reached the sidewalk.

"Will you come back a moment?" she said.

He complied at once, and the moment they were in the room she faced him.

"A curious thing has happened. When I went out this morning I left a roll of bills, ninety dollars, in that box. It is gone now."

The man seemed not to understand. "Well?" he said.

"Well," repeated Mrs. L——, "there was nobody here but —"

The man interrupted her. "Merciful Heaven, madam! you don't think I took your money?"

"I don't know what to think," replied Mrs. L——; "the money was there, and now it isn't."

"But I'm an honest man, I've got a little girl. Do you think I'd steal? Why, I've been eight years with So-and-so. They know my character. Perhaps your husband took the money."

"Will you come with me to his office and find out?"

The man acquiesced, and the journey downtown was made. Mr. L—— had not taken the money. The man was greatly disturbed.

"You can search me," he said. "There's my own money," producing a small wad. "I haven't another cent about me." And he turned his pockets inside out.

Mr. L—— was impressed with the man's apparent sincerity, and Mrs. L—— was puzzled. The man was allowed to go to his work, and Mrs. L—— went home. She ransacked drawers and boxes, and moved the furniture, but the bills could not be found.

Several days passed. Then Mrs. L—— happened to go to an upper shelf in the wardrobe, and noticed a towel pinned up in a roll. What could that be? She took it down and unrolled it. Inside was a discarded wallet, and in the wallet were the missing bills.

The sight of them recalled to her mind the fact that she had put them there herself. It had occurred to her, just before going to bed, that it was careless to leave the money in the glove-box, and she hit upon this method of concealing it. Then she went to sleep, and in the morning had forgotten what she had done.

Now, the moment the bills were found, she sent a despatch to the man at the carpet store, and his relief may be imagined.

The story, as the writer suggests, may be taken as illustrating the uncertain value of two things—a woman's memory and circumstantial evidence.

NOT THE GIRL.

An unpleasant surprise was that which *Parsons's Weekly* describes in an article on Eskimo life. A young seal-hunter, it appears, had become engaged to the daughter of a rich neighbor, but was unable to obtain the consent of her parents to a speedy marriage.

Between the cake of ice on which the young sealer had erected his hut, and the larger floe which was pre-empted by the parents of his sweetheart, the cold had broken an impassable crevasse some hundred feet or more in depth, and twenty in width. Save for a single jutting fragment, just thick enough to bear little more than his own weight, his home was completely cut off from the world about him. This practical isolation inspired him.

He began storing up in his humble quarters oil, blubber, and other delicacies sufficient for the support of two persons for at least six months. He had resolved to steal his bride, and knew that if he gained his ice floe with her and broke down the bridge, they were safe from trouble or pursuit for the winter season, or until the warmer weather of the summer moved the icebergs to closer contact. By that time, he hoped the opposition of the parents would give way to pardon and reconciliation.

The Eskimos sleep on a raised snowbank on one side of the igloo or ice-house. Encased in their sealskin nightbags, with a huge, protecting hood over the head and face, they are as comfortable as their natures require.

The youth waited outside the girl's home until he thought that all within were asleep; then creeping through the narrow entrance, he made his way toward the young woman. He seized the long bag-like mass in which her form was encased, bore it triumphantly across the narrow bridge to his stronghold, and before pursuit was possible, with his axe cut down the ice bridge and was safe.

Not waiting to hear the objurgations of those on the other side of the abyss, he knelt down beside her, and dragged back the hood to catch a glimpse of her face.

He had stolen his intended father-in-law!

HE COULD SYMPATHIZE.

A lady, writing anonymously in the *Atlantic Monthly*, describes a little street encounter in which she found herself put to shame in a most unlikely manner.

I was walking along a street given over to the smallest of shops and almost the cheapest of restaurants, when I met a good-looking ten-year-old boy in shabby-respectable clothes.

It was autumn, and I carried a bunch of flaming, splendid maple leaves. He stopped, as if the sight of them really took his breath away.

"Oh, give me one!" he gently exclaimed, in a manner that was more than polite. It lifted our interview straightway into some rare, superhuman atmosphere, where perfect simplicity became a matter of course. Unfortunately, this was not so becoming to me as to him.

I said, "Oh, I hate to!" but at the same time I began looking for the meanest little leaf I could find. When I had discovered and was presenting it, shame overcame me, and torn with conflicting emotions, I said:

"I know I'm being horridly stingy."

"Never mind," said my boy, in a big, masculine, comforting manner. "I know just how you feel."

He smiled his thanks reassuringly, and we parted never to meet again. I declare, I could write a sad little poem about it this minute.

GIFTED.

"What does your husband do?" asked a traveller of a slatternly woman whom he found living in a little old cabin in the backwoods.

"Well," was the reply, "he's one o' these handy, gifted sort o' persons, my man is. He kin jest turn his hand to anything.

"He's a blacksmith by perfession, but he cooked in a rest'rant in town most o' last winter, and he done kyarpenterin' and paintin' all spring, and then he lectured on temp'rance awhile until he got a chance to run an ingine for a month or two, and then he dug wells and hung wall-paper until he got a good chance to lay brick at three dollars a day."

"And what is he doing now?" asked the amused guest.

"Teachin' singin'-school, but he allows to give it up pretty soon, and go to practisin' medicine. He kin do anything he's a mind to turn his hand to."

TWO WERE ENOUGH.

There is always something to be thankful for, if a man has a grateful disposition.

"It is very kind of you," said a lady to her husband, as he knelt before her to put on her rubbers.

The rubbers were a pretty close fit, and the husband was a little out of breath, but he managed to answer:

"It is a—a pleasure, my dear. Still, I am glad you are not a centipede."—*Kate Field's Washington.*

"IF there is one time more than another," says an experienced married man, "when a woman should be left alone, it is when a line of clothes comes down in the mud."—*Atchison Globe.*

OUR NEW COOK.

I had a pain in my forehead,
I had an ache in my thumb,
And, "Oh!" said I,
"I believe I shall cry
To think of the bread and pudding and pie
I must make if a cook doesn't come."

Hark! a rat, tat, tat! On the threshold
A dear little maiden stood
In her grandmother's veil,
And offered for sale
Some fresh mud pies in a shabby tin pail
Which she said were exceedingly good.

I bought them and paid her in kisses,
And declared such a cook
I'd employ;
Then she offered to bake
A delicious mud cake;
And my forehead and thumb forgot to ache,
As I thought of the feast we'd enjoy.

FERNIE.

Fernie is Ned's kitty—a pretty kitty, all white except the tip of her tail, and a cunning little gray saddle on her back, and a spatter of gray on her head that Ned said looked just like a fern, the first time he saw her.

"So I'll keep that one," said he, promptly, looking at the four little mites in a basket with a good deal of pity in his blue eyes. "I wish I could all of 'em, they're so cunning, mamma."

But of course that wasn't to be thought of for a minute. Two cats in the house were as many as mamma could stand, anyway. So the next morning Fernie was alone in the basket.

She didn't seem to mind it, however. She grew and grew, prettier and plumper every day, until she was three months old, and Bony Call came to pay Ned a visit.

Bony is Ned's cousin. He lives in the city, and this visit had been talked of for a long time. But somehow at first it didn't seem as if it was going to be a pleasant one at all.

"You must remember that he is company, dear," mamma said to Ned; "and give up your own pleasure for his, and try and make him enjoy himself. Remember, Ned, won't you?"

"Yes'm," said Ned, darting off to the barn to play. And he did remember, though he couldn't help thinking it was pretty hard to have to give up *all* the time; and once or twice he caught himself wishing Bony wasn't going to stay a week.

But after all, things went along pretty smoothly until Bony's sharp-eyes spied Fernie washing her face on the porch. He made a dive at her and caught her by the tail—poor little Fernie, who wasn't used to such rough handling.

"Oh, I'll tell you what let's do," he cried; "let's make her dance. The paper on her feet, you know, and she'll dance and jump like anything. That's the way we do in Boston, and it's great fun. Hi, here! you cat, stop scratching!"

Ned's face grew very red, and tears came into his eyes.

"You sha'n't do it," said he. "That's my kitty, and I don't want her to dance."

"Well, she's going to, just the same," said Bony. "You'll see fun in a minute."

"You sha'n't," cried Ned. "Oh, dear me!" And away he flew to ask mamma if he must give up this time. He didn't believe she would say his kitty could be hurt.

But he couldn't find mamma; she had gone over to see Mrs. Dyer's sick baby. So back to the porch he hurried again, all out of breath, just in time to see Bony put Fernie down on the floor, each of her four pretty white feet tied up in coarse brown paper.

"Now you'll see fun," cried Bony, laughing. "Scat, there! Dance, now!"

But Fernie didn't dance, or run, or jump. She gave each foot a gentle shake. Then she lay down close by Ned's feet and began to bite the string that tied the papers on.

"Scat, there!" cried Bony.

"Don't you," said Ned. "You tied her up, and if she can get them off she's going to, so now!"

And she did—wise Fernie. Her sharp little teeth cut every string and pulled the papers off. Then, with a frisky jump, she climbed up to Ned's shoulder and laid her head against his cheek, and began to purr as loud as she could.

"Now isn't she real smart and cunning?" cried Ned, triumphantly; "isn't she, now?"

Bony nodded.

"Yes, she is," said he; "she beats our Boston cats all hollow. She knows 'scat' as much as folks. What'll you take for her?"

"Ten thousand million dollars," said Ned, proudly. "Let's be good friends, now, and go and see if the cherries are ripe." And away they went as fast as they could scamper.

EDITH and her brother were playing together, and got into trouble over their toys. Jimmie became excited and gave Edith a push, who ran to her mother, sobbing out, "Mamma, Jimmie hit me in my eyeball."

DAISY had a manicure set for her birthday present, and when her papa told her she must use it every day, she said, "Yes, papa, I'll go upstairs and manufacture my nails right away."

LAZY LADS.

Sing a song of summer,
Sunflowers and all,
Sing a song of lazy lads
Lounging on a wall,
Lounging and laughing,
Drawing lots to see
Which shall wheel the weeds away
Before they go to tea.

Sing a song of summer,
Sunflowers and all,
Sing a song of frightened lads
Skurrying down the wall.
"Father! Father's coming!
Hurry quick, for he
Said if they weren't wheeled away
We needn't come to tea."

DESTROYING SPECIES.

When people set about getting rid of entire species of animals by a systematic persecution, they usually find it a difficult job. Set a price on the head of the wolf or the woodchuck and the creature seems to realize the importance of its life. A bounty on crows must be viewed as a pleasant joke by those shrewd observers of men and things. The case of the wolf in Europe is a historical one. A price has been set on the creature's head for centuries, and yet there is but a small portion of the continent from which the animal has been exterminated. The Netherlands is free of wolves from the character of the country. The whole land furnishes not a single rocky den suitable for a wolf's lair; neither is there a forest for the creature's shelter.

It is true that the wolf has been exterminated from Great Britain and Ireland. This result has been reached, however, by indirect means rather than by a direct attack. The clearing off of the forest left the wolf no place in which to hide from pursuit. The islands were too far from the continent for their thinned ranks to be recruited from the main land.

In Spain and France the wolf has at no time been unknown, although a price has been set on its head for hundreds of years. The animal has developed cunning in proportion as the pursuit has become closer. Like the crow, it has learned to take care of itself.

On the other hand, species receive very little help toward their continuance from the well-meant efforts of man to that end. In proof of this we are told that there is an ancient Act of Parliament still in force in England and Wales, prohibiting the taking of the eggs of certain birds, of which six kinds are expressly named. In spite of this protecting law, four of the six species have ceased to breed in those countries.

The indirect ways in which such results are brought about are shown in the destruction of the quail in New Zealand. The birds were once numerous; no one wished to destroy them. But the land was burned over for other purposes at seasons when the eggs and young of the quail were exposed to destruction, and a few years brought the species to an end.

INVOLUNTARY HOMAGE.

It is one of the penalties, or, as some would say, one of the rewards, of beauty, that every one wishes to look at it. There are times, however, when even the love of the beautiful must be held in check. The New York *Sun* describes an occurrence in Nassau Street, by which four prosperous citizens of the metropolis learned this lesson, one day last winter, in a sudden and striking manner.

A group of three unusually pretty young women were walking along the sidewalk. Such attractive visitors are not very numerous in this sordid quarter of the town, and the girls found themselves the objects of a good deal of attention from the hurrying throng of bankers, brokers and clerks.

In front of one block the stone flagging had been worn very smooth, and the messenger boys had made several highly slippery slides upon the thin covering of ice. Still the spots could be easily avoided if a man had his eyes open, and the walk was safe enough until the three pretty girls came along. But during the minute and a half of their passing, no less than four men went sprawling to the ground.

Three of the victims were walking toward the young women, and in turn went flat in the path before them. The fourth man had passed them, and rashly turned his head to look back. He was greatly demoralized. He was an old man, apparently a retired banker, very dignified in his appearance. His tall hat went into the gutter, and an amazing shifting of his scalp-lock betrayed the fact that his thin iron-gray hair was not a natural growth.

The girls seemed not to understand the significance of the accidents until the third man went down. When they realized that all this abject but involuntary homage was being paid to them, they almost lost their own footing, and when the fourth gentleman went down they could no longer control themselves, but buried their noses in their muffs and hastened across the street.

SURF-RIDING AT NIIHAU.

A curious pastime which is somewhat in vogue among the natives of the Hawaiian Islands, and was more popular formerly than now, is surf-riding. In the opinion of a contributor to the *Journal of American Folk Lore*, the difficulty of the accomplishment has been exaggerated. He describes it thus: Six stalwart men assembled on the beach of a small cove, bearing with them their precious surf-boards. These boards—in Hawaiian, "wave-sliding boards"—are made from the wood of the bread-fruit tree.

They are eight or nine feet long, fifteen or twenty inches wide, rather thin, rounded at each end, and carefully smoothed. They are sometimes stained black, are frequently rubbed with cocoanut oil, and are preserved with great care, sometimes wrapped in cloths. Children use smaller boards.

Plunging through the nearer surf, the natives reached the outer line of breakers, and watching their opportunity they lay flat upon the board. The more expert among them kneeled. Just as a high billow was about to break over them they pushed landward in front of the combers. The waves rushing in were apparently always on the point of submerging the rider; but unless some mishap occurred, they drove him forward with rapidity upon the beach, or into shallow water. In a high surf it is an exciting sport, and demands skill and experience.

A few days later I was initiated into the mysteries of surf-riding by my host, who is himself quite expert. I learned the principle, and believe that practice only is needed to gain a measure of skill. For persons accustomed to bathing in surf, the process is far less difficult than it is usually represented.

"Why isn't something done to save that ship in distress?" cried an excited lady on the beach.

"We have sent the crew a line to come ashore, mum," said a life-saver, hurriedly.

"Of all things! Were they waiting for a formal invitation?"

A HUNTER'S RUSE.

Montaigne says that a man's wit is a man's danger unless he knows how to use it. But a witty Florida hunter, of whom an exchange chronicles an anecdote, showed himself master of his situation. He proved his property and covered his risks. Many years ago, near a place called Enterprise, on a point jutting into Lake Monroe, during all bright days a big alligator used to lie basking in the sun.

He was well known to the whole neighborhood. The entire coterie of sportsmen at the only hotel used to call him "Big Ben," and proud hunters would talk and even dream of the time when a well-aimed rifle-shot would end his long career. But Big Ben was as cunning as a serpent, and whenever any one, afoot or afloat, came unpleasantly near, he would slide off into the water—which meant good-by for the rest of the day.

One fine morning a sportsman paddling up the lake, luckily with his rifle in his canoe, came upon Big Ben so sound asleep that he stole up within range and put a bullet through the alligator's brain. What to do next was a problem. He could not tow the monster all the way to Enterprise with his tiny canoe.

A bright idea struck him. He put his visiting card into the beast's mouth and paddled swiftly back. Several hunters were at the wharf, and the slayer of Big Ben hastened to inform them that while out paddling he had come within easy range of the 'gator, which was no doubt still lying motionless on the point. A flotilla of boats and canoes, manned by an army with rifles, instantly started for the point. To avoid confusion, it was agreed that all should go down together, and that the entire party, if they were lucky enough to find Big Ben still there, should fire a volley at the word of command.

As they approached the point, the hearts of all beat quickly; and when, with straining eyes, they saw Big Ben apparently asleep and motionless upon the bank, even the coolest could hardly control his feelings. Bang! bang! went a score of rifles, and Ben, riddled with bullets, lay motionless upon the point. With a cheer of triumph the excited sportsmen leaped ashore, and fastening a rope round the dead alligator towed him to Enterprise.

There the original slayer awaited them on the wharf. When the creature was laid upon the shore he opened its mighty jaws and disclosed his visiting card, at the same time thanking them most politely for their kindness in bringing his alligator home.

SOME HISTORICAL ANTIPATHIES.

"I like to see cats about; but if one rubs against my flesh it almost sends me into fits, and nothing could make me touch one voluntarily," remarked a young lady recently. "Stuff and nonsense!" said one of her listeners, "I've no patience with such antipathies." Many people take the same view of these peculiar dislikes, but history records some strange instances of pet aversions which seem to have a foundation in more than "stuff and nonsense."

The celebrated Erasmus, although a native of Rotterdam, had such an aversion to fish that the smell of it threw him into a fever. Ambrose Paré had a patient who could never see an eel without fainting; and another who would fall into convulsions at the sight of a carp.

Joseph Scaliger and others could never drink milk. Gardan was disgusted at the sight of eggs. A king of Poland and a secretary of France bled at the nose when they looked at apples. Henry III. of France and many others had a great aversion to cats, mice and spiders. A great huntsman in Hanover, who would valiantly attack a wild boar, always fainted away at the sight of a roasted pig.

Amatus Lusitanus knew a person who fainted whenever he saw a rose, and hence always kept his house when they were in bloom. Scaliger mentions a similar case in regard to lilies, and Bayle about honey. Bayle himself turned pale at seeing water-cresses.

Tycho-Brahe fainted at the sight of a fox, and Marshal d'Albret at the sight of a pig. A lady, wonderful enough, could not endure the feel of silk or satin. A man, not so strangely, was known to faint whenever he heard a servant sweeping. Vicanor swooned whenever he heard a bagpipe. Bayle fainted at the sound of splashing water.

STREET SCENE IN MONTREAL.

"I was passing down the St. Lawrence Avenue in Montreal, one cold winter day," says a contributor, "when I saw a little tableau, the recollection of which has made me laugh many times since.

"A very courtly, dignified old gentleman, wrapped in a heavy beaver-fur overcoat, was just passing another gentleman, who, from the appearance of his clothing, was in destitute circumstances, but trying to keep up a jaunty bearing, which went down with an ill grace in an atmosphere with the temperature at ten below zero. As the fur-coated gentleman passed, he glanced at the face of the other man sharply, and after taking three steps, he turned around, strode back to the other and touched him on the shoulder, saying very politely:

"'Excuse me, sir, but I think your nose is frozen.'

"'Ah,' replied the other, carelessly, 'shouldn't wonder. It very often is.' And catching up a handful of snow from the pavement he began to rub his nose furiously. Then taking off his hat very deliberately, he bowed as if in a drawing-room, and said, 'I am under deep obligations to you, sir. Some time may I hope to be in a condition to return the favor!'

"And the two formal Englishmen parted without having even smiled at the absurdity of the scene."

NOT SO STRANGE.

An astute American woman is said to have remarked upon the astonishing precocity of the children in Paris. "Why," she said, "the little things speak French as early as an American child speaks English!"

The same woman, or another like her, lately remarked, as reported by an exchange:

"I often wonder how people manage to understand each other in France."

"How absurd!" said another woman, rather impolitely.

"I don't think it absurd at all. Both my daughters speak French, and they can't understand each other."

For the teeth use "Brown's Camphorated Saponaceous Dentifrice." This preparation gives the best results obtainable. Soap destroys the animal and vegetable parasites on the teeth, and camphor hardens the gums. Price, 25 cents a bottle. Sold by druggists. [*Adv.*

OUR BABY.

HOW TO KEEP THE LITTLE ONES WELL.

What will a mother give to save the life of her child?

All that she has.

And yet it is such a simple thing to keep the baby well, when you know how.

If the nursing mother is weak and out of health, the babe will vomit its food, and soon be seriously ill. Or if improper food is used, dangerous illness will result.

Thousands of intelligent mothers and careful physicians have found Lactated Food the best one they could use. It is pure, nourishing, and strength-giving.

LYON LEAVENWORTH TYLER, Age 14 months

"I have thoroughly tried the other infant foods on the market, and speak advisedly when I say there is no other food that so thoroughly agrees and nourishes as Lactated Food. I feel that it saved the life of my own fourteen months old boy."
N. P. TYLER, M.D., New Rochelle, N. Y., Oct. 14, 1890.

Lactated Food is sold by druggists, or mailed on receipt of price. 25 cts., 50 cts., $1.00. Interesting book of "Prize Babies" and handsome birthday card free to any mother sending baby's name and age.
WELLS, RICHARDSON & CO., Burlington, Vt.

Bailey's Rubber COMPLEXION BRUSH.

It is especially constructed for *massageing the skin*. It removes all *roughness* and *dead cuticle, smoothing out the wrinkles*, rendering the skin soft and pliant, and tinted with a *healthy glow*.

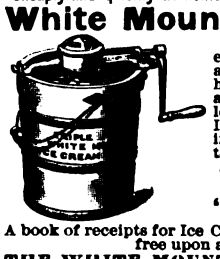
ARMS AND LEGS
WITH THE NEW PATENTED
Rubber Hands and Feet.

MR. A. A. MARKS: SALINA, KANSAS.

Dear Sir:—After having worn one of your artificial legs with rubber foot for more than fifteen years, I have no hesitation in saying it is the best leg in use; as it is simple and the most durable of any I have seen. I have worn five different makes since 1862, and find none as useful as yours. I can heartily recommend the rubber foot as the most durable and easy to handle. I am a blacksmith, and shoe horses. I have dug wells and quarried stone, and other heavy work. I can walk farther in a given time than any man can on any other kind of a leg, with the same length of stump as mine; it is only three inches from hip joint.

Yours, etc.,



E. LINCOLN.

By our formula persons can supply us with all measurements necessary to secure a fit while they remain at home. Write for New Treatise of 430 pages with 246 illustrations.
A. A. MARKS, 701 Broadway, New York.

THE GREATEST HIT of the last few years is a blacking for ladies' and childrens' shoes, called
BIXBY'S "ROYAL POLISH,"
put up in patent bottles, which prevent all overflowing and soiling of the hands, carpets or furniture and it keeps the leather in a soft and presentable condition until the shoes are fully worn out.

Speaking of the nationality of bootblacks, we are reminded that sometimes they are Polish, and sometimes Shinese, but they all do a Russian business when they use Bixby's
"THREE BEE" BLACKING.
When Bixby's boys are Hungary they Servia Turkey.
These articles sold by dealers everywhere.

ICE CREAM IS MADE
Cheaply and quickly at home by using a TRIPLE-MOTION
White Mountain Freezer.

WELL FINISHED.

Eliphalet Duncan, or "Uncle Liph," as he was familiarly called by his relatives and friends, possessed what he termed a "philosophizin' mind," which stood him in good stead on many occasions. "What's the sense o' *worritin'* over things that 'v' happened," he used to say. "Jest view 'em over careful, an' you'll most allus find they've got a side you kin dwell on, an' take some comfort out'n it."

He had his share of discomforts and trials, but he was a "well-to-do" man, and some of his less fortunate neighbors said that "if they were as forehanded as Uncle Liph, 'twould come easier to bear up under things!"

He had lived in one house ever since his marriage when a very young man, but when he was about sixty years old the old house was getting so dilapidated that he had a new one built on a lot of land which commanded a better view of the hills. He also built a new barn which was well stored with hay and grain. Much new furniture was bought, and Uncle Liph and his wife with their one unmarried daughter were to move over to the "new place" in October.

The last of September the Duncan family, together with many friends, went to the county fair, which was held eight or nine miles away. Late in the afternoon a boy arrived at the fair, and announced to Uncle Liph with horrified gasps that his new barn had caught fire, nobody knew how, and the only neighbor who had stayed at home had been making fruitless attempts to put out the flames.

When the Duncan family arrived at the site of what was to have been their new home in a week or two, the barn had been entirely destroyed, and the house was rapidly burning.

The next morning a farmer driving slowly past the scene of the conflagration, espied Uncle Liph seated on the stone wall, in a ruminating attitude. He turned round, as he heard the sound of wheels, and said, slowly, "I'm viewin' my ruins, ye see!"

"Well," said his friend, with some energy, "I'm bound to say, Uncle Liph, ef I was in your shoes, I sh'd find it considduble of a stump to philosophize over this mess."

"Ye-es," drawled the afflicted Eliphalet, "'tis more difficult 'n usu'l; but," he added, brightening a little, "it's all fer the best, in course; an' then jest see what a complete job 'tis; there aint anything' left wuth speakin' of except ashes; an' ye know I allus was a great hand t' like things finished up, without any shilly-shallyin' or half-way work!"

WOOD PULP.

Wood fibre has come into general use as a substitute for the cotton rags and other materials formerly employed in the making of paper. This fibre is called pulp, having taken the name which used to be given to the cotton and linen fibre when it had been prepared by maceration for spreading into sheets of paper. The wood fibre used to be prepared, only a few years ago, by a wholly mechanical process. The blocks of wood were ground, or rasped off by action applied obliquely to the grain. The length of fibre depended partly upon the angle at which the block was held during this process.

In place of the old mode of obtaining wood pulp, chemical treatment of the wood is now in vogue. As formerly, the bark is stripped from the wood to secure fibre of uniform quality. All discolored or decayed parts are removed for the same reason. Then the wood is cut across the grain into thin chips, which are carried to the top of the mill and dropped into large drums about fourteen feet in diameter, and twenty-four feet long.

The drums are made strong enough to bear a pressure of from seventy-five to two hundred pounds to the square inch. When a drum is packed full of chips it is filled with sulphuric acid and other chemicals. The wood is converted into a cotton-like product, which is then pressed dry and mashed. It is next mixed with water, rolled flat, and cut into shape for bundling. In this condition it is said to be made up of sixty per cent. moisture and forty per cent. fibre. In this shape it goes to the paper mill. It is found to be better to pay the freight on the contained water than to cheapen the cost of transportation by pressing out the water, for the pulp packs hard when it is dry.

One cord of spruce wood is estimated to make twelve hundred pounds of dry fibre, worth from one dollar to one dollar and a half a hundred pounds. A sulphite plant that will use up from eight to fifteen cords of wood every twenty-four hours costs about ten thousand dollars.

HOW THE HOUND WAS SCARED.

An aged Lehigh Valley woodsman, Amos Metz, says that during the winter of 1840-41 he lived alone, save for his hound, in a small cabin on what is now the Drinker Turnpike, Penn., between Moscow and Tobyhanna Mills. Amos often boasted that Zeke, the hound, was the best hunter in the county.

One night, an hour or two after I'd gone to bed, I was waked by Zeke's yelping. He was putting in at a good rate, and I jumped up to see what was the trouble.

It was bright moonlight, and I soon made out that two wolves were chasing the hound. Zeke was running round and round the cabin, and the wolves were after him as fast as they could leg it; but the hound was swifter on foot and managed to keep a few feet ahead of them.

I had two loaded muskets in the house. I placed one of them in the corner near by, cocked the other, and opened the door a few inches to get a shot at the wolves as they came round in front of the house.

The frightened hound saw the crack where I stood, dashed into it, threw the door wide open, and knocked me off my feet. Both wolves rushed in after him, and Zeke leaped upon the bed, which stood at one side. The wolves stopped when they came to the bed, and I shut the door in a hurry, and then banged away at one of the critters, hitting it in the head and killing it instantly.

The second wolf was scared, and ran around the room and then made a spring for the window. It knocked out three or four panes of glass, but didn't break the sash. The brute tumbled back ward, but was on its feet in a second and made another spring.

By this time I was ready with my other musket, and I bored a hole through the animal's heart just as it struck the window. That settled the wolves. But Zeke, although he wasn't hurt a mite, was so scared that he hasn't been worth a copper to hunt since that night.

Itching Piles.

THE RATS WON.

The question is frequently asked, writes a correspondent of the Lewiston *Journal*, whence comes the name of Thomson Pond, a sheet of water in Western Maine, extending through four towns and lying partly in three counties. Tradition says it was named from the first settler, Joe Thomson, of whom the following anecdote is related:

Mr. Thomson was greatly disturbed by rats, which assailed his premises in hordes, and at last he took an original method of getting rid of them.

He placed an empty hogshead in his log hovel, leaving the bunghole open, through which he dropped a small quantity of meat scraps and bread crumbs. Then taking a large leather bag he retired outside and peeped through a crevice to see what would happen.

Presently he espied an old gray veteran approaching the bunghole. The rodent looked in, then sniffed, and seemed to take an inventory of the room to ascertain what dangers there were, and finally he disappeared inside the hogshead. Very soon he emerged from the bunghole and scampered off. In a half-minute the old rat appeared, followed by a drove of a hundred or more hungry rodents which went after him into the hogshead.

"Now is my fun!" Joe chuckled, and he went quietly through the door and adjusted the open mouth of his leather bag over the bunghole, at the same time rapping the hogshead with the toe of his boot, which produced a ringing sound.

With loud squeals and fierce struggles the frightened rats began to scramble through the bunghole, and soon they all landed in the bottom of the bag.

Joe's first thought was to drown them by sinking the bag in the pond, but being in a rather gamesome mood, he concluded to put the bag in his boat, and, after rowing to a good distance from the shore, release the rats, and with his ox-goad have some fun knocking them in the head.

He rowed out from the shore so far that he was certain the rodents would be unable to swim to land. Then he untied the bag, expecting to see the frightened creatures leap pellmell into the pond; but he did not know the nature of his prisoners.

Instead of fleeing into the water, or even retreating to one side of the boat, the rats charged upon the man in a body, and with teeth and claws so severely lacerated his face, neck and hands as to cause him to leap from the boat and swim for the shore, leaving the craft in possession of his one-time victims.

DAVID'S COAT.

David Robertson, the Scotch naturalist, had, when a boy, rather an unusual experience in clothing himself, and the method he adopted seems amusingly different from that of boys in our own day, who, when they want a new jacket, ask for it or go without.

David was early apprenticed to a farmer, to herd the cattle, and one day he went to a fair with his master, and there gained a prize of twenty shillings by running a race. When he reached home, his mistress offered him, for the pound, enough of her home-made woollen cloth for a coat; but though David joyfully accepted it, he was disappointed at finding that the tailor would not make his yearly visit to the house for some time.

With the impatience of youth, he begged his mistress to let him make the coat himself. At first she refused, but when David persisted, she agreed to the wild project, stipulating, however, that he should take all the responsibility, and ask help of no one.

The boy began by carefully ripping his old coat in pieces for a pattern, and by this he cut the new one; first numbering the pieces in chalk, that he might know how to put them together. As all his time belonged to his master, he was obliged to take his sewing out into the pasture; and there, after a month of laborious work, the new coat was completed. Its buttons came from an old coat which had been discarded by his master, and the thread with which it was put together had been spun and dyed at the house.

When David showed his mistress the new coat, she was loud in praise of it, and declared that not even the tailor could have done it better. One thing, however, it needed, and that was a careful pressing, which he was allowed to give it at the house.

The hardest task of all remained, for he was obliged to remake his old coat, and as the seams were frayed and delicate, he had to exercise great care in joining them again. Another month, and this task also was done. Then was David the proud possessor of two coats.

HARD TO GET.

Doctors are sometimes more considerate of their patients' needs than they are of their circumstances. It is easier to prescribe a journey to Europe or Bermuda than it is to fill the prescription.

A gentleman whose affairs had become very much embarrassed, and who was overworked and overworried, went to a celebrated specialist, broken down with nervous exhaustion.

"Now," said the doctor, "there is only one thing that you must have; that is, absence of worry, absence of care, and freedom from all preoccupations."

"Much obliged for your prescription," said the gentleman, "but you've left out one important thing in it."

"What is that?"

"You haven't put in the apothecary's street and number!"

OUTSIDE AND INSIDE.

The ingenuity of people who think they are ill when they are not, quite triumphs over any external evidence of health.

A very stout German workman went to a physician in the West, and complained of being very unwell.

"But," said the doctor, "if you are sick, it has not prevented you from getting pretty comfortably fat."

"Oh, dot fat!" said the German. "Yes, I am fat on de outside, but on de eenside, ach! I am so poor!"

LITTLE Albert had been allowed to amuse himself by turning over the leaves of the big illustrated dictionary. The picture of the skeleton impressed him particularly, and at the breakfast-table the next morning, he surprised his father by asking suddenly, "Papa, can that bony fellow in the dictionary wiggle his fingers?"

America again takes the lead. "We could hardly believe our good luck when we ventured to ask for Burnett's Extract of Vanilla in Paris, to have it handed us; it was like meeting an old friend." [*Adv.*

The Bradley Two Wheeler

During all the time we have manufactured the Bradley Two Wheelers, they have been sold subject to the guarantee that they were positively free from the disagreeable horse motion so noticeable in other makes. We are acknowledged as leaders in this line of carriage construction, and produce the most substantial, the most stylish and the smoothest riding two wheeled vehicles in the market. We make both horse and pony sizes, painted or natural wood finish.
Comparatively few carriage dealers carry in stock an assortment of fine Two Wheelers, and as a consequence we each year sell a large number direct to the users. We have never received complaint that our shipments were not fully equal to our representations. Complete catalogue and price list, covering our large line of two and four wheeled vehicles, mailed free to any address.

FOR $60 and freight, we erect on a 40 FT. STEEL TOWER a Steel Wheel that equals any 12 feet Wooden one. GREAT REDUCTION TO FIRST PURCHASER.

THESE FIGURES TELL THE STORY of the EVER-GROWING, EVER-GOING, EVERLASTING Steel AERMOTOR Where one goes others follow, and "WE TAKE THE COUNTRY"
This unprecedented success is due:
1st. To the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of sail surface the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations proved that the power of the best wind wheels could be doubled, and the AERMOTOR daily demonstrates it has been done.
2d. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and
3d. To the enormous output of its factory which has made possible a reduction of prices so that it furnishes the best article at less than the poorest is sold for.
If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last 10 times as long—**IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB** (The Tilting Tower) and **THE WHEEL that RUNS when all others STAND STILL,** or if you want *a wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e.* **A GEARED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE** ($100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and work, to the **AERMOTOR CO.,** Rockwell & Fillmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

CONTAGIOUSNESS OF DISEASES.

Among the practical questions connected with the subject of contagious diseases is one which relates to the length of the period of special exposure. The Boston *Medical and Surgical Journal* says that the contagiousness of measles, mumps and whooping-cough disappears with the patient's recovery; that there is probably no danger of his conveying the disease to others for about a week after he himself was exposed to it—that is to say, during the so-called period of incubation; and that the contagiousness of measles does not extend beyond a fortnight.

Some authorities affirm that the contagiousness of whooping-cough ceases after six weeks, however long the coughing may continue; others think it prudent to isolate the patient until the paroxysms are over.

In scarlet fever and diphtheria the period of incubation is brief, a few days only; and during this period there is no contagion. It is very important to know that in scarlet fever the period of greatest danger is after the disappearance of the fever, the period of desquamation or peeling. From ignorance of this fact many lives have been lost. Persons have gone into society before the peeling was completed, and almost of course have communicated the disease. The fact is that every particle of the scales contains thousands of microbes.

A lady who was recovering from scarlet fever wrote a letter to a distant friend. As she wrote she blew from the paper the "dust" which peeled from her hand. The letter conveyed the disease to the friend and her little daughter, and the daughter died.

A servant nursed a scarlet fever patient, and on leaving the place put her clothing into a trunk. A year afterward she unpacked the trunk, and a little girl who stood by took the disease.

In diphtheria the virus resides in the false membrane, and for that reason is less likely to be carried to a distance; but the particles long retain their power of infection. The contagiousness of consumption lies in the patient's expectorations and discharges. If these are carefully received in a disinfecting fluid, there is almost no danger to attendants and friends.

JAPANESE GIRLS.

In a book entitled "Japanese Girls and Women" an interesting account of the duties of a daughter in the family is given.

"If she is the eldest daughter, to the servants she is 'O Jo Sama,' literally, young lady; to her own brothers and sisters, 'A ne San,' elder sister. Should she be one of the younger ones, her given name, preceded by the honorific O, and followed by San, meaning Miss, is the name by which she will be called.

"As she passes from babyhood to girlhood, and from girlhood to womanhood, she is the object of much love and care and solicitude; but she does not grow up irresponsible, or untrained to meet the duties which womanhood will surely bring to her. She must take a certain responsibility in the household, must see that tea is made for the guests, and in all but families of the highest rank, must serve it. She must know the proper etiquette of the table, how to serve carefully and neatly.

"She also feels a certain care about the behavior of the younger members of the family, especially in the absence of the parents. In all but the very wealthiest and most aristocratic families, the daughters of the house do a large part of the simple housework.

"In a house with no furniture, no carpets, no mirrors, picture-frames or glasses to be cared for, no stoves or furnaces, no windows to wash, no latest styles in clothing to be imitated, the amount of work to be done by women is considerably diminished, but still there remains enough to take a good deal of time.

"Every morning there are the beds to be rolled up and stored away in the closet. Breakfast is to be cooked and served, and marketing done. Of sewing there is always a good deal to be done, for many Japanese dresses must be taken to pieces whenever they are washed, and are turned, dyed, and made over again and again so long as there is a shred of the original material left to work upon. Then there are the every-day dishes which our Japanese maiden must learn to prepare.

"The proper boiling of rice is in itself a study. The construction of various soups, which form the staple in the Japanese bill of fare, the preparation of *mochi*, a kind of rice dough which is prepared at the New Year, or to send to friends on various festival occasions,—these and many other branches of the culinary art must be mastered before the young girl is prepared to assume the duties of married life."

MRS. HUSE AND THE BEAR.

In the "History of Henniker," New Hampshire, it is related that Mr. Moses Huse set off with a friend on a bear hunt one autumn morning to be gone for the day. A little before sundown Mrs. Huse began her preparations for supper against the time of the hunters' return. In those early days few houses had cellars underneath; but a potato hole was dug near the dwelling and covered over during the winter with sods or thatch. In this hole the season's vegetables were stored.

Mrs. Huse handed a pan to her little girl and bade her go out to the cellar hole and get some vegetables. The child obeyed, but soon ran in, saying that she had heard a noise in the leaves and was afraid. Her mother assured her there was nothing to be afraid of, and sent her back; but the little girl soon returned with the same story, when the mother said impatiently, "Wal, you stay here, an' I'll go myself."

As Mrs. Huse neared the potato hole she heard the noise which had alarmed the child. Upon going nearer she espied a bear digging in the leaves for acorns.

She immediately gave chase, picking up, as she ran, a huge pine knot, "with a train as long as yer arm," she said afterwards, and came up with Bruin just as he had begun the ascent of a tree.

Mrs. Huse was of Indian descent, of wiry, powerful muscle. She had often taken her end of the log in clearing the land, and now, equal to the emergency, she dealt the bear a heavy blow with the knot, which broke his back, and he fell to the ground. She quickly dispatched him, dragged him to the house and dressed him.

When Mr. Huse and his comrade returned, the woman was cooking bear steak for supper. They were much astonished, and asked where she obtained the meat. She told them, and added, in her quaint dialect: "When he falled from the tree, I lammed on, I did; and I killed him, I did, I did!"

The energetic woman had beaten the hunters, whose search for bears had been fruitless and who had returned without game of any sort.

STRONG WRITER.

Uncle Stephen, an old negro, had come to cut the grass in the front yard, and as Colonel Winter started out to his office he stopped to greet the old man. "Well, Stephen," said the Colonel, "I hear that you intend to give your son an education."

"Dat's what I does, sah. I knows what 'tis ter struggle erlong widout larnin', an' I is 'termined dat my son sha'n't trabble bar'foot ober de same hard road dat I did."

"A noble resolution, Stephen. I wish all fathers felt as you do. Is your boy learning rapidly?"

"Ez fast ez er hoss ken trot, sah. Why, last week he wrote a letter to his aunt dat libs mo' dan twenty mile from yere, an' atter a while he gwine ter write ter his udder aunt dat libs fifty mile away."

"Why doesn't he write to her now?"

"Oh, he kaint write so fur, yit. He ken write twenty mile fust-rate, but I tole him not ter try ter write fifty mile till he got stronger wid his pen. But he's gwine ter git dar, I tell you. Won't be more'n er year fo' dat boy ken set down at one eend ob de gumbronment an' write er letter cl'ar ter de udder eend."—*Exchange.*

TIME WASTED.

A young woman who had taken up the study of Greek remarked cheerfully, at the close of the second day, that the language did not seem at all difficult. But not all beginnings are thus easy.

A farmer's son up in the country conceived a desire to shine as a member of the legal profession, and undertook a clerkship in the office of the village pettifogger at nothing a week. At the end of his first day's study he returned home.

"Well, Tobe, how d'yer like the law?" asked his father.

"'Taint what it's cracked up to be," answered Tobe. "I'm sorry I learnt it."—Brooklyn *Life.*

HAD READ ABOUT IT.

The conversation heard at concerts is sometimes even more interesting than the music. The Washington *Post* prints this fragment:

The trombone-player was fitting a mouth-piece to his instrument with a good deal of care, and a young woman was heard to ask, "Mamma, what can that man be doing?"

"I don't know, my dear," answered the mother, as she levelled her glass upon the musician in question, "unless he is winding his horn. You often read of players doing that, you know."

HOW CAN THAT BE?

Over the mantle-piece of an old inn, in Lincolnshire, England, may be found this droll quiz:

A man without eyes saw plums on a tree,
Neither took plums nor left plums.
Pray how can that be?

The answer just below the riddle is this:

The man hadn't eyes, but he had just one eye,
With which on the tree two plums he could spy.
He neither took plums, nor plums did he leave,
But took one and left one, as we may conceive.

BOLD BOY.

The principle that "discretion is the better part of valor" is sometimes comprehended quite early. A gentleman heard a young visitor in his house ask his own son, aged six:

"Which would you rather be—a walking policeman or a mounted policeman?"

"A mounted policeman, of course," said the boy.

"Why?" asked the other.

"'Cause if the robbers came, I could get away quicker!"

"More Bicycle-Riders Than Ever."

A result largely owing to the New Safety Wheel of the Lovell Arms Co., Boston, Mass. The bicycling season just opened shows a greater number of devotees than ever before. "This is largely owing to the popularity of the new low-priced safety wheel designed for both ladies and gentlemen, which is equipped with all of the latest improvements. These bicycles are made by the John P. Lovell Arms Company of Boston, and, although selling for only $35, are considered superior to any safety on the market. Their illustrated catalogue is well worth perusing, and can be had for the asking." [*Adv.*

Allcock's are the only genuine *Porous Plasters.* They act quickly and with certainty, and can be worn for weeks without causing pain or inconvenience. They are invaluable in cases of Weak Back, Kidney and Pulmonary Difficulties, Strains, Rheumatism, Colds, Coughs, and all Local pains. [*Adv*

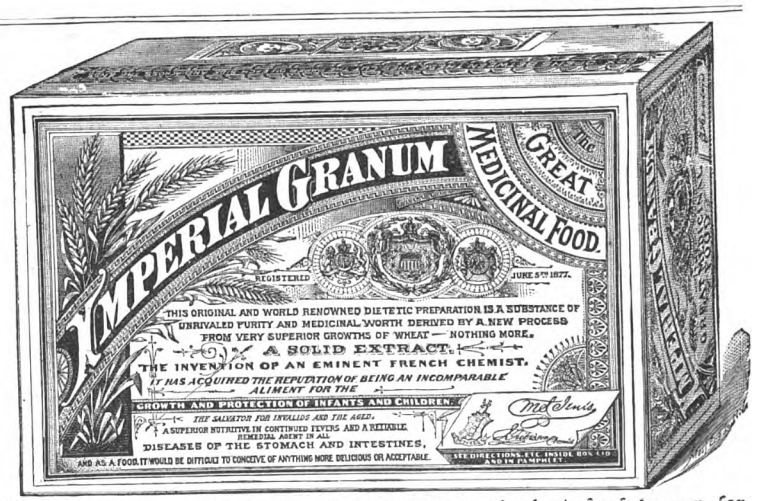
OFFICE OF THE RECORDER.

SALEM, MASS., MARCH 23, 1891.



When at Stuttgart, Germany, during the winter 1881–82, I was suffering from a severe attack of Bronchitis, which seemed to threaten Pneumonia. I met, at the Hotel Marquardt, Commander Beardslee, of the United States Navy. In speaking of my sickness, he remarked: "Doctor, you can cure that chest trouble of yours by using an ALLCOCK'S POROUS PLASTER." "That may be true," I answered, "but where can I get the plaster?" "Anywhere in the civilized world, and surely here in Stuttgart. Whenever I have a cold, I always use one and find relief." I sent to the drug-store for the plaster, and it did all that my friend had promised. Ever since then I have used it whenever suffering from a cold, and I have many times prescribed it for patients.

The ALLCOCK'S PLASTER is the best to be had, and has saved many from severe illness, and undoubtedly, if used promptly, will save many valuable lives. Whenever one has a severe cold they should put on an ALLCOCK'S PLASTER as soon as possible. It should be placed across the chest, the upper margin just below the neck; some hot beef tea, or milk, will aid in the treatment.

This is not a patent remedy in the objectionable sense of that term, but a standard preparation of value. The government supplies for the U. S. Army and Indian Hospital stores contain ALLCOCK'S PLASTERS, and the medical profession throughout the world are well aware of their reliability and excellence.

I shall always recommend it, not only to break up colds, but as useful in allaying pains in the chest and in the back. It is a preparation worthy of general confidence.

W. Thornton Parker late A. A. Surgeon U.S. Army.

OUR readers scarcely need an introduction to the best food known for children and invalids, and for that matter for healthy people also, who desire in a food the acme of nutrition with the least possible tax on the digestive organs. We refer to the well-known IMPERIAL GRANUM, which has through a long experience of years justly earned its title of IMPERIAL, and we can truthfully assert that no preparation is so nicely and carefully prepared, or so liberally certified to as a food of unrivaled delicacy and superior nutritive and medicinal worth. The food of all others to be depended on for infants, from birth; for nursing mothers and children; for invalids and convalescents; and as an article of diet for the aged and for sufferers from impaired digestion. Through its use thousands of lives have been saved; thousands of healthy children bespeak it value. It is praised alike by the public, by physicians, and the press. It has stood the test of time, and has become a necessity in the household. Furthermore, we can cordially recommend it from our own knowledge of its good qualities, for we have used it with the most gratifying results.—*The Home Magazine, Washington, D. C., June, 1890.*

THROUGH THICK AND THIN.

In Eight Chapters. — Chapter VI.

Jack at West Point.

The summer encampment was formed soon after Jack reported at West Point, and then came his cadet life in earnest. Of the miseries of his days as a "plebe"—that is, a fourth-class man—he often laughed in after years, but at the time it was such real and acute wretchedness that he kept a full knowledge of it from his mother. Among other such exercises, he walked for weary hours with the palms of his hands turned outward, like a seal's flippers, a process that straightens and strengthens the forearm.

The "setting up of the plebes" by the upper classmen, whose duty it was to drill them, was tiresome in the extreme to the pleties. However, Jack did not falter for a moment in his resolution to work hard and finish his course creditably.

The first change for the better came when the camp was broken,—for during the summer the boys lived in tents,—and the regular recitations were in order.

Then the drills in the riding-hall began. Jack's eyes sparkled the first morning he marched with his section into the great riding-hall, laid with tanbark for the cavalry drill. The horses, led out by troopers, were all splendid specimens of cavalry chargers — clean-limbed, well-groomed, their eyes and ears alert.

The first class, having the choice of horses, naturally took the most spirited; but Jack, by great good luck as he fancied, found himself astride of a sorrel that looked as if he meant mischief. The officer in charge rode up to Jack, eyed the sorrel, and then said:

"That's a vicious brute. I thought he had been got rid of. I think, if you are not much accustomed to riding, I had better have your horse changed."

"Thank you, sir, but I learned to ride down in Virginia, where I live," answered Jack, quietly.

It took all of Jack's horsemanship, nevertheless, to stick to the sorrel. When the brute found that a few very lively jerks and charges did not unseat his rider, he appeared to become frantic with rage. He charged up and down the tanbark, biting, lunging and trying to rear.

Fortunately he had on a severe curb. Jack kept the horse's head down, at which the sorrel kicked furiously; but Jack sat like a centaur. He had not been used to breaking in colts for nothing.

At the end of ten minutes the sorrel had been conquered. His flanks were dripping, his neck covered with blood and foam from his mouth. When Jack dismounted, and a trooper led the sorrel off, the officer in charge of the drill rode up to him, and said, "You ought to be in the cavalry, Mr. Randolph."

Jack blushed with pleasure. His proficiency in riding gave him a sort of prestige—for there is nothing the cadets love so well as those of their number who excel in manly exercises.

At fencing, wrestling and boxing Jack did wonderfully well in a short time; but his standing in his classes was not so satisfactory. His desultory education was against him, and the great fund of miscellaneous information he had got out of the old-fashioned library at Marrowbone did not help him much with his sections and lgnatzthas.

His rank in his class was below the middle, and that was a keen mortification to him.

When his grandfather learned that Jack was not high up in his class, but, in fact, very low down, he was very angry, and wrote Jack an indignant and reproving letter.

Mrs. Randolph, more reasonable, wrote encouragingly, reminding her son that his education heretofore had been in the line of general information—without which a man might do great things but could never be an interesting or agreeable companion—and assuring him that there was ample time yet for him to retrieve himself.

The only thing to do, Jack perceived, was to work harder than ever, and although he felt convinced he would never be graduated high enough to go into the engineer corps, or ordnance corps, or perhaps the artillery, he consoled himself with the reflection that he preferred the cavalry. He also soothed his wounded vanity by thinking of the great soldiers, such as General Grant and Stonewall Jackson, who were graduated low at West Point, and yet immortalized themselves among the masters of the art of war.

Though Jack made many friends, he made none like his little, lean, shabby Tony. The cadets were jolly good fellows, but, fond of his classmates as he was, they never entered into his heart as the little fisher-boy had done.

"That's a vicious brute."

The presence of Edgar Mount did much to keep Tony in mind. To add to Jack's chagrin, Edgar was as far advanced in his classes as Jack was behind, and Jack's proficiency in physical exercises did not make up in his own mind for Edgar's superior marks. Sometimes as Jack watched Edgar's inscrutable face, he felt a decided resentment toward him; and often, as he lay at night in his tent during the summer encampment, he lived over that scene where Tony cut the rope at sea, and so nobly sacrificed himself.

When two summers and two winters had passed, and the day came on which Jack was steaming down the Hudson on his way to Virginia, wearing citizens' clothes for the first time in two years, it seemed scarcely more than six months since he had left home; and when, in the cool of the June evening, Uncle Josh, who had been sent to the wharf for him in the rickety old carriage, drove up to the door of the old house at Marrowbone, and there, standing on the steps, he saw his mother, with a pale, glorified face, and his grandfather, looking exactly as he had done two years before, Jack could scarcely persuade himself that he had been away at all.

Oh, the joy of that meeting! When Jack had been a boy of sixteen or seventeen, he had been anxious to be thought a man; but now that he was a young man of twenty, and for two long years had been treated as a man, he liked to go back to his boyhood, and be treated as if he were a boy again.

All the old servants were waiting to greet him, and Mam Betsy clasped him in her arms almost before his mother did.

"Bless de Lord!" she cried, fervently. "Here my chile done come back to me, a man, sho' 'nough. An' who teck keer o' you, honey, while you was away?"

"I took care of myself," answered Jack, smiling. "I even made up my own bed, and I can sweep and dust a room about as well as you can, old lady."

"Hi!" cried Mam Betsy, highly indignant. "You does' mean dem sojer folks at West P'int made one ob de quality, like de Randolphs, make de bed an' sweep de room?"

"They did, indeed, every blessed one of us."

Mam Betsy's astonishment was so great that she was speechless.

Uncle Josh showed a great deal of dignified delight at seeing Jack at home again.

"Did all dem officers up dyar ax arter me an' ole marse?" he inquired, anxiously.

"Some of them did," responded Jack, evasively.

"Law, I 'spect dey talkin' 'bout we all now!" chuckled Uncle Josh, highly delighted. "When me an' ole marse was stationed dyar, we sut'n'y was de haid of ev'ything. Ef any of de gineruls come, de superintendent he say, 'We mus' have Cun'l Randolph an' Josh; we can't make no show at all 'thouten dem two. Dat Josh, he done see mo' wars an' fightin' an' battles an' sich dan Ginerul Winfield Scott hisself.' Dat's what dey say in dem ole times, Marse Jack."

How sweet and homelike was the old place, and the old people and the old life to Jack! He felt a desire to hold on to his gay and careless boyhood as long as he could.

In the happy excitement of that first evening there was but little serious conversation, and that night, when, for the first time in two years, Jack lay down in his own bed in the familiar room, and his mother came and sat by him, he fell off into a happy sleep, with her hand in his.

Next morning the Colonel, sitting on the broad porch, questioned him to find out wherein Jack saw his mother, with a pale, glorified face, and had improved, in his character as well as his education. One of the first things he asked Jack was, "And what have you to say of Edgar Mount?"

"Nothing, sir, except that he is about twenty numbers ahead of me," answered Jack, with a slight flush.

"And why is that, sir?" growled his grandfather, bringing his bristling brows together.

"Because he had better opportunities, and possibly has more brains for mathematics than I," answered Jack, doggedly.

"I deny that he has more brains. Perhaps he has more industry, sir."

"I think not, grandfather. But you know I haven't much to do with Edgar Mount. I have not forgotten Tony Scaife. I never can, nor can I ever believe in Edgar Mount."

The old Colonel looked keenly at Jack. "Do you still remember Tony Scaife?"

"Yes, sir," answered Jack, "and I shall always remember him; nor can I ever forget Edgar Mount's behavior to him. When Tony threw off the rope, it was the very thing I should expect of such a brave fellow; but sometimes I have thought perhaps he was not hurt."

"You are very sanguine," remarked his grandfather, dryly.

The two months' furlough went by like a dream. Jack spent much of it drifting about the river in the *Undine*. Having the prudence and common sense of a man, the first thing he did was to put a reef in the sail; and instead of glorying in being upset, he did not get into the water once, while he was at home.

He went down to Lone Point often. The little cottage looked just as it used to—even the quiet little widow had not changed. She and Jack had long talks, and Jack found she still clung to the hope that some day Tony would return.

The Colonel's interest in Jack's West Point life was pathetic. Everything Jack told he would supplement by, "It was not so in my day," or, "We did things much better when I was a first-class man."

Almost before Jack knew it, the day for parting came. But this farewell was unlike that other one. Jack felt that he had found his place in life. His work was exactly what he wanted—an excellent thing for any young man. The life he returned to suited him, and this idle, happy Virginia life which he had once lived so carelessly and merrily, appeared to him in its true light—as a holiday time, a breathing spell.

The pain of parting was deep, and the emotion the Colonel tried gallantly to conceal was touching. He gave Jack his great, ponderous watch and seals. They were quite unfashionable, but Jack did not consider that when he thanked his grandfather earnestly, and promised that he would always wear them.

His mother parted from him with the beautiful fortitude that had often aroused his boyish soul to enthusiasm.

"Mother," said Jack, when he held her in his arms for that last good-by, and looking into her brave and tearless eyes, yet knew the struggle that went on in her tender heart, "I believe you are braver than any soldier in the world."

His mother kissed him for answer, and said with a smile, "A soldier's widow and a soldier's mother should be brave."

Jack's heart lingered in Virginia and in the old country-house all the way to West Point, until he went on board the steamer that was to take him up the river, and found all of his class on board. Then, for the first time, he began to feel the charm of his West Point life again. As they landed in the brilliant September morning, they formed a line as they mounted the cliff, and according to the time-honored custom, at the word an opposing line of first-class men rushed forward, and they embraced, kissed, hugged and pounded one another and rolled over, in the joy of meeting.

Jack was delighted to be once more at West Point. Edgar Mount, of course, came up with them. A few half-hearted whacks were all he got to show the good feeling of the first class toward him; and in a minute or two he was walking off, as quiet as ever, without the slightest indication that he had been engaged in a scrimmage whose roughness is in proportion to its friendship.

Jack, though, as one of the most popular men in his class, was swung between four stalwart first-class men, who dashed him about as if he were a bag of meal, while a fifth churn pounded him vigorously with his own handbag.

When the scrub was over, Jack looked like a ragamuffin; his citizen's clothes were tattered and

Digitized by Google

dirty, his hat smashed, and he himself nearly worn-out from the affectionate pounding he had received.

But in half an hour Jack had washed away the evidences of good-will bestowed upon him by the first class, and neat and trim in his spotless uniform, was once more the immaculate cadet.

The first two years had been long, but the last two were short. Edgar Mount maintained his lead, but Jack steadily advanced until he passed the middle of the class. Edgar had taken a higher stand in the beginning, but Jack had gained twice as many numbers; and then he was a cadet officer—a distinction which is won, not by class standing, but by soldierly and officer-like qualities, and which is highly prized.

Jack, the most good-natured fellow in the world when off duty, was a strict disciplinarian when he was on duty, and it was freely predicted that he would be captain of his company before graduation. Although pride and vanity, too, had much to do with Jack's desire to excel, as soon as he had proved himself capable of advancement in his classes, and his practical fitness as an officer had been proved by his splendid record as a cadet officer, he was no longer made unhappy by the feeling that others were ahead of him.

In his second year, he had become an officer of the cadet battalion; and in his fourth year, he was captain of his company.

At last, the day of graduation came.

Jack had begged his mother in his letters to come and see him graduated; and he had also ventured to hint to the Colonel that he, too, should come back to West Point for that one occasion.

Mrs. Randolph was eager to come, and wrote Jack that nothing could keep her from being present with him on that proud and happy day. But the Colonel said not a word about his coming, and Mrs. Randolph preserved equal silence on the subject.

On the afternoon before graduation, just as the parade was forming, a tall, straight, handsome old gentleman, and a lady young enough to be his daughter, and a venerable negro alighted from a carriage.

Without going to the hotel, they took their seats in the line of camp-chairs under the trees that face the parade. It was Colonel Randolph and Mrs. Randolph; and Uncle Josh was in attendance on "ole marse." The group was so unusual and picturesque that it attracted attention at once.

The Colonel seemed in a dream. His eyes rested on the beautiful scene—the broad plateau with the noble academy buildings, the vast and silent parade ground, the Hudson flowing in stately majesty, overlooked by the frowning masses of the purple mountains; while beyond the grand peak of the Storm King the sun of a perfect June day was sinking redly.

"I 'clar'," said Uncle Josh, confidentially, to Mrs. Randolph, "I done furgot all 'bout de war an' Marse Linkum makin' de black folks free. Seem like 'twas yistiddy when me an' ole marse was heah—ole marse a orficer an' me a gent'mun. Dem was good ole times!"

The Colonel was silent. A red flush burned in his wrinkled cheek, and he twisted his snowy moustache nervously. He seemed to have forgotten all about Jack in the flood of recollections that overcame him.

Presently, the sharp blare of the bugle rang out; and as if by magic, a line of white-trousered, gray-coated cadets formed in front of the great stone barrack buildings. Then the markers, bearing their guidons, and the color guard advanced across the plain. The band, playing an inspiring air, followed next, and then came the splendid cadet battalion, marching as one man, and forming the most beautiful parade in the world.

Mrs. Randolph's eye sought Jack among the cadet officers, wearing red silk sashes around their trim waists; and there he was, marching at the head of the first company, so straight, so soldierly, and so like his grandfather!

But the old Colonel fixed his eyes on the flag. There was stirring within him an old affection, that had long slept. As the color-bearer folded the flag around its staff, and laid it across the muskets stuck upright in the ground, Colonel Randolph's eyes, with this strange expression in them, remained fixed upon it.

Then came the splendid parade. As it proceeded, Mrs. Randolph's eyes turned from Jack to the Colonel. At last, the battalion standing as motionless as marble, the band played the retreat, and river and mountain gave back their echoes of the noble harmony.

Suddenly came the quick flash and thundering report of the sunset gun; and as the post flag at that moment slowly descended the staff, Colonel Randolph, with a new and tender reverence in his deep eyes, raised his trembling hand and lifted his hat to the colors.

"The first time since 1861," he said to his daughter-in-law, "but not the last time, please God."

At the very moment of the action, Jack suddenly caught sight of the two most dear to him. He saw the old man's tribute to the flag, and a flush of joy filled his heart.

He had learned to love the flag with his whole heart, and the feeling that the old love had come back to his grandfather gave him a thrill of joy.

In a moment or two more, the parade was dismissed; the cadets marched back to their quarters, and the cadet officers left the ranks.

In half a minute Jack, with his left arm around his mother, was grasping the Colonel's hand with his right hand. The old man could say nothing but "My dear boy! My dear boy!"

In a few minutes Edgar Mount, slim, handsome, elegant as ever, sauntered up. Mrs. Randolph greeted him politely, as did Colonel Randolph. The two young men nodded to each other with easy courtesy, and exchanged a few words, but it was evident that they were as far away as ever from being firm friends.

MOLLY ELLIOT SEAWELL.

A PAIR.

When two at a burden lift,
Each is twice as strong;
When two can together sing,
Blither is the song.

Good Housekeeping. —*Lou Valeria Wilson.*

For the Companion.

OUR SUMMER RESORT.

People who came to see us for the first time often told us our home was charming, and we always agreed with them in a modest way.

We lived in a large, old-fashioned house in one of the country streets of a thriving little town, and as father owned this house, and three acres of ground around it, we felt secure from encroachments. The town might grow up about us, but it could not steal our lawn, with its beautiful old shade-trees shutting off the road, nor our orchard and garden at the back of the house.

In old times the house had been a plain farm-house, but grandfather had built an "L," with six good-sized rooms and two garrets in it, and father had added two large bay-windows and a wide veranda, which, on one side, went squarely out like a room, the roof being supported on arches of white, rough-cast stone.

Here we sat in summer, except on very stormy days. We had hammocks in the corners, and little tables for our work and books, and plenty of chairs, and we liked it better than any room in the house. It looked into the orchard on one side, and across the town to the low hills on the other, for our house stood on rising ground.

I was very young when we first began to go away in summer. Kitty had been ill, and the doctor said she would grow strong much faster in sea air. After that we went away every summer, almost always choosing a sea-shore place.

I remember one time at Mrs. Frink's, down at the shore, mother came into our room—Kitty's and mine—just before the dinner-bell rang, looking sweet and cool in her pretty white wrapper, and said:

"O children, if we were only at home, I needn't put on that whaleboney gown to go to dinner!"

But we never thought of staying at home. Mother never would go until the annual roses had bloomed; but then we always started, and remained until the middle or the end of September.

We tried some new place every year, for Kitty and I thought this much better fun than always going to one place. Brother Jack did not care where we went, if he could have fishing and sailing, and all mother stipulated for was that it should be near enough to the city so that father might come to us every evening.

Kitty and I really were allowed to choose, and we used to do the prospecting, which mother disliked and we enjoyed.

We came to think it quite impossible that we could get through a summer without our outing, and this was partly, I am sure, because almost every one we knew did the same. Mother used to shake her head and say, "O girls, when I was young, and we put our own nice, roomy houses into summer rig, and then stayed in them, how much more comfortable we were! And how we enjoyed the little jaunts out of town of a day or two, or perhaps, once in the summer, a week or two! I like the old way best."

But we would try to persuade her that this was only because it was the old way.

One lovely evening in early June father came home looking tired and worried. After tea, when we all went out to the side veranda, I took Kit's arm and walked her off down the garden. I thought perhaps father would like to have a little talk with mother alone.

I guessed the thing out correctly, for when Kit and I sat down in the summer-house—it was a perfect bower of roses—I told her that I felt it in my bones that something had happened, and that father was worrying because he must tell us that we couldn't go away that summer.

Kit said she wished I would find a better use for my bones than imagining such unpleasant things. But, as I said, I was right. Father had lost some money—not enough to do any real harm, he said, if we lived a little more economically for a year.

It was mother who told us, following us down the garden, and leaving father in the veranda. Jack was with us.

When she had finished her story, mother added, "I know you all love father too much to add a feather's weight to his trouble, and now I want you to be cheerful givers; to make him feel that we love him, not for what he gives us, but for what he is."

She went back to him, and we sat and looked at each other for a minute. Then Kit and I got up, and turned to go back to the veranda; but Jack put one of his long arms round each of us, and drew us back upon the bench.

"Now see here," he said, "you're good little girls. Your chief fault, which you will outgrow, is your extreme youthfulness. Don't go and hug father, and weep on his neck. You mean well, but he will not really like it. Listen to wise counsel: just behave as if nothing had happened. Only, if you can do it without too much muscular exertion, be a little more cheerful than usual. That's all I mean to do."

We had been going to make a little scene, but we saw how foolish it would have been. We knew that Jack was disappointed in not going away. He had a quantity of new fishing tackle, and nearly all the things to make a canvas canoe. We promised to do as he said, if he would let us go.

We drooped a little after father was gone the next morning, and felt almost vexed to see mother so cheerful; but after breakfast, when we were comfortably settled on the veranda, with a pleasant breeze blowing and roses everywhere, we felt better, and were in quite an agreeable frame of mind for the suggestion she was going to make.

"You know, children," she said, with a twinkle of fun in her eyes, "you were very fond of 'pretending,' not such a great many years ago, and I have been thinking of a 'pretend' with which we might amuse ourselves for the next six weeks. We can pretend that we have come here to board!"

We looked somewhat aghast.

"You can take to-day for the prospecting day," she went on, "and this evening I shall ask you to describe the place to me. I wish you to do it, if you can, exactly as if you had never seen the house before; and then we will decide. After that I shall put the old frog-bank on the mantelpiece, and whoever makes a complaint or a disparaging remark about our new boarding-place must give the frog a cent. We will decide afterward what we shall do with the fines."

Kitty and I thought this would be fun, and at the moment it did not occur to us that mother had any idea beyond a little amusement to console us for our disappointment; but we saw deeper before we were done.

"What did you think of the place, Peggy?" said mother that evening, just after we had all sat down at the tea-table. For a second I did not know what she meant. Then I remembered.

"Oh," I said, thoroughly enjoying father's and Jack's bewildered faces, "it seemed so much what we wanted that I just engaged the rooms, subject to a veto from the higher powers."

"That was right. I can trust you. But I should like to hear just what it is like."

I thought for a minute, and then I began, trying, as mother had suggested, to see it from the outside.

"The house stands on a little hill, just outside or rather in the outskirts of a small town. There is a good deal of ground about it—an old orchard, and a nice big vegetable-garden, and an old-fashioned flower-garden, with quantities of roses, and a deep lawn with great trees cutting it off from the street. When you are once inside the gate, you might be miles and miles from anywhere."

"A charming rural retreat it must be," said Kitty. "But how about the house? Is it big or little?"

"It's a large house, but if we come they will not take any other boarders; so we shall have it quite to ourselves—unless we choose to ask people to visit us; we can do that, whenever we like."

"That is an unusual privilege in a boarding-house," said mother, with cheerful seriousness. "But about the town—is there anything unpleasant in it?"

I had never thought of this before, and I had to consider a minute before I answered.

"No, I don't think there is; there are some narrow streets, of course, but even the small houses look neat and comfortable, with little yards and gardens. There are two or three lumber-yards and sawmills, I believe,—oh! and a box-factory,—but no disagreeable manufactures."

"I suppose there is a river, then?" said mother.

"Yes, a beautiful little river; it does not run very near the house—I think it must be a mile away—but it looks lovely from the veranda."

"Any fishing, should you think, Peg?" asked Jack, with an amiable grin. I saw he had penetrated the mystery. Father had, too, but he did not say anything as yet.

"Yes, I believe there is, and boating, too; I saw a number of little boats, and one or two canoes on the river," I answered. "I should think there might be shooting, too; I believe there are marshes three or four miles down-stream."

"You spoke of a veranda," said mother. "I am glad there is one. Is it a good large one?"

"Unusually large; a nice wide ordinary one, part of the way, but on one side a great square room with a low wall and arches, and there are hammocks and easy-chairs and little tables. It is really charming! Then there is a summer-house, perfectly smothered with roses, and all sorts of shady little corners about among the trees and bushes."

I was warming to my work; it seemed to me that I had never really seen the place before.

Mother asked, in a doubtful tone of voice, "Is the house too much shaded for health, do you think?"

"Not at all!" I answered almost indignantly; "the trees are far enough off to let the air circulate freely about it."

"That's good," said mother. "Now, about the rooms; what are they like?"

"They are delightful!" I replied, enthusiastically. "A large one on the second floor, with a good-sized dressing-room for you and father; one nearly as large, across the entry, for Kit, and two charming third floor rooms, very large ones, for Jack and me—you know Jack doesn't mind stairs, and I have a preference for high places. I think it comes of climbing the apple-trees so much in the days of my youth!

"Oh, I forgot! there is a bath-room on each of the two floors, and a nice little bath-room, with hot and cold water, in a corner of the lower hall—out of sight, but very handy."

"Did you notice whether or not the beds were good?" asked mother.

"Yes, mother; they are excellent, nice mattresses on wire-woven frames, with fat pillows, and pretty white spreads, and fine, soft blankets—quite different from any we've had in any boarding-house."

"And you and Kitty need not share the same room this summer?" pursued mother. "I am glad of that, for I know you do not enjoy it, either of you. I have only one more question to ask. What did the proprietor say you must pay for these unusually pleasant quarters?"

Father looked at us, smiling. I don't know what came over me. I felt like choking, but I tried to laugh.

"He said the pleasure of our society would be all the compensation he could think of taking!" I said, and then, before we knew we were going to do it, Kitty and I had "fallen on his neck," and Jack, the superior, was shaking hands with him, with ridiculous violence; and father hugged us all, and said nice things, and mother sat and beamed.

That was the way in which the season opened for us; and although, of course, we did not continue at quite such a pitch of enthusiasm, there was enough left to last all summer.

Mother kept drawing little contrasts, as she found nice chances—she never forced them—between our present boarding-house and the various ones we had visited. And then, we took little trips away—there were plenty of early trains, and places that were nice for basket-picnics.

Several of our friends stayed at home that summer, so that we could always pick up three or four girls and boys to join us. Father and mother went with us several times, and enjoyed it greatly.

As for Jack, he was charming. He went with us whenever he could, and we always tried to go where there was fishing. He helped mother with her flowers in the long, light evenings, and coaxed father off for walks; and two or three times I caught him with his head in at the kitchen window, telling Hepsy how good her puddings and things had been that day, while she told him to "go 'long!"

Now, of course, I am not so foolish as to think that every one has a home like ours—I only wish every one had!—but I think the "moral" would work in any home. So would the frog-bank, or one of those nice little earthenware jugs with a slit in it, that we used to buy when we were children.

By the way, perhaps you would like to hear how much we found in the frog-bank, when we opened it at the end of the season?

Just three cents!

MARGARET VANDEGRIFT.

For the Companion.

THE CAPTAIN OF THE "KITTIEWINK."

In Seven Chapters.—Chapter II.

The Yacht-Race.

Phineas Scrod was a patient sailing-master. Every day for two weeks the *Kittiewink* sailed out to put the boys in practice; every night she returned to Marblehead Harbor. Every day the postal-card, "All safe and awfully jolly," went to Sweet Fern.

This was very uneventful yachting. The monotony of that fortnight was broken by only one exciting incident. Hal and Non furled up Trot in the main-sail one evening, and hunted for him until midnight. Trot, as if thinking that this was the way people go to bed on board a yacht, preserved a heroic silence while his master was searching the harbor and the town for the half-stifled dog.

The boys had begun to tire of all this when matters took a sudden turn, and something happened. In fact, a good deal more happened than they bargained for.

Gopher Gresham, otherwise known as Go Gresham, whose father owned the fast forty-footer *Chimpanzee*, was a member of the Neptune Yacht Club of Marblehead, and had come down for the season. Naturally he had hunted out our two young tars, and in a moment of extreme condescension had proposed their names for membership in his club.

To the ecstasy of the boys, who, by this time, knew the difference between the main-sheet and a dish-towel, they were elected. Their fathers felt no such elation when there was duly forwarded to each a pink bill for fifteen dollars, including initiation fee and annual dues; but the pink bill was counted in as part of the unavoidable luxury of running a boat, and was paid with suppressed murmurs. Mr. Maynot and the Doctor reflected that yachting is the most expensive kind of enjoyment in the world.

It was without Phin's knowledge that Hal and Non joined the Neptune Yacht Club, and one fine morning hoisted at the masthead the signal of the club, designed to represent a red trident vainly trying to fly from a blue to a white background.

One Friday, when Hal and Non were sitting in the cockpit, while the skipper was busy washing the morning's dishes with salt water forward of the mast, Hal whispered to Non, pointing toward the skipper.

"How shall we tell him?" he said.

"He'll have to do it, if we tell him to," replied Non, his breast swelling with a nautical importance never felt when Phin gave an order.

Digitized by Google

"I've seen plenty of races. I could manage her. It's easy enough," urged Hal. As he had witnessed only two races off the Neck, which the *Kittiewink* had followed at a respectful distance, Non regarded him doubtfully.

There was a silence. The boys racked their brains. How should they tell the skipper that they had entered the *Kittiewink* in the yacht-race to be sailed the next day, and how persuade him to look favorably upon the plan?

Phin was happy that morning, and sang as he worked:

Oh, Jack, me b'y, is a sailor free,
An' his ship plows through the white-capped sea.
Oh, Molly, his wife, is a pink-cheeked lass,
An' she stays ter hum an' makes apple-sass.

It was a favorable moment, and Non blurted out, point-blank:

"Phin, we've entered the *Kittiewink* in the race to-morrow at three, and you'll help us, won't you?"

Phin made no answer. In fact, he acted as if he did not hear. He hummed a while softly to himself. Neither of the boys dared to interrupt his meditations.

The skipper's voice broke out again boisterously. This time:

One day, in a voice that his shipmates froze,
"Heave her to," says Jack, "fur thar she blows!"
But the whale that blew made an end of Jack,
For with the fluke o' its tail it fotched him a crack.

This verse was not so encouraging, but Hal persisted:

"Say, Phin, didn't you hear? We are going to race to-morrow at three."

The skipper smiled scornfully, and without deigning a reply, finished his ballad:

Oh, Jack, me b'y, was gobbled at sea
By the fish he was going to stickeree.
Oh, Molly, his wife, grew pale at the gills,
And was carried away by fever an' chills.

There was a moment of suspense appropriate to the tragedy. Then the skipper said:

"Do you fellers think that you can out-foot the *Choctaw*, or out-p'int the *Gadfly*, or beat the *Spook*? Can a vessel built to fish in run with one of them racin'-machines, all wings and no hull?"

"But can't we start with them and try?" asked Non, faintly.

"I'll send Trot after him," suggested Hal, in a whisper. "He's fond of Trot."

Hal pushed the terrier forward. Trot ran up to the sailing-master, and kissed him persuasively on his left ear. Phineas patted the dog. His face relaxed.

"I dunno but you can. There aint no law agin it, if your boat is really entered for the monkey-shines. But which of ye two is cap'n? Don't a member have to handle her in the Neptune races?"

This was a poser. Thus, indeed, ran the rule of the Neptune Club: "The wheel or tiller of each yacht shall be held only by members of the club throughout the race." How could a boy who had only been at sea two weeks expect to handle a boat in a race?

Besides, who *was* the captain of the *Kittiewink*? Phin was the sailing-master—the paid man. The boat was without a "captain."

"Let's draw straws, and let the longest be captain."

Non was always ready to solve every problem in life by the easiest chances.

"Draw oilskins!" snorted Phineas. "The feller that kin pick out the top'n-lift is cap'n."

The boys looked at each other in consternation, and retreated from the subject. What new thing was this? Where did it belong? They glanced around and aloft in bewilderment. Non examined each halyard and sheet, each spar and sail lazily, but Hal went below.

Phin chuckled. He believed he had outwitted the boys. He felt sure that there would be no race for the *Kittiewink*.

After a few minutes Hal came up the companion-way, and with an unconcerned air approached the rope that holds the end of the long boom to the main-masthead and prevents the main-boom from dropping on deck. He said, quietly:

"I guess I'll be captain then. Here it is!"

"Wal, I'll be split and salted!" said Phineas.

It was not until after the race that Captain Harry could be induced to tell that he had pored studiously over the "Yachtsman's Guide" until he had found Phin's test of seamanship, and had committed its position to memory.

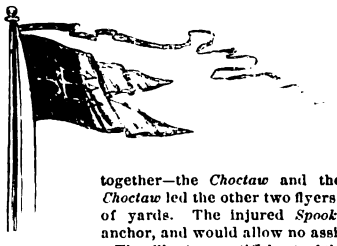
So it was decided that the *Kittiewink* should start in the Neptune race. She was to enter the lists against the flyers of the coast, with their pot-leaded bottoms, their smooth sides, their sharp prows, their spinnakers and balloon-jibs and club-topsails, and many other sails not useful except for this kind of play.

Marblehead laughed at the two mad boys and their uncouth boat.

Next morning Phin Scrod appeared with two rough old sea dogs—friends of his, fishermen off a vessel just in. One of them was an old dory-mate of Phin's in his fishing days. This man's name was Black Tarr. Phineas said he "wa'n't a-goin' to race without no talent aboard." Phin, after all, now he was "in for it," had taken quite an interest in this maiden race of the *Kittiewink*.

The fishermen made themselves much at home on the little craft, and drank up the lemonade composedly. "What's the odds?" said Hal. He was greatly excited, and would have offered them anything on the boat without a murmur.

The first gun had been fired from the bluff on Marblehead Neck. In five minutes the first class were to cross the imaginary line. Half-Way Rock was the first turning-point.



Captain Harry was at the helm. He had practised all the morning, and Phin, sitting next him, put his brawny hand from time to time over Hal's thin fingers to steer a finer course.

The yachts of the first class zigzagged here and there picturesquely. As far as sails went, all the contending boats were evenly matched. Some had started out with huge club-topsails, but a preliminary "spin" outside decided their masters that the "sky-scrapers" should come down.

The wind was pretty high. It had freshened since noon. The yachts now carried only what are called the working sails, the main-sail and head-sails. The breeze was unsteady.

"It mought back an' blow a snorter," said Black Tarr.

Clouds scudded in different directions overhead. The white yachts careened far over as puffs of wind struck their sails.

What a manœuvring there was for a good position, in order to cross the line between the stake-boats promptly at the second fire! What a calculation of seconds!

The *Kittiewink* was awkward but stanch, and it was decided she should be content to cross the line last. Phin had studied the circular, and knew every inch of the course.

The *Kittiewink* had another advantage, besides being stiff and not oversparred; she was manned by three practical sailors, ready for any emergency. Our two very young heroes did not count. But no one told them so.

A hundred glasses were levelled from the shore at the audacious fishing-boat that dared to compete with the *Spook*, the *Choctaw*, the *Gadfly* and the *Griffin*, the noted flyers of the coast.

"If it freshens up and holds, she may do them up yet," said one expert to another, pointing out the uncouth *Kittiewink* from the balcony of the Neptune Club.

Boom!

"Whew! We're off! There's the gun! Oh, what shall I do?" Harry gasped, as he heard the report and saw the white *Spook* bear away first over the line.

"Now keep cool, sonny!" Phin spoke cheeringly. "Follow them stiddy! That's good. Keep her even. Stand ready to haul on those sheets there, when we pass the line. So; that's good. Make fast! Don't cramp her! Let her go easy. There we are. Now after them! She'll do!"

The *Kittiewink* crossed the line gallantly, the last of the fleet of five; but the knowing ones noticed that she stood up to the wind, shipped no water over her lee rail, and scudded along as well as the rest.

The wind was blowing fiercely from the westward, and was heading them off continually with increasing violence. The four white-winged yachts were ahead, tossing badly and making straight for the first mark.

The three sailors on the *Kittiewink* held a consultation. It was decided to haul in the sheets, and run to the westward as close into the teeth of the wind as possible, so that, as it shifted, they could make their course with it, and so possibly get to the first goal without tacking.

Hal knew as little about steering by the wind as by the compass. What was to be done? For the owner must steer.

"Make for Baker's Island," said Phineas Scrod, "keep her steady and you'll manage."

At this moment a tremendous gust struck the *Kittiewink*. The fishing-boat careened far over on her side, and might have shipped some water in her cockpit had not Phin given the wheel a quick turn that sent her into the wind. There was a smash of crockery below, and a squeaking for which only Trot could have been responsible.

A sheet of spray struck Hal in the face, and made him gasp for breath. He turned away while Phin grasped the wheel with both hands. Non clung to the main-sheet, expecting to be washed by the board any minute.

"Look!" cried Hal, as soon as he could open his eyes. "Look there!"

The gust had passed on, and the leading white yacht, which had been staggering under the burden of the increasing wind on her enormous sails, was smitten suddenly. Over she went!

It was only the lead on her keel that saved her. The mast of the famous yacht snapped at the deck. Her spotless canvas, her rigging and bowsprit crashed together, and were carried into the sea.

"She's dismantled, but she's safe!" cried Phin. "Here, get into the cockpit, my little Cap'n—you too, Non. There's got to be a man at the wheel, now. I'll carry the *Kittiewink* through. This is the first an' the last race, an' we'll give it to her. The rest of 'em that are after the *Spook* 'll bear a hand. Ease the sheets, a bit! She'll be stiddier. That's good!"

Skipper Scrod, clad in his yellow oilskins, sat at the wheel looking grimly, now at the coming storm, and now at the sails and rigging.

The boys glanced at their sailing-master and felt safe; and the race was not lost yet.

It was as the knowing fishermen had predicted. "I knowed it 'ud fotch 'round," said Black Tarr, triumphantly. As the wind freshened, it headed them off. They were now steering a straight course for the first mark; but the other three yachts had not calculated upon so sudden a turn, and were forced to make a tack to fetch the Rock on their starboard.

How the *Kittiewink* flew! Two boats were now nearing the Rock together—the *Choctaw* and the *Kittiewink*. The *Choctaw* led the other two flyers by some hundreds of yards. The injured *Spook* had dropped an anchor, and would allow no assistance.

The *Choctaw*, a stiff boat of the racing kind, was a few hundred feet ahead of the *Kittiewink* to leeward, and bearing down upon the rocky island. Half her keel showed gray as she bent far over to the blast.

Phineas eyed his antagonist darkly. This was his day for victory, or it would never come again. With the wind only in the luff of the sail, the sword-fisherman plowed stolidly after the high-spirited racer.

"She's gaining!" yelled Hal, in a wild excitement of distress.

"Keep still!" growled Phin, as another blast flattened the *Choctaw* over until her boom swished in the waves.

"Down with the stays'l!" roared the skipper. Relieved by shortened canvas, the *Kittiewink* began to crawl upon her white rival.

Yachtsmen often make the mistake of keeping too much sail spread too long. It was evident that the *Choctaw* was staggering under her load of sail, and thereby losing ground.

She dared not stop to reef; she could not, in that blow. She was cramped, and in fact almost dead. If she gave way, she must make another "hitch;" while the *Kittiewink*, with small main-sail, and her diminutive "jumbo," was riding the waves freely, and still forging ahead without shipping a drop over her lee.

But now the two were abreast of the Rock. The *Kittiewink* had closed upon her rival, and in order to do so had come up under her lee.

The high waves dashed angrily up the gray cliff, and washed back again in white spray. The wind had grown to a gale. Nearest to the Rock rode the *Kittiewink*. The *Choctaw* had an outside position, a few feet ahead.

The two boats rose and fell together with the same swell; but the *Choctaw* staggered and rose heavily. Her main-sail, almost a half too large, handicapped her.

When she turned on the next "leg" of the triangular course, she could easily beat her clumsy rival running before the wind. Ah! There was a chance for her full main-sail!

Eager to seize every opportunity and to "blanket" the *Kittiewink*—that is to say, to cut off the wind from her sails—the *Choctaw* steered near the Rock. She left too little space for the *Kittiewink* to pass without running ashore.

"Avast there!" bellowed Scrod. "Keep away there, or I'll tack, an' cut ye in two!"

A boat under pressure of wind and sail cannot come to a sudden halt, and turn about like a horse and buggy. The situation had suddenly become critical and then dangerous.

The Rock was not fifty feet away, and abreast of the *Kittiewink*. The *Choctaw*, the waves, and the gale were forcing her upon it. But Phineas Scrod had not lost himself. Even his quid had not changed cheek.

The boys were scared dumb, but not Trot—he, poor dog, was shut up in the cabin, and barked and wailed madly.

The eyes of the two fishermen blazed, but they preserved the stolidity of their race, and trusted the man at the helm.

"Hard-a-lee!" roared Phineas.

He turned his wheel in the nick of time. The *Kittiewink* spun about like a troubled top. By the usage of the sea, whose laws the *Choctaw* had violated by forcing their rival into this predicament, she had to tack also, or be run down.

There was hardly room enough for the *Kittiewink* to pass astern. There was an instant of confusion on board the white cutter. But the boat, cramped under too much sail, and with little headway, refused to come about.

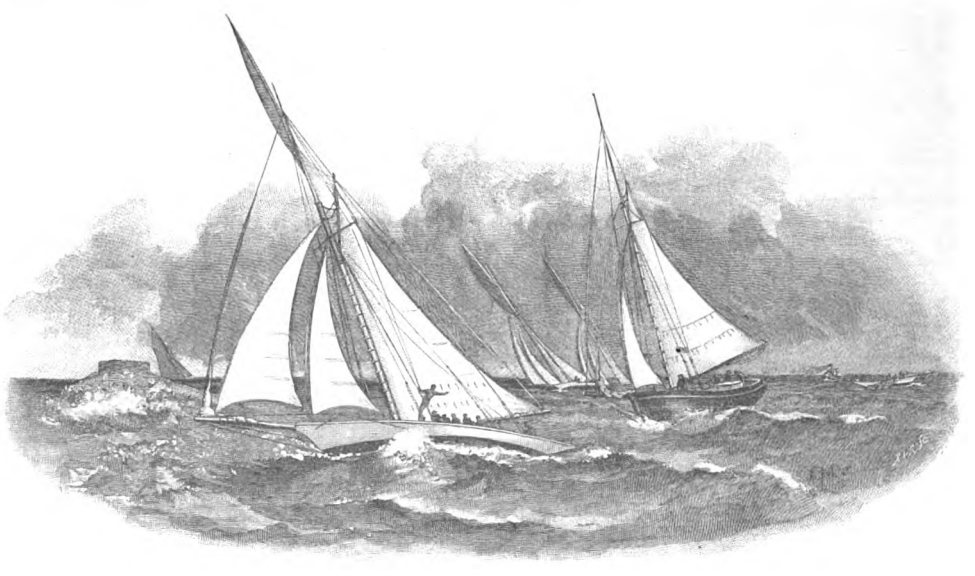
"Out with that main-sheet! Ease the jib! Way off!" shrieked Skipper Scrod, when he saw the *Choctaw* was unmanageable.

The *Kittiewink* turned square about, and retraced her course, barely passing behind her tossing rival.

"She's in irons," said Black Tarr. "I wouldn't like to be thar."

"She's a goner on them rocks. She'll be match-wood in two jiffies," said the other fisherman.

"She won't nuther," shouted Phin, through the bellowing wind, "we'll save her!"



At this moment, there came a terrible cry from the *Choctaw*: "Man overboard!"

Demoralization had taken possession of the crew of the *Choctaw*. A frantic object was seen struggling in the water. Could that be a man's head—a drowning man? How small it looked!

Hal shivered with terror. For an instant he turned away his eyes. The white yacht, meanwhile, was drifting rapidly on the breakers.

HERBERT D. WARD.

(To be continued.)

"Hard-a-lee!" roared Phineas.

For the Companion.

ALPINE VILLAGE LIFE.

The mode of life of the peasants in the higher and more remote regions of the Alps has remained unchanged for centuries. Far away from cities, railroads and modern travellers, the mountain peasant lives as his ancestors did many generations ago, and one is likely to find him living in the house where his great-grandfather was born.

The house is a large, unpainted, two-story structure, built of square pine logs, with the ends projecting at the corners, and sometimes carved into pretty shapes. The building is full of little, long windows, filled with flowers, and the roof is made of large clapboards fastened in place with poles and stones.

I recall such a house, one of a hundred forming the little village of Obstalden on the high bench of a mountain slope above the Wallen See—the most enchanting little lake, I think, in Switzerland. This body of water is seventeen miles long and two or three miles wide. It is clear as crystal, five hundred feet deep, and closed in by a nearly perpendicular wall of rocks two thousand feet high.

Back of the lake a little distance are ridges and peaks nine thousand feet above sea-level, with white glaciers and beautiful water-falls.

I spent three summer vacations in Obstalden, and aside from a few friends whom I took there, I never saw an English or an American tourist in the place. Like many another remote village of the Alps, the great outside world never heard of Obstalden.

The first and pleasantest recollection one has of the village, after the wonderful scenery, is the perfect simplicity of the people, and the familiar greeting of the stranger that comes from every lip. Every one seems to know him; every one speaks to him as to a friend. One seems to have been there a long time, and to have known the people well.

It seems hard to call the hundred houses scattered around on the green slope a town. The grass grows everywhere, quite up to the doorsteps. There is no other street in the place, except the white, well-paved post road that goes by, not through, the village.

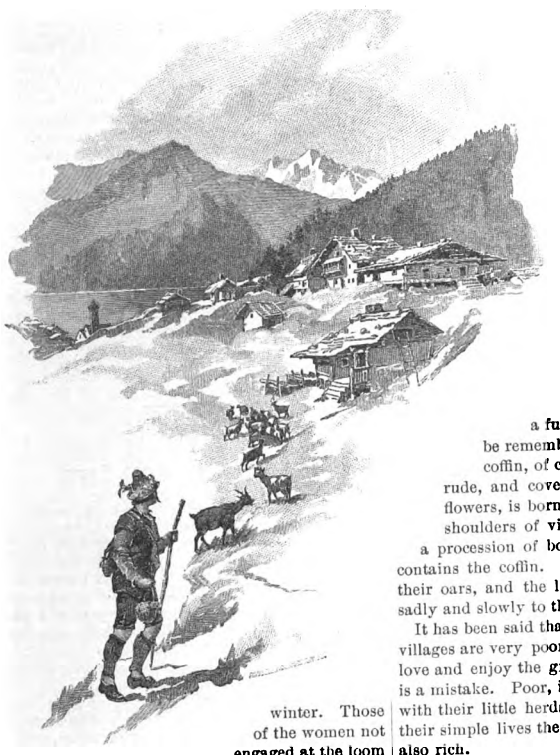
Little stony goat-paths lead up to and around the houses, and there is hardly a fence to be seen in the place.

But it is a town. There is the little stone church with the white steeple and the big-faced clock outside, and the stone floors and the plain wooden benches within. There, on the south end of the church, is painted, in great letters and figures, the big sun-dial, used long before the village had a clock.

Behind the little stone church is the village burial-ground; and near by the old, old schoolhouse, and the happy children, and the village pastor, also their teacher.

How old and long and thin the pastor looks! It is little to him that he is very poor; most village pastors are. But his religion is very rich, and his heart very great; great enough to contain the joys and the woes of every man, woman and child in the village. Where lives the millionnaire so great or so rich as that?

I have said that the big brown houses are scattered about over the sloping meadow. Each is large enough for two or three families; and owing to the absolute want of dust and dirt on this green slope, every house is as clean as fancy could wish.



They are in a sense comfortable enough, but they are sparsely furnished. Rude benches often take the place of chairs. There are no carpets on the floor, few pictures on the wall, and little of the luxury known to the homes of many American farmers.

In almost every peasant's house stands an old-fashioned wooden silk loom. It occupies the best corner of the best room. It is of more importance than the piano or organ of the American home, for with it is earned a great part of the living of the family. Silk cloth is woven for the great exporters

Digitized by Google

at Zurich, and the women are satisfied to earn thirty to forty cents a day, weaving from dawn till evening twilight.

While the women are weaving the men cut grass and wood, cultivate a few potatoes, look after their little dairies, and prepare for the winter. Those of the women not engaged at the loom help the men out of doors. Goat cheese is made here in abundance. It is an interesting sight to see the village goat-herd, usually a young man, start off every morning, driving all the goats of the village to the grass on higher mountain slopes.

His is a strange existence; he is alone all the long summer day with his goats, the sunshine and the mountains.

Evening twilight sees him at the head of his flock, winding his way down to the village. A great wreath of pink Alpine roses is twined about his hat; sometimes another rose-wreath is slung over his shoulders. He sings the Alpine *Kuhreihen*, a hundred times more melodious for being echoed by its native Alps.

Sometimes with a rude flute he leads the herd, and like another Orpheus, seems almost to charm the rocks and trees with his music. The long line of goats follows him gladly down to the group of stalls called "the village of the goats."

The goat village consists of scores of little low, covered pens, lined with forest leaves, and as snug as can be. It is noticeable how every goat knows its own stall among the hundreds, and promptly enters it. "It's a poor foolish goat," says the herdsman, "that does not know its own milking-place."

The only enemy of these peace-loving herds is the mountain bear, which sometimes comes down in the night and robs the goat-hut as a fox would rob a hen-roost.

When the winter comes, all the goats are, with their increase, returned to their owners in the village, to be kept till the grass is green again in the spring.

The cheese, like the woven silk, is all sent to the cities; and a large part of both are exported to the United States.

It is interesting to know that a large part of the raw silk used by these Alpine peasants in their weaving comes from far-off China, traversing our continent by the Pacific railways, crossing the Atlantic to London or Havre, and at last finding its way up into the Alps to be woven, and returned to us in silk dresses.

It is little wonder that silk is too dear for these weavers in the Alps to wear. Probably not one of them ever owned a silk dress in her life; but they are content without it, and prefer, a hundred times over, the picturesque village costume they wear on all festal occasions.

Aside from the flowers in the windows, the beautiful silk on the weaver's loom is likely to be the only attractive thing in her room.

One thing always to be found in a Swiss home, and in almost every room, is a great cylinder-shaped column of white porcelain. It is seven feet high, and, cold as it looks in its whiteness, it is the family stove.

In the Alps the form of the stove varies. The huge pile of porcelain may be cube-shaped, painted green, and mounted on feet.

Sometimes tiny steps lead to the top of this peculiar stove, where a curtain is hung so as to form a little warm room, perhaps six feet square. In this the children go to dress on very cold mornings.

The food of the peasants in these Alpine towns is extremely simple. They have coffee and bread for breakfast; soup and bread, and sometimes a little meat, with potatoes, for dinner, and a supper as simple as the breakfast. Good milk is abundant, but the butter and cheese are oftener sold than put on the table.

Obstalden has a queer neighbor, sitting away up on the mountain-side above the opposite bank of the lake. It is the village of Amden. Fifteen hundred people are nestled away up there, as if in an eagle's home, two thousand feet and more above the blue waters of the lake.

The village is inaccessible on the lake side except by two miles of rude stone steps, zigzagged up the face of the mountain. Every article of any kind from the outside world used by the villagers is carried up these steps on the backs of peasants.

For some reason the villagers at Amden bury their dead on the Obstalden side of the lake, and a funeral is one of the things to be remembered by the stranger. The coffin, of cheap boards and extremely rude, and covered with a black pall and flowers, is borne down to the lake on the shoulders of villagers. At the lake's edge a procession of boats is formed, one of which contains the coffin. At a signal the rowers dip their oars, and the little mourning fleet moves sadly and slowly to the other shore.

It has been said that the people of these Alpine villages are very poor—too poor and ignorant to love and enjoy the grand scenes about them. It is a mistake. Poor, in a sense, they are; but if, with their little herds, their green meadows and their simple lives they are content, then are they also rich.

The Alpine peasant loves the mountains about him, and more than one lone wanderer from the Alps to foreign lands has been known to die of heartache, longing for the scenes of his childhood.

S. H. M. Byers.

TIDE ROCK.

At flood a gleaming foam-wreath white as wool:
At ebb a shapeless blackened mass it lies.
So lives seen fair when hope is at the full,
Show all unclean when aspiration dies.

Oscar Fay Adams.

CUBA AND ITS RESOURCES.

The beautiful island of Cuba, lying off our Florida coast and resting under the stern dominion of Spain, has been an object of deep interest to the United States for many years. One reason for this lies in the fact of its proximity to our continent, and its distance from the power which rules it. Another is to be found in the extraordinary richness and variety of the natural resources of the island.

For Cuba has been well named "the garden of the West Indies." Its soil and climate are capable of yielding an almost unlimited range of agricultural products.

Not only does it grow the best tobacco in the world; a yet more valuable product is the Cuban sugar. Coffee, corn, rice and cotton can be profitably raised from it. The forests of Cuba are rich in mahogany, rosewood, ebony and cedar.

The fruits which are grown on the island are as various and luscious as those yielded by the fertile plains of Southern California. They include oranges and lemons, pineapples and bananas, figs and bread-fruit, pomegranates, cocoanuts, mangoes and guava, and others less familiar to us.

Within the past ten years, moreover, an important iron-mining industry has been developed near Santiago, as a result of which it is stated that iron ore to the value of a million and a half of dollars will be exported thence to the United States in 1891. In return, the Cubans will receive American coal.

But this island, so bountifully gifted by nature, has never yielded to the world the amount of products which it is capable of giving. It is the least developed country in our hemisphere, Brazil alone excepted. It has now fifteen hundred sugar plantations, but is capable of providing ten times that number, and the same may be said of the possible increase of tobacco, coffee and cotton plantations.

While the working-people, white, negro and Chinese, are generally peaceable and fairly industrious, it remains true that Cuba is not cultivated to anything like the extent that is possible.

The selfishness of Spanish domination, and the consequent bad economic condition of the island, are the main causes why Cuba remains to so large a degree undeveloped. The sugar-planters are stated to be poor, unable to make their product valuable, and equally unable to procure skilled labor.

Cuba is politically subject to Spain; but its geographical and commercial interests lie with the United States. Cuba needs the machinery and supplies which the United States could give it; but the economic relations between the island and the continent have hitherto prevented Cuba from receiving them.

These relations are to some degree shown by the value of the exchanges of products which take place between the two countries. The reports show that, in 1889, while we received from Cuba articles to the value of fifty-two millions of dollars, we only sent to Cuba articles to the value of about eleven and a half millions.

On the other hand, in 1888, Great Britain received from Cuba and Porto Rico goods only valued at a million and a half dollars, while of her manufactures and other goods she sent to them articles reaching a value of about twelve millions.

Negotiations have lately taken place between the United States and Spain, which have resulted in a reciprocity treaty which is expected to result in a much freer interchange of products than has been made heretofore. That is, Cuba will probably buy more American goods, which will be admitted to the island at lower rates of duty.

A secondary result of the treaty will probably be to introduce American capital and enterprise into the island.

The ultimate destination of Cuba is perhaps to a political as well as commercial union with our republic. Meanwhile, reciprocity of trade will doubtless be of large mutual benefit.

NIGHT.

The day is done: the tired land looks for night:
She prays to the night to keep
In peace her nerves of delight:
While silver mist upstealeth silently,
And the broad, cloud-driving moon in the clear sky
Lifts o'er the firs her shining shield,
And in her tranquil light
Sleep falls on forest and field.
See! sleep hath fallen: the trees are asleep:
The night is come. The land is wrapt in sleep.

—*Robert Bridges.*

POLITICAL CLUBS.

A very striking feature of political history in the last few years has been the organization of permanent political clubs by the opposing parties. Political clubs formed by voters in the electoral canvass are nothing new in United States politics. Such organizations have existed in some form ever since the foundation of the government.

The "campaign club," as it is now familiar to us, with its parades and public meetings shortly before election, really came into existence in the campaign of 1840, when William Henry Harrison was elected President.

That was the famous "log-cabin and hard-cider campaign," and the public demonstrations by mass-meetings and torch-light processions which have since distinguished all of our presidential elections then for the first time became a national institution. This helped the Whig party to win the election, and the plan has been followed, with varying enthusiasm, in every election since that time.

All of these, however, were clubs for "campaign time" alone. There is routine work to be done, of course, in the interval between elections, because the great political organizations must always be kept in working order.

But this is a matter of committee work rather than club work. In each country town or city ward the voters of a party, meeting at its political "primaries," choose their representatives in the county committee, which has the general management of county politics; and the members of the various district, State and national committees are elected by conventions called to elect delegates or to nominate candidates.

There is thus ample provision for routine political work at all times.

But within the last few years there have come into existence, all over the country, political clubs which, without any direct connection with or responsibility to the regular party organization, are at work all the time, devoting their labors between electoral canvasses to the discussion of the principles of the parties to which they belong, and the distribution among other voters of documents and general information, instructing the people in the real nature of the political situation.

Of course, in election time these clubs do the same work as the older political clubs, but usually through the formation from their own numbers of campaign clubs under a somewhat different organization.

The rise of these political clubs really began seven years ago, when "reform clubs," based somewhat upon the plan pursued in England, where they have long been an institution, played an important part in politics.

The clubs of this kind, organized by one party, were promptly duplicated by the opposing party. The movement has now become so general, that the annual convention of the League of clubs in the party, attended by delegates from all the clubs of the nation, is one of the most important of party incidents.

In the recent gathering of Republican clubs at Cincinnati, it was stated that there were present representatives from ten thousand clubs, and that practically all the States of the Union were represented. These delegates organize as a League, and elect their president and executive committee.

The movement is useful and valuable, whatever the party may be to which the clubs belong. It is an effort to make the voters of the country familiar with the great principles which divide the parties, so that at elections they can vote intelligently and not be governed merely by party prejudice. So useful has the work already been found that it will undoubtedly extend, and become an element more important than ever in future political contests.

RETURNING TO DUTY.

The daily papers of one of our seaport towns lately contained the story of an English boy's adventures in which *The Companion* itself bore a part, and in which its boy-readers may find an especial significance.

George B—— was the son of a respectable mechanic in an English village. His elder brothers each had a trade, and were contented and happy in their home. His father succeeded in placing George in a large business house, where he was to remain on trial for a few months before he was received permanently.

But in the first month he made several mistakes, and was severely rebuked. He became discontented and miserable. Why, he reasoned, should he give up his life to this wretched hack-work, when the world, full of adventure and triumphs, waited outside?

He reasoned as thousands of boys reason when tired of their monotonous work in school or in shops and offices. Why become a drudge? It would require years of study to master his business. Why stay in this jail of an office when in the great West men could win sudden victories in fortune or high social and political rank, with no especial knowledge or skill or industry?

He had saved a sum sufficient to pay his passage to America. He ran away from home to Liverpool, and crossed the sea in the steerage of a steamer, arriving in this country without a penny. He was examined by the superintendent of emigration, and was forced to confess that he had neither money nor friends in the New World, and that he had no trade nor handicraft by which to earn his living.

The boy, locked up for the night in the harbor police station, was brought abruptly face to face with his future. On one side was a vast country filled with strangers, in which success could be reached only by some especial knowledge, skill and industry; on the other side was the ocean, and beyond it his home—the one place on earth where he was loved and cared for.

During the solitary evening, while the lad struggled with his defeat and misery, an old copy of *The Companion* fell into his hands, in which was the story of a runaway boy who had showed his courage by going back to his home, and begging to be allowed to take up his work again.

In the morning George B—— asked the superintendent to send him back as a pauper, and to "give him another chance for his life."

He returned on the vessel on which he came, and after several weeks wrote back a glad, grateful letter to the official, telling him that he was forgiven at home, and was now "hard at work to make a man of himself."

Many a boy has become tired of books or of work at home, and dreamed of running away, to live a life of adventure or to conquer fortune by some bold stroke.

Such boys, if they realize their dreams, find that they have made a mistake. They get out into the world, and the world treats them coldly or lets them starve, for it has no place for ignorance and laziness. The protection of home, good habits and industry are what boys need as a preparation for a manly, successful life.

STRENGTH IN SWIMMING.

There are two periods in the year when deaths by drowning are frequently recorded: December, when skating begins, and June, when swimming-time has come. Last winter was remarkable for the number of instances in which boys had the good fortune to save the lives of their comrades who had broken through the ice.

The Royal Humane Society of London awarded their bronze medal to Cecil Stanley Manning, a boy of fourteen years, for saving another boy aged twelve years, who broke through the ice in deep water seventy-five feet from the shore.

They gave another bronze medal to a boy named Murray, who saved a little fellow one year younger than himself from drowning in the Thames at Hampton Court.

Then there were two brothers, Anthony and Charles Ellwood, who saved two of their younger brothers, and to each of them the Society awarded honorable recognition. There were several other boys, from fourteen to twelve years old, who saved or assisted to save children only a year or two younger than themselves.

It is well for boys to become acquainted with such facts as these. At the same time they should bear in mind that a human being in deep water has no great amount of strength over and above what is necessary to keep his own head above the surface, and that it may mean two victims instead of one if he tries to save from drowning a person heavier than himself, or one who will cling to him and impede his action.

The strongest swimmer cannot carry in the water more than a very few pounds, and that weight but a short distance. When he has plunged into the water with all his clothes on, with perhaps a pair of high boots on his feet, and a dozen pieces of metal in his pocket, he must be a strong man to render much help to another.

We advise healthy boys and girls to improve all good opportunities, not merely to learn to swim, but to acquire strength and confidence in the water. Our swimming-teachers very sensibly require their pupils to bathe now and then in a complete suit of old clothes, including a pair of high boots, that they may know how it feels to be in the water thus equipped, and how to get rid of

Digitized by Google

some of their garments. A person who has bathed encumbered thus will get an idea how much aid he could render to a drowning person.

It is a mistake to over-bathe; and in this particular there is a curious difference between one person and another. Of two brothers, both in apparently equal health, one can bathe every day with advantage, while the other will discover that it is best for him to keep out of the water except on hot days, and then not to stay in more than fifteen minutes. In this, as in all other athletic exercises, zeal should be tempered with prudence.

PRACTICAL.

The extravagance of Ismail Pasha, the former Khedive of Egypt, provoked English and French holders of Egyptian bonds to ask him to abdicate. Their governments pressed the request, and the Khedive, deposed in 1879 by the Sultan, left Egypt and now lives in exile. But although Ismail's faults were very great, he was a real ruler.

While M. de Lesseps was building the Suez Canal, the public opinion of Europe was against the enterprise, and money was hard to get. The Khedive sent for Mr. Hawkshaw, an eminent English engineer, and said to him:

"Examine the ground, study the plans, and report to me confidentially. If you report the canal to be impracticable, the works will be brought to an end."

Mr. Hawkshaw reported not only that the canal was practicable, but that it could be made and maintained at a reasonable expense. He was among the guests invited by the Khedive to attend the opening of the canal. On his landing at Port Said, M. de Lesseps presented him to the engineers about him, saying: "This is the gentleman to whom I owe the canal."

The Khedive was anxious that the *Aigle*, the steamer on which was the Empress of France, should have a free course through the canal. But the *Latiff*, which he sent to clear the way, stuck, and blocked the canal. Word was brought to the Khedive at Port Said between eleven and twelve o'clock at night.

He got into his own vessel, took three hundred men with him, and by six o'clock in the morning had got the *Latiff* off, and seen her shunted at one of the stations, and went on through the canal in his own yacht, so as to have the course clear for the *Aigle*, which was to start at seven in the morning.

"If," said he, "I had not got the *Latiff* off, I should have blown her up, so that the *Aigle* might have gone on clear."

RESULTS OF DISHONESTY.

The harm which a few unscrupulous men may do to a great number of honest ones is well illustrated by a circular which the United States Department of Agriculture has sent out.

For the past five years, this circular shows, there has been a steady falling off in the quantity and price of our country's butter exports. During these last years only about seventeen million pounds of butter have been sent abroad annually, against twenty million pounds a year during the five years preceding.

The price during the past five years has averaged from three to five cents less than in the first five years.

During this period also eighty-eight million pounds of cheese per year have been exported at an average price of about nine cents a pound; but for the preceding five years the exports of cheese averaged one hundred and twenty million pounds at an average price of nearly eleven cents a pound.

The decline of both these items of trade is attributed in great measure to the exportation of butter and cheese of a very bad quality. "Filled cheeses," said to be "compounds of skimmed milk and grease," have been sent to England, as well as rancid butter and "oleomargarine" instead of good butter.

Much of this mischief is undoubtedly done by unscrupulous packers or exporters, who substitute wretched stuff for the good product of the farms; but these packers, while they hurt the reputation of all American cheese in foreign business, contribute to the ruin of their own business.

No agriculturist should forget that good measure and good quality are the surest means to prosperity in the world, and farmers owe it to themselves to leave no stone unturned to secure, if possible, by combination or other fair means, the delivery of their honest products to the consumer, whether in their own country or abroad.

REASSURED BY A VOICE.

At the close of the Civil War, many of the leading men of the South hastened to make their escape from the country, fearing imprisonment and possible death at the hands of the government. Among these was Judah P. Benjamin, the Secretary of State of the Confederacy.

For many days Mr. Benjamin had been in the forests of Florida, trying to make his way to the coast, where he relied upon finding a vessel in which he could reach England.

He kept on, living upon what roots and berries he could find, not daring to approach civilization for fear of arrest, until finally he sank at the foot of a tree, completely exhausted. He had not the heart to go farther, and made up his mind to lie where he was and give it up.

Weak and drowsy, he was just sinking into a half-sleep, half-stupor when he heard a harsh, uncanny voice pronounce the words:

"Hurrah for Jeff Davis!"

Aroused he looked about him, saw no one, and thinking he must have been dreaming, again sank back. Once more came the strange voice, "Hurrah for Jeff Davis!" and now he rose to his feet and listened.

Again the words were repeated. Faint and weak, almost out of his mind, he stumbled on to find the man or thing that had uttered those words.

He had gone hardly a hundred yards, when he entered a clearing in which was a cabin. He tottered to its door and fell exhausted.

The inmates of the cabin cared for him, and he soon became able to continue his journey, but before starting he related his strange experience in the wood to his preservers, who then told him that the words had come from a parrot who was in the habit of roaming in the woods.

Reassured, Mr. Benjamin now told them who he was, and with their assistance, reached the coast in safety, whence he was taken in a vessel to England, and, as every one knows, afterward became one of the most celebrated lawyers at the bar of that country.

Two Interesting Articles.

In the next issue of THE COMPANION we shall print a striking account by Rear-Admiral Gillis of the great South American Earthquake of 1868, entitled

"Overland in a Man-of-War."

Also a thorough and entertaining description of the work

"In a Great Post-Office."

HIS OBITUARY.

It has often happened to public individuals to see, through some error, their own obituaries in print. An embarrassing consequence of this blunder is that one feels obliged ever after to live up to the good things said of him when he was supposed to be no more. Mr. Frederic Villiers, the artist, says in the *Cosmopolitan*:

Twice during my career have I been given up as "gone over to the majority"—first, when I was reported to have been killed in the advance of Hicks Pasha's army against El-Obeid, in the Eastern Soudan, at the time when that force met with disaster at the hands of the Mahdi and his followers.

I was walking in London with a cousin, when we were greatly astonished by noticing several posters of the evening papers, mentioning my death in the Soudan. Presently a friend of my cousin came up, and said to him:

"My dear fellow, this is sad news about your poor cousin."

"What's that?" said he.

"Why, his death in the Soudan."

"That's all nonsense," was the reply. "This is Frederic Villiers by my side. Allow me to introduce you."

His friend stared at him with disgust and astonishment.

"It's all very well," said he. "I know you can't resist a joke, but this sort of thing is really too bad. Your poor cousin is lying in the desert, dead, and you are cruelly joking!"

"Have no fear," said I. "I am the man, and I am every moment more and more satisfied at the fact."

"Then," said he, believing at last, "I must hurry back to the Savage Club. There's a colleague of yours, with his back to the fire, holding forth to the members about the campaigns he has seen with you."

"Hold hard," said I. "Is he saying nice things about me?"

"Yes, of course."

"Then," I continued, "by all means leave my colleague to his pleasant thoughts."

This colleague at the Savage has never forgiven me for knocking all the sentiment out of his funeral oration by persisting in being alive. When he and I meet now, we only lift hats.

DESCRIPTIVE.

While the country people of New England have no such marked dialect as prevails in some other parts of the United States, it is a fact that they use many words and phrases which to strangers are often quite incomprehensible.

A girl who spent a summer on a farm in Northern Vermont says that if her language was half as confusing to the people of that region as a good deal of theirs was to her, she wonders they didn't ask her to supply them with a "key."

One day she asked the farmer how long it would take her to get to the nearest village.

"Le's see," said the man, slowly, "they aint much choice 'tween Porterville an' Skimby's Corner, but I calc'late the Corner may be a grain nearer. How was you plannin' to git there; by hand?"

"By what?" asked the astonished girl.

"By hand, was what I said," replied the farmer. "Don't ye know what that means? Waal, seein' you're from city way, I s'pose I'd oughter've said, 'Was you intendin' to foot it?' But we allus say 'by hand' here, fer it seems more reasonable, someways!"

TOO MUCH.

If an unwelcome truth must be spoken, it is well to say it not only kindly but with neatness and point. An exchange relates that Roscoe Conkling one day appeared in Charles O'Conor's office in a state of unusual excitement. Mr. O'Conor naturally inquired what was troubling his caller.

"I'm provoked," answered Mr. Conkling; "I'm angry clean through. I never had a client quarrel with my fee before."

"What's the story?"

"Why, I defended Gibbons for arson, you know. He was convicted, but I did hard work for him. I took him to the superior court and he was convicted; then to the supreme court, and the supreme court confirmed the judgment and gave him ten years. I charged him six hundred dollars, and he is grumbling about it. Now, Mr. O'Conor, I ask you frankly, was it too much?"

"Well," said Mr. O'Conor, speaking deliberately, "of course you did a great deal of work, and six hundred dollars is not a big fee, but to be frank with you, Mr. Conkling, I do think that he might have been convicted for less money."

CROOK'S COUNCIL OF WAR.

A writer in the *Century*, giving an extended account of General Crook's warfare against the Indians in California and Arizona, thus briefly describes the General's unique method of holding a council of war:

He never asked any one for an opinion, never gave one of his own, but taking his rifle in hand strolled a short distance away from the camp, sat down under a rock, crossed one knee over the other, clasped his arms about his shins, and occasionally rubbed the tip of his nose with the back of his right hand.

This last was the infallible sign by which the troops afterward learned to know that one of Crook's councils of war was in progress.

CATERPILLARS.

Observe the number of their eyes.
How do their jaws move when eating?
Notice how much a caterpillar eats in a day.
How do they spin their silk?
Is it silk before coming to the air?
How do their actions vary when attacked?
Watch the change from caterpillar to butterfly or moth.

For the Companion.

THE STORMING OF BUNKER HILL.

Twice on the low redoubt, ere noon, the Regulars advanced,
And from their burnished bayonets the sun of morning glanced;
Twice all the bristling fire-locks flashed behind that sullen mound,
And with a coronet of flame the thundering rampart crowned.

And twice the English columns red, like Fundy's mighty tide,
Rolled back and left their stranded wreck heaped up on ev'ry side;
Down, down the flame-whipped, shot-scourged slope, the panting soldiers fled,
While through the smoke clouds, glowed like coals, strewn on the ground, their dead!

How reinforced by Clinton's troops, over their comrades slain,
With faces grim the grenadiers move to assault again;
But ere to storm that stubborn height they form in close array,
As swimmers strip to buffet tides, their knapsacks cast away.

No empty volleys herald them:—this time the King shall deal
His mercy to the "Rebel" horde on gleaming rows of steel!
The anchored ships their broadsides cease, and silence settles down,
Save that the church-bells, cannon-jarred, still clang in Boston town.

"Once more stand firm, ye heroes, stand! Once more repel the foe!
God for our Cause! Stand fast, ye Brave, and meet the final blow!
Stand! for your wives and children watch from every belfry high,
And when such prayers attend his soul, what patriot fears to die?

See, where in seething billows red the flames o'er Charlestown roll!
Hark! thundering from its steeple burned, hear ye the church-bell toll!
It summoned ye to worship once—now with expiring breath
It summons ye to victory, or to a glorious death!"

"*Halt!*" And a hedge of bayonets fronts each determined line,
Like icicles in Winter's sun the musket barrels shine.
"*Charge!*" and as myriad Autumn leaves before a gale are whirled,
Lord Howe against that wall of earth his mad battalions hurled.

Now 'neath the tattered pine-tree flag a line of fire runs
Along the curtain of the fort, and empty are the guns,
And wave on wave of grenadiers against the breastwork surge,
To fall as breakers from a rock the Equinoxes scourge!

Yet as successive waves, flung back, return with heavier stroke,
So o'er the parapet at last the spray of bayonets broke,
And as when Ocean conquers dykes she hides the barrier crossed,
Beneath that crest of British steel the wall to sight was lost!

So from the long-contested ground our smoke-grimed troops retreat,
And carry with them victory from such a dear defeat
And tho' forced back 'cross Charlestown Neck they doggedly withdrew,
The battle-storm had only ceased, to burst the sky anew!

But like a master-mariner who will not leave his post
Though sinks his ship beneath his feet, so lingered gainst the host
The champion of Young Liberty, and gallant Warren fell,
Not unremembered in the land for which he fought so well;
For where, on land or sea, shall float our proud flag from its staff,
There towers in her Stars and Stripes the Patriot's cenotaph!

FRANCIS ZURI STONE.

For the Companion.

HE OVERRULES.

"You young people," said a successful banker, "are fond of talking of luck and chance. As for myself, I do not believe in either.

"Each year that I live I am more impressed with the order and meaning which underlie all events—the least as well as the greatest. Under this inexorable law the smallest incident in our lives works for our good, if we try to do right. If you live long enough to look back, and are observing and thoughtful, you will find this to be true.

"There was a certain snow-storm, for example, which for twenty years I regarded as the unluckiest accident of my life. This is a true story, remember.

"At the time of this storm I was a young man just beginning my business career as a clerk in the employ of a large firm of cotton-brokers.

"A heavy hail-storm had broken down the telegraph wires coming into the place, and I was bidden to take a despatch of great importance to the nearest city, and send it by wire to New York. The success of a large venture which the firm had made depended on it.

"I set out in a sleigh with a stout pair of horses; but the fiercest snow-storm I ever knew set in, and before I had made half the distance to my destination the drifts were impassable.

"I was forced to turn back. As I plowed my way through the night and storm, I heard a feeble cry for help, and found buried in the snow by the roadside a woman and her child, nearly frozen. The almshouse was near, and I managed to reach it with them. The mother died that night, but the child lived and remained in the almshouse.

"I could not send the despatch. In consequence our firm lost a third of its capital, and in the financial embarrassment that followed I was thrown out of employment, and went to the West.

"For years, as I said, I regarded that storm as a cruel accident.

"But when I look back at it now, I find that the loss of money was but a temporary matter, which affected no human life seriously. The firm recovered from the shock in a year or two. My 'ill luck' forced me to exert myself as I never had done before, and new avenues of success opened before me.

"The boy who would have died if I had not been driven back by the storm, was a thin, nervous little fellow full of energy and courage. He pushed his way through school and college, became a specialist in medicine, and has made scientific discoveries which have benefited the civilized world.

"We grumble against fate whenever our plans are defeated by what we call accident or luck. It is not in a day, perhaps, nor in a year, possibly not in this life that we shall see the whole meaning of the defeat. But God sees it, and I am sure means the defeat as a part of our education in life."

A SEA LAWYER.

Judge B——, who is frequently quoted as a legal authority, and often spoken of as the "sea lawyer" in shipping cases, graduated from the law school when he was twenty-three years old, with barely money enough to pay for his diploma. He had great expectations of what he was going to do, but for a whole year he had only one client, who paid him a fee of ten dollars. The judge tells the story thus:

I pawned my watch, my books and clothes, all I could spare, and hired two hundred dollars to pull me through those twelve long months, and the worst of it was, I could see no better prospect ahead. I was sadly in the dumps, feeling some days that I had made a great mistake in my profession. I used sometimes to envy the laborers who worked by the day; they were doing work for which they received wages, while I waited impatiently for the work and wages which came not.

While I was indulging one of my worst fits of the blues an old friend of my father, a lawyer, chanced to be in town, and called on me. He inquired as to my success, and I blurted out the whole story of my disappointment and failure.

"Well, if you haven't had many clients this year," he remarked, after talking awhile, "you've been getting ready for cases when they do come. And that's right; don't get behind in your reading," he added.

The next day—and this is where my luck may be said to have begun, if luck had anything to do with it—the old lawyer came again to see me. He asked if I'd like to go to China and attend to some law business there for his firm. He would pay my passage out and back, he said, but no fee.

I didn't stop long to consider the subject, but accepted his offer, and in the course of a month set out on the long voyage to China in a sailing-vessel. I left the town where I had spent the year without regret, and there were few to heed the departure of an impecunious young lawyer.

Captain Tarbox, master of the sailing-vessel, was a good friend to me.

"Why don't some o' the lawyers who pertend to handle ship cases learn somethin' about seafaring men and their ways?" he demanded, in his gruff way. "I've had two cases spoiled for me because the blunderin' lawyer—and I tried to git the best thar was—didn't know his ground."

The Captain's words lingered in my mind, and that night I lay awake in my berth thinking them over. The next morning I joined Captain Tarbox in his walk on deck, and said, "Well, Captain, I've made up my mind to do it."

"To do what?" he inquired.

"To follow the sea until I know something of seafaring men and their ways," I replied.

"Good enough!" he said. "You couldn't do better; and when ye're through, I'll have a case ready for ye," he added, with a laugh.

From that day I began to study sea life in earnest. I went as purser on a transatlantic steamer for a year, as steward for eight months, and served in various capacities on different vessels for another fourteen months. At the end of that time I knew the ropes, and all the equipments of a vessel, and there wasn't a nautical term that I wasn't familiar with.

Moreover, I had become acquainted with many seafaring men, and when I again opened a law-office I had not long to wait for clients. Within five years I had all the business I could attend to, and took in a partner.

As I look back over my life, I count those three years at sea the most profitable investment I ever made. At the time much that I learned seemed trivial, and there were many hard, disagreeable things connected with a life on shipboard, but it has all come in play in the course of my law practice.

By means of my sea knowledge I have achieved success and fame such as I never even dreamed of during that first year of waiting. What seemed my misfortune in having no clients was really the best thing that could have happened, for had I been fairly successful as a beginner, I should never have gone to China or followed the sea.

I forgot to say that Captain Tarbox kept his word, and had a case ready for me, which I won. He was my first client.

NORTHERN AGRICULTURE.

It is wonderful what growth is made by plants under the long-continued light of the Arctic summer, notwithstanding the sun attains no great elevation above the horizon. The light, such as it is, is almost constant for weeks together, and this constancy makes up, in great part, for the shortness of the season. It is to be kept in mind, also, that the growth of vegetation is not wholly dependent upon the heat rays of the sun.

This becomes evident from the fact that wheat, for example, will grow in soil that, even in midsummer, is not thawed more than a foot below the surface. The limits of cultivation toward the pole are noticed in one of Mr. Vincent's books of travel.

In Siberia, agriculture ceases at sixty degrees of north latitude, but in Norway oats ripen under sixty-nine degrees, rye a half degree, and barley a whole degree further north. In Finmark the summer heat is intense, and daylight is continuous for ten weeks.

The rapid growth of vegetation in Finmark is almost incredible. During the short summer crops are sown, ripened and harvested. It has been found by experiment that in latitude sixty-five degrees north, barley will grow two and one-half inches, and peas three inches in the twenty-four hours for several consecutive days. Barley is harvested in ten weeks after being sown.

At Hammerfest, in latitude seventy degrees and forty minutes north, the grass grows underneath the snow, and hay is made in a month after the snow has left the fields. Here the Scotch fir flourishes vigorously, sometimes reaching an altitude of eighty feet. But a little further east in this same latitude, in winter, mercury and even brandy frequently freeze in the open air.

A Norwegian scientist has been engaged for thirty years in making experiments to determine the effects of the midnight sun, during the Scandinavian summers, on the wheat and other grain crops. The conclusion he reaches is that wheat, corn and other seeds imported from a warmer clime, when cultivated under this unintermittent sunlight, become hardier as well as larger, and are better able to resist excessive cold. The colors of these grains are also gradually changed to a richer and darker hue.

These are not the only variations that plants undergo by exposure to a night and day sun. Wild and cultivated fruits, ripened in northern lands, have a much livelier aroma and flavor than the same fruits grown under more southern skies. This is particularly observable in the small fruits that are so grateful in the early part of the warm season.

The experiments of this Norwegian scientist derive double interest from the recent inquiries of Doctor Siemens, illustrating the power of the electric light when applied to plants and vegetables to quicken and invigorate their growth. The two investigations, though entirely independent, have led to the same scientific result.

For the Companion.

WILD ROSE BY THE SEA.

Wild Rose by the stormy sea
Bloomed so fresh and fair,
That the wonder came to me
She was growing there,—
Far from home on grassy lea,
On a rock by wind-tossed sea,
Blooming bright and sweet was she,
In her beauty rare.

Wild Rose, say, how can it be
Thou dost bloom so fair,
By the cold and cruel sea,
Without fear or care?
Sweet thy home on fragrant lea,
Where soft skies are nursing thee,
But to brave the angry sea,
Wild Rose, canst thou dare?

Nay, said Wild Rose, I must be
Always fresh and fair,
And wherever thou findest me,
God has placed me there;
And I bloom by rock-bound sea
Bright as on the flowery lea,
And my sweets I give as free
To the briny air!

ZITELLA COCKE.

MISS MALVINA.

In E. Chester's valuable book on "Girls and Women" we are reminded that even for a society girl a knowledge of arithmetic is one of the essentials of education. Without it no woman can govern her household properly, or guide judiciously her affairs, should she choose to live alone. A millionnaire who meant to give his daughter every educational advantage began with a French nurse and a German maid, while he engaged an artist of distinction to oversee her untidy attempts at drawing. At length a lady was engaged to teach grammar, literature and history.

"And arithmetic?" she asked.

"A little, perhaps. Girls need very little."

The millionnaire's daughter came to take her lesson.

"I hate arithmetic, you know!" she said, confidingly. "And then, what's the good of it for girls?"

The teacher did not argue the question, but began her task.

"If thirteen yards of ribbon cost three dollars and twenty-five cents, how much will one yard cost?"

Miss Malvina was allowed pen, ink and paper. She wrinkled her forehead, curled her lip, looked up and laughed. "I haven't the faintest idea, don't you know?"

A few judicious questions led her to see the necessity of dividing three dollars and twenty-five cents by thirteen, and she went to work. After a season of struggle her countenance cleared.

"Upon my word, I've got the answer—twenty-five!"

"Twenty-five what?"

"Twenty-five—why—twenty-five dollars!"

"Wouldn't that be rather high for ribbon?"

"Oh, I don't know," replied Miss Malvina, carelessly. "I'll tell you!" she added, triumphantly. "I should tell them to give me the best, and I suppose they would know what I ought to pay!"

By and by Miss Malvina's father found himself having trouble with his workmen. The family received threatening letters. Malvina's rosy cheek grew pale.

"I don't know what they want," she said, forlornly. "They say we are all so extravagant! I don't know what difference that makes to them; if we pay for what we buy, we never hurt them. I wish we were not rich at all. It would be much nicer to be poor. I should like to be a—what is it?—a commoner—or a communist, or something. Then nobody would be envious."

To Malvina money was an unknown quantity. She had no idea of its use or value, and not even her charities prospered. Yet she thought arithmetic of no use for girls.

ADMIRAL AND DOG.

Sailors, like horsemen, have a tendency to become bow-legged, and the peculiarity is not confined to common seamen. An old admiral, whose long sea service had given his legs a decided outward curvature, once had a singular adventure on this account with a ship's pet. The crew of the ship owned a large Newfoundland dog, and the sailors, in their leisure moments, took great pains with his education, and were especially successful in teaching him to jump.

His most frequent exploit was managed in this way: A man, standing up, would put one foot against his other knee, thus making a hole for Nep, the dog, to make his leap through. The dog always jumped through the aperture readily, though if his trainer's legs happened to be short, it was sometimes a rather tight squeeze.

One fine day the admiral came aboard from the flag-ship on a visit of inspection. Happening to walk to the forward part of the ship, he stood there for a few minutes conversing with the officers who had attended him.

Here he was spied by the dog, who was taking his airing on deck among the sailors.

Nep stood a moment surveying the admiral's bow-legs. They seemed to strike him as affording the best chance for a running leap, after his peculiar fashion, that he had seen for many a day.

Suddenly the dog made a rush at the legs, and a mad leap through the tempting gap. In astonishment at the black tornado that had passed beneath him, the admiral whirled quickly about to see what was the cause. The dog took this action as a signal for an "encore," and jumped again.

Once more the admiral turned, and again the dog jumped.

The bewildered face of the admiral and the serious attention of Nep to what he imagined was his business were too much for the gravity of the by-standers, and forgetting the respect due to rank, they all burst into laughter.

A sailor, however, had enough presence of mind to break from the crowd and catch the dog by the collar. He led him off, and as he did so Nep seemed to wonder why he did not receive the praise due to such spirited efforts.

The excited admiral got but an imperfect explanation of the affair from the spectators, for they could hardly tell him that his legs had been used as a kind of circus-hoop by a forecastle dog. Perhaps to his dying day the occurrence was a mystery to him.

NOT SO EASY.

The ascent of Vesuvius is not considered difficult. The mountain is not high, scarcely exceeding four thousand feet; and not until the cone of the volcano is reached does the average mountain-climber grow sensible of fatigue. "From that point," writes one who has made the ascent, "my experience is that a guide and assistant will be agreeable. There are no longer roads, bridle-paths, footpaths or tracks; nothing but a mass of cinders and scoriæ, and these scoriæ exactly resemble iron sponges. The lumps of dross are incessantly rolling under your feet, so that bad slip-backs are frequent.

"My companion, who counted himself a good mountaineer, smiled with pity when he caught sight of the cone, and scorned any assistance.

"'Is that all!' he cried; 'and you call that hard to climb. Look here then!' and he started off briskly. At the end of a hundred paces he halted, blowing and gasping; then he resumed his course. I marched slowly behind.

"The scoriæ rattled under my friend's feet like stones from a dump-cart. He went another hundred steps, and fell flat, grazing his hands and knees.

"He rose bravely, without uttering a word, and ran upward. Another fall; this time he tore his clothing. Then he sat down, and when the guide came up, took his arm, and shortly afterward the arm of another guide.

"Soon we reached the smooth slope, the yielding side of the cinders, and our courage rose. Alas! we regretted the scoriæ. It is true that the stones are no longer rolling and crumbling beneath our feet, but it is worse to sink knee-deep into the dust. One limb is extricated from this solid pool of cinders, and borne forward after some astonishing manœuvres. But the other leg is set fast.

"Woe to him who thinks to help himself with his hands, for they sink immediately into the moving soil, and drag his arms into it up to the shoulders.

"Well, we got out of the 'fix' after much scrambling, coughing and choking, and reached the summit, where a keen wind dusted us off."

NEW ABBREVIATION.

A lady tells a story of a young man who had come from the country to the city in which she lived, and in a short time fancied himself quite equal to any social emergency. He never asked advice upon questions of etiquette, and in consequence he made many mistakes. At one time the lady issued cards to a dancing party, and among the invited guests she included this rather conceited and exceedingly awkward young man.

He was to be out of town at the date of the party, and so was unable to accept the invitation. At the foot of the card he read the letters R. S. V. P., and was much perplexed as to their meaning. However, he was nothing daunted by his ignorance, and wrote a note declining the invitation in as formal and stilted terms as he could command, and after signing his name, added the letters, M. S. C. C.

On his return to the city, after the party, he went to call on the lady, and in the course of the conversation asked, "By the way, Mrs. Clapp, what did you mean by R. S. V. P. at the end of the invitation you sent me?"

"Why," replied the hostess, without a note of surprise in her polite voice, "they stand for the French phrase, *Répondez, s'il vous plait*—Answer, if you please."

"Oh, yes! Well, I was all right, then!" said the young man, in a tone of much satisfaction. "I thought I should hit it in my answer!"

"Now that you speak of it," said his courteous hostess, "I do wish to ask you what M. S. C. C. stands for. I can't imagine, and I can't find any one who has ever seen the abbreviation used!"

"Oh," replied her visitor, airily, "that meant 'Mighty sorry couldn't come.' I should think that was plain enough!"

BREAKING THE RULES.

Accepting as true the anecdotes that appear from time to time in the European newspapers, America is a country where a great many queer things happen. New York houses are built thirty stories high, Boston merchants ride races on horseback down State Street, herds of infuriated buffaloes invade Chicago parks, and Sioux chieftains break up sessions of Congress with improvised scalp-dances. Here is a story of New York customs recently told by a French paper:

In the Central Park there is a very large bears' den, which lies at a lower level than the ground about it, and is surrounded by a railing.

One day a stranger, while leaning over this rail, lost his balance and fell into the pit. He struck by the side of a large grizzly bear, which at once seized the man's leg in its mouth, and completely crushed it.

When the bear had bitten the man's leg nearly in two, some by-standers, by the aid of ropes and clubs, succeeded in getting him out of the den. He lay in a fainting condition.

At this point a policeman stepped up.

"I place you under arrest," he said to the wounded man.

"Arrest? What for?" gasped the victim.

"For violating the rules of the park," said the policeman. "Don't you see that notice there?"

He pointed to a sign over the railing of the bears' den, which read:

"IT IS POSITIVELY FORBIDDEN TO FEED THE ANIMALS."

WANDERING THOUGHTS.

Artists who "receive" in their studios have some trying experiences. An English paper mentions an instance.

The painter was talking with a fair visitor about one of his pictures, and hoped that he was making a decided impression.

"Yes," she said, "it is charming—charming! But oh, Mr. Fitz Madder, what a delightful room this would be for a dance, with the musicians in the gallery, and all the easels and pictures and things cleared away."

CHILDREN'S DAY AT GRANDPA'S.

At church, they don't keep Children's Day
In Grandpa's town,—but orchards blow
For miles and miles along the way,
And shower the roads with rosy snow,
And make a rosy roof. The bees
Have come from all the hives around,—
We walked to church beneath the trees,
And heard their happy humming sound;
And Grandpa said that bird and bee
Sing Sabbath hymns as well as we.

My Grandpa's church is brown and small,
And all the folks are old, I think.
Outside you hear the robin's call,
And on the fence a bobolink
Looked in the window where I sat,
And sang so loud I couldn't hear
The prayer or text; and after that
A bumblebee, so big and queer,
Played "drowsy, boozy, dizzy-brains"
All up and down the window-panes.

When we walked home, Grandpa and I,
White flowers were falling all the way.
Great flocks of butterflies went by,
And every one was white to-day.
The white clouds sailed so soft and high,
And Grandpa's hair is white as they.
(His eyes are blue, just like the sky,
And mine are like them, people say.)
So, if they don't keep Children's Day,
They have White Sunday up this way.

ANNA BOYNTON AVERILL.

For the Companion.

WHO CUT HOLES IN THE ROSE-LEAVES.

Grandma heard a great commotion, and, I am sorry to say, something that sounded a little like quarrelling, out on the piazza.

"It's them children, I do believe!" said the dear old lady, in dismay, dropping her knitting and trotting to the door.

"Jack's cutting holes all in the pretty rose-leaves, grandma!" cried little Cary, angrily, as soon as grandma's face appeared in the doorway.

"Preserve my patience!" exclaimed grandma. "I wouldn't have believed it of you, Jack! Those sweet roses, that Aunt Kitty was going to take to town to-morrow to the sick little children in the hospital!" and grandma looked both grieved and astonished.

"But I didn't, grandma!" protested Jack, as soon as he could get in a word.

"You are sure you have not been flourishing your new whip, with the long snapper on it, too near 'em?" questioned grandma.

"Why-y, I did switch it a little —"

"And you tried to see how neat you could cut out a piece, Jack Brown! You can't see anything pretty without wanting to 'stroy it, so there!" and tears of vexation stood in Cary's eyes at the remembrance of how Jack had snapped in an eye of her best dolly that morning with this same pretty new whip.

"Well, well, don't dispute, children," said grandma, mildly. "If you did do this, Jack, I'm sure you didn't mean to. I can't believe you would be such a heartless boy."

Jack went off to the garden, kicking his toes sullenly into the clover tufts, and beheading some tall scarlet poppies with the offending whip, for he felt ill-used.

He flung himself down in one corner by the patch of giant rhubarb, and began to chew a stalk. Jack resorted to rhubarb when he felt particularly cross.

Pretty soon a bee hummed close by his ear with something red in its "mouth." Jack dodged, and the bee alighted in the corner by the garden fence near him, and before Jack could hop up it had popped out of sight into a little round hole at one side of a sod.

In a minute or two Mrs. Bee (so Jack called it) came out and flew away. Jack did not move, and not long after the hurried little worker returned with another load. This time she dropped it. It fluttered down to the edge of the hole. Jack jumped to look.

Then he rolled under the rhubarb, and laughed and shouted till an old Pee-wee, wagging his tail on the fence, flew off in alarm. Jack rushed up to the house. "Grandma! Cary! Come out! I've found the rose-leaf snapper!"

"Bless my heart! Well, well, I'm glad it isn't my Jack!" and grandma rumpled his hair lovingly.

"Where is he?" cried Cary, looking about a little puzzled.

"Wait a minute and you'll see!" said Jack, chuckling.

Just then along hummed Mrs. Bee again, and alighted softly on a fine red rose.

Snip! Snip! Snip! went her little *scissors* rapidly, and in a moment a tiny disc of the leaf about as large as a silver half-dime was cut out, and away she flew with it.

At that moment Aunt Kitty came up the walk.

"Ah yes," said Aunt Kitty, laughing. "'Tis the little upholsterer bee, as some call it. She's got a nest in that hole, Jack. But we won't disturb her if she did come near getting you into trouble.

"She lines and pads it with rose-leaves, and in this sweet bed she lays her eggs and places her bee-bread for the little bees to eat when they are hatched. Then she adds more leaves, tramping them with her little feet till the hole is filled to the top. She is a dainty mother, but I think we must humor her. There are enough roses for her and the children, too."

Our little Charlie had never seen a round doughnut with a hole in the centre, until he went to grandma's and she gave him one for lunch. He held it up with such a thoughtful, puzzled look, that mamma asked, "Why don't you eat your doughnut, Charlie?" "I was thinking, mamma, what a wonderful woman my grandma is, to get so much dough round such a little hole."

Little Clarence, who had often seen his grandma's false teeth, happened one day to notice the gold bows of her glasses hooked over her ears to keep them from falling off, and exclaimed, "O grandma! are your ears false, too?"

For the Companion.

A PUZZLING QUESTION.

I've learned to say some words in French,
I've studied them a week;
What puzzles me, I do declare,
Is how the babies over there
In France can learn to speak.

For the Companion.

CHILDREN'S SAYINGS.

There is a large picture of the Father of his Country in Eddie's home. Eddie is three years old and has ideas. "Who is that in the picture, Eddie?" asked a visitor. "Washington," he answered, gravely. "And who is Washington?" "*Oh, he washes!*" replied Eddie, promptly.

Daisy's grandpa was grating horse-radish. Daisy stood in a chair beside him, intently watching him work, when she suddenly exclaimed, "I'll det down, danpa; it makes my eyes sweat."

Enigmas, Charades, Puzzles, etc.

1.

FLORAL PUZZLE.

At a drawing-school there was a class of twelve scholars. For an exhibition, each of the scholars drew her favorite flower or flowers. We give these flowers alphabetically; but the girls found they could arrange these names so that, by taking each central letter and adding them together, they would form a name often bestowed upon June.

Alonsia; alyssum; armeria; begonia; clarkia; celosia; fuchsia; jocobea; pansies; primula; statice and trefoil.

CYRIL DEANE.

2.

A SEASONABLE HINT.

A crested 1 perched on a 2;
3. 4. the brisk wind blew;
"Chill wind," said I, "it's time to go;
It's 1 2 3 4, you know."

3.

ANAGRAM.

A wish insures a joy and a tear.

The summer's come—
The bee's low hum,
The song of the twittering birds,
The forest's hush
And the rose's blush
Are framed in the poet's words.

A. M. P.

4.

BEHEADINGS.

1. Behead to astonish, and leave a labyrinth.
2. Behead to degrade, and leave a foundation.
3. Behead a nut, and leave a vegetable.
4. Behead a tumult, and leave to execute.
5. Behead to descend, and leave a beacon.
6. Behead above, and leave a high room.
7. Behead to reform, and leave to repair.
8. Behead a response, and leave a race.
9. Behead hastily, and leave a measured walk.
10. Behead to rouse, and leave a watch with the dead.
11. Behead a judgment, and leave part of a lock.
12. Behead to profit, and leave a covering.

5.

CHARADE.

My *first* into the garden stole,
And anxiously and greedily
She took a *second* of my *whole*,
Which cured her very speedily.

E. S. B.

6.

ENIGMA.

I am composed of 22 letters.
My 5, 11, 7, 8, 14, 13 is to touch.
My 19, 2, 21, 10 is ardent.
My 12, 15, 3, 8, 14, 15, 7, 16 is catching fire.
My 9, 17, 6, 22, 13 is to tremble.
My 18, 20, 1, 10, 4 is a boy's nickname.
My 9, 5, 11, 1 is a counterfeit.
My 14, 11, 18, 13 is behindhand.
My 8, 6, 3, 8, 13, 14, 15, 20, 7 is a spring flower.
My whole is a proverb.

Conundrums.

What kind of yarn is unfit for knitting stockings? A sailor's yarn.

What is that which you generally become when it is over you? Comfortable.

When is wheat like certain young men? When it is cracked.

What is the difference between a brook and a pennant? One is a stream and the other is a streamer.

Why are figures like George Washington? Because they will not lie.

Which is the warmest tree in the world? The fir-tree.

Answers to Puzzles in Last Number.

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

LEANNESS.

Some persons are born with a normal tendency to become fat, others with a tendency to leanness. It is the same among the lower animals. The hog is a sort of machine for transforming the odds and ends of food into fat; but the farmer knows beforehand that a little pig with long legs and snout will work off the fat as fast as it can be made. So a long-legged person seldom inclines to obesity.

Temperament has much to do with the bodily condition in this respect. In lymphatic people the life processes are slow, and the fat is largely deposited, rather than burned. This temperament furnishes some of the best types of surface-beauty. The person of nervous temperament, on the other hand, by excessive activity of body and mind, and by predisposition to haste, worry, fret and impatience, naturally remains lean; but while the features of such a person will probably lack softness and roundness of outline, they may exhibit in a marked degree the higher beauties of mind and soul.

People who incline to obesity may hold the tendency in check by appropriate food and stirring exercise in the open air, thus both lessening the amount of fat-forming food taken into the system, and causing a more rapid consumption of such fat as is produced; and those who incline to undue leanness, by pursuing the opposite course, may largely increase the amount of fat deposited.

If the leanness is the result of digestive weakness, or of a faulty assimilation, little, of course, can be done until a condition of general health has been secured. But assuming that the abnormal leanness is connected with high health, what advice must be given?

First, let the carbonaceous, or fat-forming, food greatly preponderate over the nitrogenous—such as beef, lamb and codfish. Calling the fat-forming elements of beef twenty, lamb thirty-five, and codfish five, those of pork will be fifty; beans, fifty-seven; peas, sixty; oats, sixty-six; wheat, sixty-nine; corn and rye, each seventy-two; rice, eighty, and butter, one hundred.

Of course it would not do to take a single carbonaceous article and live on it, for the entire body is to be kept in high health by the proper nourishment of all the tissues. However, the system can be well supported in full vigor by a vegetable diet, with the addition of milk, eggs and butter.

In the second place, cultivate calmness and quietness in feeling and manner. Avoid impatience and fret. Do not overwork with mind or body. We may add that tea-drinking tends to leanness. If possible, milk should be substituted.

THE FAR-SOUNDER.

The telephone justifies its Greek name—*tele*, far off, and *phone*, a sound—more and more as the years go by. Probably conversation has been carried on at a greater distance over the wire in the United States than elsewhere; but the most interesting recent development of telephonic science is the opening of a public telephone line between Paris and London, and its inauguration by an exchange of formal speeches between representatives of the French and British governments.

These speeches were delivered into telephone "transmitters" at the telephone central office in Paris and at the General Post-Office in London. The wire carried them to the coast of the Channel on each side, and then through a submarine cable under the water.

This cable is regarded as a triumph of the electrician's art. It is composed of four "conductors," and each "conductor" is composed of seven individual wires of pure copper. The wires are insulated, wrapped together in a triple envelope of India-rubber, and the whole is surrounded by a coating of a composition of coal tar and other substances designed to make the cable entirely water-proof.

The route followed by the wires between the two capitals is a little more than three hundred miles in length.

When the line was ready, the French minister of commerce, the British ambassador and other dignitaries gathered at the Paris end of the line, and the British postmaster-general and certain officials at the other; and the British postmaster-general made a speech through the telephone, in which he assured the Frenchmen, that France and England, "already allied by mutual esteem and common interests, were henceforth to be allied by the most powerful of human agencies, the human voice."

Then the French minister of commerce responded in the French tongue with a somewhat long speech, in which he declared that this new miracle of science was a proof that men were now to use the mightiest forces of nature for the service of their needs and friendly intercourse, and no longer for purposes of mutual injury.

These speeches, containing so noble a pledge of peace between the world's two greatest capitals, were overheard as distinctly, by those at the receivers, as if they had been uttered in the same room.

The English electrician under whose superintendance the line was constructed expressed his belief, in discussing the matter, that at no very distant date a telephone cable would be laid beneath the Atlantic ocean, and that Americans and English would converse with each other, hearing each others' voices, in actual fact, across the ocean.

MR. BARNES AND THE BEAR.

Mr. Elisha Barnes, one of the early settlers of Henniker, New Hampshire, stood looking out of his cabin door one day in early spring, when he saw a large bear passing along the upper edge of the snow-covered clearing. He ran for his gun, but found it unfit for use. He seized an axe, therefore, and in considerable excitement started in pursuit of the bear.

As Mr. Barnes came up, the bear stopped and looked at him. He raised his axe and brought it down with what he thought stunning effect; but Bruin lifted his paw and struck the axe from the hand of his enemy, and then fell upon him, biting him severely in the leg and thigh.

It was a dangerous situation—alone with the bear and wholly unarmed. When the beast opened his mouth for another bite, the unfortunate man, in desperation, pushed his hand between the jaws, and ran his arm down the animal's throat.

Meantime, Mrs. Barnes had run to the nearest neighbor's, Samuel Eastman, who seized his gun and hastened to Mr. Barnes's relief. He arrived very opportunely. Mr. Barnes was struggling with the bear, but was growing faint from loss of blood.

Not daring to shoot for fear of wounding his friend, Mr. Eastman took the axe and dealt Bruin a blow on the thigh. The animal turned, and then, without ceremony, lumbered off toward the woods, where he disappeared before Eastman could fire at him. On the following day, however, the bear was tracked and killed.

Mr. Barnes's injuries were so severe that months elapsed before he was able to perform any labor.

WHAT MICROBES ARE.

Science is in the air in these days of the general diffusion of newspapers and books. The Albany *Argus* reports a dialogue between two Irishmen. They were running on about one thing and another, and finally one of them remarked upon the great prevalence of sickness.

"Aren't you afraid of typhoid fever?" said Dennis.

"Yis, I am," answered Pat.

"Pat?"

"Yes, Dinny."

"What are those microbys and germs the docthors are all talking about?"

"Waal, I'll tell ye my idee, Dinny. Thim germs and microbys are paculiar things. Flannigan was tellin' me about thim. He says they reside in the wather. He was fishing through the ice last Monday, and he pulled up his line and found a microbe on it. He says it looked a good dale like a bullhead, but it had a mighty queer face. He says he threw it back afther he got over being scart. Me own opinion is, Dinny, that microbys are a paculiar kind of fish."

LAZY.

"Mose" Little was a shiftless inhabitant of a Maine town, who would not work a minute more than was necessary to get money enough to support him in idleness for a few days.

He went into the village store to purchase some groceries, one item of which was a dollar's worth of flour. He put the smaller articles in a basket, which he took on one arm, while he carried the flour on the other.

All at once he set the bundle down.

"Say, Jake," said he, "is flour lower?"

"Yes," replied Jake. "We give thirty-five pounds for a dollar now, instead of thirty."

"Well," drawled Mose, "I'll be glad when it goes up again, so I sha'n't have to lug so much home for a dollar."

HONEST ADVICE.

A gentleman in a French restaurant who desired to get the best that the place afforded, drew a silver coin out of his pocket and gave it to the waiter before he had ordered anything.

"Here is your fee," said the customer. "Now I want to know, in all confidence, what you can recommend."

The waiter pocketed the coin.

"You want my honest advice, eh?" he asked.

"Certainly."

"Well," said the waiter, in a confidential whisper, "I should recommend—another restaurant!"

IT WOULD BE LARGE.

Six-year-old James, of Boston, and his New York cousin were disputing about the relative size of their respective cities, says the Boston *Transcript*.

Quotations from the census returns rather staggered the youthful Hubbite at first, but he soon brushed them aside with the remark:

"Well, I'll bet yer Boston's the biggest, if yer take in all the hubbubs!"

Worms.—In children bad breath and hard, swelled stomach are symptoms of worms. Give "*Brown's Vermifuge Comfits.*" A sure remedy. 25 cents a box. [*Adv.*

$10. delivered, for **two** custom-made Undersuits of **"Brown's Pure Silk Sponge,"** or **$6** for material, trimmings and instructions. Take pains to write name, address and measures. This is the new "*Silk Underwear Fabric*" referred to by "Shirley Dare" in New York *Herald*, Feb. 15, 1891. GEO. S. BROWN, Sole Manufacturer, 19 West St., Boston, Mass., U. S. A. Inducements

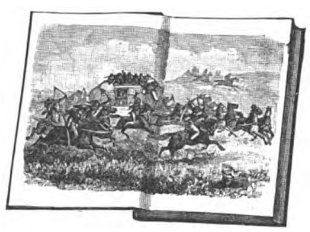
OFFERED FOR

Obtaining New Subscribers.

The following Premiums are offered in addition to those offered in our Annual List issued last October:

Conditions. These Premiums are given to those who are subscribers for THE COMPANION as rewards for obtaining new subscribers. No person can receive a Premium unless he himself is a subscriber for THE COMPANION.



No person sending his own name as a subscriber can receive a Premium for it. No new name will be received unless payment of **$1.75** in full is made in advance.

Any person subscribing for THE COMPANION, and paying the full subscription price, can then receive Premiums for all the new subscribers he may obtain and send us.

You must offer no inducement whatever for a person to subscribe for THE COMPANION, other than the paper itself. You must collect from the new subscriber the full price of the paper, which is **$1.75.**

THE YOUTH'S COMPANION, BOSTON, MASS.

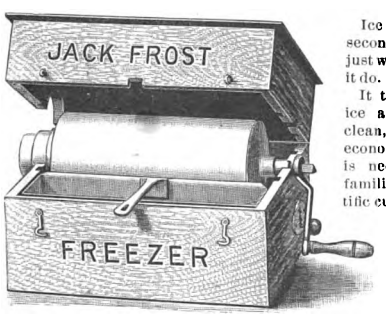
The Life of Kit Carson. By J. S. C. Abbott.

Kit Carson was the model American Pioneer, and the story of his life finds hundreds of admirers among the youth of this land. The cut gives you a look at one of the adventures of this brave fellow. His daring deeds in the West among the Indians and Pioneers are well told by the author. The Book is illustrated by full-page engravings, and contains 350 pages. Cloth bound.

Given for one new subscriber. Price 90 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

Six to Sixteen. A Great Emergency.

And Other Tales. Two Volumes.



Mrs. Ewing has been called the "Louisa Alcott of England." These are her two most popular Books for girls in their teens. Nobility and genius characterize these stories, and we do not hesitate to recommend them to careful parents for the family to read.

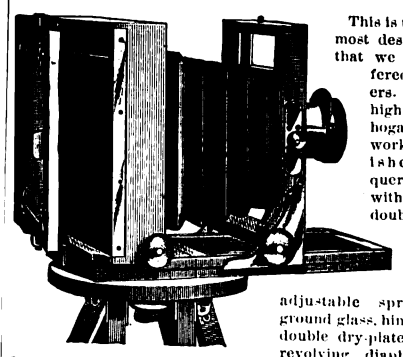
The offer is generous. Formerly we gave them each for one new subscriber; now we offer the two volumes for one new subscriber. 580 pp. nicely illustrated, and bound in cloth.

Price of the two volumes $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased.

Jack Frost Ice Cream Freezer.

Given for two new subscribers and 50 cents additional, or for one new subscriber and $1.00 additional.

Ice cream in thirty seconds,—yes, that is just what we have seen it do.

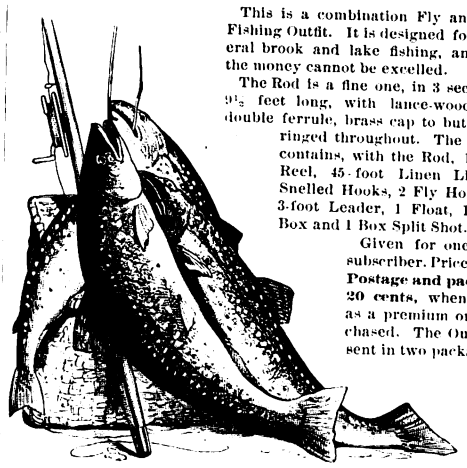


It takes very little ice and salt. It is clean, convenient and economical; just what is needed for small families. It is a scientific curiosity.

The ice cream it produces is remarkably smooth and delicious.

Given for two new subscribers and 50 cents additional, or for one new subscriber and $1.00 additional. Price $3.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Anthony's Victor Camera, with Special Outfit.



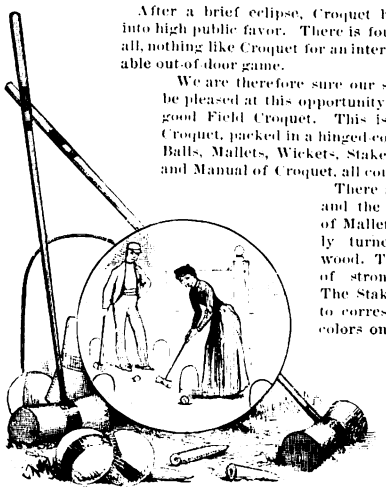
Given for five new subscribers and $8.00 additional.

This is the neatest and most desirable Camera that we have ever offered our subscribers. It is made of highly polished mahogany, with metal work, finely finished and lacquered. Is provided with a rising front, double swing, front focus, double rack and pinion movement, patent adjustable spring-actuated ground glass, hinged front bed, double dry-plate holder, fixed revolving diaphragm and a fine single achromatic lens. Size of plate used, 4¼ x 6½.

With this Camera we give a complete Outfit, consisting of a Canvas Carrying Case, Folding Tripod, Dry Plates, Sensitized Paper, Trays, Printing Frame, Card Mounts, Focusing Cloth, Graduate, Ruby Lantern, Book of Instructions, and all the Chemicals necessary for developing and fixing the plates, and toning and fixing the prints. Given for five new subscribers and $8.00 additional. Price $15.00. **Must be sent by express and charges paid by receiver.** In ordering Camera, be sure and give the name, "Victor."

Complete Fly and Bait Fishing Outfit.

This is a combination Fly and Bait Fishing Outfit. It is designed for general brook and lake fishing, and for the money cannot be excelled.



The Rod is a fine one, in 3 sections, 9½ feet long, with lance-wood tip, double ferrule, brass cap to butt, and ringed throughout. The Outfit contains, with the Rod, 1 Pat. Reel, 45-foot Linen Line, 6 Snelled Hooks, 2 Fly Hooks, 1 3-foot Leader, 1 Float, 1 Bait Box and 1 Box Split Shot.

Given for one new subscriber. Price $1.00. **Postage and packing 20 cents,** when sent as a premium or purchased. The Outfit is sent in two packages.

The cut shows the Patent Reel given with the Outfit. It is simple, but effective, and takes up the line rapidly.

Field Croquet.

Given for one new subscriber and 50 cents additional.

After a brief eclipse, Croquet has again come into high public favor. There is found to be, after all, nothing like Croquet for an interesting, comfortable out-of-door game.

We are therefore sure our subscribers will be pleased at this opportunity for securing a good Field Croquet. This is an Eight-Ball Croquet, packed in a hinged-cover Box; with Balls, Mallets, Wickets, Stakes, Wicket-pegs, and Manual of Croquet, all complete.

There are eight Balls and the same number of Mallets, all accurately turned from hard wood. The Wickets are of strong iron wire. The Stakes are striped to correspond with the colors on the balls and mallets.

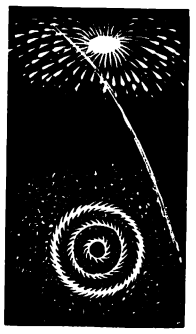
Croquet and all similar games should be strongly encouraged,—not simply as games, but as delightful means for keeping people in the life giving out-door air.

Given for one new subscriber and 50 cents additional. Price $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Flannel Outing and Tennis Shirt.

Flannel Outing Shirts are coming to be worn more and more. For street and office, as well as vacations, during hot weather, nothing adds more to one's comfort and diminishes one's laundry bills.

This Outing Shirt is made to our order, and is neat, stylish and comfortable. Is good value for a medium-priced Shirt. Sizes from 13½ to 16½. When ordering state size of neck-band.



Given for one new subscriber and 10 cents additional. Price 85 cents. **Postage and packing 15 cents,** when sent as a premium or purchased.

The "Four-in-hand" Tie is not included with the Shirt, but will be sent for 25 cents additional.

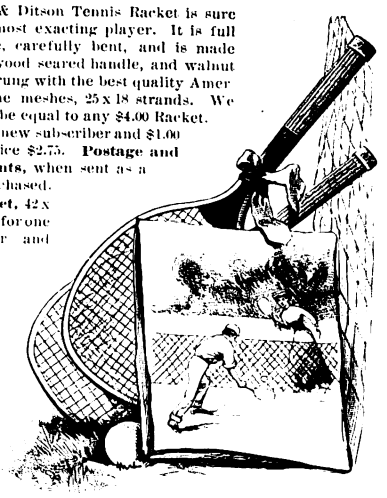
Windsor Ties are in great demand at the present time. We can furnish Plaid Windsor Ties in handsome patterns and colors at a special price. One Windsor Tie sent post-paid to any address on receipt of 25 cents.

4th of July Fireworks.

Collection No. 2 given for one new subscriber.

Independence Day is at hand! Prepare for it in time by securing one of our assortments of Fireworks! They contain a fine variety of beautiful, interesting and startling effects! They are manufactured for us by Masten & Wells, a firm with a reputation established by over thirty years of reliable work. Full directions accompany each assortment.

Collection No. 2. This collection contains 60 pieces, among which are Roman Candles, Volcanoes, Triangle Wheels, Bengola Lights, Flower Pots, Pin Wheels, Scroll Wheels, Blue Lights, Star Mines, Red Hand Lights, Green Hand Lights, Slow Matches, Incandescent Lights. These pieces, sold separately, would cost $2.80.



We offer this entire collection for only one new subscriber. Price 85 cents. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Collection No. 5. 75 pieces. This collection contains a number of pieces not found in No. 2, and in addition, the pieces are much larger in size and more suitable for public exhibitions.

Given for one new subscriber and $2.00 additional. Price $4.25. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Fine Racket, and Other Tennis Goods.

Racket given for one new subscriber and $1.00 additional.

The Wright & Ditson Tennis Racket is sure to please the most exacting player. It is full regulation size, carefully bent, and is made with hard red wood seared handle, and walnut throat. It is strung with the best quality American gut, in fine meshes, 25 x 18 strands. We guarantee it to be equal to any $4.00 Racket.

Given for one new subscriber and $1.00 additional. Price $2.75. **Postage and packing 20 cents,** when sent as a premium or purchased.

12-Thread Net, 42 x 2½ feet. Given for one new subscriber and 45 cents additional. Price $1.75. **Postage and packing 40 cents,** when sent as a premium or purchased.

Handicap Balls. Three given for one new subscriber. Price 75 cents. **Postage and packing 10 cents,** when sent as a premium or purchased.

Sectional Net Poles, Guy Ropes, and Pegs. Given for one new subscriber and 35 cents additional. Price complete $1.50. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

The King Pneumatic Rifle. Pistol Grip. Nickel-Plated.

Given for one new subscriber and 15 cents additional.

Our Pneumatic Rifle is a mine of sport. If the weather is rainy, the piazza can be made a shooting-gallery, and a whole company entertained with trials of marksmanship. If the sun shines, out-of-door shooting-matches can be held, and keen eyes and healthy complexions secured.

For the past few years we have been using the Chicago Air Rifle. This has given good satisfaction, and many thousands have been ordered. Its manufacturers have recently, however, produced a much finer Gun.

This new Gun we have named the King Pneumatic Rifle. Though so much superior to the Chicago Air Rifle, and in fact any other similar gun, we are able to offer it at but a slight advance over the Chicago. For an accurate long distance Target Gun, we cannot too highly recommend it.

A Beautiful Rifle.

This is the handsomest Air Rifle we have ever seen. Its polished barrel shines like silver. Its curves are graceful, and its proportions perfect. It is a gun any boy would be proud to carry, and prouder still to own. Yet, with all its beauty, its shooting qualities do not suffer in comparison. It shoots with precision, and carries a shot for a long distance.

The great advantage of an Air Gun is that it uses no powder. It is hence inexpensive. There is scarcely any noise. No danger of explosions. No possibility of fires.

The King Pneumatic Rifle is made entirely of brass, iron and steel, with the exception of the stock. This is of wood, stained and polished to represent mahogany, and has a **pistol grip.** The barrel and other exposed parts are nickel-plated. Its length is 33 inches. It is designed entirely for shot. Common BB shot are used. These can be bought for a few cents a pound at any local store.

Given for one new subscriber and 15 cents additional. Price, $1.25. We send with the Rifle a small quantity of Shot and a Target. **Postage and packing 45 cents,** when sent as a premium or purchased.

Lovell's Boys' or Girls' $35.00 Safety Bicycle.

Given for Twenty New Subscribers.

A Special Offer.

This is a rare offer. It is made for a short time only. We cannot extend it beyond August 20th.

Boys think more of fishing in the summer than of working for new subscribers. THE YOUTH'S COMPANION offers here to any boy or girl subscriber a more attractive inducement than fishing. It will certainly pay you to exchange the brooks and forests for a little angling for subscribers.

Twenty Subscribers! **Ten weeks** to get them in; that means only two subscribers each week for ten weeks,—and the **Bicycle is yours.**

It's a Costly Offer

for us to make. We try it as an experiment. We hope 1,000 boys and girls will get a Bicycle.

This offer is made independent of any offer of presents made in the October List.

Ordinarily it would be necessary for you to obtain forty new subscribers to THE YOUTH'S COMPANION in order to secure this superb Bicycle, but until August 20th we will reduce this number one-half, making it just twenty.

We Propose to Help You.

We wish to know just how many boys and girls would like to earn this beautiful Bicycle before August 20th. If you desire to work for it, write and tell us and we will send you special helps for securing it. These helps will consist of instructions how to work, and also **twenty illustrated Bicycle certificates,** which you will find invaluable. With these almost any active and persevering boy or girl will be able to earn the Bicycle before August 20th. This is a rare opportunity for securing a Safety Bicycle with but little effort. Commence work at once, and thus take advantage of our offer before it expires. So liberal an offer may never again be made.

Two Subscribers a Week

for only ten weeks, and this fine $35.00 Bicycle is yours! The advent of a high-grade Boys' and Girls' Bicycle at a low price was like the advent of a sudden fire on the dry prairies of the West.

No sooner did it make its appearance than it won the hearts of all.

These Bicycles are to be seen on every road. If a boy hasn't one, he wants one.

Description.

There is no more enjoyable and health-giving exercise than Bicycle-Riding. There is no better or safer wheel to use than the Lovell $35.00 Safety, adapted to boys and girls from 8 to 14 years of age.

Drop Frame, Steel Tubing, 26-inch Wheels, Crescent Rim, Moulded Rubber Tires, Direct Spokes, Plunger Brake, Adjustable Cone Bearings, Adjustable Suspension Saddle, Frame and Wheels Enameled, all other parts Nickeled. Each machine fitted with Saddle Bag, Wrench and Oil Can.

Given for twenty new subscribers. Price $35.00. **Must be sent by express and charges paid by receiver,** when sent as a premium or purchased.

Ask Friends to Help.

Ask your friends to help you. Send them one of the Bicycle Certificates and tell them you are working for the Bicycle. Two new subscribers a week! Start out with success as your motto—and our word for it—you will be mounted on your Bicycle in less than ten weeks.

You can send in the names of the new subscribers as fast as they are obtained. They will be credited to you, and as soon as twenty have been received, the Bicycle will be forwarded to you. On account of the costly character of this Offer, no **Extra** Premium can be allowed when you select a Safety Bicycle.

Harvard Photograph Outfit.

Given for one new subscriber and 50 cents additional.

A success needs no pushing. So with the Harvard Photograph Outfit. Thousands of young folks are its ready witnesses. They are enthusiastic in its praises. Every mail brings us pictures they have taken with it. Even we are surprised at the merit displayed.

We have secured the negatives of many of these and had them copied. If any one desires such a copy, send us six cents. We will forward, in addition to a photograph, a booklet, "How Harry was Kept from the Street," and Our Prize Offer Album. This Album will enable one to compete for the prizes named in our offer of April.

The Harvard Camera

is of metal. Handsome in appearance. Takes a picture 4 inches long and 2¼ wide. Has a fine French, wide-angle lens. Is provided with a Tripod, and also a Finder for locating the picture.

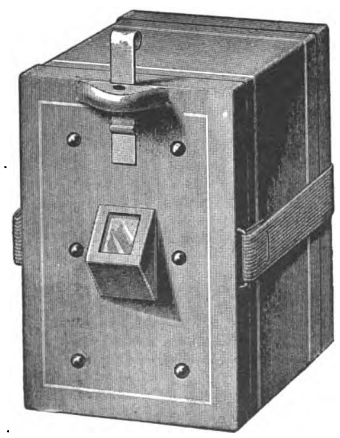
With the Camera we give sufficient apparatus, chemicals and materials for enabling pictures to be taken, developed, printed and mounted. The Outfit consists of the Camera, Tripod, Finder, Developing Tray, Printing Frame, Glass Graduate, Ruby Fabric (for ruby light), and Dry Plates, Sensitized Paper, Card Mounts, Chemicals and Toning-Gold sufficient for six negatives, and prints from the same.

The Complete Outfit given for one new subscriber and 50 cents additional. Price $1.75. **Postage and packing 50 cents,** when sent as a premium or purchased. For short distances express is cheaper than mail.

REBATE CARD. With each Harvard Outfit we send a Rebate Card. If at any time you wish to buy a $10.00 or $15.00 Camera, we will accept this Card as $1.75 in part payment thereon.

The Hand-Woven Hammocks.

No. 1 Given for one new subscriber and 15 cents additional.



This is the third season we have used this Hammock. It is the best Hammock in the world at the price. It is strong, durable and handsome. Has no knots to untie. Cannot catch your buttons, and does not become stretched and baggy. We give this Hammock in two sizes:

Hammock No. 1. This is a closely-woven Hammock, with every one of its warp-threads joined to the suspension cords. Has a colored border. Extreme length 10 feet, length of body 5½ feet, width 3 feet. Given for one new subscriber and 15 cts. additional. Price $1.00. **Postage and packing 35 cents,** when sent as a premium or purchased.

Hammock No. 2. This is also closely-woven, made from heavy 60-thread prize cotton cord. Has a colored border. Size of body 6½ x 3½ feet, extreme length 12½ feet. Given for one new subscriber and 60 cents additional. Price $1.75. **Postage and packing 45 cents,** when sent as a premium or purchased, or it can be sent by express and charges paid by receiver.

The Gem Tin-Type Camera and Outfit.

Given for two new subscribers and 50 cents additional.

There is hardly a crowd of school-children to be seen where an exchanging of tin-types is not going on. Especially so as vacation approaches. Professional photographers are pressed with work. Why not have a Camera of your own, and earn some money for yourself?

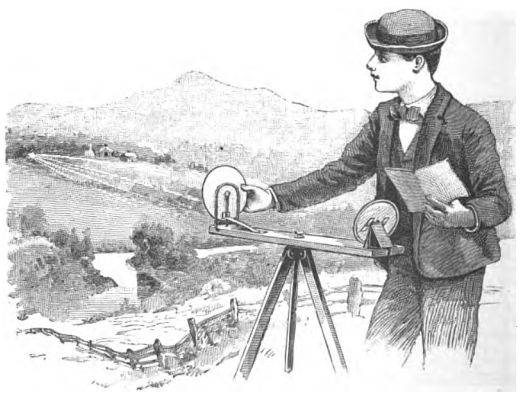
Our Tin-Type Camera takes six pictures at a time, all on a single plate. This plate can be developed and fixed, the six portraits cut apart with scissors and delivered to the sitter in less than ten minutes. As the plates and chemicals are cheap, your profits can be large.

Six Cameras in One.

The Tin-Type Camera is really six small Cameras in one. It has six chambers and six lenses. A single Argentic Plate is placed in the Camera, and six portraits taken on it at once. The Plates are 2½ x 4 inches, and the six portraits are each 1¼ x 1½ inches. The Outfit we give with the Camera includes everything needed for taking and finishing 36 Portraits.

The Outfit for Tin-Type Portraiture consists of the Phenix Gem Camera, 1 Gem Tin-Type Album, 24 Gem Mounts, 6 Argentic Tin-Type Plates (capable of making 36 pictures), 1 Glass Graduate, 1 Sheet Ruby Fabric, 2 Bottles Developer, 1 Box Hyposulphite, 1 Tray, and Manual of Directions.

Given for two new subscribers and 50 cents additional. Price $2.75. **Postage and packing 50 cents,** when sent as a premium or purchased. Express may be cheaper. Ask your local agent. Weight 3 pounds. **A Sample Tin-Type** sent to any address on receipt of a two-cent stamp.



Heliograph, or Sunlight Telegraph.

Given for one new subscriber.

A Heliograph is an instrument for signalling by means of the sun's rays.

Government surveyors have telegraphed by means of it between points a hundred miles apart.

We know our young friends will be delighted to possess such an instrument, and be enabled to communicate with distant neighbors.

Construction.

Our Heliograph consists of a cherry-wood Base, mounted upon a Tripod, and supporting an adjustable Mirror and a hinged Screen. The Mirror is of copper, nickel-plated and highly polished. Will reflect sunlight three miles.

The Heliograph is first aimed, and the mirror turned to reflect the sun's rays in the same direction. By moving the screen, the reflected light is made to flash the dots and dashes of the Morse Alphabet, and so spell out the message. Knowledge of the Morse Alphabet not needed. With the Heliograph young folks can plan for parties and picnics; school questions can be asked; the latest news told; messages sent for friends.

One Heliograph, with Directions and Morse Alphabet, given for one new subscriber. Two for one subscriber and 75 cents. Price $1.00 each. **Must be sent by express and charges paid by receiver.**

WHAT WE LIKE.

Among the many things that are hard to understand is the fancy entertained by so many people, that other people will be interested to hear at considerable length what they like to eat and what they do not like to eat. There seems to be nothing of very great interest to one's friends in the fact that one is passionately fond of cabbage and onions; and yet, next to the weather, the most frequent subject of conversation is probably the subject of eatables.

"If there's anything I dote on," says Mrs. Chubb, "it's a nice leg of mutton, with a butter gravy and capers. And I like —"

"But," says Mrs. Scragg, breaking in, "is there anything more horrid than pickled tripe? I can't bear it."

"My favorite sauce," Mrs. Chubb continues, "is fried apple-sauce; and scalloped apples I can't get enough of."

"Laws!" exclaims Mrs. Scragg, "you don't say so! No kind of fruit agrees with me. And I don't see how anybody can eat those miserable things they call olives."

So they go on for an hour. "Well, I must be going," says Mrs. Scragg, rising at last. "We've had a real pleasant time!"

Throughout the whole interview Mrs. Chubb has been talking about the things she likes, and Mrs. Scragg has been talking about the things she does not like. Each one has been following her own temperament; and while she has not been at all interested in what the other has said, she has been greatly interested in what she herself has said.

This principle of compromise is generally the basis of these little conversations about food.

"How would it do," said one man to another, when, on a long railway journey, their conversation had lagged, "to tell each other what we like to eat, and divide the time?"

"Capital!" said the other. "You tell me for ten minutes what you like best, and then I'll call time on you, and tell you what I like."

"And then I begin again in ten minutes more?"

"Certainly."

It was agreed, and for a mortal hour the two men related to each other the smallest details of their very dissimilar food-likings, in ten-minute speeches. At the end of that time the porter passed through the car and announced that dinner was ready in the dining-car.

"Good!" exclaimed one. "I'm so hungry I could eat anything."

"So could I," said the other. Then they went in and ate exactly the same things, which were practically the same that both had eaten the day before.

BIDEL TO THE RESCUE.

A lion-tamer's power lies not only in his courage and self-possession, but in his understanding of the temper of the animals. It is perilous for any one but the tamer himself to attempt any liberties with them, however indifferent and well-disposed they may seem. M. Bidel, the noted lion-tamer, relates in his memoirs a terrible adventure. He was sitting at the entrance of the menagerie with Madame Bidel, and the entertainment was about to begin, when he heard a piercing cry. This was followed by furious roaring, and cries of "Help! help!" by many voices. He rushed in. All eyes were turned toward one of the cages.

It was appalling. Venturelli, a poor fellow in my employ, had been lifted from the ground, and was suspended outside the cage, in the claws of four lions, one of whom was eating his arm!

One glimpse of that horrible sight, and I ran, reflecting in a second that to go around the cages and get in by the ordinary entrance would involve a fatal delay, and deciding on the desperate expedient of raising the grating on the side toward the spectators, and so crawling into the cage.

How I did it, how it happened that I was not caught and mangled, I do not know. But suddenly I was on my feet, in the midst of that savage feast, with neither stick nor whip, and only my fists for weapons. I struck and I commanded. The lions fell back and let fall their prey. I hurried out of the cage, and was greeted with enthusiastic applause.

I thought poor Venturelli was dead. But he was taken to the hospital, his wounds were dressed, and he recovered. Then I asked him how it happened. He said, "When I passed those gentlemen," he always spoke courteously of the lions, "I wished to caress them. Three were asleep, and one was awake; that one misunderstood my attention. He waked his comrades, seized me, and but for you I should certainly have made a meal for them."

The heroic lion-tamer goes on to relate that the king, being informed of his act, decorated him publicly, and the people fêted him and loaded him with honors. On this occasion, he says, though he was not used to being afraid, he was so agitated that his limbs shook; he was faint and could hardly see. He soon recovered himself, however, and his pleasure in this public recognition of his bravery was marred only by a regret that his father could not be there to enjoy it.

ALFALFA FARMS.

One of the greatest irrigation districts in the United States is in Kern County, California. Here are some thirty-five large canals with branches and distributing ditches, covering nearly half a million acres of very rich, sandy loam. The largest of the canals is the Calloway, thirty-two miles long. It has sixty-five distributing ditches, and covers two hundred thousand acres of very rich land. Its water appropriation is one thousand four hundred and seventy-six cubic feet per second.

On the lower side of the canal one can see fully twenty-five thousand acres in almost continuous alfalfa fields. Alfalfa, with water, yields five crops a year, and two tons to the acre at each cutting.

About once in six weeks, for eight months in the year, the alfalfa fields are cut, and the crops stacked in great piles. The vastness of some of the stacks near the ranch-houses of the "irrigation belt" is a constant source of wonder to tourists. Eight hundred and fifty tons have been put into one stack.

There are some immense alfalfa farms in Kern County. The McClurg and the Rosedale ranches have about three thousand five hundred acres each, the Jackson ranch has over seven thousand, and the Poso ranch above ten thousand acres.

The process of handling alfalfa on a large scale is interesting. The derrick and derrick-fork are used. The stacks range from one hundred to four hundred feet long, and are usually thirty feet wide and from twenty-five to thirty feet high, and on the extensive ranches one can often see from fifty to a hundred stacks of alfalfa in sight at one time.

From six to ten teams are kept busy supplying the derricks, and from sixty to one hundred tons can be stacked in a day. Eight thousand tons have been stacked in a single ranch and fed out to live-stock.

Cattle, sheep, horses and hogs all live, to a great extent, on alfalfa.

GRISI'S CHILDREN.

It is delightful to read of two persons in the same profession who are happily married. Identical tastes and pursuits bring about a certain harmony of relation which is both rare and beautiful. Grisi, the great singer, married the tenor Mario, and some incidents told of them and their children prove an unusually happy domestic life.

The prima donna identified her own success entirely with that of her husband, always preferring his advancement to her own. Perhaps the clever reply which she made to the Emperor Nicholas, of Russia, was half-serious, in embodying this spirit of self-surrender.

"So," said his majesty, jocosely, pointing to her children, "these are your little Grisettes!"

"No, sire," she returned, "they are my little Marionettes."

The children themselves tell an amusing story of their own sensations at one of their mother's public triumphs in Dublin. Grisi's admirers had dragged her carriage to the hotel, and she had sung to them again, "as if she were tearing the harp-strings asunder and singing from the depths of her heart." The enthusiasm of the listeners knew no bounds.

"They climbed up the lamp-post," said one of the children, in after years. "We thought they would come into the room, and when one speaker called out, 'Leave us one of your children!' our fright was awful. In a chorus of pitiful little voices we begged mamma not to leave us behind; we would be such good children!"

LAMP ROCK OF CENTRAL ASIA.

Captain Younghusband, an English traveller, writes home from Central Asia an account of a rock which has been a mystery to the natives and to travellers. It is situated on the shores of a lake near one of the branches of the upper Oxus, and is known as the Lamp Rock. The account of it is published in the *Geographical Magazine*.

This rock received its strange name because from a supposed cave in its side a perpetual light shines out. Mr. Elias, who passed the spot in 1885, thought the light might be a phosphorescent one, but he did not have time to examine it properly.

Younghusband says the rock stands by itself about two hundred feet high, and projects from the mountain side. High up the steep cliff the cave was pointed out to him, and sure enough there was a pale light visible. The natives have a superstitious dread of the rock, and say the light comes from a diamond in the forehead of a demon, who guards his vast treasures stored in the cave.

With great difficulty Mr. Younghusband ascended to the cave. A false step, in some places, would have meant certain death. He entered the cave and saw the light, which he found to be merely the unadulterated light of heaven, coming from the other side of the cave. In fact, it is no cave, but a tunnel right through the rock. 'From below, the fact cannot be determined that the hole is not a cave, and the light striking up against the roof is all that can be seen.

SAVING A SPARROW.

An authentic incident in the career of General Robert E. Lee is told as an evidence of his sweetness of disposition and natural kindliness. One day he was inspecting the batteries over the lines below the city of Richmond, and the soldiers had gathered in a group to welcome him. This action drew upon them the fire of the Union guns.

The General faced about and advised the men to go under shelter. But he did not do this himself. Walking on, although in apparent danger, he picked up and replaced an unfledged sparrow which had fallen from its nest near by.

The act was instinctive, but perhaps indicates a really higher endowment than ability to conduct notable campaigns.

TOUGH STORY.

Everything goes by comparison. The man who thinks his own condition almost unendurable has only to look about him to find some other man whose case is still worse. Says the Salt Lake *Tribune*:

"I say," said a man to his butcher, "that last piece of steak I bought of you must have come from a steer old enough to vote."

"Was it tough?"

"Tough! Well, I should say it was. I could hardly cut it."

"Oh, is that all? Well, you ought to have heard another man kicking a day or two ago. He bought a piece that he said was so tough he couldn't get his fork into the gravy."

REASONABLE QUESTION.

Facts, taken all by themselves, are often open to a ludicrous interpretation.

A young man just home from college, wishing to inspire his little sister with awe for his learning, pointed to a star, and said:

"Do you see that bright little luminary? It's bigger than this whole world."

"No, 'tisn't," said she.

"Yes it is," declared the young collegian.

"Then why don't it keep off the rain?" was the triumphant rejoinder.—*Spare Moments.*

UNREASONABLE CURIOSITY.

Before a young man marries he should learn not to ask foolish questions.

"What, my angel," exclaimed a youthful husband bursting into the kitchen, "doing the cooking yourself? What is it?"

"Why, Edgar, how foolish of you! How in the world can I tell till I see what it turns out?"

"A DOG, I suppose?" said a hospital surgeon, as he was dressing the wound of a woman severely bitten in the arm. "No, sir," was the dignified answer, "*another lady.*"

Burnett's Cocoaine.—A PERFECT DRESSING FOR THE HAIR.—The Cocoaine holds in a liquid form a large proportion of deodorized COCOA-NUT OIL, prepared expressly for this purpose. *No other Compound* possesses the peculiar properties which so exactly suit the various conditions of the human hair. It is conceded by all who have used it to be the *best and cheapest Hair Dressing in the World.* [*Adv.*

COLORED FIRES.

It may be taken for granted that many readers will be interested to learn how the colored fires, with which the "birthday of our country" is popularly celebrated, are prepared. The process of combining the materials is simple. Striking differences in color are produced by slight changes in composition. The "Western Druggist" gives some formulæ which clear up the mystery of these strange effects.

For the production of red, green, yellow and blue fires, one-fifth part of the composition is shellac. As this is a constant quantity it is apparent at once that the shellac has nothing to do with determining the color. It serves the purpose that charcoal does in the manufacture of gunpowder. It holds the other elements in desired form, and regulates the rate of combustion.

Another fifth part of these several compounds is the chlorate of potassium. This is used for the detonating effect; to startle the beholder with the crackling sound, and with the scattering of the fire. Of itself it would give a white light, and would burn with intense energy. It imparts "go" to the rocket.

The remaining three-fifths are what give color to the flame. They differ, of course, in the four compounds. For producing red fire nitrate of strontium is used; for green, nitrate of barium; for yellow, nitrate of sodium; and for blue, ammonia sulphate of copper. As we find nitrates used for the first three colors named, it is plain that the effect is determined wholly by the use respectively of strontium, barium and sodium. It is equally true that blue is the result of the burning of copper.

Violet and purple flames are composite. To produce the violet, lime and copper and sulphur are burned together. For purple, strontium and calomel are burned with just a little copper. The fumes of calomel are particularly harmful, and all these substances yield gases that ought not to be freely breathed. Very striking effects could be obtained by using nickel, arsenic and other similar elements, but their use would be dangerous to health.

UNEXPLAINED.

In Captain King's "Trials of a Staff Officer" an amusing story is told of General Upton, who was at one time commandant of cadets at West Point. The commandant's tent was a great place for fighting battles over again.

One day six or eight of us were gathered there, and the floor was held by one of those blatant gentlemen who, having graduated before the Civil War, and having had just as good a chance as the gallant band of ambitious young lieutenants who rose to be generals, had preferred the safety, ease and slow promotion of mustering and disbursing duty, and whose only brevet was for the service of the "recruitment of the armies of the United States."

For some reason or other, such men have often been prone to disparage the services of successful men, and to attribute the promotion over their heads of such soldiers as Upton and Custer to political influence. So Major —— was on this day holding forth about luck in the line, ending with this startling statement:

"Well, now, Upton's another instance. Of course, I don't mean to say but what *you* fought all right, old fellow, when you got a chance, but you won't deny that there were fellows who went through the whole war with the regulars, stuck to their regiments or batteries, got wounded time and again, and only got a brevet; but here you are a lieutenant-colonel, and never got a scratch!"

Considering the fact that Upton had been wounded in three different engagements, he might have been excused for making a pointed reply, but he only smiled quietly, as he sat writing at his desk, and said:

"Well, there are lots of men who think just as you do, I've no doubt."

"CHIVALROUS!"

An exciting story of the rescue from drowning of a Japanese, by an Englishman whose life the Japanese himself had set out to save, is told in a Japanese paper, the *Kobe Shimbun*. The Englishman was a resident of Tokio. Being on his way to Yokohama, and finding no ferry-boat, owing to the swollen state of the river, he determined to swim across with his clothing in a bundle tied on his head.

The daring attempt attracted a crowd of sight-seers, one of whom, observing that the stranger was apparently in difficulty, plunged in and swam to his rescue. The Japanese was a good swimmer, but the waters ran swiftly, his strength gave out, and he was carried down-stream. Then arose a cry from the spectators, for they saw that the Japanese was going to sink.

By this time the Englishman had almost reached the opposite bank, but when he heard the cries of the crowd he turned about, and seeing the drowning Japanese, he again faced the current, and coming up with the drowning man, caught him with one arm, and swimming with the other hand he brought him ashore amid the cheers of the crowd.

"How chivalrous was his action!" exclaims the Japanese journalist in conclusion. "His name we know not, but he has our highest admiration."

FORCE OF HABIT.

A lady who wished to weigh her baby, two months old, but who had no scales at hand suitable for the purpose, took the child to a neighboring butcher-shop. The butcher put the baby in his spring scales, looked at the dial, and remarked:

"With the bones and all, mum, it's fourteen pounds and a half. Shall I —?"

"How dare you make such a suggestion," screamed the woman, as she snatched her baby, and rushed out of the shop.

HE KNEW.

What is so sweet as sympathy when a man finds himself in trouble?

"Say, waiter," exclaimed an impatient customer, "I've been here a full hour!"

"I've been here since seven this morning," answered the waiter. "Tiresome, aint it?"—New York *Sun*.

Itching Piles.

Garfield Tea Cures

Sir HENRY THOMPSON, the most noted physician of England, says that more than half of all diseases come from errors in diet. Garfield Tea overcomes results of bad eating; cures Sick Headache; restores the Complexion; cures Constipation. Send for Free Sample to 319 West 45th Street, New York. Mention COMPANION.

Constipation & Sick Headache.

PICTURE IN RIVET. Ivory handle, 2-blades, razor steel; very neat; sample post-paid, 50 cents. Our 75-cent jackknife mailed for awhile at 48 cents; Hollow-ground Razor, $1.25; best strop, 50 cents. Illustrated list free.
MAHER & GROSH, 44 S Street, Toledo, Ohio.

INFANTILE SKIN SCALP AND BLOOD DISEASES CURED BY Cuticura

EVERY HUMOR OF THE SKIN AND Scalp of infancy and childhood, whether torturing, disfiguring, itching, burning, scaly, crusted, pimply, or blotchy, with loss of hair, and every impurity of the blood, whether simple, scrofulous, or hereditary, is speedily, permanently, and economically cured by the CUTICURA REMEDIES, consisting of CUTICURA, the great Skin Cure, CUTICURA SOAP, an exquisite Skin Purifier and Beautifier, and CUTICURA RESOLVENT, the new Blood and Skin Purifier and greatest of Humor Remedies, when the best physicians and all other remedies fail. Parents, save your children years of mental and physical suffering. Begin now. Delays are dangerous. Cures made in childhood are permanent.

Sold everywhere. Price, CUTICURA, 50c.; SOAP, 25c.; RESOLVENT, $1. Prepared by Potter Drug and Chemical Corporation, Boston, Mass.

Send for "How to Cure Skin and Blood Diseases."

Baby's skin and scalp purified and beautified by CUTICURA SOAP.

Kidney pains, backache, and muscular rheumatism relieved in one minute by the celebrated CUTICURA ANTI-PAIN PLASTER. 25 cents.

DONALD KENNEDY Of Roxbury, Mass., says:

Kennedy's Medical Discovery cures Horrid Old Sores, Deep-Seated Ulcers of **40** years' standing, Inward Tumors, and every disease of the skin, except Thunder Humor, and Cancer that has taken root. Price, $1.50. Sold by every Druggist in the United States and Canada.

Teething Made Easy.

Increased flow of saliva, sore gums, dry mouth, diarrhœa, unusual redness of cheeks, eruptions, ulcerations, itching of the nose, twitching of the muscles, dilation of the pupils, fretfulness, restless sleep or wakefulness, thirst, and loss of appetite, all are symptoms of Teething. Although painful, Teething is not in itself dangerous. It is not disputed, however, that during the teething period the greatest number of deaths occur. A cold, an indigestion or an eruptive fever, coming at this time, acts upon a system less able than usual to resist injurious influences.

"Tooth-Food"

will prevent or cure all teething pains and carry the child comfortably through a period of unusual irritation and danger.

Children who are late in cutting teeth, slow to walk and whose bone formation is defective, should be given "Tooth-Food." The use of this remedy will prevent rickets, convulsions, spasms of the glottis, St. Vitus dance, retention of the urine, etc. "Tooth-Food" is the best anti-scrofula remedy known.

This remedy is made of the nutrient elements necessary to bone growth, supplying material lacking in most natural and all artificial food. It is absolutely harmless and pleasant to the taste. Around each bottle is wrapped a circular with full description of "Tooth-Food" and directions for its use. A bottle will be sent, expressage free, to any address, on receipt of one dollar.

THE REYNOLDS M'F'G. CO., CINCINNATI, O.

Your druggist should have "Tooth-Food" and before sending to us you had better ask him for it.

THE UNIVERSAL WHISTLE

Price, 25c. or $2.00 doz.

The Best Lip Whistle for Cyclists, Horse-car Conductors, Hunters, and all who use Mouth Whistles. Any smart boy can make money selling it. **WHITTEN, GODDING & CO., Providence, R. I.**

WALL PAPER Attractive and Non-Arsenical. Factory prices. Enormous assortment of styles. Goods sent to any part of the U. S. A very large line of samples sent for **8 cts.** postage. Papers without gold, 4c. to 6c. Gold Papers, 5c. to 15c. Elegant Embossed Gold Papers, 10 cts. to 20 cts. Borders, all widths to match, in proportion. **The Providence Wall Paper House,** 337-339-341-343 Westminster Street, Providence, R. I.

THE GREATEST HIT of the last few years is a blacking for ladies' and childrens' shoes, called **BIXBY'S "ROYAL POLISH,"** put up in patent bottles, which prevent all overflowing and soiling of the hands, carpets or furniture and it keeps the leather in a soft and presentable condition until the shoes are fully worn out.

Speaking of the nationality of bootblacks, we are reminded that sometimes they are Polish, and sometimes Shinese, but they all do a Russian business when they use Bixby's

"THREE BEE" BLACKING.

When Bixby's boys are Hungary they Servia Turkey. These articles sold by dealers everywhere.

THROUGH THICK AND THIN.

In Eight Chapters.—Chapter VII.

In the Army.

The next morning was bright and beautiful. In the great ceremony of the day, the awarding of diplomas, Edgar Mount came out well up toward the head of his class, while Jack Randolph was among the twenties.

Jack felt no envy at Edgar's success. He was graduated high enough to have been assigned to the artillery, but there were more desirable vacancies in the cavalry, which branch, in his heart, Jack had always preferred.

For a few days after graduation the question of cavalry or artillery was suffered to rest. Colonel Randolph had agreed to come to West Point upon the express condition that he was to stay no longer than was necessary to see Jack receive his diploma; but on graduation day he seemed to be in no hurry to depart.

Half a dozen of the older officers had gathered around the old gentleman, and were greeting him with the utmost cordiality. One or two had served under him, and others had been cadets at West Point when he had been an instructor there.

The Colonel stood up in the group as straight as an Indian, with a smile on his grim face, and something like tears shining in his eyes.

"Why, Banks!" he would say to an officer who was wringing his hand. "You don't mean, sir, that you ever got through the Academy? Such a scamp as you were! I didn't think even your brains would manage to pull you through.

"And Jackson!" the Colonel went on, delightedly, turning to a grizzled major who had made his way toward him, and had put both hands on his shoulders. "Why, this is like the old times on the frontier! Some tough work we had with the Indians, didn't we?"

"About as tough as tough could be," answered the Major. "But, Colonel, it seems almost too good to be true to see you here!"

So it went on. As Jack was talking earnestly with his mother, he heard a pressing invitation given to the Colonel to dine at the officers' mess; and then there were innumerable introductions to him, hand-shakings, and everything that could gratify the old man's heart.

The days slipped by. The Colonel spent his time in the library, or else wandering about the post, seeking out the well-known haunts of his youth and manhood, telling long stories of his cadet life, almost living at the officers' mess, and receiving generous and affectionate attentions.

Mrs. Randolph was hardly less an object of admiration among the few classmates of Jack's who still lingered, and the newly enfranchised first class. She was so gentle and sympathetic and intelligent that they flocked around her.

"Jack's mother!" and the quaint, dignified, old-fashioned Virginia Colonel, belonging to a type that few of the cadets had ever seen, were the most popular of the guests at West Point.

Uncle Josh seemed swimming in a sea of glory. He found interested listeners for all his wonderful stories of military exploits. The officers gave the Colonel a rousing farewell dinner, at which there were toasts and speeches, and a few touching words from the old man, who felt that he should never see the well-beloved spot again.

But at last came the return journey to Virginia, and with it two happy, idle months for Jack. The strain of four years was relaxed. He scarcely looked at a book, but spent his days in a delicious idleness—delicious because earned by hard and honest work. His grandfather seemed to have taken a new lease of life, and his mother's content was complete. Her Jack was a man in the true sense of the word—upright, brave and honorable.

But just as it had been two years before, Jack missed Tony's companionship. As in that former time, he went down to Lone Point, spent long hours with Mrs. Scaife, and went all over the little place, his heart still loyal to Tony.

It was now four years since that stormy night off Hatteras, but Jack's memory was tenacious. Tony was his first, his best, his earliest friend, and he never could forget him.

The first of September his orders came. They were to a cavalry regiment at a post in the far West, where there was always a certain risk of trouble with the Indians.

Sergeant Anthony Scaife!

The assignment pleased Jack greatly, and made him an object of envy to those of his class who had no chance of anything more exciting than the routine of Eastern military posts.

The parting was harder for Mrs. Randolph and the old Colonel than for Jack, who had a new life of adventure and responsibility to look forward to; but they were cheered by the prospect of a visit from Jack the next summer on his annual leave. The Colonel even talked seriously of going out to see Jack; but at this Mrs. Randolph only smiled.

Among the assignments to the same post, which comprised two batteries of light artillery as well as cavalry and infantry, was Edgar Mount, who was now a second lieutenant of artillery.

"It is strange how you and Edgar are thrown together," said Mrs. Randolph, when Jack read out the list of army orders published in the newspaper.

"I'm sorry for it," answered Jack, frankly.

Almost before he knew it the summer was come, and on the first day of September Jack left Marrowbone to join his regiment.

One afternoon in the late spring of the next year Jack was sitting in the little frame building which did duty for the adjutant's office at the Western post where he was stationed. The adjutant of the post was absent for a few days, and Lieutenant Randolph, who was his assistant, was in charge of the office.

Across the white and dusty stretch of the parade-ground a squad of men was advancing. They were new arrivals, and the officer in charge, having reported to the commandant, was now bringing the squad to be entered upon the adjutant's books, and to report in form.

The day was warm, and Jack sat at his desk, feeling very hot and tired, his cap pushed back on his head, and his feet stretched out; but when the officer in charge of the squad entered, he found Jack as trim as possible, sitting up with soldierly erectness.

He saluted the recruits punctiliously, for one of the results of his mother's lessons in politeness was to make him scrupulously courteous in acknowledging the salutes of the private soldiers. Nothing contributed more to his popularity than the way in which, while remembering his dignity as an officer, he respected the manhood of the soldiers.

Some of the men had just enlisted, while there were a dozen or so of old soldiers, and one or two non-commissioned officers who had been transferred from another regiment.

Jack turned his attention first to the new recruits, and addressing a kind word to each, made them feel that they were under the authority of kind and humane officers. The report was a monotonous business, and went on with singsong regularity, until the very last name was reached.

"Anthony —" began Lieutenant Randolph, in his clear voice, and then stopped suddenly. The name was Scaife!

The sudden appearance of Tony's name startled Jack. It was no doubt a mere coincidence, but it was a peculiar one.

Meanwhile the owner of the name, a slight but well-made young fellow, with "sandy" hair and sunburnt skin, had advanced. He was evidently under some powerful but suppressed emotion. His face was alternately pale and red, and he clenched his hands and then opened them again with nervous excitement.

Lieutenant Randolph's eyes remained glued to the list he held in his hand. It had a sort of fascination for him. But when the young man, who was one of the transferred soldiers, answered to his name, Jack let the paper drop, and fell back in his chair as white as a sheet.

The men standing around saw that something extraordinary connected the young officer sitting in his chair and the sergeant standing up before him. Both were evidently deeply agitated.

For a few moments there was a dead pause. Tony—for it was indeed Tony—recovered his self-possession first. Jack's brain was in a whirl. He half rose from his chair, and then sat down again. He leaned his head on his hand, and the pen dropped to the floor.

Tony, stooping down, picked up the pen and handed it to him, saluting, but giving him a look that brought him back to his surroundings.

He uttered a mechanical "Thank you!" and then, with an effort, resumed his work, calling Tony's name.

The rest of the business was soon despatched. All went out except Tony, who, in response to a sign, had remained.

As soon as the room was cleared, Jack and Tony rushed into each other's arms. Both were now men, and manly men, but there were tears in the eyes of each as they grasped each other's hands and sat down side by side.

"How was it—how was it?" Jack breathlessly exclaimed; "and do you know your mother is alive?"

"Yes," answered Tony, with a slight break in his voice. "I know it now, but I didn't know it for a long time. You know I thought the Captain said, 'Cast off the rope —'"

"Tony, you were a brave fellow — the bravest in the world."

"And I let it go. Then, when I found out what he did mean, it was too late. The boat couldn't reach me.

"I ran below, thinking that I could get hold of a table or a chair. That saved me, for the great wave that swept over the deck certainly would have carried me off. I jumped on the cabin table and broke the skylight out with a chair, and scrambled out somehow; and the next thing I knew I was floating about in the midst of the storm, still holding on to the chair.

"I don't know how I felt for the next two hours; I was in the water as long as that. I expected every moment to be my last, and I thought of my mother and of you—and I thought when bedtime came at Lone Point my mother would be saying a prayer for me.

"Then the first thing I knew, a big hull loomed up before me. The wind had gone down then, and the people heard my voice when I shouted—it wasn't much of a shout, I can tell you; and then a boat was lowered, and put out for me.

"I remember being dragged on board, and I've forgotten everything else for a long, long time. The next thing I recalled, I was lying in a snug cot, and I was very comfortable and quiet, and wanted to sleep all the time.

"I found out I was on a splendid barkantine bound for Jamaica. The Captain sent for me, and I told him my story, and he said I wouldn't be likely to have a chance to communicate with any one until we got to Jamaica. Then I started in to work my passage.

"The sea had not lost its charm for me, and I thought, except for the sorrow my mother must suffer on my account, that shipwreck was the luckiest thing that ever happened to me.

"We were delayed by contrary winds, and had a very long voyage to Jamaica; and when we got there, the very first New York newspaper that I saw, had an account of the wreck of the *Mary Staveley*, and of my going down with the vessel. They made me a sort of hero, and then it said the shock had killed my mother.

"I don't know how I felt after that. I told the Captain I had had bad news—he didn't ask me what it was—and after a day or two, I went about my work.

"Then I began to ask myself, since my mother was dead, and you and your mother were the only people who believed in me, why should I go back to a place where I was disgraced? I thought I had better live it down, and earn a good name for myself somewhere else, before I went back to Virginia.

"You, Jack, were the only person that I longed to see or to write to—and often I'd write you a long letter, and then tear it up —"

"But, Tony, didn't you know how distressed I was, when I thought you were lost?"

"Yes, I knew it. But that money business preyed upon me. I could not be more innocent, but my innocence seemed no shield to me. I felt

Digitized by Google

that the whole country would hear the story—that I was considered a thief."

"And the money was found!" cried Jack, getting up excitedly. "In Edgar Mount's bedroom!"

A mist of thankfulness came into Tony's eyes. "And I've suffered more than four years' torment for that two hundred dollars," he exclaimed, bitterly, "and my mother and you have suffered, too.

"I tell you, Jack, I felt that unless I could prove that I hadn't taken the money, I never wanted any of you to see or hear of me again. And the only hope I had was, that I might rise in the world, and some day go back with a good character behind me, and so live it down.

"I even thought of changing my name, but that seemed cowardly to me, and I am glad that in the end I didn't. But there was no danger of people in those distant parts knowing anything about Tony Scaife, the fisherman.

"So I worked along, and when I was twenty-one, I was mate of a first-rate English ship.

"But all this time I had been going about from place to place and trying to improve myself. My thoughts, and my view of the life I was leading, changed a good deal. I wasn't satisfied with being in the merchant service, though I loved the sea as much as ever—and then I began to look about me for some way of bettering myself.

"I found out that in the United States army there were certain commissions given every year to non-commissioned officers. Now, I had got to be a pretty good mathematician, going to sea as mate—for let me tell you, a fellow nowadays on board ship must know a good deal—and it occurred to me that if I enlisted for five years, I'd stand a pretty good chance of getting one of those commissions. The desire to get it took possession of me —"

"So it did of me, when I wanted to go to West Point," interrupted Jack.

"I thought about it night and day—and I concluded I'd try for it. I found out all about the company schools and company libraries, and I made up my mind I'd put in the five years of my enlistment in working for that commission.

"That's just what I enlisted for. That was three years ago, and I've worked at mathematics until I believe I can stand up with you fellows from West Point. I was promoted twice in two years, until now I'm a first sergeant; and, Jack, I tell you, I've been working toward that officer's commission like a beaver.

"Ever since I found out that a competitive examination for two commissions was going to be held a month from now, I've worked at my books harder than ever, studying all my spare time.

"I learned some time ago from the papers that you and Edgar Mount, too, were in the army, although I still thought my mother was dead. But I had been seized with ambition. I thought if I got the commission, how proud I'd be to write to you, and I knew you would be glad to hear it; but if I didn't get it, I meant to write to you just the same.

"Then, just a day or two ago, I found out in the most roundabout way, through one of the new recruits, that my dear old mother was alive.

"Jack, I had saved up enough to make her comfortable as long as she lives; and when I wrote to her—I don't mind telling you I cried when I wrote that letter—I sent her more money than she ever saw in her life before, and told her as soon as I could get a furlough I should go to see her.

"But I told her not to mention that I was alive to anybody until after this competitive examination was over—because if I should be lucky enough to come out ahead, it would be a proud day when I could go back to her an officer in the army.

"Jack, I think you and your mother first put it in my mind to have this ambition. I always wanted to be a man—but ever since I knew you, I had the feeling that I wanted to be any and every man's equal. I never felt ashamed of it, either."

"Why should you be?" answered Jack, leaning over with his arm around Tony's neck.

They talked about Edgar Mount. Tony showed no revengeful spirit. "But perhaps," he said, "if I am ever an officer, he will apologize to me for what he said."

It was dark before Jack and Tony parted—Jack to go to the mess to dinner, and Tony to the men's quarters, with a solemn promise that in an hour he would be at Lieutenant Randolph's quarters.

Jack had an absent air that was plainly noticeable, and Edgar Mount, who was dining at the cavalry mess that night, made some half-joking allusion to it, to which Jack paid no attention.

Long before the time appointed for Tony to come, Jack was waiting for him; and at last, when he did come, they met as if they had been parted for a month instead of an hour, and sat long into the night, talking of the old days, and of their hopes for the future.

For the Companion.

AUNT MEREDITH.

"That was the saddest mistake I ever made."

From my lounge in the corner of Aunt Meredith's room I watch her with half-closed eyes as she draws her low chair before the fire, and takes her knitting from the work-basket at her side. She is always busy, it seems to me, and when I think of it, we six are enough to make work constant with her.

First, there is Uncle Clay, Aunt Meredith's brother, full of hobbies that require her constant attention.

"If I can only prove its worthlessness before he mounts it, I can save him a good deal of trouble," she says, when a new hobby is presented; and often she succeeds.

And there is Robert, just starting out for himself under Aunt Meredith's special guidance. There is Frank, another nephew, generous and impulsive,—a regular tinder-box in temper,—with May, his sister, always ready, in her love for teasing, to put the match to the tinder-box.

And there is Richard—happy, rollicking Richard, of whom Aunt Meredith is never quite sure until she has herself tucked him in bed and sung him to sleep.

Then here am I; a cripple, dependent upon Aunt Meredith for every ray of sunshine that has crept into my poor maimed existence since the day I opened my eyes to the life which, but for her, might indeed have proved a curse to me.

So there are six of us, all under her care.

She thinks I am asleep, or else she would not have spoken of that fatal mistake which affected the current of so many lives.

The firelight plays upon her needles as she patiently plies them. The blaze rises higher, and forms, as she sits outlined against it, a sort of halo about her gray head.

She is thinking of the past, I know, and that "mistake," while she sits there waiting.

Robert is doing some extra book-keeping, and will not be in until ten o'clock. May and Frank are busy with their lessons in the sitting-room. Uncle Clay rode over to Richland to-day, and did not return until late. Richard is asleep, for I heard Aunt Meredith singing "Rock of Ages" in the boys' room more than half an hour before she went down to give Uncle Clay his supper.

While she sits waiting for the last one of the household to come in, I am lying here thinking over that mistake she made.

Indeed, I often think of it. We cripples have so little else to do except to study books and people, and all these tedious years I have studied her until I think I know her great soul by heart. And I know all about that "sad mistake," although she does not dream that it is known to me. If I were to tell her that I learned from her own lips to call it a "mistake," I am sure that she would think the affliction that has dwarfed and tortured my body for almost forty years has attacked my mind as well, for she does not really look upon it as a blunder.

If she ever allows herself to think of it as such, it is only when she is troubled and tired, and her thoughts go crowding back, to fasten themselves upon the brightest spot in the past.

Such moments come to the bravest and best of us. But I heard Aunt Meredith tell Uncle Clay only last night that "there can be no blunders in God's plan;" and if she can stand up so grandly amid the ruins of youth's promises and testify to the perfection of the eternal plan, few indeed have the right to sit in judgment on it.

I feel the warm tears trickling down my cheeks as I watch the figure in the firelight. I can remember the day when this white-haired woman, knitting stockings in the chimney-corner, was the merriest girl in our village.

"And the handsomest one," people said. "And the best one," John Eastman declared, when he asked her to be his wife. "And the happiest one," I heard her tell herself when John was gone, and with him her pledge.

I was a child then, but I remember it. I am a child now, for that matter; a child in body, a man in years; but I remember it all as plainly as if it had been yesterday. I think we crippled ones have keener memories than those who share the mind's work with the body.

Aunt Meredith was an orphan, and had been reared and cared for by my mother, her only sister, and Uncle George, her oldest brother.

The brother and sister tenderly discharged their duty toward her, and Aunt Meredith, always keenly conscientious, felt that an immense debt was accumulating against her; so that, when my dying mother placed my hand in hers, and with her last breath said, "As I have dealt with you, Merry," there was but one thing for Aunt Meredith to do. She accepted the charge of the little cripple committed to her care.

She was young then—just twenty—and was soon to have been John Eastman's wife. When she had accepted the new charge, she sent for her lover to tell him that the marriage must be postponed.

He protested, but Aunt Merry was firm. "Just one year, John," she insisted. "Then we shall be better prepared to accept the new—charge."

She would not say "burden," but it was a burden to lay upon her young shoulders—a cruel sacrifice to ask of one who, having never known a home of her own, was about to step into that sweet peace which is found nowhere but about the family fireside.

But she did not hesitate. "I am only paying interest upon the debt I owe his mother, John; I can never hope to pay the principal," she urged.

John Eastman smothered his disappointment, and said, "It shall be as you wish, Merry; but it will be a very long year to me."

Before the year ended Uncle George's wife died, and her two children, Robert and Annie, were added to Aunt Merry's charge.

She hesitated when Uncle George came to ask her to come over and take charge of his house.

"No, George," she said, "I cannot."

"Just a little while, Merry," he begged, "until we can get things in working order; just one year."

"But there is John!" she insisted. "I owe something to John."

"And to no one else, Merry?" asked Uncle George. "What if Eunice and I had not cared for you when you were left alone?"

She turned pale when Uncle George reminded her of her obligation. After all, more would be expected of her than the mere interest upon her debt. Like many other debts, whether of money, of gratitude, or of affection, hers had come to face her at the moment when she was the least prepared for it.

Her lips trembled when she attempted to speak; she put out her hand as if seeking some support, and rested it heavily upon the back of a chair.

I can never forget that scene. Boy as I was, I realized that it was the sacrifice of a life. I lifted my poor twisted body upon my pillows, and from my corner watched the struggle my aunt was making.

Uncle George stood leaning against the low mantel, looking heavy-eyed and weary. Aunt Merry stood before him, with her hand upon the tall chair. The young face was growing grave—the girl had given place to the woman.

While I watched, the sunlight crept through the open window and crowned the brown braids of hair with a kind of halo, just as the firelight touches the silver ones to-night. Then Aunt Merry lifted her head and said softly, "I will come, George."

So John Eastman was asked to wait a second time. "Just one year yet, John," Aunt Merry begged. "Let me feel that I have at least paid my debt in part."

But at the end of the year she said, "There is so much to do, John; let us give the children one more year. We can spare so much to them. Just one! I promise not to ask another, John."

With a heavy heart he answered for the third time, "It shall be as you wish, Merry."

I think Aunt Merry began to feel then that an unseen power was shaping her life in a strange, uncomprehended mould.

Strange indeed! Before the year ended a scourge passed over the city. The Angel of Death hung his black banner on almost every door. Uncle George was among the first to be stricken.

"God bless you, Merry," he said; "don't forget the children; God bless you!" With the blessing still on his lips, he left us.

Then she was glad that she had stayed with him; the sacrifice was fully repaid in that last blessing.

But the next day little Annie laid her hot cheek against Aunt Merry's, and cried out that the fever was burning her throat. For eight days the little life swung in the balance; but on the ninth she crept into Aunt Merry's arms and whispered, "Good auntie!" just once before death set a seal upon the childish lips.

The black banner floated again from our door, and met an answering signal through all the stricken town.

Death played upon many heart-strings; but none, I think, were so entirely swept as was Aunt Merry's. She had scarcely seen the clay heaped upon the grave of little Annie before a messenger came for her. John—honest, patient John Eastman—was dying.

Poor Aunt Merry! The blows fell so fast that she had scarcely time to consider the magnitude of one before a heavier sunk it out of sight.

This was the last; when the light left John Eastman's eyes, hope left Aunt Merry's heart, to follow into and fix itself upon that unknown land into which his soul had drifted.

"Don't reproach yourself," he had said, at the last; "you did your duty, Merry. God bless you!"

We never called her "Aunt Merry" after that—never but once. It was the day they buried John Eastman; and she turned to me with a look of hopeless sorrow upon her pale, sweet face, and said, "Call me 'Aunt Meredith,' child."

The years have crowded fast, in spite of crippled bodies and hearts that give back echoless answers. Thirty and five; I have notched them upon my crutches; ten upon two, the last one fifteen. For the twisted body is well-nigh spent, and the last crutch is as good as new, save for the notches where my knife has recorded the years.

I have borne my burden tolerably, with Aunt Meredith's help. She has borne hers grandly, without help.

Without help, did I say? Then I spoke too quickly; for one evening I found her sitting alone on the west piazza, among the honeysuckles and jasmine vines, watching the sombre cloud-banks piling across the sunset, or forming into a purple bridge to span the crimson cloud-lakes.

She did not hear my crutch upon the soft sward, and her voice was scarcely more than the hum of the bees in the yellow jasmine bells.

"No man, having put his hand to the plow, and looking back, is fit for the kingdom of God."

Every step of my life, the clouded and the cloudless, has been blessed and brightened by her. She has paid her debt, interest and principal, and is now herself the lender; for when Uncle Clay's wife died ten years ago, four others were admitted to her household—Uncle Clay himself, Frank, May and Richard.

Frank and May have both been in to say good-night since I have been lying here, thinking about Aunt Meredith's mistake. May hugged her with both arms, and said softly, "The blessedest, best auntie;" while Frank stood a moment behind her chair and softly stroked the silver braids and recounted the day's trials and its pleasures.

"I shall be a man soon, and take care of you, Aunt Meredith," was his good-night.

Aunt Meredith nodded and smiled, and went to open the door for Robert, pausing as she passed my lounge to draw the covers more closely about my shoulders, while I lay here as if asleep.

Then for half an hour she and Robert sat there before the fire, while Robert told her everything.

First, he had thought he might take still another set of books to keep. By staying an hour later every night he could accomplish it. But Aunt Meredith said, "No, dear. It is not right to stay out so very late;" and the books were given up.

Then the clock struck half-past ten. Robert rose and lighted Aunt Meredith's candle; and again the halo seemed to form around the silver braids, and showed me the smile upon her pale face as Robert bent his head to kiss her faded cheek.

Now she is gone, and it is Robert who bends over my pillow and whispers, "Poor Clarence!" as he draws the covers ever so lightly over my chest.

And now he, too, is asleep; but his bed is so near that I can touch him if I choose. A little silver call-bell is in reach on the other side.

"You may want water, dear," Aunt Meredith said, when she put the bell there; as if I did not know what it is Aunt Meredith fears. It is the black banner on the door-knob.

But I am not thinking of that to-night. I am thinking of Aunt Meredith; and thinking of her life, so full of promise and so barren of fulfilment, and of my life so devoid of promise, and yet so full of peace.

I am thinking, too, of the lives of the children asleep in their beds; of the young man about to enter the world—pure of heart and strong of purpose; of the graves of the two men who blessed Aunt Meredith with their last breath; of the dying pillows made easy by her promises; of the little child who only left the shelter of her arms to slip away to God's.

When I remember these, I bless Aunt Meredith's mistake.

WILL ALLEN DROMGOOLE.

GOOD APPETITE.

Poets really do not feed on air. Indeed, though they may be hungry in a distraught and absent-minded way, they probably eat as much as other men. More, perhaps, sometimes.

Heinrich Heine once destroyed the pleasure of a little supper by a mixture of appetite and absent-mindedness, of which he afterward became conscious with regret and yet a spice of amusement.

Heine, when a student at Göttingen, was invited with a fellow-student to take supper with Professor Hugo and his hospitable wife. The fare was simple and not too plentiful, but one dish was viewed with conscious pride by the hostess, who evidently felt that nothing could be better for the occasion; this was a small plate containing four fat sausages, with tempting gravy and garnishings of green.

The choice dish was passed first to Heine, who was in the full tide of a long and animated discourse, setting forth his opinions on some question which had been started by the professor.

Instead of serving himself to one sausage, and allowing the dish to proceed on its way to the others who were eagerly expecting it, he seized the plate, placed it before him, and proceeded to dispose of one sausage after another, not neglecting the gravy either, until the garnishings alone remained to show the havoc he had made.

Coming to the end of his speech at about the same time that he finished the last sausage, he looked at the gloomy faces about him, then at the empty dish, discovered what had been the

Digitized by Google

meaning of certain spasmodic attempts on the part of Professor Hugo and his distracted spouse to interrupt his flow of language, and of course made profuse apologies.

But he was never invited to that house for supper again—the chance of being left supperless themselves was too great for his hosts to risk it a second time!

THE TREES.

Could we but read your steadfast lives aright,
And hear your message, as true hearts may hear,
In you our life might find its meaning clear,
"Rooted in clay, we lift our heads toward light."

Springfield Republican. —*J. O. Rankin.*

THE CAPTAIN OF THE "KITTIEWINK."

In Seven Chapters.—Chapter III.

The Finish.

A yacht-race is not in itself a particularly dangerous experience, nor is the modern yacht necessarily a death-trap. But a full main-sail in a gale, especially when its size is out of all sensible proportion to the boat, is nothing short of madness. The *Choctaw*, as many of her kind have done before, was merely reaping the result of foolhardiness.

Her owner, in the excitement of the peril, had dashed forward from the tiller to shove the jib to windward in order to bring the boat about, when a lurch sent him overboard. At that moment the *Kittiewink* was passing by the stern of the mismanaged yacht.

"Heave her a line!" shouted Phin, above the wind. "Take the road!"

As he called, he picked up a life-preserver at his feet—one of several which Mrs. Maynot had smuggled into the baggage, and which had not been relegated to the locker. Long experience had taught Phineas the value of a convenient life-preserver.

He stood up and hurled it toward the sinking man. The life-preserver whirled in the air, was carried toward its mark by a gust, and dropped within a few feet of its object.

Then the *Kittiewink* came sharp up into the wind. At the same time Black Tarr, obedient to orders, had cast the line from the *Kittiewink* to the *Choctaw*.

"Make her fast for'ard, you lubbers!" shouted the rugged sailor.

Phin, when he saw that the rope had fetched, put his helm hard down. A man on board the yacht had enough presence of mind left to catch the stout cable, and to make it fast. The *Kittiewink* now pulled stoutly on the dead weight. The *Choctaw* turned.

"Let go the road! There she fills!" The flapping jib now bellied out.

"Ease your main-sheet!" Black Tarr hurled this order at the discomfited yacht as it caught its first wind, and bent dangerously to it. She made slow headway. The foam washed back from the rocks upon her stern. Hurrah! She was still safe, and good for more races.

But where was the drowning man? Evidently he had caught the cork preserver, and had slowly forced his way toward the *Kittiewink*, which had again come up into the wind. Phineas Scrod had kept a weather-eye upon the floundering yachtsman. He had done all he could; it was five lives to one.

A dripping hand, purple with cold and fright, clutched the gunwale. The two boys, as pale almost as the face that peered gasping at them, lifted the struggling man aboard. This was quite a nautical feat for Harry and Algernon.

The *Choctaw* meanwhile was already some distance away, and getting clear of the Island. The *Kittiewink*, having modestly saved a yacht and her owner, stood off again by the wind. Scrod, at the wheel, was grumbling to himself.

At that moment, when the new-comer had but just reached the cockpit of the *Kittiewink*, the *Griffin* loomed up before them, making bad weather; but she was still in the race, and about to round Half-Way Rock. The crew of the *Kittiewink* had forgotten all about the race.

A yacht-race is seldom given up until it is lost at the last stake-boat. A dozen circumstances may conspire to bring the leading boat in last. It has even happened from time to time in the history of yachting that a boat has been capsized, has righted itself, been bailed out, and actually won the prize.

At the moment when the *Griffin* came into sight the racing passion revived, and the rescued owner of the *Choctaw*, forgetful of everything else, sprang to the shrouds and signalled his cutter wildly. It did not seem to occur to him that he was just out of the teeth of death.

"Keep on!" he shrieked. "Don't let them get ahead!"

The crew of the *Choctaw* could not hear him, but divined his meaning. They tacked and started once more in the race, and to turn the Rock.

"Get down there!" shouted Phineas, pointing at the dripping yachtsman. "Get down below there! Stow away that tongue, and put on some dry togs!"

The owner of the *Choctaw* reluctantly obeyed orders. He was not on his own boat.

"Hard-a-lee!" The *Kittiewink* started again in the race, slightly astern of the *Griffin*, but this time leading the *Choctaw*.

"If ther' aint no tug about," Phin muttered to himself, "I've got to stand ready to pick 'em up as they drop overboard!"

Non turned pale when they came about. Were these the pleasures of yacht-racing? He would have given his summer's vacation to steal unobserved to the harbor and give it all up.

He felt dizzy and sick in the tempestuous sea. It was very rough; but he did the best he could—he went below. Trot took this opportunity to sneak on deck.

Hal, too, was dazed. As the nominal Captain, he was outwardly jubilant before the stranger; but the spray struck him in the face and trickled down his neck, and took the romance out of this manly sport.

He gulped down his fright, and patted the terrier, who was now shivering and squealing in his master's arms.

Phineas Scrod kept on—it was not wholly easy to say why; but he had a great deal of confidence in the *Kittiewink*. She was built to stand such blows, but the yachts were not. Theirs was dangerous work. Phineas felt as if it would be unseamanlike to desert them.

The three boats were now in bitter competition. The *Gadfly* had withdrawn long ago, but rivalry ran high with those which remained. It was a shame that an old hulk should mock the crack vessels of their class!

The Captain of the *Choctaw* now came up from below, dressed in a dry suit of Hal's. For this reason Trot did not snap at him. He did not seem the worse for his ducking. His eyes blazed as he watched the contestants.

The *Griffin* was forging ahead; his boat was far behind. Half-Way Rock had been left astern; they were flying before the wind. A stake-boat off Tinker's Island was the next mark—then for home!

The Captain of the *Choctaw* sat down near the skipper, and eyed the *Kittiewink* with envy. How easily she rode the waves! How little she yawed from one side to the other! How bravely she carried her sail!

On the other hand, at every roller the *Griffin* heeled to one side, and her boom, longer than herself, dragged with the sail in the water. Then, with a tremendous jerk, she pulled it out, racking the whole boat.

There is hardly a more dangerous course than to run full sail on before the wind in a gale. The paid man on board the *Griffin* would have given his month's wages to be well out of it; but the amateurs clung to it. Sport is too often blind to peril, and courage is sometimes nothing but ignorance.

The wind blew in flaws, each new one more vicious than the last. Suddenly Hal's new yachting-cap blew far off to sea. It was one of the model adopted by the New York Yacht Club, and had crossed anchors embroidered in gold braid, which indicated that its wearer possessed a yacht. It was one of Hal's proudest possessions.

As it flew gracefully away, Trot, who had been trained to bring his master's hat, eyed it sharply. He knew his duty. He gave a few preliminary yelps, and made a mad jump for the floating cap. In a twinkling he disappeared over the side of the boat.

Hal shrieked. Non was down below, very sick.

"He's a goner!" said Scrod, curtly.

"But turn around! You must get him! He's my dog! I don't care about the race! I order you to. I'm Captain of the *Kittiewink*!"

Hal spoke passionately. Tears welled to his eyes. The poor dog could hardly be seen struggling in the waves.

What the effect of this peremptory command might have been is difficult to say. It was a terrible day, and the unusual kept happening. As Hal stood looking back, stamping his feet, and even attempting to force the wheel from Scrod, the two sailors suddenly jumped up like cats. One seized the life-preserver, while the other rushed forward to the same coil of rope that had saved the *Choctaw*.

What had happened to cause this commotion? Nothing less than the last possibility: the *Griffin* had overturned right before them! A fierce flaw had struck her sails full, and sent her over.

The fancy centreboard yacht lay on her side in the water. Her huge, speckless sails were spread upon the waves, and the gale flapped them ominously up and down.

The owner of the *Griffin* had advanced notions in yachting; his yacht carried an iron centreboard, but no outside ballast. She lay helplessly on her side. Evidently none of the rigging had parted, but the wind had simply forced her down.

From under ropes and canvas the surprised crew crawled and clambered upon her upper rail. Her cabin was locked tight. Had the doors been open, or the skylight unscrewed, she would have sunk like a shot. But with the air in her, and if the wind struck just right under that mass of sail, she might right herself.

In a moment the *Kittiewink* was alongside. Hal was terribly excited, and Non's sickness was suddenly cured by the strong emotion.

"Now, heave her the line! Down with the jumbo!" said Scrod, wearily, as if he had begun to be tired of picking up yachting boys.

The men aboard the *Griffin* seized the rope as well as they could, in a dazed way. They seemed dumfounded by what had happened.

The *Kittiewink* drew alongside. There was a general scramble for safety. With a crestfallen air, the two yacht-owners regarded each other.

"Too bad, old fellow!" said the *Choctaw* to the *Griffin*, as he helped him aboard the *Kittiewink*.

"I don't want your sympathy," said the Captain of the *Griffin*.

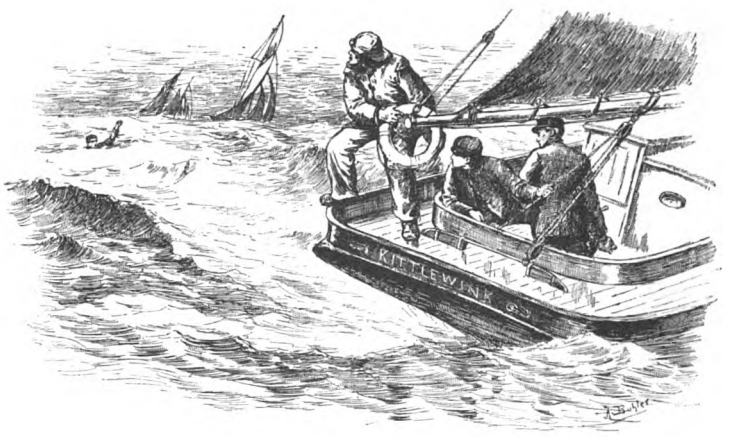
They all boarded their black rival, looking like wet seals, and were sulkily saved.

In the excitement of the accident and the rescue nobody had thought of the *Griffin* herself. This boat, the pride of the Neptune Club, lay like a wounded albatross, while the sea gurgled, and the wind groaned beneath her outspread wings. The *Choctaw* was still laboring far behind.

The *Griffin's* six men crowded into the cockpit of the *Kittiewink*. The owner of the *Choctaw* had joined them. One of the *Kittiewink's* fishermen made preparation to cast off from the floundering racer.

"Ar'n't you going to stand by, and help save the boat?" cried the owner of the *Griffin*.

"I wouldn't bother with that tea-cup for a thousand dollars," retorted Phineas, contemptuously. "You're lucky to be out of her so easy. Up with the jumbo. Ease the sheet there and let her go!"



But poor Trot! What had become of him? In all this danger and delirium, who could save a puppy?

"Yap, yap! Yow, yow!" came a feeble cry. Hal and Non saw a strange little object floating astern, as the *Kittiewink* rose and fell heavily.

"It's Trot!" shrieked Hal. "Dear Trot! Phin, if you don't save that dog this time, I'll jump over after him!"

The order to "shove her off" was stayed. Black Tarr deftly took a long oar from the deck, and upon this the desperate dog clung with his fore-legs until he was drawn to the side of the boat.

"It's miraculous!" said Skipper Scrod, when the

Scrod saves the owner of the "Choctaw."

dog was drawn aboard. "None lost this trip, so far. Heave her off!"

Trot fell, a limp mass, into his master's arms; and if dogs can be said to faint, then and there the dog swooned dead away from exhaustion. Trot, too, had enough of racing that day.

"But," urged the owner of the *Griffin*, after this episode, "you don't mean to abandon my boat? She'll right pretty soon and sail anywhere. Let me aboard!"

He struggled to accomplish this object by main force.

"Avast there!" said Phineas, as firmly as though he trod a man-of-war. "Sit down, or I'll put ye in irons. Heave that line off there, I say!"

One of the men from the deserted *Griffin* obeyed mechanically. The crew did not seem particularly sorry to leave her. Held in a vise by the two rough fishermen, the owner of the *Griffin* gesticulated wildly. But, as the *Kittiewink* filled away, he stood with his arms folded across his breast in a tragic attitude, and surveying the ruin, began to anathematize his boat, her designer, her builder, the race, the day, his rescuers, the *Kittiewink*, and particularly her sailing-master.

Responsive to a wink from Scrod, the brawniest man, who happened to be Black Tarr, stopped the young gentleman's mouth with a hand whose palm was none of the softest and sweetest.

"I'm willin' to save human lives," said Phineas, charitably. "I'll save tom-fool boys; but to save tom-fool boats, that aint what I'm here for."

When the *Kittiewink* was distant about a quarter of a mile from the scene, and while seven pairs of staring eyes were following the floundering motions of the abandoned yacht, the *Griffin* rose with a sudden lurch. A gust had struck under her outspread sails. She righted herself, and dashed tipsily here and there on her unpiloted course.

Her owner uttered a deep groan. But it was noticed that the *Choctaw* made for the derelict, and thus gave up the race.

"We'll go the hull course an' win," said Phineas. No one reproved him for this pardonable exhibition of vanity.

The day and the gale had done their worst. With another shift of the wind the rain settled in, and with her rivals so well represented on board, the *Kittiewink* finished the course of the Neptune Club regatta on the Sixteenth of June in the worst weather found in the records of the Club.

As she rounded the bluff and passed the stake-boats, a salute of the gun pronounced her the victor. There were a hundred hurrahs for her unparalleled performance. But many anxious faces looked seaward for the missing yachts.

Skiffs and dories rowed out to the *Kittiewink* to learn the particulars of this memorable race, and carried its wet and sullen guests ashore.

The excitement in Marblehead ran high when it became known that the *Choctaw* had finally captured the wandering *Griffin*, and that the *Spook* was still waiting for a tug. Never had there been such a series of narrow escapes.

It was a rare combination of chances that brought the successive catastrophes about, but some yachtsmen shook their heads, and admitted that the same thing might happen again. Where were the builder's art and science, when a Cape fisherman could beat such crack yachts?

In view of the *Kittiewink's* gallant conduct, and of the tact and heroism of her sailing-master, the fact that Hal had not steered his own boat throughout the course was overlooked.

That evening, Hal and Non dressed and went to the Yacht Club. In the elation of the brilliant achievement of the *Kittiewink*, whose credit Hal, in this crisis, took upon himself as Captain, he sent a telegraphic message to Sweet Fern announcing his safety and victory.

This dispatch troubled his family exceedingly. It would have finally shaken their faith in summer yachting if they had read the graphic account in the next morning's papers. As it was, Mr. Maynot, thinking that no time should be lost, sent the following explicit message in return; which, however, was not delivered that night:

"*If you sail another race this summer, Phin will be dismissed and the boat sold.—Henry Maynot.*"

HERBERT D. WARD.

(To be continued.)

For the Companion.

SWIFT-FOOTED INDIANS.

It is easy to understand that savages must ordinarily be better runners and walkers than civilized men; but the Indians of the United States—with the exception of those of the far Southwest—seldom perform any feats of phenomenal endurance in pedestrianism, verging upon the incredible. It is natural, therefore, that we should be slow to suppose that the Indian natives of neighboring countries are able greatly to surpass our own in pedestrian feats.

But I am able to show from many examples within my own experience that the Indians of Mexico and our Southwestern Territories are unequalled in this respect. The very first Europeans who came among them, led by Cortes, marvelled at the Mexicans' swiftness of foot, and often had occasion to regret their superiority in this respect. Prescott says of the Aztec Indian couriers:

"Communication was maintained with the remotest parts of the country by means of couriers. Post-houses were established on the great roads, about two leagues distant from each other. The couriers bearing the king's despatches in the form of a hieroglyphical painting ran with them to the first station, where they were taken by another messenger and carried forward to the next, and so on till they reached the capital.

"These couriers, trained from childhood, travelled with incredible swiftness; not four or five leagues an hour, as an old chronicler would make us believe, but with such speed that despatches were carried from one hundred to two hundred miles a day. Fresh fish was frequently served at Montezuma's table in twenty-four hours from the time it had been taken in the Gulf of Mexico, two hundred miles from the capital.

"In this way intelligence of the movements of the royal armies was rapidly brought to court, and the dress of the courier, denoting by its color the nature of his tidings, spread joy or consternation in the towns through which he passed."

Swift as the courier system was among the civilized Indians of Mexico, its achievements are surpassed by the feats of endurance shown by individuals among the savages of that country, and especially among those in the Sierra Madre range of Northern Mexico.

Here dwell the Tarahumari Indians—a large tribe, of whom we hear little in the United States, although very few tribes in our own country exceed them in numbers. They are divided into two branches—the wild or savage Tarahumaris, and those called civilized. The latter have, as a rule, adopted Christianity, build rough log and stone houses, and rudely cultivate fields of corn and hardy cereals and vegetables; while the others still worship the sun, usually live in cliffs and caves, and gain more of their subsistence from game than they do from the little corn which they cultivate.

They secure their game by their swiftness of foot. Both the wild and civilized Tarahumari Indians are enduring and swift, the savages, as would be expected, surpassing their more sedentary brothers in these characteristics, although the civilized Tarahumaris can put to shame all the white pedestrians of the country.

Many of these people are employed by the Mexican Government as mail-carriers in the mountainous country of the Sierra Madre, and as such they are swifter and more reliable than any animal that could be used for the service. Over the dizzy Alpine trails of the Sierras, a mail-carrier, with a mail-bag weighing from twenty to thirty pounds, will readily make two or three days' mule-marches in one day; and he will never be delayed by washed-out trails or swollen mountain streams.

Even when, as is often the case, the carrier leaves the trail for miles at a time, to make a cut-off, he progresses about as rapidly as he would if he had kept upon it. Over all obstructions, trifling to him, he keeps up his regular "dog-trot."

It is very interesting to see one of these Tarahumari mail-carriers on a mountain trail. He is always on an easy run that must carry him along six or seven miles an hour, at least. He is nearly always dressed in white cotton cloth, which makes him a conspicuous figure against the sombre green and black tints of the high mountain levels, and which, late in the evening, causes him to look like

Digitized by Google

a ghost or spectre flitting among the pines and firs and moss-covered boulders strewn along the trail.

These trails, on the steep places, wind backward and forward in stretches from fifty to seventy-five yards in length in order to find a grade up which a heavily-laden pack-mule can

make his way. But the athletic carrier does not run the whole length of these windings in descending a hill. He cuts off the corners at each bend by placing his hand on the edge of the trail, and vaulting to the lower level whenever the two levels are not more than six or seven feet apart. All this time he never gives up the little dog-trot that is carrying him forward so rapidly and surely.

The carrier will in half an hour go down a mountain side that would take the best mule in a bullion train or the fleetest one ridden by the little Mexican *caballero*, the best rider in the world, half a day to accomplish. In ascending, too, the carrier has methods of taking shorter cuts up steeper inclines, so as to gain time and distance at every turn.

In one of the great cañons of the Sierra Madre known as the Barranca del Cobre there is a rich silver-mine at the bottom of the steep cañon. The only way out is by one of these winding, twisting trails to the top of the mountain crest or *Cumbra*, as it is called, some five thousand or six thousand feet above the site of the mine. It takes a good mule five or six hours to make this ascent, and about an hour less to come down from the crest. Usually a much longer time is used. One day a party which had reached the *cumbra* sent a Tarahumari courier with a letter to the mine below; and this swift-footed son of the Sierra made the trip to the bottom, and returned with an answer in less than an hour and a half, running the entire distance, up and down.

Before the diligence or Mexican stage-line was established between the city of Chihuahua and the foot-hills of the Sierras, a mail-carrier with a mail often weighing from forty to fifty pounds used to leave that city on foot for the mining camps in the great barrancas of the Pacific coast slope of the mountains, and return, making the round trip in six days. He spent his Sunday in Chihuahua, seeing the bull-fights and cock-fights, and then repeated his trip in the ensuing six days.

The entire distance traversed in one of these trips of six days was five hundred miles, more than half of which was over a mountain trail of extraordinary roughness and severity. I was fifteen days on mule-back, and four in a diligence or stage in making the same distance; two days' ride in the diligence being seventy miles each day, and changing eight to ten mules five times between morning and night.

Something more than six hundred miles has been walked or run in pedestrian contests in six days, the contestants having level tracks and all the appliances of athletics to help them in making such a wonderful record; but compared with this mail-carrier's work, repeated every week in the year, summer and winter, the professional pedestrians seem to me very puny examples of what the human race is capable of in walking and endurance.

But as I have said, the wild Tarahumaris surpass their civilized brothers, although it would hardly seem possible. They are much hardier, and live in cliffs and caves so difficult of approach by the whites that it is very hard to study their habits. It is known that they live upon the game of the country to a very much greater extent than their civilized neighbors, and as they are armed only with the crudest bows and arrows, they would seldom be successful in securing the larger kinds if they did not depend upon their phenomenal swiftness of foot.

Their method of securing a deer is this: A small dog is starved for a day or two, and then put on the trail of the deer, which, of course, he follows with a great deal of energy. The wild Tarahumari, often wearing nothing at all but a pair of rawhide sandals, follows as fast as his feet will carry him, which is at a gait that will allow him to keep within sight of the dog, or within sound of his barkings. If night overtakes them, the savage and the dog sleep on the trail together, and cases have been known where two such nights have been passed in this way, the Indian's endurance quite equalling that of his canine companion.

The deer once sighted, the man begins to save his strength somewhat by cutting off all the corners he can as he is guided by the dog's barkings; and whenever he can assist by getting in front of the deer by means of some detour and frightening it back with loud shouts, he will do so, considering it a point gained.

This process, often repeated, finally brings the dog within reach of the exhausted animal. At the right moment it seizes him, and the Indian mountaineer rushes in and despatches the creature with a knife. To encourage the dog in future hunts, it is given no small share of the carcass.

There are several other tribes in Northern Mexico who could supply wonderful examples of the same accomplishments. All of them go to show that it is probably in this region of the world where we must look for our most swift-footed and enduring human beings. Buffon, who had gathered many interesting facts regarding the pedestrian feats of wild men, truly said in his Natural History, "Civilized man does not know his powers." FREDERICK SCHWATKA.

NOT ALL PERISHED.

Never true poet lived and sung in vain.
Lost if his name and withered if his wreath,
The thoughts he woke an element remain.
—*Lord Lytton.*

INSECURITY OF THRONES.

It is a striking and suggestive fact that the French Republic seems to-day to be as stable and secure a government as any in Europe. Indeed, it may be said that there are several European monarchies which seem in greater danger of falling than that Republic does.

In taking a glance at the several royal dynasties, it is not difficult to see that events might happen in the course of a few years which would be followed by the overthrow of more than one of them.

Of course, no one looks forward to seeing the British Monarchy replaced by a Republic in his own lifetime. The British are very loyal to their regal house, and Queen Victoria's course has commended itself to popular approval.

Yet it is not impossible that, ere very many years, a sovereign may be seated on the British throne who will not deserve the regard and affection in which the Queen is held.

The health of the Prince of Wales has long been delicate, and his manner of life is not such as to protect or improve it. It is well known that the Prince's eldest son reveals no indication, to say the least, of high ability and character.

If young Prince Albert Victor — the Duke of Clarence — should succeed to the throne, and should exhibit a conspicuous lack of the qualities needed in a king ruling over a constitutional monarchy, it would not be surprising if his incompetency should perceptibly weaken the bulwarks of the throne.

The great Empire of Germany is presided over by a young and erratic ruler, whose course of surprises is watched with anxiety by his subjects, and whose policy is opposed by the greatest and most resolute of living statesmen. His conduct may weaken the hold of monarchy on Germany, while, if within a few years he should follow his father to the grave, that mighty throne would be occupied by a boy now only nine years old.

A regency would be established in that case, and we should then look forward to grave changes in Germany.

The royal houses of Austria and Belgium have both within a short period lost the heirs apparent to the thrones, and in each case the succession departs from the direct line. Holland and Spain have young children as sovereigns, and are ruled by regencies of the sovereigns' mothers. It is a proved historical fact that a regency is less able to withstand popular discontent or commotion than an adult sovereign.

The royal house of Italy seems to be securely established. Yet there are evidences of political agitation beneath the surface of Italian society, and the kingdom has constantly a source of more or less danger within it in the presence of the Pope at the Vatican.

Italy is distressed in its finances, and finds the triple alliance a heavy burden; and forces exist in the peninsula which might take advantage of untoward events to strike for a republic.

In Russia, the throne is in danger from a powerful secret conspiracy, and from a discontent so widespread that it includes every class of society, and so formidable that even despotic power cannot suppress it. A revolution in Russia is by no means one of the least probable events of the not distant future.

The Portuguese monarchy is probably that whose peril is the greatest at the present moment. Its finances are in a desperate state. Its King does not show capacity or statesmanship. Its ministerial system seems to be in a condition of anarchy. Its embroilments with England in South Africa have perceptibly undermined its security.

The Portuguese have witnessed the deposition of a prince of their own royal house in Brazil, and the substitution of a Republic; and there is no doubt that an active Republican party is in existence in Portugal, bent on reproducing the Brazilian revolution on their own soil.

It is certainly remarkable that, while sources of danger to thrones may be discovered in nearly every European monarchy, the Republic of France grows stronger and more secure every day.

For the Companion.

LIFE.

Life is a folded flower, and what it holds
We know not, till, unwinding leaf by leaf,
It shows God's secrets hidden in its folds
And bares its fragrant heart to vision brief,—

For when its beauty and significance
Upon our earth-dulled senses break at last,
Back to its dust the flower turns; perchance
Ere we have learned its meaning life is past.

ELEANOR M. DENNY.

THE PUBLIC DEBT.

Those who are now "young people" have little idea how important were the questions raised by the national debt during the years immediately succeeding the Civil War. When the United States entered into that great contest, it was almost free from debt. Ninety million dollars would have paid every claim against the treasury and left a balance.

Four years later there had been piled up a debt thirty times as great. It amounted to more than twenty-seven hundred and fifty millions. The interest charge was enormous, for the money had been borrowed at excessive rates of interest. Only one-tenth of the debt bore interest as low as five per cent., and the rest had been borrowed at six and seven and three-tenths per cent.

In one year the interest paid amounted to more than one hundred and forty million dollars. Taxes, and high taxes, were necessarily laid wherever anything could be found that could bear taxation, to meet the expenses entailed by the war.

As soon as the war was over, the work of paying off the debt, and of renewing every loan that fell due at a lower rate of interest, was begun in earnest. In 1868 the last of the Treasury notes bearing more than six per cent. interest were refunded at six per cent., and in that same year the total debt was reduced to less than twenty-five hundred millions.

In 1870 an act was passed authorizing the Secretary of the Treasury to issue bonds to the amount of five hundred millions at five per cent., three hundred millions at four and a half per cent., and one thousand millions at four per cent. Bonds of these issues were to be exchanged for six per cent. bonds if the holders of those bonds wished to make the exchange; or they were to be sold, and the proceeds used to redeem the six per cents. when they should fall due.

It was not until 1876 that the credit of the United States became so good that the sale of five per cent. bonds ceased, and that of four and a half per cents. began. But within two years it was possible to stop selling the four and a half per cents. and to begin on the fours, the whole issue of which was taken up in about one year.

In 1881 the last of the six per cents. and five per cents. were redeemed—or, rather, the holders of more than four hundred million dollars' worth of five per cent. bonds consented to reduce the interest first to three and a half and then to three per cent. By 1887 all these bonds at a reduced rate were paid.

Then the country was left with an interest-bearing debt of two hundred and fifty millions at four and a half per cent., which could not be paid until 1891, and seven hundred and thirty-eight millions at four per cent. which the government cannot touch, without buying the bonds at a premium, until the year 1907.

Since that time whatever money has been available for the reduction of the debt has been applied to the purchase of these two classes of bonds. On the first of May there were left but fifty-one millions of four and a half per cents. and five hundred and sixty millions of fours. In June, the Secretary of the Treasury gave notice that all the four and a half per cent. bonds will be paid when they mature in September. Perhaps, however, some of them may be extended at one or one and a half per cent.

Thus the huge national debt incurred thirty years ago—so far as that part of it which bears interest is concerned—has been reduced to about six hundred millions, and the interest charge is considerably less than half a dollar a year upon each person of the population.

There are very few of the governments of the world which have so small a debt in proportion to population as that of the United States; and when the ability of the people to pay is considered there is no country where the public debt is a lighter burden than it is here.

SELF-RESPECT.

"The way to keep a man out of the mud is to black his boots," says Frederick Douglass.

This happy remark often occurs to us when we see boys going to school with shoes that have never once known the brush, with hair uncombed, faces not too clean, ears unfit for inspection, hands very black, and a cap that has evidently known hard service as a missile weapon. Such a boy is more likely at least both to talk and to act unbecomingly than one who is clean and tidy. Something within the tidy boy impels him to live up to his appearance. The other boy is apt to live down to his dirty boots.

Fixing upon a boy an odious and belittling nickname, which lowers his self-esteem, has the same tendency. So does ridiculing him for any natural defect, and for the clumsiness which often results from such a defect. The mistakes of youth frequently result from shyness, and this is greatly aggravated by the jeers of companions, and still more by the impatience of a teacher.

Many a person now honored and esteemed in the world dates his progress upward from the moment when he received from some honored lips a word of encouragement, or discovered by chance that he was not inferior to his comrades, despite appearances to the contrary.

We can hardly do a more injurious act than to make another think more meanly of himself than he ought to think. Humility is an excellent trait; but humility is a very different thing from the mortification and self-abasement that sometimes result from sneers or ridicule.

There was a girl a few months ago who seemed to be made a new person by just changing her school, although the school she left was, upon the whole, a very good one; but her old teacher, a strict and conscientious lady, could not be at all indulgent toward the faults and defects of this particular girl.

The new teacher bore with them easily, and thus soon discovered the good qualities hitherto concealed. From being constantly reproved, the girl found herself valued, liked, commended, and it made a new girl of her. Like the man of Frederick Douglass, whose boots were blacked, she felt that she must avoid her disagreeable ways.

Almost any observant and experienced teacher can call to mind similar instances, where the acquisition of a reasonable self-love seemed to lift an unpleasing character out of the mire of low propensities and offensive habits.

GREAT EXPECTATIONS.

"Olive is coming to see me! Olive, my roommate at Farmington! Olive, my dearest friend!" exclaimed an enthusiastic girl to her family. "Oh, I am so glad! She is the most beautiful girl, and the cleverest! Everybody at school adored her."

Three days elapsed between the coming of the letter and the coming of Olive, and those three days were all too short for Rose to ring her friend's praises. The family became almost as expectant as Rose.

"Fair Inez" herself could not have dazzled them. So imagine their feelings when a plump, large-mouthed, good-natured-looking girl was ushered in triumphantly as Olive.

"We might have expected it," said one brother to another, afterward. "When did Rose ever fail to sound the trumpet before her friends?"

"It is too bad," replied the other. "Very likely we should have thought her pretty if we had been left to discover it for ourselves. However, we must not let Olive suffer for Rose's indiscretion. Beside, I have an awful feeling that Olive is disappointed in us; that Rose has sprinkled the years of their acquaintance with praises of your classic nose and my Byronic locks and our beautiful home. We shall have to work to redeem ourselves."

Lord Bacon wisely suggested that it is "good discretion not to make too much of our friends at first;" and the still wiser King Solomon declared that "he that blesseth his friend with a loud voice, rising early in the morning, it shall be counted a curse to him."

But Rose had never modelled herself after Bacon nor Solomon.

At breakfast the next morning she broke forth, "Oh, I have the best story that you ever heard in your life. I laughed over it until I cried."

Upon her telling it, however, there was neither laughter nor tears from the others. Olive and the boys exchanged amused glances, as if to say, "Had she told it without that startling preamble, it would have been capital."

Rose has such a faculty for spoiling things—not ill-naturedly, for she is unselfishness itself; but she raises expectation to a height that the after performance never realizes, and disappointment is always following in her footsteps.

The emissaries of the Queen of Sheba were shrewd when they carried back so moderate a report that the Queen herself could say, "The half was not told me."

CLASS TREES.

Garden and Forest has a very sensible suggestion to make in regard to the planting of class vines and trees by graduating classes. It is a time-honored custom to set out these vines or trees in Commencement week, to keep green the memory of the class about to leave college; but nobody afterward takes the responsibility of seeing that they do not die an early and unwatered death.

In many New England towns huddle about the school buildings numbers of pitiful little maples

Digitized by Google

and elms, which would have reached an ample growth if only they had received proper care when first planted.

Instead of setting out its tree at the close of the college course, every class should, on entering an institution, erect its growing monument, and devote its best energies, during the years of student life, to having its vine or tree beat the record in growth and vigor. Thus, if one specimen died, another could be planted, that the class might be sure of a memorial. A yearly committee should be appointed to attend to the plant, and a small subscription levied for proper fertilizers and cultivation.

If the personal attention of the boys could be given to this subject, if they would themselves dig about, enrich and prune what they had planted, college yards would cease to be bare and desolate.

"CITOYENNES."

Looked at from the distance of a century, the fury of the French people, at the epoch of the Revolution, against all titles of honor and other distinctions, seems amusing; but the matter was then far from being something to be laughed at.

All titles were abolished save those of *citoyen* or citizen, for men, and *citoyenne* or "citizeness" for women. So determined were the radical opponents of aristocracy that it cost more than one man his life to speak of another person by his former title. It was not Louis XVI. who was condemned to the guillotine, but "Louis Capet." Yet even in those troublous times there were occasions when a laugh at the political absurdities into which the people ran was not only in order, but could not be repressed.

During the awful years between 1789 and 1801, the Parisian people required to be entertained, and much excellent music was produced. On one occasion, when a musical programme was given before a great audience, one of the singers, a woman, was taken ill, and her place had to be supplied by another singer. The manager of the entertainment stepped forward to announce the change. He began:

"Gentlemen and ladies —"

"No! No!" the shouts rang through the hall. "There are no more gentlemen and ladies! We are all citizens."

"Citoyens and citoyennes," the speaker began again, "I regret to announce that Mlle. ——"

"No! no!" rang the shouts once more; "there are no more demoiselles. Say 'citoyenne!'"

"Citoyens and citoyennes, I regret to have to announce that the Citoyenne Roublard is ill; but I take pleasure in informing you that Madame Chevalier —"

Once more the noisy protest came from the audience: "There are no more 'mesdames;' say 'citoyenne,' we tell you!"

The manager stood as if he were unable to go on. "Come now, ladies and gentlemen," he said; "if I say Citoyenne Roublard and Citoyenne Chevalier, how are you going to know that one of them is a married lady and the other isn't?"

This was a view of the case which had not occurred to the people before. They allowed the manager to begin his statement over again, and say "madame" and "mademoiselle," apparently recognizing the fact that the words were sensible and convenient.

FOMENTING DISCORD.

Our newspapers are our greatest educators, and they certainly disseminate a vast amount of useful information; but like all the works of men, they have imperfections. One of the most common faults is a disposition to magnify every personal, religious, political, or international quarrel, and even to imagine differences where none exist.

The other day we saw three examples of this disposition in a single issue of a newspaper. First there was a studied effort to make it appear that there is jealousy and all manner of concealed unpleasantness between two high officers of the national government.

In another column was the denial by a prominent politician of the correctness of a certain "interview" in which he was represented to have spoken of reporters in terms of great contempt. He had had no such interview, he had never expressed the opinion imputed to him, and he had never held that opinion.

Finally, there was a detailed statement that a certain person intended to take advantage of the unpopularity of a gentleman holding a public position to become a candidate for the office. It subsequently appeared that the whole story, beginning with the matter of the officer's unpopularity, was invented, and had not a particle of foundation.

It is a pity that, when there are so many pleasant things to say, some of our newspapers go so far out of the way to find unpleasant matter. Things are rarely quite as bad as they are represented to be.

It is a good rule not to believe more than one-half of the stories of private quarrel told by the newspapers addicted to this sort of thing; and if one were not to believe anything of them until he knew which half is true, he would do better still.

WHAT HE WANTED.

The eccentricities of great men are not to be interfered with, especially when the great men are in bad humor. A new story of General Jackson relates that, while on one of his journeys to Tennessee about the time of the nullification excitement, he arrived at a Virginian village in a very impatient state of mind, both with public affairs and with the state of the roads.

The President was entertained as a guest at the house of a lady in the village, and although he tried to be polite, the state of vexation which he was in affected him visibly.

His hostess, at the supper table, was much alarmed to see the General swallowing with great rapidity a cup of almost boiling-hot tea.

"Wait, wait, General!" exclaimed the lady. "Let me give you some cold water." "No, I thank you, ma'am," said the General, continuing to drink. "But I don't see how you can drink that boiling-hot tea without scalding yourself."

"No wonder you can't, ma'am," said Jackson; "I *am* scalding myself."

"But, sir, why do you —"

"Good gracious, ma'am!" exclaimed the General; "don't you see that I want to scald myself?"

The lady refrained from making any further suggestions as to her distinguished guest's comfort.

AN AMBITIOUS ROOSTER.

When a Philadelphia boy returned home last fall from his father's New England farm, where he had been several months, he carried with him a young game rooster which had been his care literally *ab ovo*, for he had seen the little chicken come to life in an incubator, and had made it his pet from the first. Carefully packed in a basket, young Chanticleer began the journey. His owner would trust him to no hands but his own, and deposited basket and bird safely in his state-room on the Fall River boat. In proper season he gave his charge a rooster's supper, and at his own bedtime, seeing that his pet was well disposed for the night, went to sleep to dream of the dear farm he was leaving behind.

All went well till the first streak of daylight appeared. Chanticleer was not "house-trained," and being proud of the lusty, discordant crow he was just acquiring, nature commanded him to herald the dawn with true barnyard vigor.

The first few peals fitted themselves beautifully into the boy's dreams of the farm. Soon a particularly strident crow waked him completely, and left no doubt in his mind that his pet was acting in a very questionable manner. Crowing on a farm, even badly, may be a worthy accomplishment, but in the state-room of a Sound steamer, before the passengers want to get up, it is quite another thing.

Evidently the rooster felt more at home than the boy, for he continued his clarion call at frequent intervals with increasing fervor.

The boy rolled out of his berth, and tried to awe the bird by peering sternly into the basket. For a moment Chanticleer was silenced, but the boy's eye was not a lion-tamer's, and even as he looked the bird crowed again. At a rough count this was the tenth peal.

Murmurings of discontent could be heard from the surrounding state-rooms. "Wring that bird's neck," called out one sleepy traveller. A better-natured man was heard to laugh, and more distant came the words, in undoubted Yankee twang:

"Wal, I swan, if I didn't think I was back in the State of Maine, and chore-time was here."

Strangulation seemed the only cure, and that the boy would not have inflicted at the command of the Captain and all the boat's officers. The rooster kept on crowing, and the funny side of the affair struck its owner more and more forcibly. As he chuckled, the rage of his neighbors increased, and he soon heard sounds of getting up, dressing, and indignant protests against travelling with a barnyard. The angry man said:

"There's no more rest in this part of the boat, and I'd rather shiver on deck as we go through Hell Gate than hear such a din."

State-room doors slammed. The rooster had won the day, early as it was. In the train from New York to Philadelphia the crowing went on, and when they reached the Broad Street Station, the tally the boy had carefully kept since the tenth outburst showed the alarming record of one hundred and seventy-seven crows.

It was not altogether "bad fun" for the boy, but it was after all somewhat embarrassing, and he decided he would not manage another "personally conducted tour," with a young rooster as chief traveller.

CHEERING THACKERAY.

Mrs. Ritchie, Thackeray's daughter, who has been giving in *Macmillan's Magazine* some interesting recollections of literary life, says that she has a dim but most delightful remembrance of a party at the house of Dickens, when his children and she herself were very little. She recalls her admiration of the white satin shoes and long white sashes worn by the Dickens girls, and the fact that her own sash was a bright plaid of red and blue, a combination which she "could not bear." The evening passed, happily, radiantly, and at its close came an incident which brings tears to the eyes of those who love and reverence the satirical but always warm-hearted novelist.

Only this do I remember very clearly, that we had danced and supped, and danced again, and that we were all standing in a hall lighted and hung with bunches of Christmas green, and as I have said, everything seemed altogether magnificent and important, more magnificent and important every minute, for as the evening went on, more and more people kept arriving.

The hall was crowded, and the broad staircase was lined with little boys—*thousands* of little boys, whose heads, arms and legs were waving about together. They were making a great noise, and talking and shouting, and the eldest son of the house seemed to be marshalling them.

Presently, their noise became a cheer, and then another, and we looked up, and saw that our own father had come to fetch us, and that his white head was there above the others.

Then came a third final, ringing cheer, and some one went up to him—it was Mr. Dickens himself—and laughed, and said, quickly, "That is for you!"

My father, surprised, pleased, touched, settled his spectacles, and nodded gravely to the little boys.

KNEW HIS NAME.

The New York *Tribune* prints a highly improbable story about an aristocratic young lady of that city and her two fox terriers. The dogs, as the story runs, are of lofty pedigree, but bear the not very high-sounding names of "Rags" and "Tatters,"—from their fondness for tearing things.

The trio—the young woman and the two dogs—had been out for an afternoon walk, and while they were on their way back an Italian rag-picker happened along, trundling his cart rapidly down the street, and calling at short intervals, "Rags, rags, rags!"

The puppy pricked up his ears, and before his mistress could stop him, was at the Italian's heels, following him in the most confiding manner. The young woman hastened after him, but was unable to coax the truant back, every partial success being thwarted by another cry of "Rags, rags, ra-ags!"

At last, when the owner of the dog was almost in despair, she overtook a policeman, who soon recovered her pet.

The story reads well, but it will be hard for most people to believe that any rag-picker ever called "Rags!" distinctly enough for a dog to understand him.

To cleanse and preserve the teeth use "*Brown's Camphorated Saponaceous Dentifrice.*" Microscopical examinations have proved that the use of soap is the only safeguard against the accumulation of animal and vegetable parasites on the teeth. Camphor strengthens and relieves soreness of the gums. Price, 25 cents a bottle. Sold at drug stores. [*Adv.*

TRINITY SCHOOL. TIVOLI-ON-HUDSON, N. Y. Location and surroundings unsurpassed. Equipment complete. Gymnasium, drill hall, bowling alleys, etc. Thorough preparation for college, scientific schools or business. JAS. STARR CLARK, D. D., Rector.

OHIO MILITARY INSTITUTE. COLLEGE HILL, OHIO. Fall term begins Sept. 15. Elegant new buildings with modern improvements. For illustrated catalogue address, J. H. McKENZIE, A. M., President.

Eastman COLLEGE, Poughkeepsie, N.Y., offers both sexes the best educational advantages at the lowest cost. Business houses supplied with competent assistants. Address as above for illustrated catalogue.

TELEGRAPHY. Learner's manual of complete instruction, with description of instruments. How to put up Telegraph Lines, Electric Bells, Batteries, etc. By mail, FREE. J. H. Bunnell & Co., 76 Cortlandt St., New York.

LEAD PENCILS. DIXON'S "AMERICAN GRAPHITE" are the best. Send 16 cents for samples worth double the money. Send once only and then buy of your stationer. DIXON CRUCIBLE CO., Jersey City, N. J.

VALENTINE'S SCHOOL OF TELEGRAPHY Teaches its students a trade and then starts them in railroad service. Send for circulars. VALENTINE BROS., JANESVILLE, WIS.

BOTH SIDES OF THE TARIFF. The two great speeches, Hon. Roger Q. Mills on "Free Trade" and Hon. Wm. McKinley, Jr., on "Protection to American Industries," recently delivered before the students of the Rochester Business University, the most brilliant addresses ever delivered by these gentlemen, will be mailed to any address, together with elegant portraits of the speakers, for 15 cts. in stamps. Address, WILLIAMS & ROGERS, Rochester, N. Y.

HOMES FOR THE PEOPLE. Boise City, the permanent capital of the new State of Idaho, is situated in the midst of gardens, orchards and groves; is growing rapidly; is the leading city of the mountain inland empire. Climate about that of East Tennessee. The attention of health and homeseekers and capitalists invited. Address Sec'y BOARD OF TRADE.

How to OBTAIN A BUSINESS EDUCATION At HOME. By means of practical Correspondence instruction, as given by the CHAUTAUQUA SCHOOL of BUSINESS. Full particulars free. Address, K. F. KIMBALL, Chautauqua Office, Buffalo, N. Y.

HOME STUDY FOR VACATION Spend a part of vacation time in studying practical subjects not taught in Common Schools. A good business education will pay every one. Book-keeping, Business Forms, Arithmetic, Penmanship, Shorthand, etc., thoroughly taught by mail at student's home. No experiment; years of successful experience. Adapted to all ages and both sexes. Students from every State. Trial Lessons sent free. Write to BRYANT & STRATTON'S COLLEGE, 467 Main Street, Buffalo, N. Y.

"B & H" LAMP. BRIGHTEST LIGHT. BEST MADE. EASIEST CARED FOR. LARGEST VARIETY. Every Genuine Lamp Stamped "The B & H." BUY IT. TAKE NO OTHER. SOLD BY *Leading Houses Everywhere.* BRADLEY & HUBBARD MFG. CO. NEW YORK, BOSTON, CHICAGO. FACTORIES: Meriden, Conn.

A Metallurgist decides the mixture of ores for casting of iron plate in piano with reference to greatest strength, and its part in production of tone. After casting, this plate is fastened over sounding-board to skeleton frame of instrument. The strain caused by tension of strings in best overstrung upright pianos is from eight to ten tons. The iron plate in

The EVERETT PIANO.

through peculiar distribution of braces insures great strength.
If not for sale by your local dealer, address THE JOHN CHURCH CO., Cincinnati, Ohio.

"From Andante to Allegro," an illustrated pamphlet, will be sent free to any one who will mention where this advertisement was seen.

HAVE YOU FOUND IT

Difficult to obtain writing paper for society, foreign, business or every-day correspondence that just suits you in quality and price? If so, ask your dealer to give you **BOSTON LINEN, BOSTON BOND or BUNKER HILL,** and make sure that he does. Every sheet has the name therein, which you can easily see by holding to the light, and none are genuine without it. If he does not keep them and will not get them for you, send us 6 cts. and we will forward you our complete samples representing over 250 varieties.

You operate the pedals. The Organ does the rest. Organs of every description. Forty three years' experience. SEND FOR CATALOGUE.

WILCOX & WHITE ORGAN CO., Meriden, Conn.

Some Summer Books.

POWER THROUGH REPOSE. By ANNIE PAYSON CALL. 16mo, cloth, $1.00.

A BOOK O' NINE TALES. With Interludes. By ARLO BATES, author of "A Lad's Love," etc. 16mo, cloth, $1.00.

ONE OF OUR CONQUERORS. A New Novel. By GEORGE MEREDITH. 16mo, cloth, $1.50.

A VIOLIN OBLIGATO, And Other Stories. By MARGARET CROSBY. 16mo, cloth, $1.00.

ONE SUMMER'S LESSONS IN PRACTICAL PERSPECTIVE. Told in the Form of a Story for Young People. By CHRISTINE CHAPLIN BRUSH. Illustrated. 16mo, cloth, 75 cents.

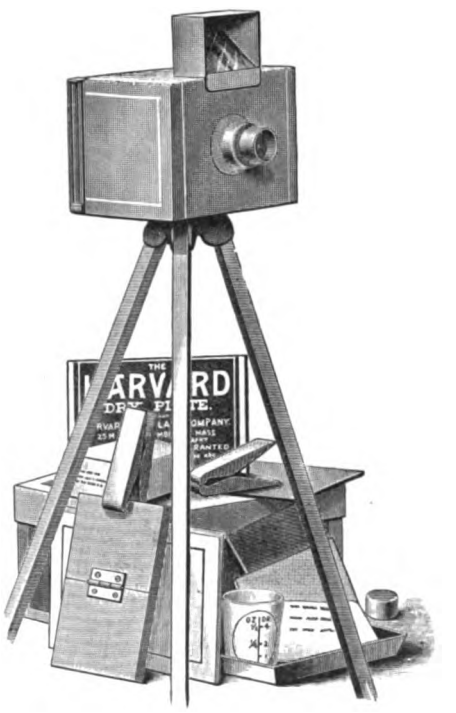
A QUESTION OF LOVE. A Story of Swiss Life. Translated from the French of T. Combe, by ANNIE R. RAMSEY. 16mo, cloth, $1.00.

HER GREAT AMBITION. A Story. By ANNE RICHARDSON EARLE. 16mo, cloth. Price, $1.00.

DREAMS. By OLIVE SCHREINER, author of "The Story of an African Farm." 16mo, cloth, with portrait, $1.00.

MISS BROOKS. A Story. By ELIZA ORNE WHITE, author of "A Browning Courtship." 16mo, cloth, $1.00.

THE BAGPIPERS. By GEORGE SAND. Translated by Miss K. P. Wormeley. 12mo, half Russia, uniform with "Balzac's Novels." $1.50.



At all the Bookstores. Complete Catalogue, containing list of all our paper novels, mailed free.

ROBERTS BROTHERS, Boston.

FREE!—Harvard Camera Clubs—FREE!

Large numbers of our young friends have taken advantage of our April 2d Offer, and are organizing Camera Clubs. To assist them still further in this direction we make the following promise:

Upon a written application signed by at least three persons who agree to form a Harvard Camera Club, we will send, free of all expense, Aids for forming Camera Clubs, Organization Blanks, Membership Tickets and a Constitution.

$1.75

Will purchase a Complete HARVARD PHOTOGRAPH OUTFIT. These Outfits are thickly scattered all over our country, tens of thousands being in constant use.

We have described the Outfit and Camera so often that we believe it is not necessary to do so again. The Outfit is absolutely complete. No extras required. Contains everything needed to produce finished photographs.

We have pictures on exhibition at our office made with the Harvard Camera, that, though smaller, are equal to photographs taken with a $15.00 instrument.

Then why do you longer hesitate?

We will give the Complete Harvard Photograph Outfit to any subscriber to The Companion for one new subscriber and 50 cents additional.

Or we will send the Outfit to any address on receipt of $1.75.

In either case, if to be sent by mail, 50 cents must also be enclosed for postage, or it can be sent by express, the receiver to pay the charges.

THE YOUTH'S COMPANION, Boston, Mass.

For the Companion.

OVERLAND ON A MAN-OF-WAR.

By Rear-Admiral J. H. Gillis, U.S.N.

In the spring of 1867 I was ordered to proceed to Panama and take command of the United States Steamship *Wateree*, then lying in the harbor of that city.

I had been on the coast of the Pacific a little more than a year, and during that time had experienced many *temblors*, or tremblings of the earth; but none had been serious. I had begun to believe that earthquakes in Peru did not amount to much. But my ideas of earthquakes in that country were destined to undergo a sudden and lasting change.

The month of April, 1868, found us at Callao, where we expected to make a prolonged stay in order to make repairs; but an outbreak of yellow fever in the town compelled us to leave the port, and we set sail for Arica.

The *Fredonia* was a United States store-ship which had been lying in the harbor of Callao for many years. She was a rotten old hulk, and it had been confidently predicted that some day she would quietly go down at her anchors; but her captain feared a visit from Yellow Jack more than the dangers he might incur in a voyage at sea. I took the *Fredonia* in tow, and after several mishaps that threatened her destruction, she was at last safely anchored in the harbor of Arica.

Arica, which was then in Peru, but was afterward annexed, with the country about it, to Chile, lies at the foot of the Lluta valley—a valley abounding in fruits and flowers. The emerald green of its fields of grass and its orange and lemon trees presents a striking contrast to the dark gray of the hills that rise abruptly from its borders on either side. The bold, bald peaks of the Cordilleras, whose summits are lost in the clouds, with snow-clad Andes rising in the far distance, form a wonderfully imposing background to the scene.

The city contained at that time a population of about ten thousand.

For nearly four months the good people of Arica appeared to vie with each other in their endeavors to make the time pass pleasantly for us. Dinners, balls, parties and excursions followed one another in rapid succession.

Warnings of the Catastrophe.

For several weeks previous to the Thirteenth of August, there had been frequent *temblors*. But few of them were severe enough to cause more than a quickening of the pulse, although some were of sufficient force to loosen the rocks on the adjacent hills and send them rolling down to their bases, raising great clouds of dust. No apprehension was felt by any one, either native or foreigner; there was nothing in the temperature nor in the appearance of the heavens that would indicate to the people that a great calamity was about to befall them.

Even the sea was unusually quiet. It seems as if all nature was resting in order that it might gather the required strength for the terrific struggle which commenced at five minutes past four in the afternoon of that day.

I was at dinner. Suddenly we were startled by a low, rumbling sound, accompanied by a tremulous motion of the ship. The first impression was that a cask of water was being rolled over the deck; but this idea was dispelled as the rumbling sounds grew louder, and the increased motion of the ship caused the dishes on the table to dance about.

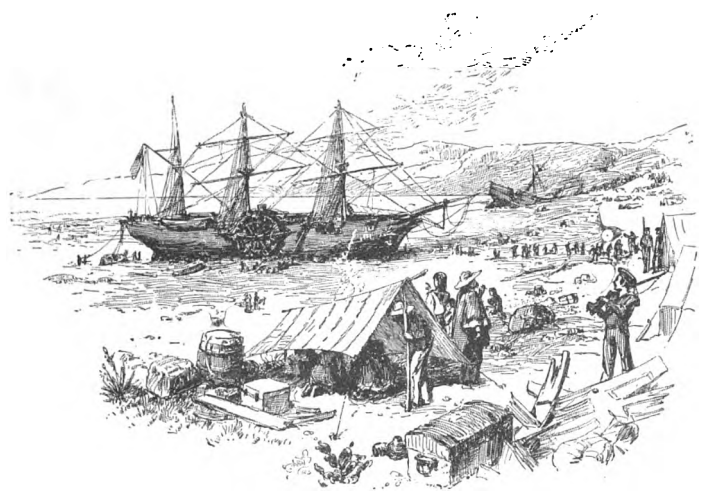
The conviction was forced upon our minds that an earthquake of unusual severity was in progress. Hastening on deck, we saw that the high hills along the coast to the southward seemed to be reeling to and fro, sending great masses of earth and rocks down their steep sides into the sea. We could distinctly trace the approach of the mighty convulsion as it swept on toward the doomed city.

The Morro joined the fearful dance, and then a house in the northeastern part of the city was seen to crumble away. Before there was time for more than an exclamation, Arica had ceased to exist as a city; a great cloud of dust covered the place where it stood.

A Ruined City.

As the cloud lifted and rolled away, there was presented to our view one of the saddest sights the eye ever rested upon—a city, the home of ten thousand people, a heap of ruins, and the inhabitants running frantically in all directions, appealing for help. During all this time the ship was trembling as if she were sentient, and realized the great danger which threatened her.

We were aware that a danger even more terrible threatened us from the sea, that in all probability we would soon be at the mercy of the dreadful tidal-wave; and what hope could there be in such an encounter for a vessel so frail as ours?



With a determination to do all that could be done, I at once gave orders to get the guns, which had been cast loose and run over to the starboard side for the purpose of careening the ship, into their places and secured. This was done with a coolness and freedom from excitement that can only come from a long familiarity with danger, and strict discipline.

When this had been done and other preparations had been made, and the sea still showed no signs of unusual disturbance, we believed the danger had passed away.

Relief of the Injured.

Then we turned our attention to the appeals of the sufferers on shore, whose cries and groans could be distinctly heard. I had all the boats called away, giving directions to have the men provided with shovels, axes, picks and crowbars to assist in extricating those who were buried beneath the ruins. I also directed the medical officer to get up his case of surgical instruments, and provide himself with everything necessary with which to perform surgical operations.

As soon as he reported himself ready, I took him in my own boat, and with the paymaster as his assistant, proceeded to the landing at the mole, or wharf. This was packed with people who were trying to get off to the vessels in the harbor, believing that they were the only safe places of refuge within reach.

The "Wateree" Ashore.

As I stepped out of my boat I was met by the navigating officer of the *Wateree*, Lieutenant-Commander Johnson, who, with his wife, was residing on shore. He was bareheaded and in his slippers, covered with dust and dirt, but uninjured. He had escaped as by a miracle, while his wife had been buried beneath the ruins. We found her body, lifeless and mangled.

While we were working to extricate her, I was startled by the cry of "*La mar! la mar!*" or "The sea! the sea!" uttered by thousands of voices. I realized the great peril we were in. The ground on which we stood was not more than eight feet above the level of the sea, and we should be at the mercy of the incoming waves.

A Race for Life.

By a mighty effort we released the body of Mrs. Johnson from the mass of wreckage that held it down; and now commenced the race for life. My heart sank as I felt how little chance there was that I should be able to gain a place of safety before being overtaken.

I kept on with the struggling crowd, followed by the grinding, groaning of the ruins as they were hurled forward by the vast body of water that swept irresistibly on; while high above the noise rang the fearful cry, "*La mar! la mar!*" in many instances only silenced by the death-struggle with the waters as they overtook the fugitive in his flight, or swept over some half-buried victim.

I discovered a break in the wall through which the people were passing; and on reaching the opening, saw that it led into a vacant lot which ran through to the next street, which was considerably higher than the one along which I had been passing.

I was soon in a place of comparative safety.

Of all the throng I had met on the mole when I landed, but a small proportion escaped, and of those who did, some were saved in a most wonderful manner. Señor Vicarro, a gentleman of my acquaintance, had been thrown from his horse a few days before and had broken the cap of his knee. The accident rendered him entirely helpless.

When the earthquake began he was carried by his attendant to the mole, and placed under an awning. When it was discovered that the sea was in motion, he was placed in a launch, where others had already taken refuge. Hardly had he been placed there when a large lighter was dashed against the launch, crushing it against the mole. Those who had sought refuge in the launch now clambered into the lighter, and Vicarro was taken with them.

Back and Forth on the Tide.

Borne by the rising water, the lighter now swept up the street and against the side of the hill, where, in the moment of rest preceding the recession of the sea, all but Vicarro succeeded in making their escape over the debris. But he, being unable to help himself, soon was carried far out to sea by the receding waters.

Again the waters turned, and the frail vessel, with its helpless passenger, was hurried on, apparently to certain destruction. Coming far ashore, the lighter rested a moment high up on the waste of ruin, and then took its flight back seaward.

Back and forth the man went upon a series of these fearful journeys. He could see his friends gathered on the hillside, watching with anxious eyes the course of the seemingly charmed craft. At last it was driven high up on the very top of the immense mass of debris that had already been forced up the side of the hill, by the sea, and lodged there.

All night long poor Vicarro lay praying and waiting for the morning light to bring him succor; and in the morning friendly hands gently raised and bore him away and ministered to his comfort.

When I reached the side of the Morro, I found many scattered groups of people gazing mournfully upon the places that but an hour before had been their happy homes, while here and there were other groups, gathered around some suffering and perhaps dying loved one.

The Bed of the Sea Laid Bare.

Turning my gaze towards the sea, a wonderful scene was presented. The sea had again receded, and for quite two miles from the shore the rocky bottom was bare. Of the six vessels that had been lying quietly at anchor, three were already wrecks, while the others, the *Wateree* among the number, were being hurried to and fro at the mercy of the fearful current, which seemed to be setting in every direction.

The Peruvian corvette *America* at one time made a complete circle around the *Wateree*, coming so close that it seemed impossible for the two vessels to avoid a collision. Then one was soon hurried forward in one direction, while the other took an opposite course. In a brief space of time they were fully half a mile apart.

When night closed down the *Wateree's* lights were placed in their proper position. Seeing them flash out, my hope rose high that the vessel would pass through the ordeal in safety. But just when hope was highest, and the ship was rushing with fearful rapidity past the city to the north, I was startled by seeing through the darkness a long line of glimmering white, coming down along the coast from the westward; and as it swept on, every moment becoming more and more distinct, I realized too fully what it must be.

It was the terrible bore, or combing sea, which we had so much feared when the earthquake was first felt in its full force. So much time had passed without it that we had hoped that it would not come; but now on it rolled, a solid wall of water fully fifty feet high, before which it seemed as if nothing but God's works could stand.

Right in its path lay the gallant ship. My gaze was fixed upon that dim red light, waiting to see it extinguished forever by the mad sea. I dared not hope ever to meet my comrades again. Suddenly the light shot up into the air, was lost to sight for one brief instant, then was hurried on once more. They had met—the sea and the ship—and, thank God, the ship was still safe!

Soon the light became stationary. Hope lived again, and a great load was lifted from my heart. I could observe the scenes around me.

It was now twenty minutes past seven—two hours and a quarter since the city fell—and all this time, with short intervals of intermission, the earth had continued its restless motion. At each low rumbling, and as each successive wave passed over the land, the voices of the thousands on the side of the hill broke forth, in a long, low wail, and earnest prayers rose from the pallid lips of strong men and weak women alike.

Here and there the feeble light of a fire, kindled to keep off the damp night air, shone out; while in the far distance, in the great Andean range, the light of the volcano of Sahama illuminated the heavens, and brought out in startling relief the bold outlines of the mountains.

As the night wore on I wandered from group to group, doing what I could to help those most in need, although it was, at the best, to give but a cup of cold water or a cheering word.

My heart was deeply touched at the patience in suffering evinced by those who had been most seriously injured. There they lay, mangled and bruised, with shattered limbs and gaping wounds, weak women and strong men, the young and the old, the sick and diseased, with no bed but the trembling earth and no covering but the canopy of heaven.

The Earthquake Continues.

All the time the terrible, sickening motion continued, the earth opening in many places, and in some boiling up like water in a vessel, while noxious gases made their escape, filling the atmosphere with an unpleasant odor. Long lines of crevices, extending far down and in every direction, seemed to stand ready to engulf any unwary victim who might come near.

Many of the shocks were so strong that the silent watchers by their dead were actually shaken down the hillside.

Eleven mighty waves had burst upon the shore, each one completing some unfinished work of destruction, each one, as it receded, bearing with it fresh victims. But, as though the sea were exhausted with its last mighty effort, when the great ocean hurled its vast body of water high up on the land, each subsequent wave came weaker and weaker, until finally the harbor became as tranquil and undisturbed as though it had never been the scene of such wild and tragic events.

At midnight, while standing near one of the fires that had been lighted on the side of the hill, and which had served as a beacon to guide them on their course, I saw approaching an officer from my own vessel, accompanied by two of the crew, who had been sent to find me and report the condition of affairs on board the ship.

It was with the deepest satisfaction, and with my heart filled with gratitude, that I received the information that not one of those belonging to the *Wateree* had perished, although the ship had been swept far inland, and was then resting on the sands half a mile from the water.

I had not supposed it possible for a vessel to be carried up on shore any distance from the beach at that point, as I knew that there was a range of sand-hills, from twenty to thirty feet in height, and from one hundred and fifty to two hundred and fifty feet in width at their base, running all along the shore above the city. At high tide, the waters came close up to the foot of these hills. But it appeared that they had been completely obliterated by the sea. Not even an irregularity in the sands was left to show where they had been.

As soon as I had received the report of the officer, I set out on my return to my vessel, guided by the ship's light, that still shone out upon the night. The light from a lantern carried by one of the men enabled us to pick our way over the debris and through the mud. While this lantern was a benefit to us in one way, it added to our insecurity in another, by attracting the notice of the armed robbers who had already begun their nefarious work, and who were maddened by the liquors which they found in abundance on every hand.

Getting out of their way as much as possible, we escaped their violence, and after a weary tramp of about three miles, reached our vessel.

Inspecting the "Wateree."

We found her lying as upright as though still in her proper element, but bearing many marks of the conflict through which she had passed. Her starboard side had received a terrific blow from the bore, crushing in the paddle-box, carrying away nearly all the wood-work in the neighborhood of the starboard wheel, and sweeping into the sea a number of the hammocks belonging to the men.

The decks were covered with sand and mud that had been left by the sea when it broke over her.

The crew, with the exception of the few on watch, and those who had lost their bedding, were in their hammocks; the officer of the deck was promenading the quarter-deck, and everything was in the same order as is usual on board of a man-of-war lying at anchor.

The *Wateree* undoubtedly owed her escape, in the first place, to the fact that both of her chains did not part, one of them holding on, and the

Digitized by Google

anchor thus keeping her head on to the waves. I can only account for her escape from the crushing effects of the bore, by supposing that she must have gone up on the curve of the sea, its power, to a great extent, thus being destroyed. But had the chain parted at this critical moment, the ship would have been rolled over and over, and not a soul would have escaped.

I received the report of the executive officer and then retired to my state-room, worn out with the excitement and fatigue of the hours which had been filled with such strange and awful events, but with a deep sense of gratitude for the wonderful mercy that had spared me and those under my command.

One man was supposed to be lost. The last that had been seen of him he was standing up in my boat, as she was being carried out to sea, and waving the boat's ensign. But he turned up all right sixteen days after.

He had made his escape to the island of Alacran, against which the boat had been carried, and the following day was taken off by a boat from a steamer which had come in from sea. He was carried down the coast to Iquique, and thence made his way back to Arica.

I tried to obtain a little rest, knowing that all my energies, physical and mental, would be required next day; but the almost incessant vibration of the vessel, caused by the continued shocks, prevented sleep, and I was glad when the morning light broke. I was enabled then to see the waste of ruin that lay about me.

The *Fredonia* had succumbed to the first incoming wave. When the sea receded, her anchors held and kept her from going out, and although she was anchored in fifty-one feet of water, she was left on the naked rocks, and, falling over on her side, never righted. Being old and rotten, the first returning wave split her open from end to end. Of all on board, only two seamen were spared. They were picked up in the morning from a portion of the wreck that was floating in the harbor, so terribly mangled that they only lived to be helpless cripples for the remainder of their days.

The Peruvian corvette *America*, which was as handsome a craft as ever was launched, now lay a wreck on the beach, directly in front of the *Wateree*. Eighty-three of her officers and crew were dead, among the number being her commander; and many of those who escaped death were seriously injured.

The *Rosa de Rivera*, a Peruvian barque, had entirely disappeared. Not a vestige of the vessel nor anything belonging to her could be found; and of those on board not one was left.

The English barque *Chañarcillo*, a new and powerfully built vessel, was literally torn to pieces. She had rolled over and over, her decks being crushed in by the rocks which lay at the bottom of the harbor, her chains wrapped completely around her. Not a man on board escaped.

There was another vessel, a small brig, the name of which I have forgotten, that was also thrown up on the shore. What became of those on board I could not learn, although I made every endeavor to do so, and I was forced to conclude that they too had in all probability lost their lives.

Merchandise of every description, from the custom-house and from stores, to the value of many millions of dollars, chairs, tables, bureaus, pianos and household goods of every kind, were scattered along the shore, while here and there on the beach could be seen the nude bodies of the dead, which the sea had already begun to give up.

After giving directions to the executive officer to afford such relief as was possible to all who might ask for aid, and not waiting to break my fast, I started for the place where the people were still collected on the side of the Morro, to ascertain what had become of my friends, and to offer my services to the authorities in instituting a system of relief for those who were most in need.

I soon found out that it was useless to attempt to coöperate with the authorities. They were in too demoralized a condition to make any use of the powers with which they were invested. The thieves were having everything their own way, boldly loading upon the backs of mules everything that was transportable.

A reign of lawlessness prevailed, and every man who cared for his life had need to go well armed. I naturally felt very anxious to learn the fate of those to whom I had become most particularly attached during my stay at Arica; and after a walk of about two miles up the side of the hill, I found a little party which included nearly all of my friends. All were safe.

They had been preparing their breakfast—a frugal meal of a few sea-biscuit, a small piece of sun-dried beef, and a fish that had been thrown on shore by the sea.

After taking leave of my friends I returned to the ship and began the distribution of provisions to the hungry people. Fortunately we had a good supply on hand. For several days the cooks were kept busy from early in the morning until late in the evening, preparing food.

I had made free use of the stores on board the *Wateree*, in relieving, so far as I could, the necessities of the people; and when the Admiral arrived, he directed me to turn everything remaining over to the authorities for distribution. This I immediately did, and over twenty thousand dollars' worth of stores were thus given them. I am happy to state that the Admiral's action, as well as my own, met the cordial approval of our government.

The stores having been delivered to the authorities, preparations were at once made to leave the ill-fated *Wateree*. The brass pieces, consisting of twelve and twenty-four pounder guns, and the ammunition that was on board were sent to the *Powhatan* and *Kearsarge*. These were about the only articles of any value which could be transported to the landing at that time.

Two officers were left to take charge of the ship, to prevent the destruction or carrying off of such things as were left on board; and with the other officers, and what remained of the crew, I took leave on the Twenty-ninth of the month of my late command.

I embarked on board the *Powhatan*, and the following day we steamed away from the ruins of the city whose hospitable citizens had extended to us so warm a greeting but four short months before.

For the Companion.

IN A GREAT POST-OFFICE.

When you have written a letter to a friend in California, Texas, Maine or Florida, you drop it in the post-office or letter-box and forego all further care, knowing well that, if it is properly stamped and addressed, it is practically sure to reach its destination.

Where your care ends that of the United States Government begins; and the little white envelope becomes an object of careful attention from at least a score of trained men.

Suppose we enter the long gallery overlooking the general mail department in the New York City post-office, and see what becomes of your letter.

As New York is the largest city in the country, it sends out more letters than any other. In the year 1889, more than half a billion of letters were transmitted, through this room, to all parts of the world.

It is a rather strange fact that the larger part of the city's correspondence is with itself. Distances within it are so great that the little stamped messengers are of great convenience.

It is amusing to watch the letters as they drop upon the tables or into the tubs prepared for them. As we stand behind the long line of boxes with a score of openings, we see and hear them slip, with a gentle *click*, *click*, *click*, all day long, through the little openings; they are dropped by the hands of busy people, now into the "Outgoing Domestic" box, now into the "Foreign" box, now into the "New York City Delivery" box.

Here a great roll of circulars comes tumbling in, or a package of newspapers or magazines. Here, again, through the wide opening provided for the purpose, parcels and packages of every shape and almost every size are dropping into place.

It is so interesting to watch the constant fall of these various missives, and to wonder who sent them and where they are going, and whether they contain messages of joy or sorrow, that we are in danger of neglecting to watch the busy workers at the tables just beyond.

Near the boxes into which the letters fall, sits a man at a table with a short, hoe-like rake. He draws the letters toward him and places them face upward. They are now ready to have their stamps "killed," which means, of course, marked so that they cannot be used again.

Next to the tables upon which the stamps are

cancelled, stand a series of long tables, on each of which are long cases divided into numerous compartments. These are rapidly filled with letters by the assorting clerks. There are special tables marked "Pennsylvania," "New England," and so on. One would think just now that all the world were writing to New England, from the immense pile of letters being deposited here.

With surprising swiftness the assorting clerk takes up a package brought from the stamping table, arranged with face upward for easy reading. A glance at the State and town, a moment of thought, sometimes not even that, apparently, and the letter goes into the packet which is to be carried by a particular railway route.

Nearly every assorter has some trick of manner by which he gains a little time for thought before placing his letters. One twirls the letter around twice, another flirts it up and down, while a third appears to throw it over his shoulder.

In that second of time the decision as to its route is made. In many cases not even a second is needed to place the letter correctly.

The assorting clerks become very skilful in their work. They are paid according to ability, and their salaries range from fifty dollars to one hundred and fifteen dollars a month.

To each man is given a pile of cards, one thousand or more in number, each about the size of a letter, and each addressed to some post-office. The clerk is required to assort these, and his marks in the examination depend on the speed and the accuracy of his work. One man assorted a thousand cards in twenty minutes. That is almost one every second.

A great variety of work is being done at the numerous other tables and departments of the large room. Here are seven boys who are stamping incoming letters with the New York postmark and time of arrival. Their hands move so swiftly that one can scarcely follow them.

The packages of letters which arrive through the mail from other points are securely tied together with strong cords. As they are taken from the pouches they are carried to the "string man," who, standing all day at a table, does nothing but clip the cords, opening the precious packages.

There are men to sort and distribute letters for the lock-boxes, and others to collect mail from each set of boxes. The carriers have a separate table where they make their mail ready for their trips. At another table some are busy with letters just brought in from the street boxes.

Papers and parcels have each their own particular place for arrangement and distribution. The newspapers, which require more space than the letters, are cared for in the basement, where a small army of men and boys, without a laggard among them, are getting the papers in order for carriage or distribution.

The New York post-office costs the United States Government over a million dollars a year for clerk hire—not such a large sum, in view of the immense amount of work done here, and the skill and strength required to do it. It costs more than two thousand dollars merely to repair the mail-bags.

Of course a large amount of money is received for stamps, postal-cards, stamped envelopes, postal notes, money-orders, and so forth. Every year the people make greater use of the money-order and registry departments. In the year 1889 over ninety-one millions of dollars passed through the money-order department.

As in all large offices, there are special windows where stamps are bought in large or in small amounts—seven windows in all—and the work of the department is greatly facilitated by this division of the business. More than five million dollars were received last year for stamps.

While a great deal of money must be paid out in so large an establishment, a large sum is taken in; and the net profit to the Government for the last year from this office was more than three millions of dollars. Let us take a look into the office of inquiry for missing letters and parcels. This is a very interesting room, where a dozen men and girls are busily engaged trying to right the errors of the careless, ignorant or dishonest people who abuse the postal system.

To this room are sent all the misdirected, unaddressed, unclaimed, underpaid and "refused" letters; indeed, everything which the quick eye of the assorter finds out of place.

Here is a pile of thirty or more letters, all addressed in the same hand, to one of the richest merchants in the city, and each one marked "refused." The writer evidently belongs to the "importunate widow" class, for we are told that she has sent these letters, begging for money, every day for weeks and months. The merchant now directs them to be marked "refused," and they are then returned to the office. According to the requirement of the law, they are sent to Washington and there destroyed.

Inquiries for missing letters or packages are sent to this room, where the most careful effort is made to recover the lost article.

Between ten and fifteen thousand misdirected, unstamped, not-addressed and otherwise unmailable letters are sent to Washington every Friday from this room. Efforts are made to trace every missing letter, parcel or paper received here; but often there is nothing whatever to indicate the name of the sender or the person to whom it was sent.

Although the sending of fresh fruits and vegetables is strictly prohibited, many boxes of strawberries were received last year, all of which were detained, of course. Some selfish people forget that there is to be something in the mail-bag besides their own parcels, and that a box of berries or cherries might ruin parcels of

great value. I saw several cans of oil, one of which had lost a part of its contents by leaking.

In a large, high case are hundreds of papers and magazines which have burst their wrappers, and have no means of declaring where they came from or to whom they were sent.

It is unpleasant to think how many people all over the world must be suffering disappointment because of all this array of letters and packages sent by careless or ignorant hands. Hundreds of letters are stamped, but not directed; as many more are not stamped.

Every one who writes a letter should be careful to make the address plain and easy to read. Of course it is much easier for those who sort and send letters to have legible inscriptions to read, but it is far more important to the sender than to any one else that the letters should go, not be detained by a puzzling superscription.

Does any one make a small *a* and *o* very much alike? Then such an one should not use the abbreviations for California and Colorado, but write out the whole word.

The same rule applies to the abbreviations "Me." and "Mo."; "Miss." and "Mass."; "Penn." and "Tenn."; "Pa." and "Va."; "Ct." and "Vt."; "N. C.," "D. C.," and others.

To be considerate to others and to try to help instead of hinder their work is a mark of good-breeding, but in this case carefulness is necessary to one's own convenience.

HELEN MARSHALL NORTH.

SUGGESTIONS

WINDS.

Notice and explain the air-currents around and above a fire or a hot stove.

Are plains, hills, forests, and lakes warmed equally or unequally by the sun's heat?

What must be the result?

Why are winds so variable in force, direction, etc.?

What are land-and-sea breezes? Their causes?

What are the trade-winds and their causes?

For the Companion.

MEHITABLE MAKING DOUGHNUTS.

The fun we've had, my ancient chum,
In the old farm-house, yonder!
That gable-end was where we slept,—
Who sleeps there now, I wonder?
The moon lights up the big red barn,
And glides along the clover,
I tell you 'twas a happy life,
I'd like to live it over.
But best of all, to us, was when
Mehitable, our cousin,
Rolled out the doughnuts on a board,
Ah, many a baker's dozen.

For Hitty was a winsome girl,
With country ways and graces;
Somehow you don't find just that look
In any city faces.
I see her now—her eyes so blue!
I called 'em jest entrancin',
The dimples both in cheek an' chin,
They seemed forever dancin';
Her merry laugh, her sleeves tucked up,
Her hair combed off her for'ed,
Leavin' it soft an' white an' round,—
She thought that bangs were horrid;
Her hands upon the rollin' pin,
No rings upon her fingers,
The memory of that happy time,
It sort o' comes an' lingers.

Then, when the dough was cut in shape,
An' bits left over, maybe,
She'd, laughing, make an elephant,
Or all sorts of a gaby
For you an' me, but of the rest,
Such hearts an' rounds an' twisters!
And threw 'em in the kettle, where
They plumped with rich brown blisters;
Then quick she'd turn 'em with a fork,
An' daintily she'd set 'em,
And land 'em—well, we boys did that
As hot as we could get 'em.

To-day the farm's in stranger-hands,
The blackberry hills built over,
The town has raised a big stone hall,
Right where we picked the clover;
Mehitable's a grandma now,
An' livin' in the city,
Her husband is a millionaire,
So you an' I lost Hitty;
But we old boys sometimes review
The scenes where memory's laid 'em,
An' call to mind the doughnuts hot,
And how we boys would raid 'em;
I've never tasted doughnuts, since,
As nice as Hitty made 'em.

MARY A. DENISON.

HONEST OLD TOM.

Two years ago there died an old man who, as a learned and just judge, had long commanded the respect of the community. Forty years before he had gone to the city where he lived a penniless young lawyer, and had slowly earned for himself an honorable position.

He had never married, and never could be tempted to enter society, but lived always in the same quiet apartments, surrounded by his books and a few friends, who greatly respected and loved him. Every Sunday, no matter how stormy, found him in his obscure seat in church, devout and earnest; but he never could be persuaded to hold any office, even the humblest, in the church.

He was so just a judge, so rigid in his integrity, that his townsmen affectionately dubbed him "Honest old Tom."

He died after a lingering illness, with a few faithful friends about him. When they began to prepare him for the grave, they found upon his chest the letter T branded with a hot iron—the most degrading punishment inflicted in the Southern States.

The just judge, the faithful Christian, had once been convicted as a thief.

The astonishment at the discovery was great. His nearest friends bowed over his coffin in sorrow at the revelation, forgetting that the shut lips could never deny the charge, nor speak a word in his defence.

But there were voices to speak for him.

Men and women were eager to tell what they knew of his private life. It was found that each year he had given to benevolent objects the largest part of his income.

Nurses from the hospitals spoke of him now as a visitor who had often come to bring luxuries to the poor patients, and to comfort them with kind words.

Officers of jails and penitentiaries spoke tenderly of him. To many a poor, battered prisoner he had gone as a brother, and held out a hand in an endeavor to lift him up to a clean, honest life again.

Out of the obscure quarters of the city, there came, on the day of his burial, women whom he had rescued from a life of shame, and orphan children whom he had befriended.

When he was carried to the grave, these were his mourners. They crowded silently about his coffin, tears on their pale faces. The man whom Christ sent to help them was gone. His brotherly sympathy they had felt; they did not know its secret spring, nor realize that another could sympathize with them as he sympathized. Good Christian men who had never been tempted and overcome as he had been, talked to them as from a height. He stood beside them; he seemed to speak out of the depths of his heart.

He had been in the slough. He knew the Hand that could lead them out of it. He held it in his own, every step of the way.

The old minister, looking at these men and women standing about the grave, said with almost a voice of triumph, "Blessed are the dead who die in the Lord." For he saw a meaning of great courage and hope in this poor thief's life. It was that the man who repents of his sin and forsakes it, may be fitted for higher work in Christ's service than he who has never battled with sin and been helped to victory.

The multitude whom St. John saw standing nearest to the throne in heaven were not those whose garments had never been stained, but they who had washed their robes and made them white by faith and through obedience "to Him who loved them and gave Himself for them."

"STEEPLE-JACKS."

In the great cities of England and in several of those of America a small number of men follow the trade of climbing steeples, great chimneys, monuments and other lofty structures, to make repairs, put up lightning-rods, apply paint, and do other things which are needed. The men who follow this perilous occupation are frequently called "steeple-jacks," and they are, as a rule, proud of their occupation, and not insensible to the fact that they are, at certain moments, the most conspicuous and closely observed men in their city. There are two or three ways of making an ascent to the top of a steeple or a chimney which has no means of ascent on the interior. The old-fashioned method of climbing such a place is as follows:

A kite is provided with a cord which hangs straight down, in addition to the usual cord by which it is flown. The flyers of the kite get it directly over the apex of the steeple, and then draw down upon both cords until the kite rests upon the top of the steeple. In effect, they now have one continuous line from the ground, passing over the steeple and down to the ground again.

To one end of this line a stout rope is fastened, and the other end is pulled upon until the rope is drawn entirely over the steeple. Then to this is attached a light chain with a pulley-block and tackle affixed to it. The block is hauled to the top, and then the "steeple-jack," seated in a boatswain's or painter's chair, begins his ascent.

A less interesting but safer method has been introduced, and was lately used in the ascent of the great Vauxhall chimney in London, which is three hundred and ten feet high above the surface of its foundation, and three hundred and eighty feet above the level of the London docks.

A sufficient number of ladders was provided, each twelve feet long and furnished with four iron arms. Beginning at the bottom, four iron sockets were driven into the chimney between the bricks, and to these the first ladder was attached by means of its arms. Mounting the ladder so fixed, the operator placed a plank across the upper pair of arms, and having thus provided himself with a sort of platform to stand upon, drove in another set of sockets, and put another ladder in position.

In this way the entire height of the great Vauxhall chimney, which is considerably taller than Bunker Hill Monument, was scaled in something less than six hours of actual work, and a lightning-rod was erected upon its summit.

Each ladder is so made that, in case of need, it can be detached from below and pinned on above, so that a workman could, if necessary, make the ascent of a chimney with only two ladders. In practice, however, it is found more convenient to have a sufficient number of ladders to make a continuous way from bottom to top.

Sometimes it happens that to lengthen or repair a steeple or chimney the "steeple-jack" is called upon to build a scaffold or staging at the summit, or at a great height from the earth. In this case the scaffold is built from the top downward, and its construction requires a constant exercise of courage and presence of mind.

The "steeple-jack's" worst danger is from high winds or suddenly rising squalls. It is said that the bravest steeple-climber declines to face a strong wind. A high wind will cause the soldest chimney to vibrate at the top. In the case of extremely tall chimneys, like the Vauxhall, the summit actually swings in a gale over a space of six to eight inches. Although this does not make the chimney any the less secure, it invariably causes the "steeple-jack," if he happens to be up there, to beat a retreat to the ground.

"MONEY, DAN, MONEY."

The following extracts from the letters of Daniel Webster and his brother Ezekiel will indicate how the young men had to struggle with poverty through their college days. The reader will remember that the home farm was mortgaged to pay Daniel's expenses through college, and when it was proposed to give Ezekiel similar advantages the father and mother held a council. "The farm is already mortgaged," said the old gentleman, "and if we send Ezekiel to college it will take all we have; but the boys think they can take care of us."

It did not take the strong-hearted, sagacious woman long to decide the matter. "We can trust the boys," she said.

So the matter was settled. Daniel went back to Hanover, while Ezekiel went, bundle in hand, to Doctor Wood's and began the study of Latin, his expenses being but a dollar a week.

In November, 1802, Daniel was at home in Salisbury, while Ezekiel was struggling with poverty at Hanover. Funds were getting low in the Webster homestead. Daniel writes under date of November Fourth:

"Now, Zeke, you will not read half a sentence, no, not one syllable, before you have thoroughly searched this sheet for scrip; but my word for it, you'll find no scrip here. We held a sanhedrim this morning on the subject of cash. Could not hit upon any way to get you any. Just before we went away to hang ourselves through disappointment it came into our heads that next week might do.

"The truth is, father had an execution against Hubbard of North Chester for about one hundred dollars. The money was collecting and just ready to drop into the hands of the creditors, when Hubbard suddenly died. This, you see, stays the execution till the long process of administering is completed.

"I have now by me two cents in lawful federal currency. Next week I shall send them, if they be all.

"We are all here just in the old way, always behind and lacking. Boys digging potatoes with frozen fingers, and girls washing without wood."

Ezekiel writes to Daniel at about the same time, the two letters probably crossing each other.

"These cold, frosty mornings very sensibly inform me that I want a warm great-coat. I wish, Daniel, it might be convenient to send me cloth for one, otherwise I shall be necessitated to purchase one here. I do not care what color it is—anything that will keep the frost out. Some kind of shaggy cloth, I think, would be cheapest. Deacon Peabody gill has written, offering me fourteen dollars a month, to keep school. I believe I shall take it.

"Money, Dan, money! As I was walking down to the office after a letter, I happened to have one cent, which is the only money I have had since the second day after I came on. It is a fact, Dan, that I was called on for a dollar where I owed it, and borrowed it, and have borrowed it four times since to pay those I borrowed of."

For the Companion.

THE SPINNER.

The spinner in the garden slept,
As Day passed through the valley;
Her silent wheel the sunbeams swept,
The spinner in the garden slept,
The brown bees at their labor kept,
Rung clear the song-birds' rally.
The spinner in the garden slept,
As Day passed through the valley.

The spinner in the garden wept,
As Night came down the valley;
Her humming wheel the shadows swept,
The spinner in the garden wept,—
Her cry was: "If I had not slept!
Oh, wherefore did I dally?"
The spinner in the garden wept,
As Night came down the valley.

EMMA C. DOWD.

HE NO SQUAW.

At the beginning of this century the fur trade was a lucrative business; but the traders led a life of privation, and often of danger and hardship. Many of them were rude of manner, with a reckless courage which served to keep the Indians respectful. But occasionally a gentleman chose the position, either with the hope of bettering his fortune, or with a Quixotic notion of benefiting the Indian. With some such idea as this last mentioned, John De Vine moved his family to an isolated station in Northern Minnesota, in 1804, and opened a store to trade with the Indians.

Mr. De Vine was small of stature and quiet in his ways, and treated his red customers with honesty and fairness. The previous trader had been a man of a different stamp, and the Indians naturally failed at first to understand the newcomer.

Mr. De Vine had been at the station but a few months when the Indians began to be impudent and disagreeable, and to demand more than their due. Thus does a man often suffer from the mistakes of others.

The Indians were well aware that the old trader had cheated them whenever he could, and they supposed that Mr. De Vine would do the same if he dared. They deemed him a coward, and acted accordingly. "He squaw," they said.

As the weeks passed the Indians became more troublesome. One young brave in particular had two or three times audaciously helped himself to something that he wanted, and laughed when the trader objected.

"Oh yes, me pay, me pay!" he said, insolently.

One day he went to the counter and took a plug of tobacco. Mr. De Vine ordered him to pay for it and leave the store. Instead of obeying, the young redskin coolly went up and took a second plug of tobacco.

Mr. De Vine lost his temper at this, and seizing a knife which lay near, he brought it down forcibly upon the Indian's fingers. As a result the tips of two fingers were left on the counter. The redskin put the bleeding stumps in his mouth, and walked out of the store without a word. The trader had not meant to strike so hard a blow, and regretted his rash act. The brave was a chief's son, and Mr. De Vine expected that trouble would result. He felt vaguely uneasy during the rest of the day.

The next forenoon, as Mr. De Vine stood before the stove, a half-score of Indians filed into the store. One of them bolted the door. They were in war paint, fully armed, and evidently had come for mischief.

"We come kill you!" spoke out the foremost Indian.

Quick as thought the trader seized a burning brand, and leaped to the side of a barrel of gunpowder.

"Come one step nearer," he said, resolutely, "and I drop this brand into the powder, and we'll all blow up together! I'm not afraid," and he held the brand almost over the open powder barrel.

"No blow up powder!" the Indian leader exclaimed; "no blow up powder!" and then, turning to his followers, he said, "He no squaw; he brave man!"

"Put down your guns!" commanded Mr. De Vine.

The Indians hesitated a moment, and the trader advanced the burning brand an inch nearer the powder. At that every Indian laid down his gun. It was evident that the trader was in earnest.

"Now, leave the store," commanded Mr. De Vine, "and don't one of you dare to show his face here for a month! I won't stand any more nonsense!"

The door was unbolted, and the redskins solemnly filed out, leaving the trader master of the situation. That was the end of the trouble for that year. Mr. De Vine had proved his courage.

ANOTHER STORM.

Jesse Morton was a man who loved to tell a large story, and it cannot be denied that his flow of language and ideas was such as often to involve him in considerable confusion in case he happened to be cross-questioned in regard to the particulars of his thrilling tales. One evening he was entertaining two "drummers," at the village store, with an account of a terrible snow-storm which had nearly buried the village some ten years before.

Jesse was in the full tide of narration and enjoying himself to the top of his bent, half-sitting on the counter, and knocking his heels against its support occasionally, if he made a particularly impressive point.

"Well," he was saying, "I've pictered out to ye jest the kind of an afternoon 't had been, an' what I'd said to Sairy; but 'twarn't no manner o' use, argurin' with her; she was set to go, an' go she would! So I give in, an' got aout the old mare, an' hitched her inter the pung, an' we started.

"There warn't no snow at all on the ground then, to speak of, an' the old pung scraped along consideuble hubbly, an' Sairy she warn't over'n above pleasant abaout it. But I told her there'd be snow enough 'fore we got them twelve miles over to Enoch's an' back, an' sure enough —"

Here the evening mail arrived, and Jesse hurried to the door for a word with the stage-driver, and all was bustle and excitement for a few minutes. Jesse evidently forgot about his story, but he was stopped by one of the drummers, just as he was marching out of the store with his evening paper.

"Finish that story you were telling us—that tremendous snow-storm," demanded the young man.

"Oh, yes," said Jesse, with an air of slight reluctance; "let's see, where was I?"

"About three miles on the way to Enoch's;" prompted the seeker for information.

"Well, there aint time now for me to do that storm jestice," said Jesse, with his most judicial manner; "but I'll tell ye this one thing abaout it; before we'd made out to get clear'n over to Enoch's, the snow was up to the hubs of aour wheels!"

"But I thought you were in a pung," said his listener, with a sarcastic smile.

Jesse gave a sort of gasp, and then, gathering together his bundles, he said with a glance full of reproach:

"That jest comes o' my bein' so interrupted, an' havin' the words driv' out'n my head by that plaguy coach comin' up. It slipped my mind which storm I was tellin' you abaout, fer the circumstances was so amazin' similar.

"It *was* the pung, I rec'llect now, but there was full as much snow before we got to Enoch's, as I've stated; an' as you've got such a surprisin' head, young man, probably you can figger fer yerself where 'twould come to, on the old pung, an' I'll bid ye good evenin'!"

Then Jesse stepped out of the store with much dignity, leaving the drummer with the feeling that somehow or other *he* had been entirely in the wrong, and exceedingly rude, into the bargain.

PRUDENCE IN MOURNING.

The economy which is too strong to be disturbed by grief or bereavement is so akin to avarice that no one feels any self-reproach for holding it up to ridicule, although the circumstances may have to do with the saddest of events. There was once an eccentric old lady who lived in one of the seaport towns of New England, and who was renowned alike for her oddities and for what her neighbors called her "nearness." She was a widow, and had inherited not a little property from her husband, which she carefully handled, and which increased in her care. It was made a matter of reproach that she did not erect a tombstone to her husband, but she always said that she could not afford such an expense.

In course of time, however, the widow made up her mind to have a tablet, and accordingly went to Boston to select it. She visited one marble yard after another, but for a long time could find nothing cheap enough to suit her. At last she came upon a large and handsome slab which was set aside to be cut down.

"You see it was spoiled," the stone-cutter explained. "We began it for a man named Mark, but his wife changed her mind by the time we had got so much of the name on, and there is the whole slab spoiled."

"I'll take it off your hands," the widow said, promptly, "if you'll let me have it reasonably."

"Oh, I'll let you have it very cheap, to save the bother of having it cut over. But what can you do with it?"

"I'll use it," she answered, and at once proceeded to go into the discussion of the price.

When she had at last beaten the stone-cutter down to an absurdly low figure, the widow bought the slab.

"There," she said, "now what I want you to do is to put 'the perfect man' after that word in the same sort of letters, and then the name and the date can go just there."

She indicated to the astonished stone-cutter with her long finger the disposition of the inscription, and thus it came about that in a certain well-known cemetery of her native city her husband sleeps under a marble whereupon the world is admonished to "Mark the perfect man!"

TWO AGAINST ONE.

Lapsley was not a bad young fellow, as boys go, but he was more or less frolicsome, and one day the school-mistress found it necessary to punish him. Lapsley took offence at this, and jerking himself free from her grasp, started homeward. It was summer-time, and he wore only a vest over his shirt.

When Lapsley pulled himself away from the teacher he left in her hands nearly the whole back of his vest, the material being rather old and frail. He reached home in high dudgeon, displaying his ruined vest, and declaring that he would never go back to school so long as that teacher remained.

His mother listened quietly, but the next morning the boy was bidden to go to school as usual. He objected strenuously, but yielded on condition that his mother should write a note to the teacher in regard to the torn garment. This she did, and Lapsley and his sister set out for the schoolhouse.

The teacher, meantime, had been feeling not a little disturbed over the affair, and was just debating with herself whether she had not better write a letter of apology to the mother, when the boy and girl appeared, and Lapsley handed the teacher an envelope. No doubt it contained a complaint. Perhaps the teacher would lose two pupils. When she opened the envelope, however, this was what she read:

"MY DEAR MISS B——: I spent an hour last night putting a new back into Lapsley's vest. I think you will find it strong enough, but if necessary, I will put in another to-night.

"Truly yours, MRS. T——."

The teacher said nothing, but handed the note to Lapsley, who no sooner read it than he saw that the case had gone against him.

RELIEVED.

A young woman, refined-looking and beautiful, but evidently in much distress, called at the office of the postmaster of one of our large cities not long ago, as an exchange tells the story. For three weeks she had been expecting a letter from home with twenty dollars in it.

On account of an imperfect direction, as it turned out, the letter had not been delivered, and the poor girl had been reduced to such straits, alone in the great city, that she was in almost a frantic condition.

The postmaster was absent, but his private secretary listened to her story, and at once sent a messenger to the delivery division to ascertain whether such a letter had been received, and if so, whether it had been forwarded to the Dead-Letter Office.

In a few minutes the messenger returned bringing the letter, which the secretary handed to the girl, with the remark that if she would open it she would probably find the money.

With nervous haste she nipped little pieces from the end of the envelope, her eyes full of almost painful expectancy, and as she caught sight of the green bills, she clasped both hands tightly over the envelope, and with tears running down her cheeks, exclaimed, "God bless the postmaster!"

It was such a scene as does not occur every day in a business-office, and as she went out there was not a dry eye in the room.

DAISY'S CALENDAR.—VI.

J-u-n-e—that's June, you know;
The fairest of months to come and go.
It's easy to spell if once you try—
Just look at the garden
and look at the sky,
And Daisy, my pet, you
needn't forget,
There are so many
things to remember
it by;
The currants that shine
by the garden walk;
The dear little birds that
almost talk;
The blithe little bees that
rock as they please
In the roses nodding on
every stalk;
The breezes frolicking
high and low;
And the meadows wide
where the strawber-
ries hide
On every side—that's
June, you know.

For the Companion.

TWO PICNIC-PARTIES.

"How many kinds of cake, mamma?"

"Two, dear."

"And cocoanut-pie, mamma?"

"No, dear; lemon-pie."

"Oh, now!" cried May Blossom; and there began to be signs of a storm. "I wanted three kinds of cake and cocoanut-pie. It won't be a nice picnic-party at all. Oh dear, me!"

Pink Rose slipped in just at that minute, and she looked a little frightened at May's stormy face, just as she always did. But when she heard what the trouble was, she laughed.

"Why, my mamma's making me a cocoanut one," said she, "and I wanted lemon; so it'll be just lovely."

"But I want three kinds of cake," said May, pouting still.

"I've only got sponge and marble, and I wanted one black and citrony."

"Children!" called grandma, from the veranda; and out to her they scampered, these two merry little girls.

"I s'pose maybe it's a story," said May on the way.

It was a story. Grandma's hands were folded over her knitting-work, and she welcomed May and Pink with a smile which said a great deal; and they sat down on the step at her feet; and grandma began:

"Once there were four little girls who made up their minds to have a picnic-party in the woods."

"That's we," said Pink; "I and May and Georgie Andrews and Helen Wells."

"No," said grandma, with one hand on the small golden head; "it was Prissy Follett and Hepsibah Coolbroth and Thankful Doolittle and I, and we expected to have a very nice time indeed.

"The woods were not a great ways from our house, and they were deep and dark and cool.

"I remember we didn't dare go out of sight of father's clearing for fear we might get lost; but we found a delightful spot just in the edge of the forest, where we took off our long aprons and spread them down for a tablecloth, and we gathered some of the great moose-wood leaves for plates."

"What did you have to eat?" asked May.

"We had," said grandma, slowly, "we had, if I remember rightly, four twisted doughnuts, a saucer pumpkin-pie, four ginger-snaps, and four biscuits spread thick with butter. And for dessert we had the new buds of the spruce-trees and birch twigs, which tasted like checkerberry candy the least bit —"

"O gramma!"

"And the tender shoots of the wild raspberry bushes," said grandma, "with the prickles all scraped off —"

"O-oh!"

"And a tin dish full of sorrel leaves sweetened with molasses, which was the nicest of anything. And we had water from a clear spring which boiled out from under a rock."

"Hot water?" asked Pink, greatly surprised.

"Oh no, dearie."

"You said—it boiled," said Pink, "and hot water boils, and my Aunt Louise has went to the Hot Springs, and I thought —"

"Little goosey!" laughed May.

"This wasn't a hot spring, dearie," said grandma. "I meant that the water bubbled out of the ground; the water was clear and cold.

"And I hope," grandma went on, fondly, "that my two little girls will have as pleasant a time to-morrow at their picnic-party as their grandmothers did at this one so many, many years ago."

"Yes'm, I do," answered May; "but I don't see how you could, eating trees and things. Anyhow, when I want to fuss 'bout cocoanut-pie next time, I'll think of your picnic-party, and twisted doughnuts and all, and I don't b'lieve I'll fret and complain a bit."

"Nor I won't, either," said Pink, earnestly.

"Bless you, dears!" said grandma, and she picked up her knitting-work again with a far-away smile.

AUNT Dinah is Kitty's old nurse, and on Christmas Kitty gave her a nice new dusting-cloth. "Do you use the duster I gave you?" Kitty asked, some time later. Dinah looked at her much surprised. "What, honey," she asked, "and get it all dirty?"

HUNTING ANTELOPE.

In early days, before the game of the prairies became educated to the wiles of the white man, it was easy to flag an antelope and lure him to his ruin. A white or red rag tied to a stick and allowed to flutter in the breeze would bring a herd of antelope. Even the white canvas of a prairie schooner would then so excite the curiosity of a herd that they would approach near enough for the teamster to shoot two or three.

Since those days, however, the antelope, owing to the relentless war waged against him, has become so wary that he not only restrains his own curiosity, but prevents the hunter from approaching within six hundred yards. A guide, scout, hunter, trapper and Indian-fighter, known as Liver-eating Johnson, while hunting with the writer of an article contributed to "The Big Game of North America," said to him:

"What a live antelope don't see between dawn and dark isn't visible from his standpoint; and while you're a-gawkin' at him through that 'ere glass, to make out whether he's a rock or a goat, he's a-countin' your cartridges and fixin's, and makin' up his mind which way he'll scoot when you disappear in the draw for to sneak on 'im."

The writer of the article once got into a hot corner while hunting antelope. He was out with the Seventh Cavalry,—Custer's regiment,—following a trail which took a short cut across one of the big bends of the Missouri, the neck of which was not more than a mile wide.

The scouts and Indians were skirting the river two miles to the right. Suddenly several shots were heard in that direction, and a herd of seven or eight hundred antelope was seen sweeping over the prairie. The cavalry with the wagon-train spanned the narrow neck from side to side, so that the antelope found themselves in a *cul-de-sac*, from which there was no escape.

The writer, being midway between the column and the scouts, had full view of the fleeing herd as they charged two or three hundred yards past him. Seeing several stragglers, he dismounted, picketed his horse, and killed two or three.

He was beginning to enjoy this battue shooting, when a volley of bullets came whizzing by. Instantly he dropped on the ground. He was between two fires—the scouts firing as they advanced from the river, and the soldiers pelting away as they closed in from the neck. The bullets, before reaching the spot where he was hugging the earth, struck the ground, and then came tumbling and ricocheting over his head, buzzing at times so close as to make his position highly uncomfortable.

During the lulls in the firing, he signalled several times to the soldiers not to kill him. But he had "nerve" and kept on shooting, firing forty shots and killing eight antelope. On riding over the ground forty or fifty dead antelope were found, enough to keep the regiment in meat for several days.

MISJUDGED.

"Dear me, I wonder how it is," said an impulsive woman, who was constantly misjudging people, "that everybody is so much better than I think them!"

The sweet, motherly face of Mrs. B——, who always wore decorous black, appeared on the promenade lately in a Rubens hat.

"Twenty years too young for her," ejaculated one friend behind her back.

"Did you see Mrs. B—— at church to-day?" asked another lady of her husband.

"Yes, she never misses morning service," he replied.

"And did you notice her hat?"

"Why, no. I suppose it was the same one she always wears."

"It was a round hat," announced the lady, in much the same tone she might have used if the headgear in question had been a washtub.

"That woman will wear a crown some day," answered her husband. "I do not know her equal in good works."

"I am talking about earthly millinery now," answered his wife, as she picked up the discussion again.

Meanwhile Mrs. B—— had returned home and taken off the offending hat, which she handed to her daughter.

"Thank you, Ruby," she said. "I suppose my bonnet has come back."

"Yes, dear," answered her daughter, "and Mrs. —— was so grateful because you lent it to her. She said she could not afford to buy mourning for her boy."

"It was a small favor to do for one in trouble," answered the mother, gently.

And the wagging tongues never reached her.—*Detroit Free Press.*

NO OBJECTION.

Mr. Luke Harron, an easy-going old farmer, was especially proud of two things, his sheep and his poultry, and all visitors to the farm were taken out to see them.

Thus it chanced that Constable Short, who had come over from the village to serve on Farmer Harron a summons to act as juryman, was on his hands and knees peering into the depths of a coop, examining a new variety of chicks. Suddenly, and without the slightest warning, something swift and terrible smote him in the unprotected rear with such force that he was driven head-first into the coop, to the consternation of its feathered inmates.

With some assistance from Farmer Harron—who, it must be admitted, chuckled audibly at the sight—the constable was, at length, cleared from the wreck, his hat was pulled from over his eyes, and then he saw his assailant, a sturdy young ram, standing with lowered head, as if meditating another attack.

Full of wrath the officer cried, "Look here, Harron! Can't a man look at your hens without being knocked over by a confounded ram?"

"Wal," replied Farmer Harron, philosophically, "I dunno; ye might try agin 'n' see how 't would turn out. I'm sure I haint any objection."

EXTRAVAGANCE.

A man who has earned his own money knows how to value it; and the same may be said of a woman who puts up her own preserves.

THESE FIGURES TELL THE STORY of the EVER-GROWING, EVER-GOING, EVERLASTING Steel AERMOTOR Where one goes others follow, and *"WE TAKE THE COUNTRY"*

This unprecedented success is due: 1st. To the fact that before commencing the manufacture, exhaustive scientific investigation and experiments were made by a skilled mechanical engineer, in which over 5,000 dynamometric tests were made on 61 different forms of wheels, propelled by artificial and therefore uniform wind, by which were settled definitely many questions relating to the proper speed of wheel, the best form, angle, curvature and amount of sail surface, the resistance of air to rotation, obstructions in the wheel, such as heavy wooden arms, obstructions before the wheel, as in the vaneless mill, and numerous other more abstruse, though not less important questions. These investigations proved that the power of the best wind wheels could be doubled, and the AERMOTOR daily demonstrates it has been done. 2d. To the liberal policy of the Aermotor Company, that guarantees its goods satisfactory or pays freight both ways, and 3d. To the enormous output of its factory which has made possible a reduction of prices so that it furnishes the best article at less than the poorest is sold for. *If you want a firm Fixed Tower made of Strong, Stiff Steel, and a Wheel that will cost you less than wood, and last 10 times as long*—IF YOU WANT THE TOWER YOU DON'T HAVE TO CLIMB (The Tilting Tower) and THE WHEEL that RUNS when all others STAND STILL, or if you want a *wheel that will churn, grind, cut feed, pump water, turn grindstone & saw wood, i.e.* A GEARED AERMOTOR THAT WILL DO THE WORK OF FOUR HORSES AT THE COST OF ONE ($100) write for copiously illustrated printed matter, showing every conceivable phase of Windmill construction and work, to the AERMOTOR CO., Rockwell & Fillmore Sts., Chicago, Ill., U. S. A., or Branch, 12 Main St., San Francisco, Cal., U. S. A.

FOR $60 and freight, we erect on a 40 FT. STEEL TOWER a Steel Wheel that equals any 12 feet Wooden one. GREAT REDUCTION TO FIRST PURCHASER.

NAMES AND NICKNAMES.

The *Companion* printed some time ago an article explaining the origin of such queer-sounding Indian names as Sitting Bull, Kicking Bear and the like. But oddities of this sort are not confined to Indians, nor even to so-called uncivilized people. In Mr. Lower's treatise on "English Surnames" we read many statements like the following:

Tyrwhitt, in his edition of Chaucer, says that in Chaucer's time the use of surnames was probably not fully established among the lower class of people; whereupon a later editor remarks that even now, in the nineteenth century, such names are not fully established in some parts of England.

"Very few of the miners of Staffordshire bear the names of their fathers. The editor knows a pig-dealer whose father's name was Johnson, but the people call him Pigman, and Pigman he calls himself. The name may now be seen over the door of a public house which this man keeps in Staffordshire."

Among the colliers it is common for the same man to have, without any sinister intention, a double set of names, as John Smith and Thomas Jones; but it must not be imagined that they are meant for every-day use. They are a kind of *best* names, which, like Sunday clothes, are brought out only on special occasions, as at christenings and marriages.

For ordinary purposes they use no appellative except a nickname—Nosey, Soaker, or something equally elegant; and this nickname is employed, not by their neighbors alone, but by their wives and children, and even by themselves. A correspondent of *Knight's Quarterly Magazine* says:

"I knew an apothecary in the collieries, who, as a matter of decorum, always entered the real names of his patients in his books; that is, when he could ascertain them. But they stood there only for ornament; for use he found it necessary to append the sobriquet, which he did with true medical formality, as for instance, 'Thomas Williams, *vulgo dict.* Old Puff.'"

A story is told of an attorney's clerk who was employed to serve a process on one of these oddly named persons, whose real name was entered in the instrument with legal accuracy. After much vain inquiry the clerk was on the point of abandoning his search when a young woman kindly volunteered to assist him.

"Oy say, Bullyed," she cried to the first person they met, "does thee know a mon neamed Adam Green?"

The bull-head was shaken in token of ignorance. Lay-abed, Stumpy, Cowskin, Spindleshanks, Cock-eye and Pigtail were severally invoked, but without success, and the querist fell into a brown study. Suddenly her eyes brightened, and slapping one of her companions on the shoulder, she exclaimed triumphantly:

"Dash my wig! whoy, he means moy feyther!" and then turning to the lawyer's clerk, she added, "You should'n ax'd for Ode Blackbird!"

Mr. Lower says that there were lately living in a small town in Kent fifteen persons whose hereditary name was Hall, but who, for the sake of distinction, bore the elegant designations of Dogg-Hall, Feathertoe, Bumper, Bubbles, Pierce-Eye, Faggots, Cula, Jiggery, Pumble-Foot, Cold-Flip, Silver-Eye, Lumpy, Sutty, Thick-Lips and Old Hare.

GOING EARLY.

Punctuality is perhaps a characteristic American trait. At all events American tourists abroad are given to bewailing the dilatory ways of other peoples. How early this characteristic is sometimes developed—in connection, too, with the American habit of travelling—is pleasantly illustrated in a little story printed in *Golden Days*.

A small, rosy-cheeked girl picked up her doll and her doll's trunk, and trudged a mile or more over frosty roads until she reached a railway station. There she boarded the first train that came along, and contentedly settled herself and her doll into a vacant seat.

By and by the conductor appeared. He looked down at the little woman, who was pointing out flying trees and other objects of interest to her travelling companion, the doll.

"Where are you going, little one?" asked the big man with buttons.

"Why, I'm going to the World's Fair, of course." The conductor coughed.

"Aren't you rather early?" he asked. "I don't believe the doors are open yet."

"Dear me," said the child in alarm, "what shall I do?"

"Perhaps you had better go home and ask your mother," suggested the conductor.

And she did. She was loaded with pretty things by interested fellow-passengers, and returned to her mother in safety. We may reasonably expect that she will be among the first visitors when the World's Fair opens its doors to the world.

TOO IMPORTANT.

A reasonable degree of self-confidence is almost essential to one's comfort and efficiency, but if a man has a very exalted opinion of his own abilities, he will do well to keep it to himself.

An exchange relates that a certain dry goods clerk was in the habit of saying to his associates that the concern would find it pretty hard to get along without him. These remarks came to the ears of the senior partner, and he called the clerk into the inner office.

"Mr. Jenkins," he began, "you have been very efficient and we highly appreciate your services, but we have heard it said that if you were to die the business could not possibly survive the loss. This has worried us a good deal, for you, like all the rest of us, are liable to drop off suddenly.

"We have concluded, therefore, for our peace of mind, to experiment while we are both in good health, and see if the concern can bear up under your loss. You will accordingly consider yourself dead for one year, and we will try to get on without you for that length of time."

HORSES IN DANGER.

A wise cavalry officer keeps a sharp eye upon the horses of his command, as the success of the next engagement may depend upon their good condition.

A sergeant was out of patience with an awkward recruit.

"Never approach the horses from behind without speaking," he exclaimed. "If you do they'll kick you in that thick head of yours, and the end of it will be that we shall have nothing but lame horses in the squadron."

Itching Piles.

SIGSBEE'S SEAMLESS SHIELDS.

Patented May 20, 1890.
Sales this year over 50 per cent. greater than 1890.
One of the most troublesome parts of a lady's apparel is the Dress Shield. They are hot, causing profuse perspiration and annoying odors. Dresses set uncomfortably on account of this cumbersome attachment under the arm, and every lady has experienced much trouble by her shields constantly ripping out. The **Sigsbee Shields** overcome all of these difficulties. They are worn next to, or underneath, the undervest with equal comfort, thus keeping the corset and corset cover sweet and clean. They conform perfectly to the shape of the arm, do not wrinkle. Instantly adjusted. Impervious. The only perfect Dress Shield. All sizes. In ordering, give measure of arm-scye. Price, per pair, 38c. Sold by Dry Goods Dealers everywhere. Sent by mail, postage prepaid, on receipt of price. **SIGSBEE MANUFG. CO., Ayer, Mass.**

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-office address is given.

Always give the name of the Post-office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

THE YOUTH'S COMPANION,
41 Temple Place, Boston, Mass.

For the Companion.

GALL-STONES.

Gall-stones are concretions formed in the gall-bladder from some of the constituents of the bile. They vary in size from a millet-seed to a hen's egg, and occasionally are much larger.

Very small gall-stones may pass out with the bile, and give no sign. Very large ones never pass into the duct, but sometimes cause inflammation and ulceration, and escape through an abscess.

When one of the size, say, of a filbert, gets into the duct, it obstructs the flow of the bile, which accumulates behind it, swelling the bladder and exerting a constant pressure on the stone. As the stone is slowly forced along, it produces a dilation and inflammation of the duct, until a sudden cessation of the pain announces that the stone has dropped into the intestine; but other stones may follow, repeating the agonizing process.

The cause of the formation of gall-stones is not known. Age and sex have something to do with it. Most cases occur after the age of thirty-five, and women are much more liable to the ailment than men. Probably high living and sedentary habits are in some way determining factors.

Hepatic colic, as the disease is called, is rarely fatal. As no medicine can directly reach the gall-bladder, and as the movement of the stone, though slow, is toward the outlet, the most that the profession attempts is to mitigate the pain with morphine, and by the constant application of water as hot as can be borne.

A correspondent in New York writes us that his mother was cured of a severe attack, thirty years ago, by the use of olive oil; that she is now well at the age of eighty-four, and that he has since recommended the oil in more than forty cases, and has never known it to fail. He says:

"Let the patient take on an empty stomach a half-pint of pure olive oil, or as much as he can swallow and retain. Keep the patient as quiet as possible, lying on the back. If nausea occurs, place cloths wet in warm spirits of camphor, or other spirits, over the pit of the stomach, and give a tablespoonful of clear, strong coffee.

"The effect is usually noticed in ten hours, when the gall-stones pass the patient in the natural way, without pain or annoyance. The oil reduces them from their crystallized form to a soft substance, in consistency about the same as the white of an egg."

We know of no objection to trying the oil; but medical authorities regard supposed gall-stones of this kind as only concrete forms of fatty matter such as are sometimes passed in cases of fatty diarrhœa.

ASBESTOS.

Asbestos is a mineral that crystallizes in long fibres. The fibres can be separated as easily as those of our softer woods, and are woven into a variety of articles, which are worn for protection against fire.

Among these articles are mittens to guard the hands of firemen, assayers, refiners, and others who are exposed to burning. As the material is not affected by heat, the workman thus protected can grasp hot irons, crucibles, and the like without discomfort.

Masks for the face are also made of asbestos. It is said that the heat from the hottest fire cannot penetrate through them to the skin. Air for breathing is supplied through a tube from beneath the mask, so that the flame or the burned atmosphere is not inhaled. In this way the discomfort of working directly in front of retorts and furnaces is greatly relieved.

Complete suits of fire-proof asbestos cloth are now made for firemen's wear. As the material is indestructible, and a bad conductor of heat as well, the wearer is protected in the midst of flames. Of course air for breathing must be supplied through tubes in some such way as it is supplied to the diver when he is under water.

For domestic uses sad-iron holders are now made of asbestos. With them the grasp of the iron, however hot it may be, never causes pain or burning. There are also made large holders, intended for use by smelters, molders and workers in metal generally.

It remains to be added that asbestos is widely distributed among the older rocks of the United States and Canada. As goods made of it are subject to loss only by wear, the supply of fibre is likely to be equal to all demand for articles of dress.

BRAVE BOY.

Some years ago, says the author of "Big Game of North America," three children who lived near Olympia, Washington, were returning from school, when Walter, the eldest, a boy of twelve, noticed what he thought to be a large yellow dog trotting in the road behind them. They paid no attention to it, as large mongrel dogs of this color abound everywhere in the vicinity of Indian camps, but went playing leisurely along.

Suddenly the youngest, a chubby chap of six, who was behind his brothers, came running to the front, and a moment later the animal, seen now to be a cougar, sprang over the heads of the two astonished boys, seized the little fellow in his mouth, and with a spring vanished in the bushes.

The elder brother did not stop to deliberate. He had for a weapon only an empty bottle, in which he had carried milk for his dinner, and with this he rushed into the bushes. His little brother was lying prostrate, grasping a small tree with both hands, and holding on with the strength of despair, while the cougar, his fangs luckily imbedded only in the child's clothing, was trying to break this deathlike grip.

With a scream, Walter threw himself on the animal, beat it over the head with the bottle until the glass was shattered in fragments, and then, with the ragged edges of the bottle's neck, he endeavored to cut out the cougar's eyes.

At last the cougar, with a yell of rage, dropped his hold on the child, and ran up a tree near at hand, while the heroic boy, lifting his brother in his arms, carried him into the road, and fell fainting upon him.

Meanwhile the other brother had fled screaming up the road, and fortunately met two men who had been chopping near by. As soon as he had told the cause of his fright, they rushed on, to find the little hero senseless, still tightly grasping the neck of the broken bottle.

The cougar's victim was too much horrified to speak, but pointed to the savage beast, lying on a limb in full view. One of the men had a pistol, and with a few shots the animal was killed.

NOT MUCH TO ASK.

A stout, choleric-looking man hurried into a street-car, on a day when the rain was pouring in torrents, and glared angrily about, evidently much displeased that there was no seat for him, although there were plenty of other people, clutching at the straps, or swaying about, with more or less cheerful countenances.

With a snort of displeasure the man planted himself in front of a meek and unoffending spinster who was squeezed tightly into one corner of the car, and placed his umbrella, from which was running a perfect stream of water, directly on one of her feet.

She looked up at him in mild dismay, but he stared straight over her head, with a most unpleasant expression.

After a moment or two, she said in a clear though perfectly courteous tone:

"Would you be kind enough, sir, to remove your umbrella to my *other* foot for a moment, so that I may empty my rubber?"

Every one at that end of the car smiled, except the man, who beat a retreat to the platform, without so much as saying, "I beg your pardon."

SCHOOL BLUNDERS.

A teacher in a public school gave out a list of words to be defined and put in sentences. Among them was the word "chasm." A little girl looked in the dictionary, and not being quite satisfied, inquired if "chasm" meant "gap."

The teacher absently replied yes, but was astonished when she presented her paper with this sentence: "When I am sleepy, I always chasm."

But this is hardly equal to another teacher's experience in a little district school some years ago. She gave out words for analysis. "Bank-note" was one of them, and the teacher's astonishment may be imagined when one young lady brought the following unique analysis:

"Bank-note is a compound, primitive word, composed of 'bank' and 'note.' 'Bank' is a simple word, meaning the side of a stream; 'note,' to set down. 'Bank-note,' to set down by the side of a stream."

NO BREAD.

Antoinette de Bourbon, the mother of the Guises, had in addition to her other fine qualities, great good sense. One example of the discipline to which she subjected the young Guises, indicates that had there been more mothers like her in her class there would have been less of ruthless extravagance on the part of the royalty and nobility of France.

The young nobles were out hunting, and rode through fields which had been sown with corn. The duchess heard of it. That evening, according to the tradition preserved at Joinville, there was no bread on the supper table.

The princes at once asked for bread, astonished at such negligence in this well-ordered household.

"My children," replied Antoinette, "it is necessary to economize flour, since you have destroyed the future harvest."

IMPATIENT.

A doctor who was noted for his pretences rather than for his cures was called to prescribe one day for a man who was ill, and gave him some medicine. The next day but one he called to see the patient.

"How is he to-day?" he asked a servant at the door.

"He's dead, sir—that's how he is," said the servant.

"He is, eh?" said the doctor, indignantly. "Well, that's always the way. People expect our medicine to work wonders, and then they get in a hurry and don't give it time to prove what it can do!"

IT is not true, as suggested by the Washington *Post*, that firemen use rubber hose in order to keep their feet dry.

Good Housekeepers are fast finding out that a pure Extract made by Joseph Burnett & Co., costing a cent or two more a bottle, goes farther and makes the most delicious of dishes. Avoid goods only recommended by their cheapness. [*Adv.*

THE BRAID THAT IS KNOWN

THE WORLD AROUND.

A NEW DRESS FOR NOTHING.

All of the lady readers of THE YOUTH'S COMPANION have not yet availed themselves of our great offer to give a New Dress to each subscriber to the BAZAR JOURNAL AND MOTHER'S ASSISTANT, although a great many have done so and are now happy.

As we promised in our last advertisement (perhaps you did not notice it), we will give you

12 YARDS OF EXCELLENT SEASONABLE DRESS MATERIAL

and any one of our celebrated *McCall's Bazar Glove-Fitting Patterns* that you may choose, to make it up with, if you will send us $2.00 for one year's subscription to the BAZAR JOURNAL AND MOTHER'S ASSISTANT. The DRESS GOODS supplied is the new fabric known by the name of

KYBER CLOTH.

We have secured an immense quantity of this popular material, in beautiful effects, for the sole purpose of giving it away as premiums to our subscribers. It is no shoddy stuff but good dress material, suitable for any lady in the land, and will not fail to give satisfaction to every one. All who have received these dresses are delighted.

HOW CAN WE AFFORD THIS?

We have a double purpose:—In the first place, we want, and must have, at least 500,000 subscribers to our Journal. We mean to make the BAZAR JOURNAL AND MOTHER'S ASSISTANT the greatest magazine on earth, in every respect, and its circulation must be the greatest. We must tempt ladies to subscribe AT ONCE, and we have determined to make the temptation irresistible. What more tempting to a lady than

A NEW DRESS FOR NOTHING?

Subscribe for yourself and get the dress. You will like it so well you will get some friend to subscribe in order to secure another. You will require no inducement to subscribe next year. In the second place, we want you to use our patterns. By giving you the pattern you like best

FOR NOTHING,

we get you to test it. That will be sufficient. After one trial you will always use the

McCALL'S BAZAR GLOVE-FITTING PATTERNS.

Thus, to secure you as a permanent subscriber to our magazine and, at the same time, gain your regular patronage for our celebrated patterns, we feel we can give you

A NICE NEW DRESS FOR NOTHING.

SECURE IT AT ONCE by sending $2.00 for the *Bazar Journal and Mother's Assistant.*

The Dress, The Pattern, and The Journal are each sent to your address FREE of all charge to you. JAS. McCALL & CO. (Man'f'rs McCall's Bazar Patterns), 46 E. 14th St., New York.

THROUGH THICK AND THIN.

In Eight Chapters. — Chapter VIII.

The Test of Battle.

Jack was quite as anxious that Tony should get the lieutenant's commission as Tony himself was, and fresh from his West Point examination, he was able to give his friend much useful instruction. He found Tony solidly grounded in mathematics, and by devoting much time to the work, he brought him well up in other branches toward the level of a West Point graduate. Of course the story of Lieutenant Randolph and Sergeant Scaife soon came to be known at the post, and talked about. Tony and Edgar Mount saw each other a dozen times a day, but beyond a mere salute, nothing approaching recognition passed between them.

One night at the mess, when Edgar Mount was present, some officer asked Jack about Sergeant Scaife; for his gentlemanly appearance and manners, and the knowledge that he was working hard for the coming examination, drew the interest of the officers toward him.

Lieutenant Randolph, fixing his eyes on Mount, who sat just across the mess-table, told Tony's whole story — merely leaving out Edgar Mount's name. He told of the loss of the money at Marrowbone, of the unjust accusation against Tony, of his going away to sea, of his heroic conduct at the time of the shipwreck, and of the finding of the money afterward.

During the recital Edgar Mount's face grew pale. Every word that Jack uttered cut him to the quick. At last, as the story was finished and all the officers were expressing good-will toward Tony, he rose abruptly and left the table.

The day of the examination was an anxious one for Jack; and when it was over, and Tony appeared at his quarters, the young lieutenant was much more nervous about the result than the young sergeant.

"Never mind," said Tony. "I think I have distanced the rest of them. I had worked harder, and I had better help."

As he spoke, he put his hand on Jack's shoulder. Tony was of an undemonstrative nature, and that word and touch meant much.

At last, after a weary waiting of some weeks, the announcement was made that Sergeant Anthony Scaife had received one of the two second lieutenant's commissions granted to non-commissioned officers.

If Jack thought Tony so strong and self-contained that nothing could shake him, he was mistaken for once. When Tony came to Jack's quarters, with the lieutenant's commission in his hand, his face was as pale as ashes. He sat down in a chair before the fire, and seemed as much unnerved as if he had failed.

Jack sat on the other side of the little fireplace, as red and overflowing with delight as Tony was pale and silent.

"You don't know what it is," said Tony, at last. "It is the realization of a dream. I have gained what seemed beyond hope in the beginning —a fixed place, an honorable place. It wasn't my ambition to be rich; but I wanted to be educated, to be a gentleman, and to be acknowledged as one."

Jack was the happiest fellow that night in his regiment, not excepting Tony, and he never felt prouder in his life than the night when he took Tony for the first time to dinner at the officers' mess, where the other officers—all except Lieutenant Mount—received him most cordially.

Lieutenant Scaife was assigned to the regiment in which he had already served as a sergeant. He might have obtained leave to go home for a short time, but just at that time the Apaches began to be troublesome. Daily reports of the stealing of stock came in, followed presently by the news of the killing of several settlers. Under such circumstances no officer would have asked for leave.

Tony wrote to his mother that when everything was quiet he and Jack intended to apply for leave together, and to go back to Virginia. Mrs. Scaife, more comfortable now than ever before in her life, at her little cottage at Lone Point, waited and hoped. She was happy beyond expression.

At last the order came for an expedition against the hostile Apaches. Jack, as the assistant adjutant of the post, was the first to hear the news. One day, as Tony sat in his quarters reading, Jack suddenly burst in at the door.

"We're in luck, Tony!" he shouted. "We're to go to the front!"

Tony jumped up, flushing with pleasure; but he only said, quietly, "What luck!"

Jack danced a hornpipe, while Tony looked on and laughed. Only a portion of the garrison had been ordered upon the expedition, and the officers who were left behind were as much disappointed as Jack and Tony were elated.

The expedition consisted of six companies of cavalry and a detachment of light artillery, with a Gatling gun and two mountain howitzers, which might be taken upon mule-back in case it was necessary. Lieutenant Mount went with the artillery.

It was a bright July morning when the expedition started. Officers and men were in high spirits, and one would have thought the errand was one of merry-making, instead of a warlike campaign involving hardship, danger, and perhaps a dreadful death.

At the word of command, the squadrons wheeled into line, and forming by fours, trotted off gaily, with guidons fluttering. The post band played merrily "The Girl I Left Behind Me;" there were smiles and fluttering handkerchiefs from the women and children, and three rousing cheers from the officers and soldiers left behind.

Jack and Tony, riding side by side, congratulated themselves on their luck in having a chance to see service. Edgar Mount, riding at the head of his detachment, had little to say to any one.

For the first few days the marches were long and hard, but the bivouacs were cheerful enough. Tony knew better how to make himself comfortable than any of the other officers.

On the fourth day they began to ride hard upon the Indian trail. The Apaches followed their usual tactics, refusing a pitched battle until they reached a country where their superior knowledge of the ground should give them a decided advantage, but keeping up a continual and harassing guerilla warfare.

The troops pushed on, scarcely stopping for rest or food, and at last, early one evening, after six days of fierce and active pursuit, the scouts came upon what was evidently an Indian ambuscade. The scouts discovered it in season, but were driven in upon the main body. It was evident that the savages were ready to give battle.

The commander of the expedition prepared for an attack at dawn. No fires were lighted, in the hope of keeping the main body of Indians uncertain as to the actual position of the troops.

Early in the night the cracking of rifles showed the presence of Indian sharpshooters, and unfortunately for the brave but tired soldiers, a spring, which was their only resource for water, was at the bottom of a ravine which the sharpshooters commanded.

The firing became so persistent that the outpost which guarded the spring was forced to retire. This was a severe loss to the men, who, thirsty from long marching under an Arizona sun, found the hot night almost intolerable without water.

The darkness, and a fear of bringing on an engagement at night, where the Indians were perfectly familiar with the ground, while the troops were not, restrained the commander from ordering any attempt to dislodge the sharpshooters. The firing was kept up at frequent intervals, so that it was hazardous to make any attempt to reach the spring.

Tony and Jack could not sleep for excitement. Crouching under a scrubby live-oak, they tried to pierce the uncertain gloom of a moonless summer night.

Presently Tony got up and crept toward the ravine. Then he returned to Jack.

"Jack," said he, sheepishly, "I was just going to do you a shabby turn."

"Were you?" asked Jack, with a suppressed laugh. He and Tony were not used to doing each other shabby turns.

"Yes," said Tony. "Look here. There isn't so much danger, after all, in getting to the spring. There's a line of bushes nearly all the way, and the redskins are firing at random. I made up my mind to go and get a bucket of water for my men; and then it occurred to me that you would not forgive me if I didn't let you know. We certainly can get there once and back without being seen."

For answer Jack jumped up, and said, in a low, eager voice, "Where's a bucket?"

Tony produced two pails, and then he and Jack crept carefully down the ravine amid the steady popping of rifles. They reached the spring, filled their buckets, and got back within their lines.

When each marched among his own troop with his pail of water, they could hardly restrain their men from cheering them. Every trooper stood up and silently waved his cap in the gloom in honor of the brave and self-sacrificing young officers.

Three different excursions Jack and Tony made to the spring during the night, and each time escaped without a scratch. About an hour before daylight they lay down in their blankets to rest, promising each other not to go to sleep; but in five minutes they were sleeping soundly.

At the first hint of light in the blue-black sky the horses were saddled and mounted, in readiness to move to the attack, and when the wild landscape seemed suddenly to smile into rosy light, the column moved forward.

The alarm had evidently been given at the Indian encampment, for Indian horsemen were rushing wildly to and fro, and the savage riflemen hung upon the flanks of the cavalry, as it dashed forward to secure a butte or elevation which commanded the Indian stronghold. The artillery detachment followed with the guns.

Jack Randolph commanded an advanced guard of fifteen picked troopers, and the whole body, at a fast trot, made for the brow of the hill.

The first sight of the encampment showed that the alarm had been given. The Indians, with their fierce yelling and hallooing, gathered in their savage but effective formation, and while the squaws disappeared rapidly in the ravines, the warriors tried their invariable flank movement. Then, seeing the small cavalry detachment in advance, they evidently formed the design to attack and overwhelm it before the main body came up.

The first onset was terrific; and then came the hand-to-hand fighting that distinguishes Indian warfare. The other troops, at the rear, heard the shouts, the yells, the neighing and trampling of horses, and all of the frightful uproar of battle.

Jack, looking around in the midst of the fight, saw Tony at his elbow. Their men stuck close to them, and in vain the warriors, whose boast it is to kill as many officers as possible, tried to surround the two young lieutenants.

Here Jack's superb horsemanship stood him in good stead. Holding on by his knees to his excited horse, he handled a carbine so that half a dozen Indian braves rolled from their ponies before him.

Tony, with a bloody gash across his cheek, said to Jack, "This is warm work!" The next minute, he had raised his sabre to bring it down upon the arm of an Indian who was almost upon him, with a Remington aimed straight at him.

The main body had now come up. The attacking Indians withdrew, and the fight assumed more the aspect of a regular battle. The cavalry gave ground slowly, so as to draw the Indians within range of the artillery.

The Indians fought fiercely, but they were disorganized by a terrible volley from behind them. Two of the light guns had gained a position on their right flank, and poured in a destructive fire. The Indians wavered.

At that instant, Tony, looking around him, saw Edgar Mount, alone some distance away, surrounded by half a dozen yelling Indians. In the midst of the fierce uproar and confusion, the thought came to him that it would be the sweetest revenge of his life if he could save Edgar Mount;

Saving Edgar Mount.

Edward D Duffield Jan92

Digitized by Google

and at the same moment Jack Randolph saw his perilous position.

Edgar's horse was wounded and staggering, and though he was fighting bravely with pistol and sabre, he was suffering from a severe scalp wound.

Tony and Jack dashed up to him. Jack, his bridle between his teeth, knocked two Indians over with the butt of his carbine, and then clubbed a third over the head until the Indian rolled off his horse. Meanwhile, Tony had managed to keep the Indians on his side at bay.

But Mount could do nothing. Faint from loss of blood, his sabre dropped from his hand. He reeled in his saddle, and would have fallen but for Tony's strong arm.

Just then, a yelling crowd of Indians dashed toward them. It was plain that Jack and Tony must run for it. They were in imminent danger of being surrounded and cut off. As their horses were comparatively fresh they could have escaped easily if they had left Edgar Mount to his fate.

"Leave me! leave me!" cried Edgar, putting his hand aimlessly to his wounded head. "Save yourselves. I can't even sit my horse."

The last words ended in a sharp cry, for a bullet had struck Mount's arm and shattered it.

But Tony, putting his strong arm around Edgar, lifted him bodily upon his own horse; and using his spurs, dashed out of the range of fire as fast as he could gallop. Jack Randolph followed him, loading and firing as he retreated; and a squad of cavalrymen galloped up to support them.

In half an hour more all was over. The Indians were in full flight, having lost heavily in men and ponies. All the troops, except those necessary to take care of the wounded and the stores, were in hot pursuit; and Edgar Mount lay desperately wounded and insensible under the surgeon's care.

Jack Randolph had received some bad cuts and bruises, and Tony had not escaped without an ugly blow on the head, and a cut across the face from the butt-end of an Indian's rifle. They were, therefore, not among the pursuers, who went on to finish up the hostiles.

Just as Jack was limping along looking for one of the surgeons, and Tony, with his head bound up, was helping him, an orderly came up, and saluting said, "Lieutenant Mount wishes to see you, sir, and Lieutenant Scaife; and the surgeons say you must come as quickly as you can."

Edgar Mount, his face a deathly color, lay on a blanket under a cactus, as Jack and Tony came up. Two surgeons were making the ghastly preparations for an operation.

"I may never come out of this alive," gasped Edgar, turning to Tony, "but I want to say that I am sincerely sorry for the injustice I did you; and if I live, my whole life will show it. And as for your gallantry in saving me from those Indians —"

He could say no more. The surgeons hustled Jack and Tony unceremoniously out of the way.

"It is agitating him," they said. "We must keep him as quiet as possible." Then they went to their work.

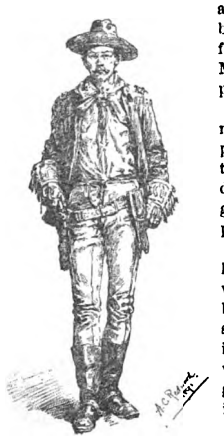
Within three weeks from the time they left the post, the troops returned dirty but victorious, with the loss of only a few men and no officers; and the hostiles were completely subdued, for the time at least. The campaign had been short, but brilliant.

The report of the general commanding, after complimenting highly the conduct of both officers and men, read as follows:

"I wish to call particular attention to the heroic conduct of Second Lieutenants Randolph and Scaife, who, at the imminent risk of their lives, rode in among the enemy, and rescued Second Lieutenant Mount when he was wounded, and would no doubt have been killed but for the gallantry of these two officers."

Edgar Mount lived to thank Tony for his life; and meanwhile, Tony and Jack had received their long-desired leave. They went back together to Virginia, and spent there the happiest two months of their lives.

The meeting at Marrowbone, where Mrs. Scaife went to greet them,—for Uncle Josh had met both the young officers at the river landing in the famous old Marrowbone coach, that grew more rickety year by year,—was the most delightful that could be imagined.



The old Colonel was wild with delight. The fact that both of "the boys," as he called them, had been publicly commended for gallantry in action, filled him with soldierly pride; and as for the two mothers, what they felt can only be imagined.

Jack wished to have Tony stay with him at Marrowbone, but Tony loyally went back with his mother to the little Lone Point cottage, now a comfortable, though plain home.

But the Colonel could not be restrained from giving a large party at Marrowbone, to all the people of the neighborhood, in honor of the two young officers. Colonel Randolph, in his most magniloquent manner and loudest voice, introduced all the guests to Tony as "my gallant and noble young friend, who was mentioned with my grandson in general orders, for conspicuous bravery in action, whose acquaintance I am proud to claim, and who is an ornament to the profession of arms."

All this was terrible to Tony, who was quite as modest as ever; and he blushed deeply while the Colonel was eulogizing him. Jack roguishly encouraged the Colonel to persevere, hinting that it pleased Tony very much.

"Say something more about Tony, and louder, sir," Jack whispered to the Colonel.

At last Tony, in an agony of embarrassment, was forced to call on Mrs. Randolph for protection.

But, blush as he might, there was no pretense on his part that the occasion did not give him great and genuine pleasure.

By his own efforts, he had achieved what Jack had been born to, and the satisfaction of having achieved it all was perhaps as great a pleasure as its possession.

That night, after the last guest had gone, and Jack and Tony sat on the porch a little while in the soft summer air, Tony said:

"I could hardly have thought all this possible, Jack, when I was working so hard as a poor little fisherman down there."

"I don't know why you might not, since you had it in you, and the country gives every man an opportunity. And now, Tony, let's turn in for a wink of sleep before daybreak!"

MOLLY ELLIOT SEAWELL.

The End.

THE UNCHANGED SUMMERS.

The meadow-brooks yet run and babble,
The green boughs whisper to the breeze,
The moon of love yet shines as tender
As through old Adam's garden trees.

—Irene Putnam.

For the Companion.

JARAMILLO'S GIRL.

The gossips of the little California town of Savoy talked much about Mrs. Duperu. She was a very wealthy, lame old lady who lived in lonely grandeur in a country residence called Robin Wood, about a mile from the town, with no one but servants about her. It was said that she had a son for whom she had planned a great career, but that she had disowned him.

What had been his fault was not certainly known, but it was reported that he had led a life of foolish pleasure, and at last married a rope-dancer.

One day two events stirred the drowsy atmosphere of Savoy.

The first was deeply tragic. A new turnpike was building, and the Chinese graders were at work on the mountain-side about a third of a mile from the town. During a heavy blast in the morning one of the Chinese, named Ah Gow, had been killed.

The Chinaman's body was badly mutilated, and, dreadful to relate, his head could not be found.

Poor Ah Gow's body, lacking the head, received temporary burial on the mountain. I say temporary, because, after a time, the bones of all Chinese who die in foreign lands are, if possible, exhumed and sent back to China, to receive final interment in their native soil.

The second event was simply light comedy. A circus came to town, and pitched its tent on the plaza. A graceful little girl, who danced on the slack-wire, was greatly admired; but the applause and laughter were loudest whenever Jaramillo, the clown, appeared.

When the circus departed from Savoy, it left behind it Jaramillo, the clown. Many of those who had heard his hollow and painful cough in the circus ring, followed by a side-shaking jest, had laughed and thought the mockery excellent; but alas! the cough was a reality, and Jaramillo was dying!

He remained at the Woodman's Hotel, kept by the rude and energetic Mrs. Driscoll. His little daughter, Mercedes, whom he called Mercy, was with him. She was the graceful child who had danced on the slack-wire.

Jaramillo lingered several weeks, always hopeful of recovery. Nevertheless, he wrote a letter one day, sealed and stamped it. Then, giving it to Mercy, he said:

"Keep that, Mercy, and if anything happens to me, put it in the post-office."

Mercy wondered what he meant, but she put the letter away carefully in a deep pocket of her dress.

Jaramillo's money gave out. The thrifty but kind-hearted Mrs. Driscoll complained loudly to her family and friends, but never to the clown or to Mercy. Jaramillo cheerfully asserted that he would soon be on his feet again, and would pay up everything.

One sad day he asked Mercy to bring his make-up box and the looking-glass. She had never seen his eyes so bright, and thought with joy that he was much better. She held the glass while he painted his face. At last he said:

"That's good. I'm ready to go on now."

He fell back on his pillow, dead.

Mercy was overwhelmed by her great loss.

When she had seen her father laid to rest in the little cemetery on the ridge, she knew no kindred nor friend in the wide world.

She went back to the Woodman's Hotel, and was expected to help with the housework, but as she knew nothing of that kind of work, she often aroused the wrath of the severely practical Mrs. Driscoll.

The landlady had a daughter named Beatrice, but the name had degenerated in common usage to "Beat." She was a red-cheeked, loud-voiced romp, and when any mischief was done, which frequently happened, she did not scruple to lay the blame upon Mercy. So Mrs. Driscoll's sceptre of power, in the shape of a broad black strap, often descended unjustly on Mercy's shoulders.

But soon the landlady learned to distinguish sometimes between the occasions when Mercy was innocent and when she was really to blame. When the fault was hers she would tearfully acknowledge it, and await with folded hands and downcast eyes any punishment that Mrs. Driscoll saw fit to inflict; but when falsely accused by the whining Beat, she always preserved a watchful silence, neither explaining nor denying, until she saw the strap taken down from its awful place upon the kitchen door.

Then, if possible, she would fly out of the house, through door or window, like a gazelle, flee to a huge oak-tree which stood on the ridge above the hotel, and ascend into its breezy top with marvellous agility.

One day Mercy found in her pocket the letter that her father had given her; she had forgotten it. It was addressed:

MRS. FLORENCE DUPERU,
No. —— Van Ness Avenue,
SAN FRANCISCO.

She mailed the letter. Mrs. Duperu had been in San Francisco for some weeks, but soon after Jaramillo's letter was despatched, she arrived suddenly at Savoy.

Mercy saw her ride past the hotel. The pale, haughty old lady looked keenly at her. After that time she passed the hotel in her carriage nearly every day, ostensibly to visit the post-office.

Sometimes she saw Mercy at a door or window, gazing at her with sad, wistful eyes. Again she saw her dancing like a fairy, or perched on the boughs of a neighboring tree. This seemed to excite her anger, and she would stamp her sound foot and mutter to herself, "A clown's daughter!"

One day at the Woodman's Hotel the clumsy Beatrice let a tray of dishes fall. She fled upstairs promptly and swiftly, well knowing what would follow.

Mrs. Driscoll, hearing the crash, rushed in furiously. She found Mercy, pale and horrified, picking up the pieces.

The next instant the strap descended on the child's shoulders. She cried out, and at once sprang through the door, and fled up the hill to her tree of refuge. The landlady followed, but she soon saw Mercy safely perched on her lofty seat.

It happened that a rough young sailor, a nephew of Mrs. Driscoll's, had come to the hotel the evening before. Hearing the noise, he came out.

"I'll fetch her down for you, Aunt Bet," said the sailor.

"Do it, Jim! I wish you would!" said Mrs. Driscoll.

When Mercy saw the young sailor climbing toward her, she gave a little cry like a frightened bird, and at once ascended higher, and disappeared in a thick bunch of foliage at the very top.

A moment later the spectators heard a scream, and saw Mercy fall from that dizzy height like a wounded squirrel. Fortunately, she struck first among the lower boughs, but from these she fell to the ground, where she lay motionless.

The sailor, reproaching himself for the accident, sprang down and picked her up. One of her slender arms hung limp, and there was blood on her face. He carried her tenderly to the hotel, and Mrs. Driscoll promptly sent for a doctor, and meanwhile exercised her own skill to revive the child.

"I never thought of her fallin', no more'n a squirrel," she mused. "She must 'a' ben terrible scared at Jim."

In the midst of the excitement, the landlady was suprised to see Mrs. Duperu enter, assisted by her coachman. She tottered feebly, and her pale face was really ghastly. She laid her trembling white hand on Mrs. Driscoll's big red arm, while her frightened eyes were fixed on Mercy's motionless form.

"I saw her—fall!" she gasped. "Is—is she—badly hurt?"

"Not so very, ma'am," replied the landlady. "Her arm is broke, and she's a bit jarred. Don't be scared, ma'am. Beat, fetch a chair for the lady. But it's pretty hard, ma'am," she continued. "I don't see what I'm a-goin' to do with her, with all the work that's a-pilin' up on me. Sure, she was enough trouble when she was well."

"I shall take her home with me as soon as she can be moved," whispered Mrs. Duperu, eagerly.

Mrs. Duperu spent the night and the succeeding days at Mercy's bedside. When the child could be safely moved, she took her in her carriage to Robin Wood, to the great amazement of the gossips.

Mercy recovered, and lived happily at Robin Wood. She felt many restrictions about her, but they were generally of a kind that accorded with her gentle nature. She was well-dressed and well-taught. Mrs. Duperu showed little affection for her, but she was very kind, and Mercy often wondered why this great lady had taken charge of her.

There were many splendid trees to climb at Robin Wood, but Mercy soon discovered that Mrs. Duperu did not regard with favor that form of exercise; and she regretfully promised her benefactress never to indulge in it again.

The girl wore a pair of antique earrings—little crescents of gold, set with turquoise. Mrs. Duperu deigned to admire them one day.

"They were my mother's," said Mercy.

The old lady started as if a wasp had stung her. Then she seized her cane and hobbled away.

Mercy had been with Mrs. Duperu several months when a Chinese notable arrived at Savoy, and registered at the Woodman's Hotel. He was a grave, dignified gentleman, dressed in his rich native costume, and wearing a black skull-cap with a red braided button at the top. His name was Wo Keong, and he was an official of the Chinese Six Companies of San Francisco.

His business was soon made known by small bills which were posted about town. He had come to remove the body of Ah Gow, who had been killed by the explosion; and the bills offered a reward of fifty dollars to the person who should recover the missing head.

Wo Keong quaintly explained in his advertisement that the matter was one of great importance, as a Chinaman who had left his head in a foreign land was placed in a very bad position in the next world. Happiness was impossible to him until his head was found; and at the great festival of *Yu Lan* he was sure to come back to the earth mournfully searching for it.

One of these singular bills was brought to Robin Wood as a curiosity, by Mercy's music-teacher. Mercy read it, and from that time was sad and absent-minded.

A secret was weighing upon her mind, and there was no one in whom she could confide. Mrs. Duperu was kind, but she had never invited her love and confidence.

Mercy drove to town one day in the carriage, and saw a great number of men and boys on the mountain side above the town. She knew for what they were searching, and she shuddered.

One morning the music-teacher remarked that Wo Keong was about to give up his search, and that he would probably leave Savoy the next day. When Mercy heard this, a great lump rose in her throat, and at the same time a great resolve rose in her heart.

The image of poor Ah Gow, so distressed without his head, haunted her. She kept saying to herself, "He is unhappy; I must help him."

When the music lesson was finished, she went to Mrs. Duperu and asked, with a tremulous voice, "Mrs. Duperu, will you please let me climb a tree just once more?"

The old lady was surprised at the request, so solemnly and earnestly made.

"Is that what has made you so serious of late?" she asked. "You are pale, too. I fear that I have kept you too quiet. I must give you more exercise, a pony to ride, perhaps. Yes, go and climb a tree if you wish, but let it be a very small one."

"I want to climb a big tree," declared Mercy, with grave firmness.

"What a strange child!" murmured Mrs. Duperu. "Choose your own tree, then," she continued, "but do not fall, and let no one see you."

At twelve o'clock that night Mercy, on foot and alone, was walking the gloomy road to town. The wind roared in the tall redwood trees; black clouds hung overhead, and drops of rain were falling.

The Woodman's Hotel was dark and silent. Mercy passed it and went up to the great oak on the ridge. She stopped there shivering. The wind made a strange noise in the huge tree.

She began to climb slowly. Her arms were weak with terror, and she had to stop often to rest. Once there was a bright gleam of lightning, and she cowered close to the trunk, lest some one should see her.

At last she reached the thick mass of foliage at the top, from which she had fallen. She wrapped her handkerchief around her hand, shut her eyes, and reached out fearfully.

She touched a smooth, round object that had lodged in the thick foliage of the tree. This object, the mere sight of which had once made her lose her hold and fall, she was now courageously grasping, inspired by pure compassion.

Holding it firmly, she hurriedly descended and ran to the hotel.

She knew Wo Keong's window; she had seen him sitting there, grave and sedate, as became his rank. There was a rain-spout at the corner; a large rosebush clung to the side, and the window cornices would afford a foothold. She began to climb the wall.

Wo Keong was awakened by the cold touch of the wind and rain on his face. Before he could rise, a brilliant flash of lightning illumined the wild night. He saw a slight form, with pallid face and flying hair, framed in the open window. Dense darkness fell, but in the mighty crash of the thunder he thought he heard a shrill cry.

He sprang up and lighted his lamp. No living thing was visible, but on the floor beneath the window he saw a human skull. He knew that Ah Gow's head was found.

Something gleamed beside the mournful relic of humanity. Wo Keong picked it up and examined it curiously. It was an antique earring—a golden crescent set with turquoise.

It had been raining heavily for an hour, with frequent flashes of lightning, when Mrs. Duperu heard a strange sound in the house. Obeying her first impulse, she took her lamp and went to Mercy's room. There she found the child lying on the floor sobbing piteously. Her hair and clothing were drenched with rain, and she was shivering with cold.

"Mercedes! Where have you been?" screamed the frightened woman.

"I have lost my mother's earring," was all that Mercy could say. She began to sob pitifully, and then fainted.

The next day Mercy was delirious and dangerously ill. The old lady's proud spirit broke, and she prayed that Mercedes might live to know her again, so that she could take her to her heart.

But Mercy was likely to die. Hour after hour she seemed to be seeking the lost earring, or shrinking in terror from some frightful object.

Late one night, when sleep had at last stilled Mercy's piteous voice, Mrs. Duperu, watching by her bedside, fell into a short, troubled slumber. She suddenly awoke and started up wildly, with the feeling that some one was in the room. But everything was still.

She was about to sink down in her chair again, when a strange object on the table attracted her attention. It was a small octagonal box, of silver filigree work. She had never seen it before.

Mercy was still sleeping, and Mrs. Duperu went out and questioned the servants. No one had called, and none of them had been in the room.

Greatly astonished, Mrs. Duperu returned and looked closely at the box. At one side of it was

Digitized by Google

a spring, which she pressed. The box opened, and she saw in it a slip of paper on which was written, *"Mercedes Jaramillo."*

Beneath the paper lay Mercy's lost earring. A piece of folded white silk remained. She lifted one corner, and saw within a beautiful pearl necklace.

This mystery greatly disturbed Mrs. Dupery, but she gently clasped the earring in Mercy's ear, grateful to whoever had returned it.

When the morning dawned, the child awoke, rational for the first time. She solemnly put her hands to her ears, and a look of joy came over her face.

"O Mrs. Dupery, I dreamed that I lost one of my earrings," she cried, weakly.

The old lady's face was wet with tears as she bent down and kissed her. Then a sound and healing slumber fell upon the child.

The genius of fancy were astonished when, not long afterward, a marble slab which bore this inscription was placed at poor Jaramillo's grave:

GEORGE DUPERU.

How the little silver box was placed on the table was never discovered. If Wo Keong thought it fitting that a mysterious kindness done to himself should be repaid by a kindness equally mysterious, he certainly carried out his idea very well.

CHARLES E. BRIMBLECOM.

For the Companion.

THE CAPTAIN OF THE "KITTIE-WINK."

In Seven Chapters.—Chapter IV.

Adrift.

During the evening after the yachtsrace Hal and Non were entertained very hospitably by the Neptune Club, and were made much of as the victors of the day. It was late when they made their way down the club landing to their own dory. Rain strutted a little, it is to be feared, even in the dark.

The night was black as jet. A fine drizzle was falling softly. Lights flickered feebly from the yachts in the harbor.

"Jump in!" said Hal. "I'll shove her off. You row this time. That's the *Kittiewink*."

Hal unfastened the painter, leaped lightly after his friend, and gave the dory a push.

The wind, as usual, had changed. The tide was running out. Thakin' tinkin! From ship to ship the bells sounded faintly, as if muffled in the mist. Each bell struck six times.

"Eleven o'clock!" said Hal, with a sense of importance in recognizing the sailor's method of computing time. "Hurry up! Why don't you row?"

"I can't find any oars," answered Non, groping from one side to the other.

The two boys searched the boat. There were no oars. They were afloat with nothing to propel their boat.

The dory began to drift slowly away from the landing. The boys did not realize at first what the situation meant. They were too inexperienced to guess that oars, though laid ever so carefully on the solid inwards, might be "borrowed" by some unscrupulous prowler about the harbor.

"What shall we do?" asked Non, unconcernedly. It seemed so easy to get ashore in some way.

"Holler, I guess," said Hal, after some leisurely thought.

He illustrated his suggestion by a loud call. Non joined in with a treble cry; but the air was thick, and they had already drifted a good distance. The sound fell back deadened.

"Tell!" commanded Captain Hal. This time a loud shriek was the result.

"Stop your noise!" answered a voice from a boat not far away.

"But we're drifting out!" shrieked Hal.

"You can't fool me! Go to bed!" came back the steering answer.

"But we've lost our oars! We're adrift!"

"You've lost your head!" called a sleepy sailor.

The cries of the boys smote falster and falnter upon the waters of Marblehead Harbor. They stopped for very fright.

"We are going out to sea!" sobbed Non.

"Why, we can't go out to sea!" expostulated Hal. But Non was right. The tide had dragged the unmanageable dory beyond the headland.

There are few experiences more terrible than being adrift in an open boat in an open sea. Now and then the newspapers record the picking up of an emaciated fisherman by a passing vessel barely in time to save his life—sometimes too late; and always there is told a sad story of pain and privation, either by the rescued mariner, or by the manifest signs of his suffering.

If Hal one must be cast adrift, there is nothing better than a Swampscott dory for such a purpose. Our two boys were in such a boat; it was thirteen feet long, and had a flat bottom, from which its sides flared outward. The dory was one of the best of its kind. Phin had chosen it.

In a very high sea, to the experienced sailor, the dory is almost as safe as any craft afloat. A dory, as the saying runs, "can sail in a dewdrop or in a Nor'easter." But a dory without oars!

Fear had cowed the boys, and they crouched side by side on the grating at the bottom. Hal held Non by the hand, while Non rested one arm on Hal's shoulder. At first neither spoke. It seemed hours to them since they had floated off, yet it was scarcely ten minutes.

"Let's give one more yell!" urged Hal. "I guess we can fetch 'em this time. They *must* hear us!"

"I can't!" sobbed Non. "It's too terrible!"

The boy put his head on the seat and shut his teeth tightly to stifle his tears. He was ashamed of himself; but many a man in no worse position has yielded more weakly to his fears.

"I'll try now," Non spoke, after a few more brave gulps. They stood up in the dory, two helpless waifs, clinging to each other, and shouted and hallooed until a rough swell toppled them over. Then they sank, exhausted and terrified, upon the dory's bottom, and clasped each other for comfort and warmth.

It seems strange that no one on board the *Kittiewink* had heard their cries. Skipper Scrod was expecting them, but being tired with his day's work, had gone below, and there fallen into a doze. The wind carried the signaling shouts in the opposite direction; the denseness of the atmosphere deadened the sound, and perhaps fright had changed the tones of the familiar voices. Phin slept on and heard no shrieks.

Trot was on the lookout. He heard the voices, and yelped loudly. But he had barked all the evening without occasion, and now barked in vain when good cause had come for his excitement.

Meantime Hal and Non shivered in the dory, which was still moving rapidly seaward.

"I don't suppose it's any use to holler any more," said Hal. Then, after a little hesitation, he went on. "Say, Non, old fellow, do you think we are going to die? It's cold enough, and dark enough, too."

Non did not trust himself to answer. He thought of his home, of his father and brothers. He could not speak just then. The boys were hushed with the solemnity of their danger. What good could talking do?

Already they had drifted beyond Marblehead Point. The tide took the light dory between Cat Island and the Beacon in a straight course for Thacher's Ledge. The wind breezed up westerly, and pushed seaward upon the flaring side of the boat as if it were best upon his destruction.

With the wind, the mist disappeared. The sky cleared, and the stars shone mockingly. The steady white light from the receding Point glittered like an eye that had no pity. As the boys strained their eyes toward the impenetrable horizon, they caught the twin lights of Baker's Island.

"Hallo!"

"That's Baker's!" said Hal, authoritatively. He was pleased to recognize a friend.

"There's a vessel!" cried Non, looking eagerly in the opposite direction. "Phin says they carry a red lantern at night. See! Perhaps they'll pick us up."

But the red light laughed at them with its even, ruddy glow. Can Egg Rock light pick up a cast-away?

To one at sea for the first time, on a clear night, off the shore bristling with light-houses, the sight is as exciting as it is dreamy. Had the boys been safe on some stout boat, they would have yielded to the romance of the situation. As it was, the excitement and the novelty of their position for the moment blinded them to its peril.

"One, two, three, four, five—there it shines again! I wonder where that light is. Now it's out. Look quick!"

Non had discovered the beautiful Eastern Point light, whose ruby lantern flashed sympathetically upon them.

But soon the diversion of discovery ceased. The boys snuggled closer together. The experience was damp and monotonous, and it began to grow dreadful. The cheap, cheap! of the waves underneath the flat dory—a pleasant sound on a bright day, with oars in hand—terrified them now.

"Say, Non!" Hal resolutely interrupted his own gloomy thoughts. "I guess papa is asleep now. Your father is in bed, too, unless he's called out; and my mother—I'm glad she doesn't know. Say! Do you think God knows—"

Non bowed his head reverently. "Perhaps this is a punishment," he ventured to say. "Perhaps we oughtn't to have gone fishing. I know my father wouldn't have liked it."

Hal thought of his mother with a heavy heart. He couldn't bear to speak of her. But a bright thought occurred to him.

"It couldn't have been very wrong, because we saved so many lives."

"That's so, as it turned out," said Non. "But we didn't know we were going to do that. I say, Hal, didn't you think it would be wrong to pray?"

"No, you pray first!" said Hal.

Hal began, falteringly, a simple prayer, but broke down. "You go on, Non," he said; "I can't."

Non was much moved.

"I can't think what to say. I never thought of saying any prayers in a place—like this."

Nevertheless, Non began, and uttered a heartfelt little supplication for rescue.

"That wasn't much of a prayer," he said, apologetically. "But I guess it will do as well as any. I've done lots better praying—inside. *What's that?*"

He seized Hal by the arm and dragged him around. They peered into the darkness, which was broken by a huge shadow; what it was their untrained vision could not at first make out.

Suddenly, the dim outlines of sails took shape, looming straight over them. A red light flushed very near. The big vessel was making directly for the dory, bowling along on the starboard tack, unconscious of the cockle-shell before her.

So silently had she approached that the fact seemed a mysterious answer to their broken prayers. The boys trembled in a kind of awe. At first their throats could make no sound; but the creaking of cranze, the slanting of spars, the clanking of chains, the swish of the parted waters brought them to their senses.

"Hallo! Ship ahoy!" they shrieked. "Hallo! Ahoy, there!"

"What's that?" came a gruff voice, quite clear upon the night air.

"Hold on! Stop! Take us in! We're adrift! Hold on!"

Then came the moment of anxiety and expectation. Would the vessel pass by? There was a stamping of feet on board the big schooner, a confusion of orders, and the vessel shot into the wind. She had just missed sending the dory to the bottom.

The jibs flapped briskly in the breeze as she came up, and a figure leaning far over the rail cried out:

"What's that? Who's there?"

"Two boys," answered Hal.

"We've drifted!" said Non, appealingly.

"From where?"

"Marblehead!"

"Why don't you hurry up and row there?"

"We haven't any oars. Do come for us!"

"What's the matter?"

The deep voice of a new comer on deck was heard.

"Two young fellows adrift that in something. Got no oars," answered one of the men. "We come very near running 'em down."

"Throw that stark'rd dory overboard! What are you about there? Jump in, two of you! Shoot her up in the wind!"

The Captain lost no time in giving and executing these delightful orders. Two men jumped quickly. In experienced hands the dory found the other shore. The boys were easily transferred into a very fishy boat, which struck them as the sweetest craft they had ever seen.

A dozen willing hands lowered the tackle and hoisted their dory on deck. The Captain himself, disentangled by no gold lace, but by a very crumpled white linen shirt, helped the boys out. The first observation which was made by any one came from one of the sailors.

"What shall we do with this dory? It's a good 'un."

"Let her tow till morning," answered the master, curtly.

Hal said nothing. He felt too much confused to speak. The Captain and the men surrounded the strange lads on the raised deck aft. A lantern was flashed before them. Everybody rushed to see the new catch.

"You're pretty young to be foolin' with the Atlantic ocean," said one gray fisherman, shaking his head solemnly. "Whar' d' ye belong?"

"Marblehead," said Non, quickly.

"Do you think you can get us back there before dinner?" asked Hal, looking from one to the other.

What a queer, yet good-hearted lot of men they were! They reminded him of the two friends the boys had brought on board for the race. The crew of the fisherman looked at one another.

"Sick back?" said one, meditatively.

"Let's sell 'em," said another, gravely. "They ought to know."

"I should like to get back before mother and father find out," Hal went on. "My mother is dreadfully afraid of yachting. She will die if she hears."

The fishermen looked at one another for the second time, but not one spoke.

"You don't understand, perhaps," quavered Hal. "You see, we've got to get back. If you know any another, you would see it's as I say. She's worse about yachting than anybody you ever saw. She and I—you see—"

Hal's voice trembled and broke.

"My lads," interrupted the Captain, laying one hand on each boy's arm, "you are going back to-day, not yet to-morrow nor the next day. We're bound for the Grand Banks for a three months' trip!"

HERBERT D. WARD.

(To be continued.)

THE ENVIOUS MAN.

Seldom he smiles, and smiles in such a sort
As if he mock'd himself, and scorn'd his spirit
That could be mov'd to smile at anything.
Such men as he be never at heart's ease,
Whiles they behold a greater than themselves.
—*Shakespeare.*

For the Companion.

SEA WONDERS.

No one can neglect a more fascinating spot, either for the student of science or for the casual observer, than the building of the United States Fish Commission at Woods Holl, Massachusetts, an establishment devoted to the propagation of cod and lobster for stocking our native waters, to scientific research, and also, incidentally, to the instruction of the public in deep-sea wonders.

In 1871 the attention of the government was called to an alarming decrease of the codfish in the waters along the American coast. Once everywhere abundant, so that it could be caught in large numbers near shore, it had not only become hopelessly scarce, but, through many causes, and chiefly through the defilement of the shore waters by the sewage of cities, it had been driven out into the deep sea.

A commission was appointed, under the late Professor Baird, to investigate the matter; and after several years spent in experimental study at coast towns, it was resolved to establish a hatching station and laboratory to supply the lows and restock the waters.

The present station was established at Woods Holl—a place especially favorable for the work. The harbor has a bottom of clean sand; its water is pure and unpolluted by refuse, and has the advantage of a comparatively high temperature.

In 1886 fish-hatching was begun here on a large scale. This, the principal business of the Commission, is a process full of interest.

During the latter part of April lobster eggs are collected and hatched, and the young distributed along the coast. The cod-hatching season lasts from November to the middle of March, and the little cod are placed in the water just as soon as they are able to take care of themselves.

The apparatus used in the process is very simple, but so automatic that one man can, without difficulty, attend to a hundred million eggs.

The hatching-room, on the lower floor of the building, is furnished with large wooden troughs, each of which contains six or eight inverted cylindrical glass jars holding four gallons apiece. Each jar has coarse cheesecloth tied over its mouth, and a small hole drilled through the bottom. Through this hole the ool eggs are introduced into the jar, and the water, constantly passing through the troughs, and made to rise and fall gently by an automatic apparatus, aerates the eggs, and gives them the motion which is necessary for them.

The sediment accumulating in the troughs is occasionally drawn off by means of a siphon, but beyond this the eggs need no attention.

Millions of little cod are by this means aided every year in our impoverished waters, and it is said that fishermen have already found this kind of fish decidedly more abundant than they were a few years ago.

Above the hatching-room, in the Fish Commission building, are laboratories where eager students from our leading colleges are busily at work during the summer months, with microscope and chemicals, in the study of various specialties in science. Each has all the privileges which the place affords, not the least of these being the examination of sea wonders, strange or familiar, brought in by the government steamer *Fishhawk* from her dredging expeditions along the coast.

Valuable or interesting specimens are preserved in alcohol, after having served their turn, and though most of them are sent to the national Museum of Natural History at Washington, full collections find their way to the cabinets of colleges.

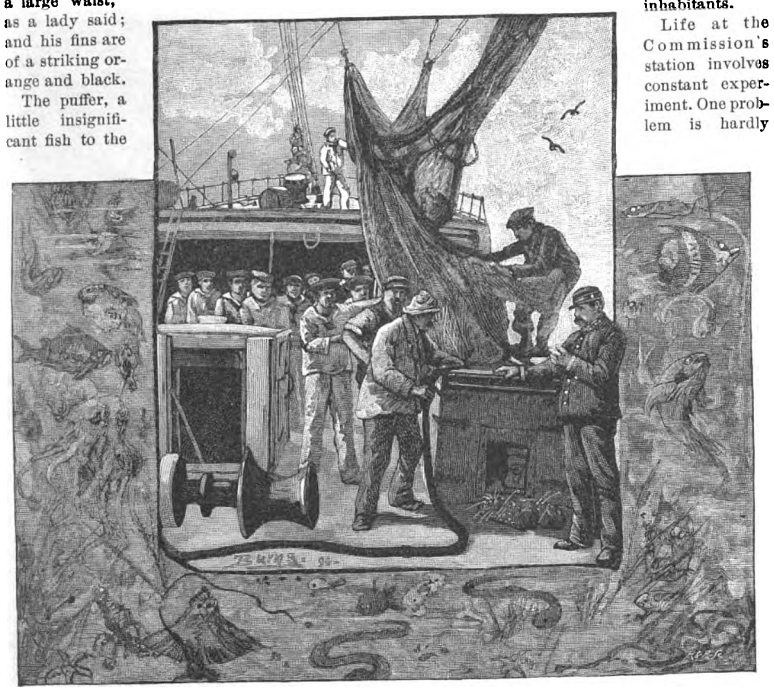
The *Fishhawk* is used as a shad-hatching station during the winter months, but in summer she is occupied exclusively in dredging for specimens; but as she is not fitted for deep-sea expeditions, she never goes far from home.

All the long and adventurous voyages are reserved for the *Albatross*, another vessel devoted by government to the use of the Commission.

This steamer is perfectly fitted for her duties, with all the modern appliances which render the path of science a smooth one. She is lighted by electricity, so that work can be accomplished accurately on deck, by night as well as by day. In dredging she uses an electric light which can be lowered to a depth of one hundred fathoms without being crushed or extinguished, and which attracts within the circle of its brilliancy all sorts of fascinating marine creatures, like moths about a candle.

As soon as the contents of the trawls used in dredging are received on deck, they are sifted through a succession of sieves which have meshes of different size, so that no desirable bit of animal life shall escape the microscope or the tank, where its habits can be studied.

All these marvels are for those who are trying, with the aid of science, to spell out the knowledge that nature has in store for us; but the Commission has advantages for even the wayfaring man. He may visit the building at Woods Holl, and examine, in its picturesque aquaria, all sorts of deep-sea inhabitants which have been hospitably made at home there.



One day, there was a family of strangely differing members swimming about in a large tank, at one end of the room. A dog-fish floated back and

Digitized by Google

forth, in graceful, undulating curves, accompanied by two *Remora* or suckers, his devoted and inseparable attendants.

Another member of this happy family was a fish in which one can imagine an odd resemblance to one of our common birds, and which is called the sea-robin. He is a brownish creature, "with a large waist," as a lady said; and his fins are of a striking orange and black.

The puffer, a little insignificant fish to the

casual gaze, was swimming about among these more pretentious creatures, giving no hint of his accomplishments, until he was suddenly dipped from the water by an attendant. Then he began to swell, without warning and with no apparent effort.

The under part of his body became more and more inflated, until no bladder could have been tighter, no drumhead more resonant when it is touched. Then, just as he had reached the climax of rage or fear, he was dropped again into the water, and his dignity collapsed on the instant. As soon as he touched his native element, he was once more a plain little fish, with no apparent powers of defence or offence.

The glass aquaria in this room are marvels of beauty, carpeted as they are with waving, many-colored seaweeds, and presenting phases of animal life always wonderful and sometimes even grotesque.

One contained, among bass, pipe-fish and other lively citizens, a lobster—more agreeable to the eye in his shell of dark vari-colored green, than those British-uniformed ones who have turned scarlet in the trial of boiling—who was sitting in a corner, in a broken-backed way, with his claws in his lap, as if he were knitting by the chimney-corner.

Little fish went bumping about over his head, but not a whit cared he; nothing was left him but the one apparent privilege of thinking and thinking over the good old days when the universe was not bounded by walls of glass.

In one aquarium live the stickleback, which are nest-builders. As the hatching season approaches, the male makes a nest, an inch or more in diameter, from vegetable fibre cemented with mucus from his body. When it is finished, he coaxes or drives the female into one of its openings, and she deposits her eggs within. After this the careful father occupies himself in watching them, in fanning the water with his tail to secure ventilation for them, and in driving away intruders.

The young, which are hatched in two or three weeks, grow very slowly, and the anxious father meantime acts as their constant nurse. If they fall from the nest, he carries them back in his mouth, and places them once more within it.

One globe is filled with snails. It is the delight of the visitor to force such as are carrying their houses on their backs to "haul in their horns," cease their sluggish crawling, and drop, inert, into the water.

In another glass tiny gold fish, hatched on the spot, grow up to maturity and fitness for life on the parlor table, and it is interesting to hear that they are, at birth, larger than the newly hatched cod, which afterward so far outstrip them in size.

Most wonderful of all, there sailed upon the water, in a large tank, the *Physalia*, or "Portuguese man-of-war"—violet-tinted and ærial, an organism which floats about, by means of its beautiful bladder filled with air, like a fairy boat.

The *Physalia* was once supposed to be a single creature, but some modern naturalists hold that it consists of a colony of individuals, some of which perform the digestive functions, while others catch the food, and still others produce the young. If this be true its life furnishes an example of the oldest and most perfect form of coöperative housekeeping known among animals.

The water in the various aquaria is constantly renewed by pipes entering and leading away from them; yet there is one fresh-water aquarium in which records an interesting experiment. In this the water has remained unchanged for a year, and is successfully purified by aëration. It is brought continually in contact with a current of air, and is consequently kept in perfect condition for its finny inhabitants.

Life at the Commission's station involves constant experiment. One problem is hardly solved before new and even more delightful ones appear, for Nature, the great teacher, has ready an infinite series of tasks for those who are eager to learn of her.

ALICE BROWN.

IDEALS.

Nothing of sweetness fills the air,
Nothing of beauty blooms,
Save as a vision of life more fair
Over the spirit looms.

Selected. —*Geo. Lansing Raymond.*

THE RUSSIAN JEWS.

The ancient tradition that the Jews are condemned to wander forever, separated from each other and shunned by the rest of mankind, is to-day being terribly exemplified in Russia.

There can no longer be any doubt that the Czar has formed the settled purpose either to banish the enormous number of Jews who dwell in his dominions, or to subject them, if they remain, to new cruelties and persecutions added to the old.

The whole world has been horrified by the late accounts of the severities to which the Russian Jews have been subjected. Recent decrees have forbidden Jewish artisans, mechanics and tradesmen from entering Moscow, and measures have been taken to banish from Moscow the Jewish tradesmen and artisans, about fourteen thousand in number, who already reside there.

Thousands of Jews have been expelled from their homes in the villages to what is called "the pale;" that is, the districts designated as those to which Jews must confine their residence.

Those who have lived less than eight years in villages must leave them, and move into the towns selected by the government. Many other restrictions and hardships, reported every week, are being inflicted in Russia on the unfortunate race.

Jews have been forbidden to observe the Hebrew Sabbath (Saturday), and to close their shops on that day, and are compelled to shut up their shops on Sunday.

There are probably two principal reasons why this relentless persecution has been entered upon and is being savagely carried out. One is the inveterate hatred, not only of the government and the Orthodox Church, but of the great masses of the people, both to the Jewish race and the Jewish religion.

The other is, that the Russian Jews, though generally of a low order of civilization, have been thrifty, have practised usury among the shiftless and intemperate Russian peasants, and have prospered in spite of the restricted sphere of their occupations.

The first appears to be the principal motive at the present time. There can be no doubt that the Czar's tyrannical course has been instigated and encouraged by the leading spirits of the Russian Orthodox Church.

As a consequence of the persecutions, Jews have been pouring out of Russia, and seeking new homes in Western Europe and America, by thousands during the past two months. So numerous have been the Jewish emigrants to English shores, that the English Government has taken alarm, and is adopting measures for restricting it.

A wealthy Austrian Jew, Baron Hirsch, is said to have devoted no less than fifteen million dollars to aid the exiles and settle them in new homes, and has devised an elaborate scheme for establishing them in colonies.

The exodus of the swarms of Jews, for the most part unskilled and poverty-stricken, has its serious aspect for the United States. There is evidence that the English and other governments threatened with their incursion are attempting to divert the stream of Jewish emigration to this country and to South America.

We do not wish for or need this class of pauper emigrants. Already the hospitality of our shores has been taken advantage of by large numbers of Europeans whose presence among us is worse than unprofitable.

It is not just to the hard-working laborers of the United States to admit hordes of paupers from abroad to undermine the wages of honest toil; neither is it in the interests of peace and good order that the lowest classes of European society should have unrestricted entrance upon our soil.

It is to be hoped that, while deeply sympathizing with the Russian Jews in their misfortune, our government will take measures to restrict their wholesale entrance into this country.

A SONG.

To sleep! to sleep! The long, bright day is done,
And darkness rises from the fallen sun.
To sleep! to sleep!
Whate'er thy joys, they vanish with the day;
Whate'er thy griefs, in sleep they fade away.
To sleep! to sleep!
Sleep, mournful heart, and let the past be past!
Sleep, happy soul! all life will sleep at last.
To sleep! to sleep!

New Review. —*Tennyson.*

PRESIDENTIAL ELECTORS.

The adoption of a law in Michigan providing that the electors of President and Vice-President of the United States, to which that State is entitled, shall be elected by the people voting by separate Congressional districts, instead of on a general ticket by the people of the whole State, has attracted a good deal of attention by reason of its possible effect upon the presidential election of 1892.

It has also led to a general discussion of the question of the manner of choosing presidential electors.

The prevailing method was arrived at by the States only after a great deal of experiment, and without any amendment of the Constitution.

The Federal Constitution provides that "Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the State may be entitled in the Congress."

Each legislature was left free by the Constitution, therefore, to direct the way in which the presidential electors should be chosen. There was great doubt, in the first election, how the thing should be done. It was at first supposed by many that it was the intention of the Convention which adopted the Constitution that the legislatures themselves should make the choice of electors, though by some jurists it was denied that the legislature had any constitutional right to elect on its own account, being merely charged with the duty of directing how the State should elect.

In the majority of the States, in this first election, the electors were chosen by the legislatures. In only three were the people permitted to make the choice definitely. In Massachusetts the people of each Congressional district were directed to choose two candidates for electors, and the legislature chose one of these two for each district, and also two electors at large.

In this first presidential election New York lost its vote altogether, because the two houses of the legislature could not agree upon a way to choose the electors.

After this there was a progressive tendency to give the choice of electors to the people. In the election of 1824 six States still chose electors by legislature; in 1828 only two,—Delaware and South Carolina,—and in 1832 the only State which clung to the legislative method was South Carolina.

That State continued to choose electors by this method until the Civil War.

Meantime, the States in which the electors were chosen by separate districts grew fewer and fewer, the manner of election by a general ticket having steadily spread. By the election of 1832 all the States had abandoned that system except Maryland; and that State adopted the prevalent system before the next presidential election. Since 1832 no State has chosen electors by districts.

Several States have changed from one method to another. In 1812 there was great popular excitement in North Carolina and New Jersey because in those States, in which laws had been passed giving the choice of electors to the people, these laws were repealed—at least in New Jersey plainly for party reasons—and the election assumed by the legislature.

In the Michigan Legislature, the change just made was opposed by the party which has carried the State in all recent presidential elections, and favored by the opposition to this party, which had gained a majority in the legislature.

The motive was alleged by the opponents of the change to be purely a party one, as it is altogether likely that the electoral vote of the State would be divided under the district system, whereas the probabilities are that it would all be cast, if chosen on a general ticket, as it has been in the past.

The advocates of the change, however, maintained that they favored it on the ground that a district system of choosing electors, like the district system of choosing delegates to a presidential nominating convention adopted by one of the two great parties, comes nearer to an expression of the real choice of the people than the general ticket system.

SILENT.

After the death of the great Prussian, General von Moltke, some of the Berlin newspapers published the following anecdote of him.

When a very young man, holding the humble position of second lieutenant in the Danish army, he wrote a letter of resignation to the King himself, full of pompous self-conceit. The King accepted his resignation, briefly adding that the Danish army would try to get on as best it could without Lieutenant von Moltke.

The young soldier, who had been unconscious of his vanity, was deeply mortified. "You talked too much, Moltke," a comrade said to him.

"I shall talk no more," he sternly replied.

His reticence thereafter was so great that in his old age he was known throughout Germany as the Silent One.

Since his death a prominent clergyman in Pennsylvania has given an account of a visit which he made to the scene of the decisive battle in the Austro-Prussian War.

He found there a group of German officers, one of whom, in a carriage, was driven at a snail's pace into every part of the field. A box beside him was filled with maps, with which he studied each minute detail of the battle, fighting it over again moment by moment. It was Moltke with his staff.

The painstaking accuracy which brought him back after years had passed, to study again his own mistakes and successes, made him the great master of the art of war of his century, while his dumb self-control gave him prestige in the eyes of the masses, who in Germany, as elsewhere, are apt to believe that silence means strength.

We live in a voluble age, when almost every intelligent man has a pet theory or pursuit to which he wishes to convert his neighbors. The able man who knows how to hold his tongue in even one language will probably be credited with more wisdom than if he could maintain his opinion with clearness or eloquence.

"The easiest thing for a great man to do," said John Randolph, "is to make a speech; the most difficult to act right and keep silent."

If any young reader of *The Companion*, however, wraps himself in reserve, and becomes reticent and cold among his fellows in order to gain respect, he must remember that Moltke, dumb, without his ten languages, his accuracy and mastery of strategy, would have remained a sub-lieutenant all of his life.

An old Spanish proverb says, "None speak better than the ant, who says nothing and—works."

BESIDE GRANDMOTHER'S BED.

And grandmother was dying!

It was a strange thing, considering how little her grandchildren had ever loved her, that they should be so sorry now.

At any time since she came to live with them, ten years ago, they would have said, had they said anything about it, that they "just wished grandma lived somewhere else;" and now when she was about to seek a new home in "a city great and glorious," they suddenly and strangely felt that they would miss her from the chair she had sat in by the fireside.

Grandmother had a gift for advising. What is it in young people that makes them hate so to be advised? When the old lady said, "Johnny, tie up your throat well; it's cold this morning," some perverse spirit got the better of Johnny, and made him go out less warmly wrapped than usual, and Johnny took a cold that kept him indoors for many a weary day.

He thought of that, now; and he remembered it was grandmother who never tired of sitting by his bed, and giving him his medicine, and tending him as if he were her heart's joy.

Johnny began to understand, now when it was too late, that what grandmother had all along wanted was some one to take care of—something to do. All her grown-up life—for she married when she was little more than a girl—until her old husband died ten years ago, she had been mistress of her own house; and when, left all alone at last, she came to live with her daughter, she had the habit of life-long authority, with nothing and nobody it was really her place to govern.

She could not quite realize that the household, accustomed to depend on itself, had no especial need of her. She thought that such advice as she had been wont to give for over fifty years must be worth something still, to somebody; and she kept offering it, poor dear old lady, just as people sing songs, sometimes, when the fashion of the music has gone by and nobody wants to hear them.

Grandmothers are apt to be like that—and grandchildren are apt to listen impatiently to the counsel that seems to them old-fashioned and out of tune.

Johnny did not believe much in tears shed by boys; but they crept up to his eyes when he looked at grandmother lying there, with the patient face the gray hair framed, and with nothing about her that seemed alive except the eyes that were looking at something no one else could see, and the tired old hands that groped at the bedspread as if they were trying to straighten it out with some instinct for tidiness.

Then Jane came in softly. When grandmother had begged her to speak more gently, there had

Digitized by Google

been in her an instinct of rebellion that made the girl long to shout; and when grandmother had thought the dress that she wore to school too fine for the occasion, Jane had gone, out of pure perversity, and tied on her prettiest sash.

How sorry she was now—when the eyes that looked at the far-off something, no longer knew what poor Jenny had on.

John and Jenny stood there, and their looks met across the bed.

"How good and patient she was!" Johnny said.

"Yes, and we weren't half good enough to her," Jane answered. "Oh, I wish, I wish we had her back again!" the girl cried, with a sudden spasm of late love and sorrow. And surely grandmother heard; for the eyes that had been seeing only the far-off something, turned for one instant toward the grandchildren, and a smile—yes it *was* a smile—quivered on the wrinkled old lips, and then—grandmother was dead!

HOW TO FIGHT A DUEL.

The practice of duelling is practically extinct in this country, and soon will be, doubtless, in all parts of the world. Sensible minds everywhere see the absurdity of it, though men in passion, or acting under a false notion of honor, may sometimes yield to the foolish requirements of the "code."

At one time two well-known Frenchmen, Cham, the caricaturist, and Philippe Gille, a man of letters, had a violent quarrel in a theatre, after the play was over. Their friends interceded, but only made matters worse.

One of the men challenged the other. Seconds were named on the spot, and both men insisted that the preliminaries of the meeting should be arranged at once.

The seconds stepped into an adjoining room to make the grim arrangements for the duel, leaving the two principals in the same apartment.

"What shall be the weapons?" the second of one party asked; "pistols?"

"No," said another; "with pistols, it is all over so quickly that one has no chance to see anything."

The partition between the room in which this discussion occurred and the one in which Cham and Gille, glaring at the floor, were waiting, was so thin that the two men heard every word.

At the remark just quoted, they looked up at each other.

"That isn't very funny to hear," said Cham.

"Hardly," said Gille. "We'd better go out on the stage."

They went out into the solemn gloom of the deserted stage, and found that also unpleasant.

"Let's go out on the street," said one to the other.

They went out, and presently saw a good many people going into a restaurant. They followed mechanically, and sat down at a table.

Half an hour afterward, when the seconds had completed the arrangements for the fight, they were surprised not to find the principals where they left them: and when they went in search of them, they found them supping merrily together, entirely reconciled.

THRONGS OF IMMIGRANTS.

The number of immigrants into the United States during the year 1890 was rather more than four hundred and ninety-five thousand—that is, more than the population of St. Louis, Baltimore or Boston. Sixteen thousand more immigrants arrived during the first three months of 1891 than during the corresponding months of 1890.

During the ten years ended with 1890 the country received more than three hundred and twenty thousand Italians. In the last year of the ten the Italians constituted almost one-eighth of the total immigration. About the same fraction of the whole was made up of Russians and Poles.

The law does not allow the American-born young man to vote, no matter how well educated he may be or how well prepared to exercise the privilege wisely, until he is twenty-one years of age. At that age he has probably been learning how to discharge the duties of a citizen for five or six years.

But every man who comes into the country from Europe may, three years after his arrival, declare his intention to become a citizen of the United States, and he will then at once, in many of the States, acquire the right to vote. He may be ignorant of his own language, and be quite unable to speak English. He may be incapable of understanding the American system of government, and indifferent to it. He may have no ambition beyond earning a dollar a day by using a shovel. Yet he has a share in the government if he desires it, and the most intelligent American who is still a minor is his political inferior.

The country in some way should protect itself from the danger of destruction to which it exposes itself by admitting to a share in the government throngs of ignorant and unintelligent Europeans.

A.

For a long time the sounds of almost all English vowels were, as the makers of dictionaries explain at length, in a state of transition. In different words we now have the same vowel pronounced in almost all the various ways known to European languages, and in several that are peculiar to English speech. Probably the pronunciation of more than half the words of the English language has been changed.

There can be no doubt that English vowels originally had the same sounds they now have in most continental languages. Thus *a* was pronounced as it still is in *father*, *e* as *ei* in *rein*, *i* as in *ravine*, and *u* like *oo* in *school*.

But the English people, having a way of changing the sounds of vowels in speech, gradually converted each one of them into something quite different.

The change is going on still. The vowel *a*, in London speech, is gradually receiving the sound of long *i*. An American in London is asked if he wishes to "take in a piper"—and is puzzled until he discovers that this is English for "taking a daily paper."

This tendency has become so marked that the "pipers" themselves have begun, at least in a whimsical way, to print words which have a long *a* with a *y* instead. The *Pali Mall Gazette*, in an article on "Primrose day," devoted to the memory of Lord Beaconsfield, fancies Englishmen singing:

But who will syve old England from the shyme,
And her sons and her daughters who will syve?
For in vyne, alas! in vyne we deplore the honoured nyme
Of Lord Beckingsfield now lying in his gryve.

This vicious pronunciation has begun to creep into a limited circle in America, whose members affect English ways. It should be rejected and resolutely discouraged by every one who wishes to speak good English.

WERE THEY QUALIFIED?

A correspondent sends us from the far West some evidence that it is not always the school children who have queer ideas regarding the meaning of words. She has transcribed from several hundred replies to questions given in the examination of applicants for the position of teacher in certain counties of a Western State the following. The candidates were asked to define plagiarism. Here are eight of the answers.

(1.) Plagiarism is an occult science. (2.) Plagiarism is the act of plaguing. (3.) It is the state of believing differently from the majority of people. (4.) It is the act of telling falsehoods about an opponent. (5.) It is downright meanness. (6.) It is having the disposition to fight. (7.) It is something made correct by usage. (8.) I do not know unless it relates to the power of witching.

Define pedagogics. (1.) Pedagogics is femail teachers. (2.) It relates to petty rulers. In that case there is something about pedagogics in the history of Europe, also history of the United States and the bible. (3.) It is the history of one's good or bad deeds. (4.) Pedagogics is an old teacher that's cranky.

What are metamorphic rocks? They are rocks composed of little animals called metamorphoses.

What is the derivation of the word *polypus?* It is derived from poly, many, and pus, puss, many cats.

What is anatomy? Anatomy is extinct in a dead boddy.

What can you say of the use of pain and pleasure? (1.) Pain is of no use, but it is bad for the health. (2.) Pain gives the physician practice. (3.) Pain tells us that all is not right in the region where the pain is. There are many kinds of pain, enough for every one to have some. Pleasure is useful because it promotes health, it lets us enjoy ourselves while the pains are absent.

Describe the bee. The bee has 2 wings, 4 leggs. It has 1 part at the end of the boddy not the head that is poisenous. He is classed among flies.

Give an account of Horace Greeley. He led the Greeley expedition into the north, turned cannible, eating up their members when provisions gave out.

FROM CRADLEY HEATH.

Recently a deputation of women went from Cradley Heath, in England,—a place where women are employed at heavy work in forging chains,—to London, to protest against the passage by Parliament of an act which proposed to prohibit the use by women of a heavy forging implement known as the "oliver." They objected to the passage of the bill on the ground that it would deprive them of employment.

At London they were questioned at length upon the manner of their employment by the Home Secretary—an officer whose position in the British Government is much the same as that of the Secretary of the Interior in this country. Between Mr. Matthews, the Secretary, and the chain-woman the following dialogue took place:

Mr. Matthews: And what is the precise nature of the employment in which you are enga—

Chain-woman (breaking in): I doan't want to have my work taken away from me!

Mr. Matthews (blandly): Pardon me, that is not quite the point on which I desire information. If you will please explain to me the nature of operation in which—

Chain-woman (firm though flustered, and determined to get out what she had come all the way to London to say): It never done *me* no harm, sir!

Mr. Matthews: But, my good woman, if you will suspend your observations long enough to communicate some idea—

Chain-woman: I likes the 'eavy work, sir; an' I says, Let each one do what they can!

The interview proceeded in this unsatisfactory way until a questioner was found who could talk to the chain-women in their own language.

TOO SMALL.

There is such a thing as poisoning all the pleasant occurrences of life by drops of depreciation. "Yes, your examination papers are always marked high," said one schoolgirl to another. "It must be because your writing is so plain!"

When the *Alabama* was destroyed by the *Kearsarge*, in 1864, there was, of course, great rejoicing in the Northern States, and complimentary tributes were abundantly showered on Captain Winslow for his achievement. A large oil-painting of the battle was presented to Secretary Seward. It represented the *Kearsarge*, with flying colors, in the foreground; the *Alabama*, half-submerged, in the middle distance.

One day, when Captain Winslow went to call upon the Secretary, his attention was drawn to the picture, and he was questioned concerning its fidelity in matters of detail. He replied that it correctly delineated the state of the sky and sea on that day, and that the portrait of the *Kearsarge* was a very good one. Here he paused, and some one asked:

"But what else, Captain? Is there anything wrong?"

"Yes," said the veteran sailor, with emphasis, "I wish these artists would not always represent the *Alabama* as smaller than the *Kearsarge*. She was as large as my vessel; she had as many guns and more men!"

LONG HAIR.

Among the "Locals" of a college paper is an enjoyable joke on a member of the Faculty whose English is usually good.

The professor of literature looked bewildered the other day, because a wave of merriment passed over the class when he spoke of Wilson.

"With his long yellow hair running over those Scottish hills."

Hair of such length seemed remarkable even for a poet to have.

Ladies' Underwear should be made from KING PHILIP CAMBRIC, LAWNS and NAINSOOKS. Send stamp for samples. King Philip Mills, Worth St., N. Y. [*Adv.*

What part of a piece of work is the varnish?

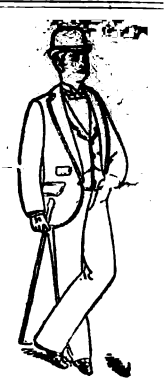
How wise they are who economize on it and spoil the whole!

We shall be glad to send you, free, the "People's Text-Book on Varnish," from which you will become intelligent, not on varnish itself, but on varnished things; know what to expect of and how to care for proper varnish on housework, piano, furniture, carriage, etc.; and how to get it in buying these things.

The intention is to help you avoid the losses that come of poor varnish, no matter who uses it.

MURPHY VARNISH COMPANY.
FRANKLIN MURPHY, President.
Head Office: Newark, N. J.
Other Offices: Boston, Cleveland, St. Louis and Chicago.
Factories: Newark and Chicago.

D'ye see those skates? The Pittsburgh lamp is ahead. It gives magnificent light. It is easy to care for.



It keeps itself clean—all but wiping.

Send for a primer—can't tell it all here.

Pittsburgh, Pa. PITTSBURGH BRASS CO.

3-button soft-roll frock.

Long roll, single-breasted sack.

BOTH THE ABOVE-STYLE COATS ARE VERY POPULAR MADE UP FROM A BLACK THIBET, WITH FLAT MILITARY BRAID. WE OFFER A SPECIAL LINE OF HAWTHORNE AND P. & H. BLACK THIBET,

COAT AND VEST, TO ORDER, $15.00.

THERE IS NO MATERIAL MADE THAT CAN EQUAL THEM FOR WEAR.

A SPECIAL LINE OF SIMONI'S CHEVIOTS IN MEDIUM AND LIGHT WEIGHT, EMBRACING 50 DIFFERENT STYLES IN PLAIDS AND MIXTURES,

SUITS, TO ORDER, $16.00.

$50 IS THE USUAL PRICE CHARGED FOR THE SAME MATERIAL, WITH NO BETTER TRIMMINGS, STYLE OR WORKMANSHIP THAN OURS.

A WRITTEN GUARANTEE IS HANDED TO EVERY CUSTOMER, WARRANTING GARMENTS TO WEAR ONE YEAR SATISFACTORILY.

SAMPLES, FASHION REVIEW, TAPE MEASURE AND OUR SIMPLE GUIDE FOR SELF-MEASUREMENT MAILED FREE ON APPLICATION. OUR MAIL ORDER SYSTEM HAS PROVED A GREAT CONVENIENCE WITH SATISFACTORY RESULTS.

The King Pneumatic Rifle. Pistol Grip.

This fine Gun is meeting with a tremendous sale. It is made entirely of Brass, Iron and Steel, with the exception of the Stock. The Barrel and other exposed parts are Nickel-plated. Its length is 33 inches. It is designed entirely for shot. Common BB shot are used. These can be bought for a few cents a pound at any local store.

A Beautiful Rifle.

This is the handsomest Air Rifle we have ever seen. Its polished barrel shines like silver. Its curves are graceful, and its proportions perfect. It is a gun any boy would be proud to carry, and prouder still to own. Yet with all its beauty, its shooting qualities do not suffer in comparison. It shoots with precision, and carries a shot for a long distance.

The great advantage of an Air Gun is that it uses no powder. It is hence inexpensive. There is scarcely any noise. No danger of explosions. No possibility of fires.

It is also a mine of sport. If the weather is rainy, the piazza can be made a shooting-gallery, and a whole company entertained with trials of marksmanship. If the sun shines, out-of-door shooting-matches can be held, and keen eyes and healthy complexions secured.

Given to any subscriber to the COMPANION for one new subscriber and 15 cents additional. Price $1.25. Postage and packing 45 cents, when sent as a premium or purchased.

Or it can be sent by express, charges to be paid by receiver.

THE YOUTH'S COMPANION, Boston, Mass.

For the Companion.

THE GIRL WITH A TASTE FOR MUSIC.

By Madame Lillian Nordica.

The one human being in this wide world around whom my sympathies are most strongly entwined —even though she may be the veriest stranger to me—is the girl who would be a public singer; for I know exactly what she has before her, and will have to go through, whether she be destined to succeed or not.

What She Must Encounter.

Admitting that she is doomed to fail, she will have to find out for herself the unwelcome certainty that she has built her house upon the sand—upon vanity, self-deception, ignorance, flatteries of so-called friends, insincere expressions of admiration, unfulfilled promises of help, and almost convincing certainties of ultimate success, even in the face of present failure.

Happy will you be, my dear young vocalist, if conviction of unfitness comes to you even on top of these rosy things, and saves you the bitterness of having others tell you, in all too substantial ways, that your step in life has been a mistaken one, and that you must just go back and begin afresh at some other vocation.

But I do not want you to despair even then; disheartened you may and must be, but *nil desperandum* should be every brave woman's motto. A woman who lacks bravery has no right to think of being a singer.

Happily there are many honorable employments open to women in these improved days, and although there cannot but be a sting in exchanging the prospect of a prima donna's life for the commonplace existence of a teacher, typewriter, modiste or clerk, it will be a great deal better to do it in time, before a public failure has been made, or useful money squandered.

Allowing, however, that your house has not been built upon sand, but on the firm rock of ability and fitness, you will still have a great deal to go through. It makes me clasp your hand, in fancy, just as kindly and tightly as though you had made, or were about to make, a failure; for in this matter I am your friend, your very own friend, Lillian, who is called by the world "successful," but has gone through every phase of the fiery ordeal for which I shall in kindness prepare you.

You must work day and night, night and day. You will have solid, hard, tiring work that cannot be shirked or put aside until a more convenient season; for it is while you are young that you will have to make your mark, and you cannot make it until you have gone through years of real labor.

Flatterers.

Well, so far so good. You will have to set your face like a flint and your heart like a nether millstone against flatterers. Scores of them will come about you. Some will say that you only need a few more finishing lessons from their friend So-and-So, in order to be perfect. Others will say that you have already attained that enviable estate. Others will try to urge you on to appear at some petty concert, or other performance, just "to give you courage."

Don't mind any of them.

When your years of preliminary study are over —for, remember, a public vocalist is always a student—and you make your stage or platform *début*, then your troubles will begin in right earnest. I think it would be well if at that particular period of her life every young vocalist could harden her heart and forget what feelings are; for undoubtedly they will be harrowed upon quite an unexpected number of occasions; and paths that looked from a distance quite smooth and flowery will be found dotted over with boulders, sharp flints, sore ruts, and hard, cutting stones, that will well-nigh scarify the feet that set out to walk on them with only velvet shoes for protection.

One thing must be borne in mind, and the frequent recollection of it will afford a healthy discipline: namely, that at whatever period a young *débutante* may appear before the public, there will always be established favorites against whom she will have to compete, for her position and theirs will be so different that there can be no working together. Their mark is made, and they depend on their established reputation, while hers is yet to be settled.

Because of this our *débutante* ought never to feel aggrieved; for it is a quite natural consequence in the lives and careers of all public people.

Nor ought a beginner ever to experience the heavy heartburnings which some do when those older artists say and do unpleasant little things to confound the new-comer. It is all a part of Nature's scheme for the working out of her own laws.

The old steady sea-fish look on from behind their crags at the struggles of the young ones in the deep waters, and are ready to devour them, and prey upon them, if the young ones do not keep a clear lookout for themselves; but it only teaches these sharpness, which is just what all young beginners need. I do not mean bumptiousness, for that is odious; but a habit of taking care of themselves, and looking out for breakers, which cannot fail to be very useful in after life.

I once asked an old soldier how he felt when he first went into battle. "Well," he said, "at the first volley I just considered myself dead. Then I forgot funk, and went on fighting; and every limb, or part of one, that I brought off the field, I looked upon as a sort of chance saving."

Now that is precisely what our *débutante* will have to do—*forget funk*, and be thankful for even small mercies.

Press criticism will be another source of heartscald, and a very constant one. Every time the young beginner sings, in strange places especially, she will shake with terror until she sees "the papers" next day; and then, if she is censured or passed over, her tortures and disappointments will be well-nigh impossible to bear.

She must, however, bear them; and bravely, too. Happily the press is an honorable institution, usually above suspicion. There are writers who are ignorant or careless, and some who will not on any account favor a new-comer; but as a rule merit is recognized and acknowledged.

In short, an over-sensitive or captious singer will make misery for herself, and the feeling is one that ought strongly to be discouraged.

I am often asked to name a few of the qualifications that are necessary for the making of a public singer, and I give them as briefly as possible.

Necessary Qualifications.

First, a voice; not necessarily a big one, but a voice, which must be pronounced one by a thoroughly competent and disinterested judge; not by mother or father, or some unconscientious professor who will say that it is one with a view to being paid for the subsequent training of it.

Second, she must have a perfectly truthful ear. A person who sings out of tune, and does not know it, will never make a vocalist—and very few who do so, even with the full knowledge of the defect, will ever be able to overcome it, unless taken extremely young, and most judiciously trained.

Were I to speak my own feelings on the subject to parents with daughters to educate, I should say, Do not have any girl trained to be a public singer whose ear is in the very least defective. I know how difficult it is to deal with parents who have set their hearts on this branch of art for their children, and I know the amount of ignorance that often prevails among the elder people. I can give you two extreme instances.

About a year ago a dear old country lady came to me in my Gloucester Place house, and asked me as a great favor if I would hear her daughter sing, as she thought her voice was a prize one. She brought a letter of introduction from a friend of mine in a southern province; and I am always ready to do what I can for those who are as really anxious as she appeared to be.

Her daughter was with her—a pale, diminutive girl, greatly over-dressed. She certainly had not the physique for a singer, but her mother kept touching my arm and saying, "Wait till you hear her! You'll wonder where the voice comes from!"

I sat at the piano and asked her to sing up the scale. I certainly did wonder. Her voice was full and rich, and powerful enough to fill La Scala; but, instead of starting on *do*, she hit off *fa*, and ran up an irregular and greatly slurred cadence, ending, I think, on *do* sharp in alt.

I struck the key-note over and over again, and bade her sing it with me, but she was evidently unable to do so; and even when she succeeded in getting a trifle nearer to it, she started off at a terrific tangent, and always landed somewhere up in the clouds.

Her mother stood by, smiling and nodding, and beating time, or trying to do so, with her comfortable-looking foot on the polished floor of the room; and when I stood up with an ominous shake of the head, the old lady burst out with, "There, now! Isn't that a fine voice? Folks south say sometimes that she sings out of toone; but I say it's only a little natural wildness!"

Another time an elderly gentleman brought his daughter to me—a splendidly-built, confident-looking girl, with magnificent fair hair, dressed in most showy fashion. He wanted to force a large fee upon me for hearing her sing, and assured me that she was quite ready for concert engagements, although her teachers had been doing her injustice, and striving to keep her back.

"It was only yesterday," he said, indignantly, "that I found her practising a song with one sharp, though a month ago she had one with four! Belinda, my dear, sing 'My Mary of the Curling Hair,' for Madame Nordica."

Belinda went boldly to the piano and began the well-known song. Never, while I have life, shall I forget its effect. She started playing it in E flat, began singing in E major, and held steadily to the quaint arrangement to the very end.

Her phrasing was dreadful, and she breathed in the middle of every second or third word, thus: "My Ma- (breath) ry of the Curl- (breath) ing Hair!"

The delighted father inquired what I thought of the performance, and in a mischievous as well as politic spirit, I answered, "Well, she did more with it than I could myself," which was as true as it seemed satisfactory to the parent.

The next day I was talking with the manager of a rather good series of concerts, and he said, "I have given your young pupil, Miss So-and-So, a promise of an engagement."

Greatly surprised, I denied that she had ever been my pupil, and inquired if he had heard her sing. "No," he said, "but her father told me he had your assurance that she sang better than yourself; and in any case she has grand hair, so she'll take!"

I subsequently learned that the rehearsal brought forth such astounding results that the promised engagement was cancelled on the spot; and I can only hope that the girl is not still going about trading on being my pupil, and securing promises of engagements on that, and the glory of her hair.

Other Requisites.

The third requisite for a would-be public singer is *physique*. She need not necessarily be tall or stout, but she must be strong, or she will never stand the preparation, much less the after fatigues of the profession.

A great deal of strength may be acquired by keeping suitable hours (early to bed, and early to rise), eating plain, wholesome food at regular intervals, maintaining, so far as is possible, an even temperature of body, and taking regular and wholesome exercise, in the house when the weather is too inclement out of doors. But the girl who is naturally delicate, or has any recognized physical defect, will not, in my opinion, do well to train as a singer.

A fourth requisite, and a most important one, is perseverance. It is useless for a vacillating, indolent, easily discouraged girl to seek a career of public vocalism. She must work, and work hard, too, without expecting any phenomenal results for a very long time; turning a stony ear to flatteries and temptations to idleness, and placing confidence only in the verdict of the master to whom her teaching has been entrusted.

Study, work, and an endless striving after perfection, must be her occupations; and nothing that interrupts these ought to be encouraged or accepted. The number of mediocre singers with which the market is at present flooded, is lamentable to contemplate. They are not actually incompetent, but they will never rise to anything above mediocrity, because they stopped study at that point, and launched themselves in shoals upon the already over-crowded market.

If they eke out a slender living it is the most they can hope for, and very many cannot do even that; while as regards teaching, there are quite as many teachers as pupils in every large city of the world.

There are, of course, many clever girls, with fairly good voices and correct ears, who would like to sing, but in a private way, and to those I say: Go to a first-class master from the beginning, or else when you do so at the end, your money and his time will be spent in undoing the mischief caused by the instruction of an inferior predecessor.

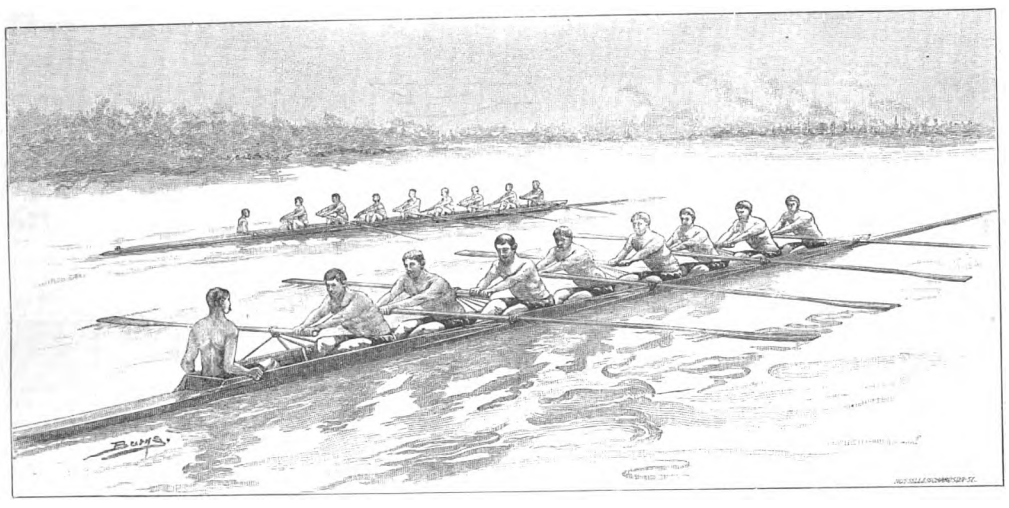
Go to a good man, and work for him, and remember one golden rule: Never, when in company, do the utmost you can at singing; always keep something in reserve, and strangers will then never know how much you have in hand. If you can sing C with a slight effort, do not go beyond B natural; and if this letter is the end of your tether, content yourself with showing off a note below.

Don't forget this. You may on state occasions come out at your strongest; but let such be rare, and always remember that there is nothing meritorious or pleasure-giving in screaming high notes. Some of the best singers of the present day have a comparatively limited compass, and never attempt to go beyond it.

Above all, be obliging when you can sing, but know also when to leave off. Some persons never do. Bear in mind that while the best song in the world is not worth pressing for, there ought to be such a thing as a limit to our obligingness, in view of the fact that in every company there are non-lovers of music, who think that more than two songs from one vocalist are a very decided bore.

In conclusion let me advise amateurs to be very careful about attempting *roulades* or shakes, unless perfected in them by very long practice under a good master. It is lamentable to hear the present-day attempts at florid singing; the slurred, scamped cadences, and spasmodic, uneven shakes, with the tone lowered and raised, until it sounds as though the singer were snapping or barking at the subject, instead of executing an even trill.

Ornate singing is not the most pleasurable to very many listeners, and ornaments, unless perfectly executed, are at all times much better dispensed with. A simple, plainly-written song, if endowed with taste and the truthful spirit of the singer, will please a thousand times better than the most florid *morceau* that is either scamped or indifferently gone through.



Besides, if ornamentation is not indulged in, nobody can possibly tell what hidden depths of riches in that way may be lying concealed out of sight.

UNIVERSITY BOAT-RACING.

By the Captain of the Harvard Crew of '89.

Few of the thousands who witness the annual boat-race between Harvard and Yale realize what care and time have been expended to "form" the crews as they come to the line at New London.

Fewer yet, perhaps, know anything of the history of the development of that form, beginning with the work in the old wooden boats, and coming down through the stage of greased seats and leathern trousers to the modern carefully balanced rowing in a paper shell.

Intercollegiate rowing in the United States began with the race between Harvard and Yale in Lake Winnipiseogee in 1852. The contrast between the work of those days and the present is strikingly illustrated by a remark, attributed to a member of the Harvard crew of 1852, that "They had not rowed much, for fear of blistering their hands."

This first race was rowed in eight-oared gigs. The Harvard boat, which was considered a very good one, was thirty-seven feet long and three and a half feet beam. Each seat had a cushion, and the oars were rowed against flat thole-pins fitted into the gunwales.

This boat was used thirteen years, and surely was a great contrast to the paper shells now rowed. These are sixty feet long and two feet wide, and have seats sliding in some cases as much as twenty inches. A new boat is provided every year, and each weighs complete less than three hundred pounds.

Once started, the boat-race soon became an annual feature. With the exception of 1859 and 1860, when Brown entered a crew, Harvard and Yale rowed alone until 1872. Then a rowing association was formed with other colleges, and in 1872 six crews rowed, and in 1873 eleven.

These races were not satisfactory, and in 1876 occurred the first eight-oared shell-race in America, at Springfield, Mass., between Harvard and Yale. Since then an annual race between these two colleges alone has been rowed at New London, Conn.

The change in the methods of training the men has more than kept pace with the change in boats and rigging. The work of a few years ago would seem ridiculous to-day. It was formerly the custom to allow to the men the use of very little water and few vegetables, and to reduce their flesh as far as possible by training. Great suffering from intense thirst resulted. The work done was very hard, and frequently long runs were taken in the mornings before breakfast.

As a result, some of the crews could not row in the race nearly as well as they had rowed in practice a long time before.

Now the men are encouraged to eat vegetables, and are allowed all the water they want; but the work done is still as hard as the men can stand and keep their strength and perfect health.

The remark is often heard at New London that the crews seem to row easily in the race, and that no one appears to exert himself particularly. This fact is the sure proof of good work; for in the best crews the men are so perfectly alike in their motions, and work so smoothly, that the most practised eye can scarcely perceive the tremendous effort each one is putting forth.

The two crews of 1890 were of unusual size and strength, averaging about one hundred and seventy pounds in weight, and about six feet in height. A brief general account of the way in which sixteen such men are brought into the wonderful form in which the crews of 1890 rowed, may be interesting.

A few students come to college with some experience in rowing, gained at the preparatory schools; but this number is very small. Once in college, the call for candidates for the Freshman

Digitized by Google

crew brings together the men who wish to row. The assembly frequently comprises about one-fourth of the Freshman class; and of course the least promising must be freely weeded out. The work begins at once, and in the course of a few months only the most promising men remain.

Generally, in the selection of the Freshman crew, preference is given to men likely to be found good later for the university crew. So far as possible, tall, graceful, easily-moving men are chosen. But in the spring, when they get upon the water, there is usually much disappointment; for some of them will never learn to handle an oar, and many fine-looking fellows are dropped on this account.

The Freshman crew, thus chosen, rows in the class races, and at the New London Freshman contest; and from the end of the year each man has a more or less definite reputation with regard to the great rowing qualities—pluck, skill and endurance.

In the autumn, too, the university captain collects his candidates. Generally he has some men who have already rowed in the university crew, and others who have been in the Freshman and class crews. He has also a few new men, whom he has undertaken to "break in."

These last cause him much trouble. He has faith in their pluck and endurance; but can they acquire in time the necessary skill?

With this unevenly matched set the captain of the university crew begins his work. Usually some rowing is done during the autumn, but it generally counts for little, for most of the best men are playing foot-ball.

About the first of January the regular training begins. Smoking and the use of liquors are forbidden, and regular hours are established. The daily work consists of two parts: first, a walk or run, or the two combined, of from two to ten miles, the distance depending upon the weather, the condition of the men, and other circumstances; and second, the drill of the men in form.

This drill is the really tedious work of the year. It consists partially of calisthenics, directed to the general development and "set up" of the body, and partially of the regular rowing motions, for which hydraulic rowing-machines and rowing-tanks are used. The machines are so constructed as to give a resistance similar to that of an oar, and the seat and rigging are the same as in a boat.

The rowing-tank is long enough so that a box the length of a shell may sit in it, and this box is rigged exactly like the boat. Oars a little "cut out" are generally used, and this, with the current of water created by the oars, gives work somewhat like real rowing, though not by any means exactly like it.

Many days are spent in teaching the men to sit well forward on their thighs, so that the whole trunk may swing freely; to hold the oar properly, and to use the sliding seat. The faults to be overcome are many, but the patience of the "coach" is generally inexhaustible.

Slowly he causes one fault to disappear, and then another. No one who was not fully aware of the ambition of the men could understand how completely their movements are changed in a few weeks. Of course a few take to the drill naturally, but for most men it requires the closest application and constant work.

Toward the end of this indoor drill, the crew generally looks promising. The men have learned to move together with precision, and everything seems nearly perfect. But all anxiously look forward to getting on the water; for experience proves that much of the drill must be done over again when the men are in a real boat. Many who seem nearly perfect on the machines and in the tank, can never learn to row a shell.

The first few days on the water are generally discouraging. The use of the oars confuses the men; and until they get them under control there is little room for "form." After a short time, however, the work of the winter begins to tell, and when the crew can adapt their work to the motion of the boat, all goes well.

Weeks are spent on the slightest details, and finally the men begin to show indications of the form in which they will row the race.

Generally before the crews go to New London they are sent over a course of four miles a few times at top speed, to test the endurance of the men and to accustom them to rowing the distance hard. These "time rows" are severe tests, and are dreaded more than the race; for the men must put forth their greatest efforts with nothing to excite them.

The crews generally go to New London a week or ten days before the race; and there is spent the most delightful part of the year. The river and harbor are very beautiful, and the men live about four miles up the river, at its prettiest part. The rival crews are in regular quarters, which are about a mile apart. Here the crews generally get their first sight of each other, and this introduction is looked forward to with intense interest.

To the inexperienced observer, the two crews often seem to row exactly alike; but the men, who have been carefully trained for months, note every fault and virtue in the opposing boat.

The crews seldom or never run alongside each other. No actual test of speed is made until the day of the race. Probably neither crew would really like to know which is the faster until that day; for the excitement of guessing the result is most fascinating.

Up to within a few years each crew tried all sorts of means to learn the time made by the other over the various miles and half miles of the course. Amusing stories are told of substitutes running along the shores, stationed with watches at the flags, and perhaps patiently waiting while the crew they were watching for is well up the river, quietly practising.

One year, it is said, one of the men, disguised as a farmer, anchored a boat near the starting flag and pretended to fish. One of the other crew, recognizing him, rowed out, and, greatly to the amusement of those on shore, entered into a conversation with him and revealed his identity.

The Freshman crews have no fear of racing against the university crews of the other colleges, and it is not an uncommon sight to see a very pretty race for a short distance between these crews.

The crews generally have a pleasant time in the intervals between the rows. The country about the quarters is wild and pretty, and there is good fishing. An occasional game of base-ball between the Freshmen and the university enlivens things, and tremendous scores are run up amid great enthusiasm.

An interesting feature of the last week is the ceremonious call of each crew upon the other. On the appointed day the launch takes the crew to their opponents' quarters, and the captains formally introduce the men.

To a keen observer the scene must be very amusing. In cases where the men already know each other and are interested in the same things, outside the race, all goes well, and the race is for the moment forgotten. Generally, however, the conversation is somewhat formal, and the men stand apart, eying one another critically, until it is time to depart.

On the day of the race the river presents a scene never to be forgotten. The head of the harbor is crowded with gaily decorated sailing yachts, and all the way up the course lie steam yachts ready to follow the shells.

On the right bank is the observation train of thirty-four platform cars covered with crimson and blue bunting, lying ready to go with the crews. As the two shells are rowed over to the start the cheers, the blowing of steam-whistles and the booming of cannon are deafening. In a few moments the boats are off; and from twenty to twenty-five minutes later the work of the year is over.

"AN ORDER FOR REMOVAL."

[*To the Lord High Chancellor of The Rats in Our House.**]

We've decided, good sir, that you and your clan
Have lived here so long on the "free for all" plan,
That now 'twould be best both for us and for you
If you'd seek a new home without further ado.

We don't like to threaten but we've heard quite enough
Of your rattle-te-bang, your scamper and scuff,
You have dined in our pantry and climbed up our stairs,
You have weighted our burdens and doubled our cares.

In the silence of midnight through our slumbers you've come
Like the charge of an army at roll of the drum,
And now, most politely we ask it, we're sure,
Other quarters at once we hope you'll secure.

But, ere you depart we'll tell this for your good,
For rats like us mortals can't live without food.
Right over the way in that mansion so fine,
A good place you'll find for your ratships to dine.

There are stores in the pantry, while sly cats there are none
To disturb your arrangements for plunder and fun,
So success to you there, but, no more must there be
Either rat-tail or whisker beneath this roof-tree.

CLARA J. DENTON.

* There is an old and amusing superstition that when a house is infested by rats they may be driven away by writing them a threatening letter, and at the same time indicating a place of harbor for them. The superstition affirms that the place indicated will at once be overrun with them.

A TERRIBLE TEMPER.

He was not a "red-haired" boy, but his temper, when roused, was a dreadful thing to contemplate, even from a safe distance. His hair was black as a crow's wing. I take pleasure in settling this point beyond controversy.

American boys very rarely lose entire self-control, even when excessively exasperated and very angry. It is asserted that there is no country in the world—unless it may be China—where schoolboys agree so well as in the United States. English and German schoolboys are said to fight far more frequently than our own, and French and Spanish boys at school frequently engage in sharp altercations.

Certain English and German writers defend this readiness to fight as a sign of desirable energy in their boys. It may be a symptom of energy, but it is also a symptom of brutality. After a long acquaintance with schoolboys in the United States, I am convinced that, as a rule, they avoid fights not from lack of animal courage but because of less excitable temperaments, and greater power of self-control.

We know from a hundred recorded instances that when real courage is demanded, in case of fire or flood, volunteers from among our schoolboys have never been slow to risk and even lose their lives. It has often been remarked, too, that these young heroes were the quietest, most self-contained boys in school, and not the fighters.

Clement Webb was oddly misnamed, for "Clement" means mild, and there was little that was mild in Clement Webb's disposition. His name should have been Ferox, or else Atrox, if names are to depict character.

I came to know him through teaching the school in the village where he lived. It was a place of fifty or sixty houses, two stores, a church and post-office. It was my very first experience in teaching, and was entered upon to eke out my funds as a student.

The school supervisor, who was also the pastor of the village church, examined me long and faithfully in arithmetic and English grammar. Indeed, he tried so hard to puzzle me in compound proportion and cube root that I suspected that he had some ulterior purpose. But I was fresher from these studies than he, and held my own.

Still he appeared to hesitate. At last he said, "You look rather young for this school. I'm afraid you will have a hard time here. It is a difficult place. I wish you had come to it with more experience; I wish you were older."

This was a hard objection to meet. I had thoughts of declaiming to him a paragraph from William Pitt's great speech: "The atrocious crime, sir, of being a young man, I neither attempt to palliate nor deny." But instead of saying this, I assured the supervisor that I was getting older every day, and that if he would kindly give me some needful hints from his own wide experience of the people, I hoped I should be able to get on.

"Well, well, my boy!" he replied, laughing, "I see that you have some of the wisdom of the serpent, and perhaps a little of the guile as well. I am going to sign your certificate. But you will need all your wisdom, and perhaps the guile, too, to get on here and give satisfaction. The main thing here, just at present, is to give satisfaction."

I did not quite understand this hint. I had supposed that to "give satisfaction" it would only be needful to perform faithfully my duties as a teacher, which I should try to do. But I soon learned that this was not enough.

The people of the village were divided into two bitterly hostile parties. The school agent who had hired me belonged to one party, and had been elected after a hot contest. I was his teacher and the teacher of his party. Whatever I did, he and his clique were bound to be satisfied with.

That was all very well; but on the other hand, I was not the teacher selected by the other party; and the opposition was equally determined not to be satisfied.

While the first party were very cordial to me, the other party held aloof and scarcely noticed me at all. This difference extended to the children in the school, so that I discerned very quickly to which party a pupil belonged. About half were cheerful and obedient, while the others regarded my arrangements and all my words with sullen distrust and aversion.

I do not know a more disheartening situation than to be ground thus between the millstones of a school district feud. Under such circumstances, the teacher is forced to be a "trimmer;" and it was while trimming my sails to escape the squalls of the feud, that I ran afoul of the boy with the terrible temper.

School had been in session a little more than a week, when one day, as I entered the house at the close of the noon intermission, I heard screams, shouts, the rattling of the stove and other sounds of disorder.

Stepping quickly into the room, I saw this lad Clement—then in his fourteenth year—bareheaded, with disordered hair and clothing, and eyes that rolled wildly, rushing about among the benches, aiming furious blows with a broom-handle at any and all of his fellow-pupils, girls or boys.

I spoke sharply to him, and then, as he paid no heed, attempted to seize him. He turned upon me fiercely, and struck me with all his strength. Thereupon I laid hold of him in earnest; but I had great difficulty in mastering him, for he bit, scratched and kicked savagely.

He was like a maniac. I was obliged to thrust him into a wood-closet and shut him up there, for the time.

Naturally, my budding dignity as a schoolmaster was somewhat ruffled. Besides, Clement had hurt a number of the pupils. I intended, as soon as he had cooled to a realization of his offence, to punish him severely; and I considered the relative merits of a green-hide, ferule and birch withes. I might have had him driven from the school, but I must confess I desired satisfaction, myself, for his ferocity.

Something in the wildness of his behavior, however, struck me as singular. I kept him in the closet during the afternoon, meditating as to the best course in the matter; and it was not till the last pupil had left the house, at four o'clock, that I opened the closet door and bade him come forth, not entirely sure that he would not attack me again.

But he came out looking very woe-begone indeed.

"What led you to fly at me and at the others after that murderous fashion?" I asked.

"They plagued me! they tormented me!" he exclaimed, the tears beginning to start in his eyes. "They know I have an awful temper. They know it runs away with me, and that I can't stop it. They know it; and they kept hectoring me half the noontime on purpose to stir me up."

"But I had not hectored you. Why did you strike me?" I demanded.

"I do' know. I got a-going, and I couldn't stop myself."

At first I had little faith in such a statement of moral helplessness. I told the boy, rather harshly, that he could control his temper if he made a proper effort to do so.

"Oh, I do try, sir!" he exclaimed. "I try awful hard. I know it's spoiling me; but as soon as they begin to torment me, and I begin to think about it and look at them, it keeps coming on blinder and blinder till it's all a blur in my eyes, and I can't stand still another minute; and then I don't know what I do!"

In my inexperience, I did not know exactly what course to take. I had not the heart to punish the boy. I sent him home, simply bidding him take care for the future.

When I mentioned the matter at my boarding-place, my landlady, who assumed the task of keeping me informed upon all matters in the village, told me that Clement's father, now dead, "was another just such firebrand before him;" and that it was common opinion that Clement would yet seriously injure some of his schoolfellows in his "mad fits." Former teachers had punished him. But there was a feeling abroad that he had not been flogged severely enough.

"He may kill some one and have to go to the gallows for it when he gets older," my landlady added.

A few days later I heard that Clement had indulged in another of his fits of temper, while skating on a pond, and had chased the other boys with stones and clubs. I was glad that this offence had occurred outside my jurisdiction; but that excuse did not avail me long.

A few mornings afterward, as I approached the schoolhouse, I saw Clement hotly pursuing two other lads, with the iron stove-shovel in his hands. When an older boy wrested it from him, the infuriated lad snatched his jack-knife from his pocket. I do not know what he would have done if I had not been in time to seize him from behind and disarm him.

He was put in the wood-closet again, struggling violently and threatening us all.

I ascertained that a number of the other boys were in the habit of provoking him out of pure mischief. One, in particular, would go on tiptoes around Clement, whispering to the others, "Step easy, boys. There's dynamite inside that fellow. Don't jar him, or he'll go off and blow us all sky-high!"

I tried to prevent the boys from goading him to these fits of anger; but my motive was promptly misconstrued. Clement's family belonged to the party that upheld the schoolmaster; while several of the children whom he had struck were of the other party.

Very soon the accusation went abroad that I would not punish Clement because he belonged to the agent's clique. Before I was aware, the supervisor had been appealed to to turn me out, on the ground that I upheld a dangerous and unruly pupil in assaulting the others with fire-shovels and knives.

Instead of visiting the school officially, the clergyman-supervisor first made me a private call one evening, and told me what had been said.

I gave him my impressions with regard to Clement, and related the circumstances.

"It is quite possible that the lad cannot control his temper," he said, thoughtfully. "Some strange traits and humors are inherited, and descend from parent to child. But you will have to do something with him. You must put a stop to his violent behavior in some way, or else there will be a public commotion which we cannot tide over."

I perceived that the supervisor, too, was obliged to be somewhat of a trimmer. Still, I shrank from administering severe chastisement. As I lay awake that night, thinking it over, Clement's tearful protestation recurred again and again to my mind: "As soon as they begin to torment me and I begin to look at them, it keeps coming on blinder and blinder, till it's all a blur in my eyes, and I can't stand still another minute."

A few years before I had bought a small magic lantern for evening entertainments. Thinking that it might be useful for me in amusing the children, I had brought it in my trunk.

Among the circular colored pictures on glass, which accompanied it, was one of "a Malay running amuck." It represented the man rushing furiously among a crowd of people, with a drawn dagger. Clement's "temper fits" bore some resemblance to the "running amuck" of the Malays; and I wondered whether a mental antidote for the one might be extracted from the other.

An idea occurred to me, and I acted upon it. I rose betimes in the morning, and going to the village tinsmith, had him make for me a short tin tube, four inches long and an inch and a half in diameter. Over one end of the tube I had the smith solder a cap, and perforate the centre of the cap with an awl, to serve as an eye-hole.

During the noon hour that day, I set the little circular glass picture of the Malay in the other end of the tube, and after school that afternoon, asked Clement to remain with me.

He took his seat with a look of sullen gloom on his face. No doubt he expected punishment, for he knew that there was trouble abroad, and that he had not been punished for his last two offences.

"Clement," I said, when the others were gone, "I am at a loss what to do with you. I cannot let you go on assaulting the others. Why do you not control your temper?"

He began to cry and protest as before.

"Why can't they let me alone?" he exclaimed. "They know I can't help it."

"But do you try to help it?"

"Oh, I do, I do!"

"But how do you try?"

"Oh, I do' know; but I do try," he protested.

I took out my tube and asked him to hold it to the light, place his eye to the awl-hole, and tell me what he saw.

He did so, and described the picture. "Oh, he's a-going it awfully; he's stabbing and cutting and frothing at his mouth!" He turned and looked at me, with a guilty, appealing glance. "That's the way I do, isn't it?" he said, slowly.

"Yes," I replied; "that is very much the way you do. But I think you can help it. And now what I want you to do is to take this tube and carry it in the breast pocket of your jacket. Whenever any one 'hectors' you, and you feel your temper begin to rise, I want you to turn aside four steps and take out this tube and look into it."

He looked at me wonderingly.

"Yes," I went on, "look at the picture carefully, count all the people in it, and think only how savage and crazy that Malay looks, running amuck. If the boys and girls continue to torment you, go still farther off, and keep looking steadily at the picture.

"If you do that, just as I tell you, there is no danger whatever that you will run amuck yourself. Remember, it is a secret between us. Let no one else look into it."

He promised faithfully to do as I bade him.

A few days afterward I heard, through my landlady, that I had given Clement Webb a "charm" for his temper. Public opinion appeared to be divided on the question whether it was of the nature of a medicine or a talisman.

My object, of course, was to turn the boy's eyes and thoughts away from his tormentors. It was only an experiment; but I had no more trouble with Clement that term.

Clement carried out my instructions; and I have often seen him walking away from a group of shouting boys, and looking earnestly into his tube.

The other pupils regarded the "charm" with some little awe, as well as curiosity; and the grown-up malcontents of the hostile clique in the district were so much mystified by what they heard of it that they neglected to invent fresh charges against me.

I managed to pull through the term; and my friend, the supervisor, kindly remarked, when he paid the school his final visit, that I had got along better than he expected.

With that somewhat doubtful compliment I was obliged to be content.

THE CHERRY-BOUGH.

In a new poet's and a new friend's honor
Forth from the scornèd town and her gold-getting
Come men with lutes and bowls, and find a welcome
Here in my garden,

Find bowers and deep shade and windy grasses,
And by the south wall, wet and forward-jutting,
One early branch fire-tipped with Roman cherries.
O naught is absent,

O naught but you, kind head that far in prison
Sunk on a weary arm, feels no god's pity
Stroking and sighing where the kingly laurels
Were once so plenty,

Nor dreams on strength of my fair tree that knew you,
How I from revels and strange faces turning
Lean most to-day when most my heart is laden
With your rich verses!

If long ago, in other gentler weather
Ere wrath and exile were, you lay beneath it,
(Your symbol then, your innocent wild brother,
Glad with your gladness,)

What has befallen in the world of wonder
That still it puts forth bubbles of sweet color,
And you, and you that burst our eyes with beauty,
Are sapped and rotten?

Alas! When my young guests have done with singing,
I break it, leaf and fruit, my garden's glory,
And hold it high among them, and say after:
"O my poor Ovid,

"Years pass, and loves pass too; and yet remember
For the clear time when we were boys together
These tears at home are shed, and with you also
This bough is dying."

LOUISE IMOGEN GUINEY.

For the Companion.

HELPED.

A few years ago, two young men who belonged to influential families in a manufacturing city sat together in a cozy little reading-room, reading the morning papers.

"That mill-boy Jones who murdered Saunders, down at the Point, is sentenced to be hanged, I see," said one of them.

"Yes," said his companion.

His friend laid down the paper. "I notice," he said, thoughtfully, "that he had neither father, mother, friend nor comrade to stand near him in the dock."

"No? What of it?"

"Perhaps that was the reason he was there."

His friend did not care to follow his meaning, and rose, yawning, to go out. He paid no more attention to the case, except to go out of town on the day of the hanging, that he might hear nothing of it. He always protected himself from pain or trouble.

But his companion kept the thought of the friendless murderer on his mind. There were scores of other mill-boys in the town. Had they friends? Did any man care for their souls?

In a quiet way he gathered four or five of them into a class. These he taught to read and write. He learned also to know them and their companions, to look at life from their point of view, to understand their hopes and needs.

He soon succeeded in interesting some of his friends in them, and they established a reading-room, and one or two coöperative societies, temperance clubs and an evening school. In six years he had succeeded in elevating the whole mass of workingmen in two or three of the mills to a higher level.

All of his work grew out of that one chance thought. A small seed, but it fell upon good soil.

God causes such seeds to fall upon our minds and hearts every day; a hint of good work to be done here, or a chance to be kind there; it may be a word, a song, a passing face in the street which summons us to climb higher in life, to be purer, truer, more like our Master.

The Sower goes forth to sow such seeds continually. It is for us to say whether the soil in our hearts on which they fall shall be hard and stony, or good ground that will yield fruit.

Modern science has banished ghosts. No schoolboy now fears to meet the shades of his ancestors, or to find gibbering spectres waiting for him as he passes by the lonely churchyard at night.

But there are ghosts that haunt thoughtful, conscientious men and women when the busy years of life are past; the neglected chances, the lost opportunities of helping those whom God sent to us to be helped; the brother who drifted out of the home life, and whom we suffered to become alien and strange to us; erring men and women who died unfriended, while we passed by on the other side; the many lonely folk who lived near us, waiting, day by day and year by year, for the word of kindness and sympathy of religious counsel which never came.

These are the ghosts that to the conscience-stricken mind will not down; that in moments of reflection make sad the evening of old age.

LEARNING FROM THE INDIANS.

It is well known that the white people obtained of the Indians the maize which is one of the greatest staple agricultural productions of the United States to-day, and which still goes by the name of Indian corn. In England, and in the Bible, "corn" ordinarily means wheat, because it is generally applied to the grain from which the bread of the common people is made. In Scotland, for this reason, "corn" means oats; and in the United States it means maize. It is not generally known, however, that the whites found the Indians cultivating corn carefully, and storing it up in bags and granaries; nor that the whites learned the art of making maple sugar from the Indians before they knew much about any other kind of sugar.

Governor Bradford's account of the settlement of the Plymouth Colony is conclusive as to the use the Indians made of their corn. On the occasion of the Pilgrims' very first landing on Cape Cod, on the Fifteenth of November, 1620, they found some deserted huts, and in them "faire Indean baskets filled with corne, and some in eares, faire and good, of diverce colours, which seemed to them a very goodly sight (haveing never seen any schuch before)."

The beauty of Indian corn, either when growing or harvested, is certainly a pleasant revelation to those who have never seen it before.

Returning to their ship, the Pilgrims "tooke with them parte of ye corne, and buried up ye rest, and so, like ye men from Escholl, carried with them of ye fruits of ye land and showed their breethren; of which & their returne, they were marvelously glad, and their harts incouraged."

Going once more to the same spot, they found two deserted Indian houses, and "also ther was found more of their corne, & of their beanes of various colloures."

This is the first mention of New England beans. The Pilgrims helped themselves from these Indian granaries, intending to pay the natives afterwards.

As to the making of maple sugar, the French settlers in Canada were learning this art about the same time that the Pilgrims were establishing themselves at Plymouth. Lescarbot, who wrote in 1606, has an account of the Indians tapping the maple-trees for their sweet sap. Many other French writers, chiefly missionaries, describe the Indians' method of gathering the sap in vessels made of birch bark; but their chief use of it seems to have been as a drink.

Father Christian Le Clercq, however, a missionary who went to Canada in 1675, has left, in French, in his work entitled "Nouvelle Relation de la Gaspésie," an account of Indian maple syrup-making and sugar-making which indicates that they had long possessed the art. He wrote:

"As to the liquor of the maple, which is the sap of the tree itself, it is equally as delicious to the French as to the savages, who in spring time give themselves to it with glad hearts. It is true, moreover, that it is very pleasant and abundant in Gaspasia; for from a very little opening in the maple-tree, made by a hatchet, enough can be distilled to make ten or a dozen vessels of it.

"What appears to me very remarkable in the juice of the maple, is that if, by boiling, the quantity be reduced to one third, it becomes a veritable syrup, which hardens little by little into sugar, taking on a reddish color.

"Of this sugar are made little cakes or loaves *(petits pains)* which are sent to France, and which in use often serve well in default of French sugar.

"I have myself," the good father adds, "often mixed this sugar with brandy, cloves and cinnamon, which made a highly agreeable liquor."

To this day maple sugar is brought into Quebec in *petits pains*, and in small cornucopias of birch bark.

A YANKEE IN COMMAND.

"All we had seen of the German Emperor, as he passed in his carriage," writes a correspondent, "was the waving plume on his helmet, which we accepted to be his on faith, that was unsatisfactory. But what could two unprotected American ladies and a German widow possibly expect in the surging crowd? Frau Wœrner suggested that we should cross over, by a transverse street, to the other thoroughfare near the City Hall; we might then have a chance 'to see things.' So we plunged resolutely into the narrow passageway. Our end was comparatively empty, and we got along well enough at first. 'That was a good idea of yours, Frau Wœrner!' I cried, as we pressed forward.

"My exultation was soon checked, however. In the middle of the street we met groups of people, who, no doubt, had also had a good idea, but in the opposite direction. They occupied the whole width of the street, and threatened to carry us away if we attempted to force a passage through them. Prudence counselled us to turn round and retrace our steps. But lo! other people, with equally good ideas, had followed us, and in a moment we were in the middle of two converging crowds.

"It was truly a tight place. A sort of gentle but irresistible force pushed on each opposite mass from behind, threatening to crush us into a jelly. Frau Wœrner, short and fat, felt it most. Her 'Ochs' and her 'Achs' were heart-rending.

"To make matters worse, a quarrel arose near us. Crowds in Berlin are not good humored, as with us in America. Some one had trodden on some one else's toes, or had knocked his hat off. Angry words were exchanged, though no blows were given. Germans, I observed, resemble very much the old Greek heroes: they palaver a great deal before they strike. And then here there was no room to move the arms. The temper of the crowd, however, had become ugly, and I was getting a little nervous.

"For a few minutes our attention had been attracted to a gentleman—an Englishman I took him to be by his appearance—who stood not far from us, towering above the throng. With some companions he had got possession of a kind of stoop, and seemed to enjoy the jamming process hugely, he laughed so heartily! He must have detected a mute appeal in my glance, for suddenly he stopped in his merriment, and with an unmistakable Yankee accent, he shouted to us:

"'From the States, ladies?'

"We nodded to him—our voices would not have been heard through the clamors around us.

"'All right, then; have no fear!' he cried. 'You will be in safety in a minute.'

"Then turning to that part of the crowd occupying the end of the street nearest to Unter den Linden, 'Attention!' he roared in German, with a mighty effort.

"His voice rang high above the din of the disputes. The noise was partly hushed. 'Attention!' he repeated, more sharply. This time there was almost a silence, and looking around, I wonderingly saw every one, men and women, even children, straightening up, and standing in the military position they were directed to take.

"'Mark time!' was the next command, and everybody obeyed, stamping in time together. 'Ready? One step forward, march!'

"What miracle possessed the motley crowd? The whole mass moved forward together, taking one step. 'Right foot now!' immediately cried our commander. 'Forward!' Again we all moved one step. 'Left! right! left! right!' he continued to cry, with increased energy, and under his ringing commands a continuous, irresistible impulse carried the whole mass toward the great thoroughfare.

"We ourselves were carried, rather than walked, past him. He smiled at us as we went by; we could only look our gratitude.

"Soon we were safe in the broad avenue, where our crowd melted away in the open space.

"The incident was mentioned in the papers the next day; they praised the quick presence of mind of the unknown Yankee. We could never learn his name, though we made many inquiries."

For the Companion.

JUNE'S DAUGHTER.

Fair Lady June, proud Queen of all the year,
With blossom sceptre in thy royal hand—
Vaunt not thyself though long thy days and dear.
Thy days and thee Time's sway cannot withstand.

Thy splendid sun may kindle the proud morn;
And the high noon may glow with love of thee:
Sunset shall laugh thy longest day to scorn,
And mocking stars its overthrow shall see.

Roses shall wither, though their lavish praise
The nightingales have chanted all night long:
Their fragrant ghosts shall throng the silent ways
Those swift-winged laureates once thrilled with song.

And thou, fair Maid, bright daughter of the June,
Dost thou not know thy youth, like hers, is brief?—
For thee the glad day, and the bird's glad tune;
And then the waning year, the wind-blown leaf.

The rising stars shall mock thy setting sun,
And watch with curious eyes thy fallen state:
Glad month! glad maid!—for both the swift sands run—
And not for month or maid shall Autumn wait.

LOUISE CHANDLER MOULTON.

FEMININE HUMOR.

The people who have sometimes uttered the very unsafe generalization that "women have no sense of humor" must be unacquainted with the genuine American girl, whose gift for a sort of humor which almost seems to be the peculiar property of this country—comical comparisons and odd exaggerations is beyond doubt very great. A certain young New York girl of eighteen is well known to her friends to possess this sense of humor. Of a particularly haughty and repellant woman she remarked: "She steps as if the ground were not good enough for her to walk on; and therefore she always wears rubbers!"

She said of a young man who had not much liking for hard work, but who complained that he could find nothing to do: "That's why he wears glasses; he has worn out his eyes looking for something nice to do."

She remarked one day of a particularly dishevelled specimen of a Skye terrier, "Dixie, you are the most ravelled little dog; you must have been woven without any selvage!"

Of a very, very old house, superficially "spruced up," she said that "nothing held it together but the paint."

She advised a young man, who was excessively proud of his bass singing, and who had sung a very low note, to "let another tuck out of his voice."

There was humor, as well as pathos, in her remark of a forlorn and very thin old horse: "Poor thing! It looks as if it had been pastured for twenty years on a plowed field."

It was a Western girl who, in visiting an Eastern acquaintance who was very proud of her descent, and who showed her first one and then another precious possession which was "ancestral," exclaimed pensively:

"Dear me! I haven't so much as an old white hat to prove that I ever *had* a grandfather!"

Another girl, who was a student at a school of technology, and who happened to be extremely slender, furnished a "chemical analysis" of herself, which, after enumerating several articles of clothing in the style of chemical ingredients, ended with the item

"Of girl, *a trace*."

This kind of humor is very different from the biting wit which used to be recorded of the famous women of European drawing-rooms.

On one occasion, it is said, a vain and foppish young Scotch nobleman, in Lady Blessington's drawing-room, was talking about his countrymen, when some one asked him why it was that all the Scotchmen abroad seemed to be intellectually superior men.

"It is because," said the young lord, "we keep well qualified watchmen at all the roads leading out of Scotland, who suffer no man to go out of the country who is not thoroughly intelligent."

"Then," said Lady Blessington, "I suppose your lordship was smuggled?"

DANGEROUS HANDFUL.

A Georgia farmer, living in rather an obscure part of the State, whose labors are such as to compel him to be in the field much of the time, says that one day last year he was engaged in clearing up a field covered with a thick under-growth of bushes and briers, and had employed two negroes to help him. The three men built a fire in the middle of the field, and gathered the brush in their hands and burnt it up.

I was working at some little distance from the fire, and of course had to travel back and forth with every handful. I had just returned from the fire, and had stooped to pick up another handful of brush, when I was conscious that I had hold of a snake, and mechanically tightened my grip.

I looked down and saw that I had a good-sized rattlesnake. I had grabbed him by the neck in such a position that so long as I kept a tight hold he could not strike.

As soon as the snake saw that he could neither get away nor strike me, he wound his body around my arm, which was bare to the elbow, and attempted to pull his head through my fingers. I tell you, I never until that moment realized what tremendous strength there was in a snake's body; it seemed almost as if my arm were being pulled to pieces.

I had grabbed his neck between my fore and middle fingers, so that I was at a great disadvantage; but I knew that if he once got his head free, I should be struck not once only, but as many times as he pleased; so I held on and squeezed for dear life.

I shouted to the negroes to come over and kill him, and they came at once; but as soon as they saw what it was I had hold of, they would not come near me. Nothing that I could say, neither threats nor persuasions, would induce them to give me help. So all I could do was to hold on and squeeze my snake.

After what seemed an age, and when I was about ready to drop from exhaustion, I felt the coils begin to loosen, and with that encouragement I squeezed harder than ever. Gradually the snake relaxed its grip, and at last the body hung limp and motionless from my hand. I walked over and dropped it into the fire, and I can tell you I watched it burn with a mingled sensation of relief and thankfulness.

ELECTRIC MOSQUITO NET.

One of the most singular uses to which electricity has been put in this electric age is announced from Paris. A French *savant* has invented an electric mosquito bar, which is, he believes, destined to replace all other means of defence against flying insects. Making use of the principle of electric execution, he has constructed a sort of screen or wire-work cage, with a small electric light in the centre. The mosquitoes, attracted by the light, attempt to fly through the interstices of the cage; but if they so much as touch the tips of their wings,—and they cannot fly through without doing so,—they are struck by the current of electricity with which the screen is kept constantly charged.

This mosquito-trap, which, under a test, is said to have killed innumerable victims, can be maintained only by the aid of a small electric apparatus, so arranged as to send alternative currents through the wire network.

It is to be supposed that the person to be protected takes refuge on the interior of the netting, with the little electric light and the generating apparatus. It is not too much to say that there are some people who would rather have the mosquitoes.

Inasmuch as, if the electrified netting will keep out the mosquitoes, a netting made a little closer would keep them out without any electricity, it does not seem likely that this invention is destined to any great usefulness.

It reminds one somewhat of the story of a Dutchman who went about selling a preparation for poisoning a certain kind of troublesome insect.

"You take de insec' mit de finger an' de dumb of von handt," said the peddler, "an' den mit de odder handt you put de pizen in his mout."

"But," said a farmer, "if you've got to catch them and hold them that way, why can't you smash 'em and done with it?"

"Vell," said the Dutchman, "dot's a good vay, too!"

The electric netting also suggests the story of Patrick's experience with an ordinary mosquito canopy. He found one in a room that he was to sleep in one night, and after studying it for a time, made up his mind how it was to be used. This was the way he related his experience the next day:

"It's an illegant thing I found in me room lasht noight. There was a kyoind of a fishing-nit for minnows over me bid. I made a hole through it wid me knife, an' ivery moskater in the room wint into the nit through the hole. Thin I shtopped up the hole wid me hat, an' shlept on the flure all noight, comfortable-loike, wid niver a boite at all!"

SECURING SILENCE.

John Leech, whose humorous pictures made *Punch*, was driven out of London by the hand-organs and street-bands. Their noise affected his nerves and prevented him from drawing, and though he tried again and again, he was unable to silence them. Mr. Montague Williams tells, in his "Later Leaves," of a lawyer who did silence a cornet-player who spent most of the day in playing his instrument.

The lawyer, poor, old and eccentric, lived in two attic rooms beneath which resided the cornet-player. Annoyed at the man's persistent playing, the lawyer remonstrated repeatedly, but in vain. One afternoon, the man in answer to the lawyer's protest remarked that an Englishman's house was his castle, and that he should play when and as long as he pleased.

That night, just as the musician had fallen to sleep, he was awakened by an unearthly din. A terrible pounding was going on in the room overhead. He flung a blanket about his shivering body, and ran upstairs. There was a light in the lawyer's room, the door stood open, and in he rushed.

What he saw took away his breath. The old lawyer was sitting on the floor, singing a lugubrious ditty, and driving large nails into the boards with a mason's hammer. The cornet-player entreated him to desist. The answer was another nail driven into the floor, another, and yet another. Then the lawyer paused and said:

"You make my life a misery to me all day long, and now that the night has come it's my turn."

Down again came the heavy hammer, and another nail was driven home.

The cornet-player, seeing that the lawyer was master of the situation, agreed not to play during the day, if the lawyer was at home. The truce was made, and silence reigned.

WHAT WAS WANTED.

The ability to state a case so clearly as to render misunderstanding impossible is a valuable gift, but, unfortunately, all persons do not possess it. A political convention was being held for the purpose of nominating a candidate for an important office.

The district was a close one, and the necessity of selecting a popular man was thoroughly recognized. A speaker had just nominated a personal friend for the position, and in an elaborate eulogy had presented in glowing terms his manifold merits, especially emphasizing his great services upon the field of battle, as well as in the pursuits of peace.

After he had finished, a voice was heard in the rear of the room. "Well, what we want is a man that will run the best."

In an instant the orator was again upon his feet. "If you think this Convention can find anybody who can run better than the gentleman I have nominated, I point you once more to his well known war record."

AS HE USED TO DO.

What a man has been must always affect what he is, whether for good or ill. A street-car conductor is reported by the New York *Sun* as talking about some of the odd characters who find employment on street railways.

One of our conductors had formerly been a Methodist minister. How he came to be running a street-car I never knew, but he did his work well, though he had some peculiar ways.

He had been on the front platform one day, collecting fares, and when he came back to the rear platform a passenger told him that a man had got on at Houston Street, and was sitting inside.

The conductor stood in the doorway and looked in, but he could not be sure of his man. Then he said with all calmness, "Will the gentleman who got on at Houston Street please rise?"

The gentleman stood up like a man, and paid his fare.

THE PUDDING-BAG STRING.

Sing, sing, what shall I sing?
The cat ran away with the pudding-bag string!

It was Saturday afternoon, and Nancy, the cook, was busy making her very best pudding for the Sunday dinner.

No one dared to ask how many eggs were used, or how many hours it took Nancy to stone the raisins and clean the currants that were put in it.

It was a real Christmas plum-pudding, but once in a while, when she was feeling very good-natured, Nancy would make it for a Sunday dinner—the only difference being that then she didn't send it to the table all in a blaze, with a sprig of holly standing in the middle.

There was a spicy smell about the house that told what Nancy was doing, but if you had seen her you would have known without the smell, for when she was making this pudding she always put on an apron made of flowered chintz, and tied up her head in a bright pink handkerchief.

Moreover, she used one special, bright tin pan to mix it in, that was never brought out of the closet for anything else. It was only taken down from its peg when needed for the Christmas pudding, or when it was to be scrubbed, for Nancy kept it very bright.

Cook Nancy had mixed and beaten, until eggs and sugar, cream, spices and fruit, were all beaten up into the batter that looked good enough to eat as it was; and now she put out her hand for the pudding-bag that she had placed on the corner of the table before she began the mixing. It was not there; it had fallen on the chair.

Nancy took it, poured the batter in quickly, and then was about to tie it and plunge it straight into the water that stood all ready—for the beauty of this pudding was in its being boiled directly it was mixed. But where was the string?

Nancy was sure she remembered untying it and putting it on the table with the bag; and now it was gone!

It was not in the chair. She looked under the table, under the chair, on the shelves, in the drawers; turned her apron pockets inside out; peeped into the floor bucket, into the coal-hod, into the wood-box; opened the spice-box and the egg basket.

Dear me, what should she do?

O Mistress Nancy, if you had only looked out of the window just then you would have seen a sight that would have made the pink handkerchief fly off your head with rage—the gray kitty that you liked none too well performing the strangest antics with your precious pudding-bag string, no longer white and fit for tying your Christmas pudding, but bedraggled and soiled with mud, stained with grass, and all chewed by kitty's little sharp teeth.

But Nancy didn't look out of the window. Who ever would have thought of finding the pudding-bag string half-way across the lawn, when she had put it on the table with her own hands!

This is how it came about. When Nancy put the pudding-bag on the table, a little corner of it hung over the edge, and the wind that blew in at the kitchen window moved it just enough to make kitty, who was winking and blinking in a chair, wonder what it was.

Could it be a mouse?

Just then a stronger puff of wind lifted it up so that a bit of the string flew out, and kitty was sure that must be a mouse's tail.

She jumped up and touched it with her paw; it swung to and fro. She caught her claw in it, and brought it down within reach of her nose.

Bah! It didn't smell like mouse at all.

So, quite angrily she hit it again with her paw, and this time the whole concern fell on the chair, frightening kitty so, that she bounced on the floor and skated all it from under the table.

What with the fall and kitty's pull the string had come untied; it hung over the edge of the chair and trailed on the floor. Kitty made a dash at it; it came off the bag so suddenly that she lost her balance, fell on her head, and rolled over and over on the floor with it between her paws, biting and pulling at it.

If Nancy had looked under the table then, she would have found the pudding-bag string, but she only growled out, "Oh, you bothering little cat, get out of my way!" and giving her a not very gentle kick, sent her flying across the room and out of the door, still with the string in her mouth.

Over the gravel walk, which the gardener had watered that morning, marched kitty, holding her head very high that she might not trip over the string that dragged between her feet. It caught on the thorn of a rose-bush, and as she pulled to get it away, over she went on her head again; and then began more rolling and kicking, scratching and growling, until both kitty and string were well covered with moist gravel.

When she was tired of the gravel, she rolled on the grass, and thus you might have seen her jumping, leaping, bouncing; running off as if she meant to leave the string forever, then rushing back to it, darting upon it with a growl, and racing off with it to the farthest corner of the lawn.

By and by up she tore into a tree, and out upon a branch, from which she jumped to the ground, not long after was overheard telling a small companion that her brother Frank was going to write the "Benediction for the Exaggeration."

"Kitty, kitty!" called her little mistress. She scampered off to the house, ate her dinner, was petted and patted, curled herself up in her missy's lap and went sound asleep.

As for the pudding-bag string, it hung on the tree all day and all night. Then Jimmy Judson happened to spy it on his way to church, pulled it off and put it in his pocket.

The next day he met Sally Manders carrying home a lot of sticks to kindle her mother's fire. They were falling out of her arms, for Sally was very little, and she had gathered a great many branches in the woods.

"Here, Sally," called out Jimmy, "I say—I've got a string here. It's just the thing to tie your fagots with."

He pulled the pudding-bag string from his pocket, tied it round the branches, and carried them home for Sally himself. Sally's mother, finding that the string round the fagots was a good bit of tape, washed it, pressed it out neatly, and made of it strings for her night-cap.

Nancy never knew what became of her pudding-string.

Kitty grew to be a soft, old puss, and had many little kittens of her own. She would tell them about the pudding-bag string, of how she ran off with it and what a fine time she had, and she always ended with:

"But my dears, what became of it when I jumped down from that tree, I never could find—it disappeared ve-ry mysteriously."

And she would shake her head, and all the little kittens would shake their heads—for what cook or what cat would ever think of looking for it on Mrs. Manders's night-cap?

FRANCES C. PRINCE.

Amy's big brother Frank remarked at the ten-table that he was to write the Valedictory for the Graduation. Amy listened attentively, and not long after was overheard telling a small

"Tick and tock! tick and tock!"
Steadily goes the old-time clock.
"Evening is come; it is time to sleep;
Tick-away, tock-away, watch I'll keep.

"Sleep, good grandmother, sound and still!
All day long you have worked with a will.
Washing and mending and sweeping and all,
Sleep now and rest while the shadows fall.

"Sleep, little baby, curled in your nest!
Playtime was merry, but bedtime is best;
Tired at last, on your pillows white,
Sleep till the kiss of the morning light.

"Tick and tock! tick and tock!"
Cheerily goes the old-time clock.
"Weary ones, cheery ones, rest and sleep!
Tick-away, tock-away, watch I'll keep!"

LAURA E. RICHARDS.

Enigmas, Charades, Puzzles, etc.

1.

CHARADE.

My *first* is a naval or military officer.
My second was an English king who was known as the surname Confessor.
My *third* is a worker in metal.
My whole was a noted man in the early history of our country, who died in London, June 21, 1621.

L. P.

2.

DOUBLE ACROSTIC.

Conundrums.

What bird does a rooster like best? A crow.

What is the difference between a blind man and a sailor in prison? One can't see to go, and the other don't go to see.

If a load of coal cost twelve dollars, what will a ton of coal cost? Come to the corner.

What is the difference between a bill and a pill? One is hard to get up, and the other is hard to get down.

What is the difference between a medicine in which is twice weak eyes and the place of Napoleon's death? One is an eye-lotion and the other is an ocean lot.

Answers to Puzzles in Last Number.

1. First stanza—bear, notable. Second stanza—taunt, hero. Third stanza—Tycoon, Punjum, true, ration. Fourth stanza—burnt, trifle, title. Fifth stanza—hoot, hoover, hoodwink, shoot, shoulder. Sixth stanza—Warren, fire, thrill, Battle of Bunker Hill.

2. "I don't see why (Y)."

3. Tritis, stile, ills.

ONLY A DOLLAR.

"I can't do much," said a dear old Vermont gentleman, when the boys in blue were marching off to the war, "and I can't go myself, but I can at least give them each a keepsake."

He brought out a little store of bright gold dollars, and gave one to each lad of the town who was pledged to fight, and perhaps die, for the Union. Some of the men who received the gift were infinitely touched by it, because they had always been among those for whom "nobody cared," and for every one to whom it was given the bright dollar evidently brought a ray of sunshine.

Some of the stories connected with the coins will never be known, but a few came back, through one mouth and another, causing the giver's heart to rejoice that he had done so kindly a deed.

"I punched a hole through mine and wore it on a string round my neck," said one rough fellow, of whom no one had ever expected to hear good. "Nobody ever give me anything before, since marm died, and I was as fond of that dollar as if I'd been a girl, and got my engagement ring.

"Once when we were in camp the string broke, and I lost it. My! didn't I tear round like a wild-cat till I found it again! I don't believe I've swore so much since I had it, and I *know* I've tried not to drink. I've kept sayin' to myself, 'Now, don't you be a disgrace to your town. You don't want to be ashamed to look that old man in the face again.'"

One man, who came crawling home a starved and pitiable wreck, after sad experiences of imprisonment and escapes, could scarcely speak of his dollar without tears.

"I had to give it up," he said, mournfully, as soon as he saw the donor, on reaching home. "I saved it as many as ninety-nine times, and the hundredth it saved me. It bought me the bread and milk that gave me strength to crawl my last mile into our lines."

"Never you mind, old fellow!" cried a hearty-looking one-armed man, who heard the story, "mine is gone, too, but I don't want to get it back. When I came home from the war there was my Mary Ann, who'd been waiting for me three years, knitting stockings and scraping lint.

"Steady as a clock she'd been, and patienter than I'd thought of being; she'd never once yipped that she was tired of waiting. So, thinks I, 'My dollar and my girl are the most precious things I've got, and I'll combine 'em.' I went to my brother (he's a jeweller, you know), and told him to make me a wedding ring out of the dollar. He said 'twould be pretty small, and I told him he might put more gold with it to give it body, but the dollar must be *there*. And Mary Ann wears it now, bless her heart, and bless the dollar and the man that give it!"

DISPOSING OF THE CASE.

There is an impression that judgments akin to those of Solomon are only given in the East, but it is evident that a judicial cleverness like that of the King of Israel is also to be found *down* East. The Lewiston *Journal* tells of two Maine farmers who bought an old-fashioned pair of steelyards. Each paid a part of the cost, and used them whenever he wished to weigh his produce for market.

After a time a dispute arose, and each claimed the ownership of the steelyards. The matter was carried into court, and the jury disagreed. Then the case, on some technicality, was sent to the law court, and was again sent back for trial. The costs, up to this point, had reached about five hundred dollars, about a hundred times the price of the steelyards themselves.

When the case came up again, Chief Justice Peters was the presiding justice. He told the counsel that if the case were carried further, the costs would be increased to such an extent that one or the other of the parties would lose his farm in order to pay. He advised them to enter it "Neither party," and divide the costs. After a consultation the parties owned themselves willing to do that, and it looked as though the case would be settled. Suddenly, however, one of the contestants rose, went over to his counsel in the court-room, and asked:

"But who is going to get the steelyards? He sha'n't have them."

The other contestant made the same declaration. Then the counsel rose, and said that the case was just where it stood before any talk of settlement had been made. They were willing to stop litigation, and divide the costs, but what could be done with the steelyards?

"I'll fix that," said Judge Peters. "Let the sheriff of the county take the steelyards at night, and go down and throw them in the middle of the river, letting nobody know the exact spot, so that they can never be recovered."

The contestants agreed to this proposition, each paid his proportionate share of the costs, and the case was dropped.

RARE PLANT.

A year or two ago there were, among the boarders at a mountain summer hotel, a celebrated botanist and a certain pretentious rich woman, who liked to make it appear to the guests that she was very well informed on all subjects. The rich woman affected to take an interest in the researches of the botanist amongst the flora of the mountains.

"I suppose, Mr. Caylix," said the lady, "you find almost all the mountain flowers around here?"

"I have found a great many, ma'am," said the botanist.

"Well, there's one kind of flower that I've read a great deal of as being always on the hills, and I've always wanted to see it. Perhaps you could pick me some."

"What is it?"

"The 'purple gloaming,' you know!"

FAITHFUL.

One does not look for the whole truth upon a tombstone, but there are exceptions to all rules.

The *Times-Star* quotes the following unique and touching epitaph:

Ann E.
Wife of Jeremiah Walters.
Died, Nov. 16, 1868, aged 68 years, 5 months.
She was a true and faithful wife to each of the following persons:

Enoch Francis.
John Sherman.
William Hassen.
J. Walters.

SHANDON BELLS: the Only Toilet Soap.

BAD COMPLEXIONS, WITH PIMPLY, blotchy, oily skin, Red, Rough Hands, with chaps, painful finger ends and shapeless nails, and simple Baby Humors prevented and cured by CUTICURA SOAP. A marvellous beautifier of world-wide celebrity, it is simply incomparable as a Skin Purifying Soap, unequalled for the Toilet and without a rival for the Nursery. Absolutely pure, delicately medicated, exquisitely perfumed, CUTICURA SOAP produces the whitest, clearest skin and softest hands, and prevents inflammation and clogging of the pores, the cause of pimples, blackheads, and most complexional disfigurations, while it admits of no comparison with the best of other skin soaps, and rivals in delicacy the most noted and expensive of toilet and nursery soaps. Sale greater than the combined sales of all other skin soaps.

Sold throughout the world. Price, 25c.

For the Companion.

FAMILY ICE-CREAM.

The children have watched the thermometer for days. They have been promised that the next time the mercury stands at ninety they shall have ice-cream for dessert, if they will help make it, and every morning their first question is, "What does the thermometer say?" Exclamations of disgust follow if the temperature is comfortably cool, and of hope if it is warm enough to suggest a possibility of rising to the occasion before noon.

When at length the great day actually arrives—a blazing, burning, cloudless day, that seems to have been lost accidentally from the calendar of the Desert of Sahara—they dance with delight, while the rest of the family mop their foreheads and groan.

But mother always keeps her word, and she says, with a reluctant sigh, that she supposes, if she promised, though she isn't at all sure that she *did* promise—but the testimony of all the children that she did is here offered in a united whoop of such vehement protest that she laughs and surrenders unconditionally, only inquiring what flavor they are pleased to want.

They have not considered the flavor.

Johnny says, "Vanilla, of course, and be sure to put in enough;" but Sister Susy does not like the idea of anything so common. She wants pistachio, but when mother shakes her head, and says they do not keep it in the house, she demands pineapple, and failing that, banana.

But it appears that Brother Tom has thought all along it was to be lemon, and will be disappointed if it is anything else; while the twins clamor in chorus for chocolate.

Mother herself declines to state her preference, and tells them they must settle the matter among themselves. She advises them to remember, however, that chocolate takes a long time to grate, and that father never likes lemon flavoring, and that if they mean to use bananas they will have to go down town and get some, and surely they must remember that little Polly hates the very smell of pineapple so much that it nearly makes her sick. So the ice-cream is vanilla after all.

They go down cellar when the custard is ready, and Tom does up the ice in a piece of old bagging and pounds it with a hammer, while Patty and Polly run for the glistening bits that fly across the cellar, and Johnny stands by, hopping on one foot from excitement, and squinting up his eyes almost too tight to see out of them in his fear of having them put out.

But as soon as the ice and salt are safely packed in the freezer the two little girls think they will go and play dolls; Tom finds he has a job in the garden; Johnny thinks he will help him, and Susy is left to attend to the freezing.

Turning the crank is fun at first, but presently she changes hands; and then she begins to wonder if it will really freeze in ten minutes according to the advertisement; and then she changes back again; and then she lifts the cover to see if it is freezing yet; and then she thinks the time would pass more quickly to music, and turns to the inspiring strains of Yankee Doodle. This proving too fast for her strength, she varies it with the Dead March from Saul.

Then she imagines it is beginning to feel stiff, and lifts the cover to look in, but closes it hurriedly with a guilty fear that she has let a lump of salt get into the cream.

At last—after half an hour at least—it does actually stiffen, and somehow the little girls are there immediately without having been called, and Tom and Johnny stray in with an innocent air, and say it is so hot in the garden they thought they would take a little recess.

They congratulate Susy on having such an easy time of it down in a nice cool cellar; but she, with aching arms and feet wet with ice-cold leakage from the freezer, does not reply as graciously as she might.

They gather round to peer at the precious vessel in its chilly setting. Susy pulls out the dasher, leaving a liberal quantity of cream adhering, tries a bit of it with a spoon, and then hands dasher and all to the others, who rapidly remove the last atom, pronouncing it "just splendid" and "perfectly elegant."

The rest is served at dinner, and meets with general approval, while the twins express an ecstatic wish that *every* day was ninety in the shade if only they could have some of mother's ice-cream.

But Susy is of a different opinion, and declares that, though it really is the best she ever tasted, she is quite sure that once a week is often enough, unless somebody else is willing to do the grinding.

HOW TO LEARN IT.

"We are going abroad in May. Papa has just decided it. Get out all your French books, Grace, and, Fred, remember to buy me a German Meisterschaft. Expect no more English from me, for I must get my foreign tongue in order. *Voulez-vous me passer une petite de pomme de terre?*"

There was a general laugh, and Grace was beginning to mimic "*une petite de pomme de terre*," when her uncle spoke.

"The first time I crossed the ocean was in company with the family of the United States Minister to Germany. I was on deck with the daughter one day, when an accomplished lady came to her with a bit of social advice.

"'Your first essential,' she said, 'is to learn the German language. To accomplish that, never mind books, but talk. Make people talk to you; talk to them—everybody, servants, drivers, shopkeepers, callers. No matter if you make mistakes; nobody will laugh at the Minister's daughter. Only talk!'

"I met the young lady six months afterward, and was amazed at the richness and purity of her speech. I fancy that our Alice will rival her."

For conversation, the natural method of study continues in prime favor, and even the grammars have taken to themselves reform. Seldom now do we see such sentences as called forth the witty scorn of Professor Corson:

"Have you seen my green-eyed horse?"

"No, I have not seen your green-eyed horse, but I have seen your Russia-leather handkerchief."

For learning to read, Emerson's method is worthy of attention. "Read," he says, "the same dozen pages over and over a hundred times, till you know every word and particle in them, and can pronounce and repeat them by heart."

Few foreigners—indeed, few English or Americans—speak and write the English language with the grace and purity of Carl Schurz, and he explains the fact as follows:

"When I first came to America, I found that I knew as little practical English as the Yale or Harvard student who has read 'Faust' and 'Piccolomini' knows of German. I went to a bookstore and asked for the classic of the English language. The 'Vicar of Wakefield' was given me. I made a careful translation of the work into German, laid it aside for six weeks, retranslated it into English, critically compared the two versions, and knew the English language."

HYSTERICS.

Hysterics are, fortunately, not in the least fashionable. A young lady who so far forgets herself as to sob ungovernably in public is by no means an "interesting object," as she might have been considered in a more sentimental age. Still, if any one is so misguided as to succumb to a nervous attack, it is well for bystanders to remember that only heroic remedies will be of use.

A company of young people were one evening trying a foolish game of "mesmerism," endeavoring to influence one another to do stated things, when an excitable girl suddenly began to laugh and cry, in rather an alarming manner. Her companions, quite distracted, were vainly trying to comfort and soothe her, when the mistress of the house came in, and at once understood the situation.

"Lettie," she said, sternly, to the weeping girl, "stop that noise this minute, and tell me what you mean by stepping on chocolate creams, and spoiling my carpet!"

The girl stopped crying at once, and stooping in confusion began removing the bits of candy from the floor. A new direction had been given to her thoughts, and in a few minutes she was calm enough to smile at the severity with which she had been treated.

On another occasion, a little girl innocently applied the same sort of remedy. Her aunt, who was recovering from a long illness, one day became hysterical, and the child, coming into the room, stopped, amazed at her excitement. In another minute, she saw a far more interesting sight.

"O auntie," she cried, "Jip has got your pretty lace handkerchief under the sofa, and he's chewed it and chewed it!"

"Get it away from him!" cried the sufferer, forgetting to weep. "Crawl under, and drag the little rascal out!" And, in bemoaning the wreck and lecturing Jip, she became once more a rational being.

Hysterics are not shams, and yet they are largely under the control of the will.

"I don't have nervous attacks now," said a lady to her physician. "When I was at home the girls used to pet and cuddle me, to coax me out of them; but they only annoy my husband. So what could I do but train myself to avoid them!"

SOAKING UP SUNSHINE.

Some poet skilled in putting the motive wisdom of life into happy phrases could evolve a taking "piece" out of this sentiment of an unfortunate little "Arab." The anecdote, from the New York *Tribune*, is as true to life as are Mrs. Dorothy Stanley's pictures.

"Hi! Jimmy! Come down here! Let's set on the bridge and go round when she turns."

This from a ten-year-old street-boy standing on the approach to a bridge over the Erie Canal in an interior city.

The person addressed was a fellow street-boy standing on a raised footbridge over the same muddy waterway. He was no older than his companion and fully as ragged. He was lame and carried a crutch, but he had his compensation in a philosophy of contentment that old Horace might have envied.

He stood upon the footbridge and answered:

"Naw. Can't. Got t' stay here."

"Aw, come on down. What d'ye hang up there fur? Lots o' fun swingin' around here. We kin git on a boat and go over the aqueduct an' then ride back on another. Aw, come on down."

"Naw, can't do it."

"Why not? What yer wants ter fool 'round up there fur? Aint no fun up there."

"Wal," was the answer that Jimmy drawled out, with as solemn a face as a cadet on parade, "I can't come down nohow. I've got to stay up here and soak in all the sunshine I kin so as I kin laugh when it rains."

LARGER AND SMALLER.

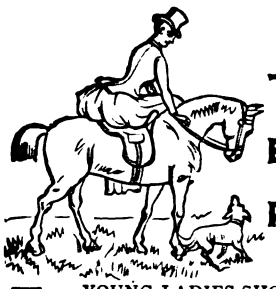
It is according to the law of nature that things near at hand should look larger than things farther off.

The committee of a graduating class went to a jeweller with a commission to procure a class badge. They had in view a design representing a youthful scholar—a graduate, that is—surveying the universe.

The spokesman made known their errand.

"About how large would you like the figure?" asked the jeweller.

"Well," said the student, "we thought the graduate ought to cover about three-quarters of the badge, and the universe the rest." — *Jeweller's Weekly.*

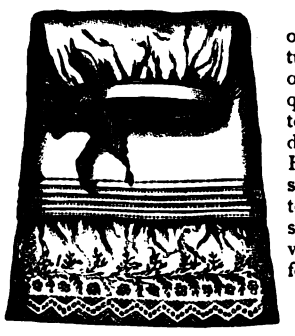


BROADLY DISTINGUISHED.

A famous Russian writer had an original way of expressing his opinions in regard to people and things.

"How do you like her voice?" he was asked, relative to a prima donna who produced an enormous quantity of husky tone when she sang.

"Voice!" repeated the writer, with great scorn. "That's not a voice. It's a draught of air!"



The Human Hair.—How many persons abuse this delicate and beautiful ornament by burning it with *alcoholic washes*, and plastering it with grease, which has no affinity for the skin and is not absorbed. Burnett's Cocoaine, a compound of Cocoa-nut Oil, etc., is unrivalled as a dressing for the hair—is readily absorbed, and is peculiarly adapted to its various conditions, preventing its falling off and promoting its healthy growth. [*Adv.*

The Youth's Companion is an illustrated weekly paper of eight pages. Its subscription price is $1.75 a year, payment in advance.

Twelve or sixteen pages are often given its subscribers in a single weekly issue of the paper. All additional pages over eight—which is the number given for $1.75—are a gift to the subscribers from the Publishers.

New Subscriptions can commence at any time during the year. The Companion does not employ agents to solicit renewals of subscriptions.

Payment for The Companion, when sent by mail, should be made in a Post-Office Money Order, Bank Check, or Draft, or an Express Money Order. WHEN NEITHER OF THESE CAN BE PROCURED, send the money in a Registered Letter. All postmasters are required to register letters whenever requested to do so.

Silver should never be sent through the mail. It is almost sure to wear a hole through the envelope and be lost, or else it is stolen. Persons who send silver to us in a letter must do it on their own responsibility.

Postal Notes are not a safe means of sending money. Any one can collect them at any Money-Order Post-Office, and, if lost or stolen, the money cannot be recovered, as no duplicates are issued. Subscribers who send us Postal Notes must do so at their own risk.

Renewals.—Three weeks are required after the receipt of money by us before the date opposite your name on your paper, which shows to what time your subscription is paid, can be changed.

Discontinuances.—Remember that the publishers must be notified by letter when a subscriber wishes his paper stopped. All arrearages must be paid.

Returning your paper will not enable us to discontinue it, as we cannot find your name on our books unless your Post-Office address is given.

Always give the name of the Post-Office to which your paper is sent. Your name cannot be found on our books unless this is done.

Letters should be addressed and drafts made payable to

HEADACHE.

We are often asked for a cure for headache. A certain wise physician classes headaches among the ailments which have baffled his profession. At a medical meeting a member said, "Did any of you ever cure a headache? I never did." Several doctors having mentioned their treatment, he replied, "Oh, you only relieved it. I can do that. But have you ever *cured* it?"

No one could answer yes. The shops contain nostrums enough, but did any one ever find himself more than temporarily relieved by them?

Nature, unaided, sometimes effects a permanent cure by the changes which the system undergoes in the process of time. Persons who have been subject to headache are often more or less fully relieved after about the age of fifty. This is perhaps a result of the shrinkage of the brain and the hardening of the tissues, which begins at about that period. Changes in one's condition or habits, or in climate, may sometimes effect a cure by removing the disturbing cause.

The causes of headache are many. Some grave headaches are due to cerebral disease—meningitis, tumor, abscess, softening of the brain. In these cases there will be other symptoms pointing to the cause. Other causes are overfulness of the blood-vessels, caused by the condition of the heart; a plethoric condition of the body; mental excitements. Such cases are marked by a flushed face, glittering eyes, a beating in the ears and giddiness on stooping.

Sick-headache has been described as a "nerve-storm," radiating from a cerebral centre. It is often connected with a hereditary tendency and a nervous temperament, and it comes on in periodical attacks, the exciting cause being some form of exhaustion. It may be intensely severe for a few hours, and pass off after vomiting. If no vomiting attends it, it is known as nervous headache. The main thing is to ascertain the exciting cause, and guard against it carefully.

Headache may be due to defective action of the liver, constipation, inactive condition of the skin, poor blood, excessive mental exertion, exhaustion from fatigue, the condition of the stomach, eye-strain, or rheumatism of the scalp. Some headaches are purely neuralgic.

It will be seen, then, that no one can suggest a cure for headache. In severe cases the aid of a physician is needed to ascertain the cause and give proper advice; but in most cases an intelligent person may himself ascertain the cause, and secure, in the main, exemption from attacks by attention to the general laws of health.

SHE LOVED THE LIGHT.

In some parts of Missouri nothing is commoner in out of the way places than a solitary "coal-shaft." In one of these remote mines there was kept, a hundred feet below the surface, a little old mule, whose business it was to draw the loaded cars up the inclined plane to the foot of the shaft.

Back and forth, back and forth it made its dismal journeys during working hours, and at night was left alone in a corner fitted up as a stable, to await in the silence and utter darkness the return of its human comrades.

For five long years it had never breathed the upper air, or seen the light of day. It was a great pet with the miners, who used to bring it bunches of fresh grass in summer, or lumps of sugar and apples in winter.

One night, when the mule was being unharnessed, some one proposed taking "Jinny" up in the cage. It was done; her tremors as the cage began to ascend were soothed by the assuring words and caresses of her companions, and soon she found herself restored to a mule's natural privileges.

The next morning when the time came to go to work, "Jinny" positively refused to return. Neither persuasion nor threats could induce her to approach the shaft and step into the waiting cage.

A council was held. The miners, touched by what the poor brute had suffered in her five years of isolation, and reproaching themselves that her imprisonment had been so long, at length solved the problem by subscribing on the spot enough out of their scanty earnings to buy "Jinny," and she was immediately loosed and "turned out to grass."

For years afterward she might have been seen nibbling the grass near the shaft, or sheltering herself behind a liberal haystack that somehow was always there for her. When working hours were over she was sure to be near the shaft, where she could mutely testify to her liberators as they came up, that she was the happiest mule in Missouri.

APPROPRIATE GIFT.

Old Hepsy had lived in the Morse family for a great many years, and being an economical soul and not given to display, had saved a comfortable sum during her time of service. When she reached the age of sixty, she announced her intention of giving up work and retiring to a tiny house which she had "kep' her eye on goin' on ten years," there to live with a niece who was in the millinery business, "an' doin' well for herself."

Hepsy was anxious to present the Morses, on her departure, with some gift which should be at once appropriate and not *too* expensive, and she spent much time in the stores searching vainly for something exactly to her mind. One day, however, she returned home in triumph with a prize which she spread out before the astonished gaze of her niece.

"Now if you ever see anything handsomer an' better suited than this, Lucindy," said Hepsy, confidently, "you can jest let me know!"

With that she spread out on the kitchen table a white silk handkerchief of enormous size. In one corner there was embroidered, in the most brilliant of colors, a bird's nest in which were two large and two small birds, and flying away from it still another bird, of particularly gaudy plumage and widely extended wings.

"It's very handsome, aunt," said Lucinda, hesitating a little, "but how do you mean it's so well suited?"

"Well," said Hepsy, with a sniff of contempt, "I did suppose I shouldn't have to explain it all out! Don't you see, Lucindy," she proceeded, in a commiserating tone, "there's Mr. Morse in the nest, an' Mrs. Morse in the nest, an' Frankie an' Emily in the nest, an' Master Willie flown to heaven above! Why, I think it's *beautiful*!"

MIZER'S CATAMOUNT.

Old John Mizer, one of the early settlers of what is now Bucks township, Ohio, went out one day on Buckhorn Creek to secure a wolf-scalp. Having fixed the bait, which consisted of a skinned rabbit, he was about to hide near by when his practised ear detected the tread of an animal behind him.

Mizer supposed it to be a wolf, but as he turned quickly he beheld a catamount, following close upon him. The moment the hunter stopped, the animal sprang into a tree. Mizer took aim and fired, and with a scream of rage the catamount sprang upon him, landing on his back, and sank its claws deep into the flesh.

With great presence of mind, Mizer instantly stepped backward against a tree, and pressed the creature hard against it. He then dropped his gun, drew out his hunting-knife, and was successful in using it upon the side of the biting, scratching beast.

He continued to press against the tree with all his might, and within a few minutes the catamount ceased to struggle, and when at length the man stepped forward, the creature dropped dead at his feet. It weighed more than a hundred pounds, and measured three feet in length.

TO AVOID THE JAR.

Every one knows that a sudden shock or jar, as in leaping and jumping, is felt less if the person rises at the moment on his toes. A naval officer and a friend were in the vicinity of a mine while some blasting was in progress. At the moment of the explosion the naval officer went through a series of peculiar gymnastics. His arms hung limp at his sides, his mouth was wide open, and he stood on tiptoe.

"What is it? Are you hit by a stone?" asked the friend, a trifle anxiously.

"No; just an old memory," replied the officer. "That was a part of my manual of arms when I was on a man-of-war facing Vicksburg."

"I don't understand," remarked his friend.

"That is the way we used to stand when we fired a mortar," replied the officer. "It looked a bit curious at first, to see forty or fifty men standing on their toes with their mouths wide open. But we were instructed to do it, and as it lessened the concussion caused by firing twenty-five pounds of gunpowder, we fell into it as into any other regulation and thought no more of it. It did not seem ridiculous then, for it was a part of the art of war."

MARRYING A STAMP.

In the old world, where marriages are often arranged purely as matters of business, it has long been customary for the possessor of any kingdom or of one estate to secure another by "marrying it;" but it is probable that not until lately has it ever occurred to any one to marry a postage-stamp. This, however, seems at last to have occurred to some one, for a French journal recently published the following advertisement:

"MATRIMONY.—A collector of postage-stamps, possessing 12,544 specimens, desires to contract a marriage with a young lady, also a collector, who has the blue Mauritius penny stamp of 1847. No others need apply."

WHY THEY FAILED.

Here is a fact for thoughtless boys to ponder upon:

Several boys who were candidates for a naval cadetship from the Eighth Michigan District were rejected because the examining physician found that their hearts had been affected by smoking cigarettes.

"DON'T you think," said his mother to little Johnny, "that you've eaten quite cakes enough?" "Oh no, mother!" said Johnny. "I don't feel a bit sick yet!"

"Brown's Vermifuge Comfits," or worm lozenges, give greater satisfaction than any other worm medicine. 25 cents a box. [*Adv.*

STILBOMA.

A prepared **Chamois Skin** for polishing Gold and Silver or Nickel, Steel and Brass. Always ready. No trouble to use. Lasts for years. The best and most economical polisher in the market. Inquire of your dealer, or send 50 cents for sample size by mail to THE CHANDLER & RUDD CO., Cleveland, Ohio.

STYLE 830 SHAWKNIT HALF-HOSE.

The Mottled Drab Cotton Half-Hose designated as **830** are the best superstout half-hose in the world. They have been on the market, in constantly increasing demand, since 1880, and it is safe to say that no other symbol is so widely understood to-day by makers and sellers of stockings as **830.**

These half-hose are extremely durable and comfortable, and are retailed at 25 cents a pair.

Beware of attempts at imitation.

None genuine unless stamped on the toe. For sale by the Trade generally. *Send for Post-paid Parcel Price-list to*

THE GIANT FIRECRACKER.

It was the morning of the Fourth of July. The little village of North Jericho was experiencing the first lull in the midst of its patriotic uproar.

Groups of boys who had been prodigal of their torpedoes and firecrackers were clustered before the village store, hunting here and there in the dust for an unexploded cracker, or talking shrilly about the next best way of making an appropriate racket in honor of the day.

Many an envious eye followed each motion of some more fortunate boy while he proudly threw a cracker at the heels of a loafing dog, or with a superb effort at unconcern touched off a whole bundle "at one lick."

This latter was considered a wilful extravagance, and called forth, from those who had nothing left, such remarks as these:

"Aint you mean!"

"Lemme have one, will yer?"

"Lemme use your punk a minute?"

"I'll bet I can chuck one up an' make it go off higher'n you can."

"I'll bet you can't!"

While this animated discussion waxed and waned, Tom Hartshorn, with a few of his friends, was peering into the window of the store.

Tom had easily acquired the leadership of the village boys. In the first place, he was the son of the minister; and that distinction counted for a great deal in North Jericho. Then he was generous, loyal to his friends, and very fond of boisterous fun.

"Aint it a buster?" whispered a youngster. The little boy nudged Tom confidentially in the ribs, and pointed at a huge red cylinder behind the glass.

The sight that touched the hearts of the youth of North Jericho with a pang of desire was a huge firecracker, eighteen inches long, which reposed with the air of a Chinese mandarin upon a bed of white cotton wool.

It was the largest cracker ever seen in the county. It seemed to look down with contempt upon the pigmy crackers which the boys had bought. It glared at their faces with a kind of insolence. Its stolid front seemed to say to Tom, "I'm not for such as *you!*"

What a Cracker! It could only be spelled with a capital C.

Mr. Cluster, who was postmaster, hardware dealer, dry-goods merchant, grocer, butcher and town clerk in one, had ordered this cracker, not for the vulgar sake of profit, but from a sentiment of pure patriotism.

"I guess North Jericho can afford to have as big a cracker as any place in the hull United States," he said, apologetically, to his wife.

To North Jericho, then, had come this proud honor; and each of her boys coveted the possession of the giant noise-maker.

"It's the biggest I ever saw," said Tom, with the air of one who sets himself up as an authority. This statement was conclusive to the crowd, for Tom had once been to Boston. In consequence, the cracker gained dignity.

"I'm goin' to ask pa to buy it for me," said Jim Johnson, the son of the village blacksmith, with an air of confidence.

A few boys looked at the lad in envy; but this admiration was soon shattered by Tom, who answered, scornfully:

"Buy it! I guess you will! Do you think your father would spend a dollar'n a half on noise for you, Jim?"

"Well, I guess yourn wouldn't, Tom Hartshorn!" retorted Jim.

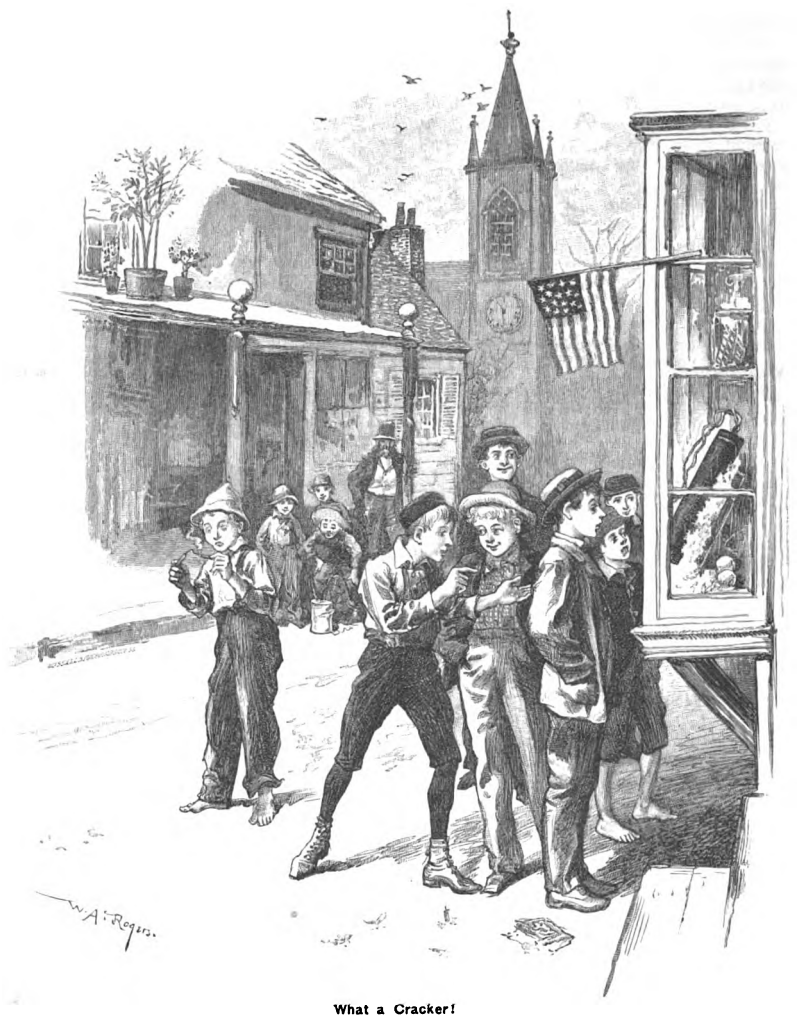
As Tom's father had a salary of five hundred dollars a year for his services, a part of which was, according to the established custom of the place, paid in farm produce, it was highly probable that Jim was right.

In comparison with the minister, the blacksmith was rich; but this obvious fact had never occurred to the people of North Jericho.

Nevertheless, this taunting reply, delivered in his own coin, discomfited the minister's son.

"What'll you bet?" demanded Tom, hotly.

"I aint mean 'nough to bet on a sure thing."



"Oh, you're not, are you?"

Tom clenched his fists.

At this juncture the boys stopped firing their crackers and torpedoes, and ranged themselves, according to their sympathies with the one or the other, about Tom or Jim.

"No, I won't fight him!" said Tom to his bosom companion. "I can whip him. He knows it. But I'll stump him to buy the cracker. The fellow that gets that cracker beats!"

This was a new way to settle a quarrel. Tom hardly knew why he had said such a foolish thing. He had nothing to buy the cracker with, and had not the smallest reason to suppose that his father would buy it.

What a Cracker!

The two boys looked at each other with an air of fierce bluster. Jim felt humiliated. The boys on his side were of the poorer boys of the town. It was doubtful if all six of them could raise a dollar as the result of doing a week's chores.

The boys all liked Tom. He was never "stuck up." He wasn't ashamed to notice the raggedest boy in the village, and divide his marbles besides.

But now about half of them drew off from him as if they were his sworn enemies.

A volley of lighted firecrackers and torpedoes was briskly exchanged. Dinner-time interrupted these preliminary hostilities. As Jim moved off, escorted by his tribe, he fired a parting shot:

"Say, Tom, we'll come to the store at two o'clock, and if you don't get the cracker you're stumped!"

The boys marched away, singing at the top of their lungs, each on a very flat key of his own: "We'll hang Tom Hartshorn to a sour apple-tree!"

Tom felt himself in honor bound to meet his own "stump," which Jim had shrewdly turned upon him. His companions clustered faithfully about him as he went up the street toward home.

"Can't we take up a collection?" suggested one.

"I aint got any money," admitted one.

"I spent every cent for crackers yesterday," owned another.

"I've got a quarter left to buy pinwheels, and a rocket, and Roman candles," said a third.

"Lemme see 'em!" interjected another. "When'll you fire 'em off?"

"Oh, to-night some time. What have *you* got, Tom?"

Tom shook his head disconsolately. Tom had not a penny in his pocket. He stared at a bird vacantly and dejectedly.

"I'll bet you dasn't come 'round an' meet Jim," spoke up one of his admirers, a little contemptuously.

"You just come around and see!" said Tom, with compressed lips. "I've got to go home. I hear the bell. Come 'round after dinner."

Tom started off on a quick trot up the street to his little white home under the broad-sweeping elms.

It was about a quarter before two o'clock that a procession of hooting boys tramped along the street of the sleepy village down towards its single store. One of them beat a drum; another flaunted an extemporized patriotic banner; another blew a tin horn, whose squawking end rested on the shoulders of the boy ahead.

Now and then a sharp explosion testified to the fact that it was still the Fourth of July, and that ammunition was not yet wholly exhausted.

The boys were all in a state of suppressed excitement. They had assembled by Mr. Hartshorn's house, and there impatiently awaited Tom, much to the uneasiness of his mother, who was not slow to suspect some mischief.

"What does this mean?" she asked.

"Oh, it's nothing, mother. They're going to set off a cannon down by the grove. That's all. That's nothing."

"You'll be very careful, my son," she answered, anxiously.

"Oh, yes!" said Tom, slamming the door, and disappearing around the corner of the parsonage.

Tom's eyes glittered peculiarly when he joined his eager companions. His cheek was as flushed as a nervous girl's. His manner was unnatural and excited. He plunged his hands into his pockets, held them there with trembling emphasis, and walked towards his cronies with all the swagger he could assume.

"Hello, Tom! Here he is! Got it, Tom?"

Tom nodded his head vigorously, and put his left hand upon his mouth with a threatening gesture.

For a few minutes he experienced the elation of preëminence which his nature craved, yet from which his heart bitterly recoiled. But it was now, he thought, too late to undo, to go back. He could only go on.

"Hurrah for Tom! Hurry up to the store! We'll come it over Jim!" the boys shouted.

"Did your ma give it to you?" one of the boys asked in a whisper.

"N-no," answered Tom, confidentially and hesitatingly, "you see—well—no matter; it's a dead secret."

A dead secret it remained.

The boys were at fever heat. Before the village store the two parties ranged themselves. It had been decided that Tom's faction should pretend not to be able to buy the wonderful cracker, and should allow Jim to taunt them until, at the last moment, Tom should stalk in, purchase it, brandish it in the face of the enemy, and so put them to ignominious rout.

This programme was carried out with singular fidelity. There was not a hitch in the performance.

"You'll have to be keerful, Tommy," said the storekeeper to the panting boy. "You've got to get a good ways off when it 'splodes. I'll put it in a shoe-box with cotton waddin'. That's the right change. I didn't know the parson approved of your wastin' money so. What did he say about the heathen last Wednesday ev'nin'?"

Tom blushed deeply. He stammered an explanation, and retired in a hurry, surrounded by his hooting admirers. But The Cracker went with him.

At the sight of that superb firecracker in Tom's possession, Jim's party, to a boy, forsook their discomfited leader. They even joined with recreant gusto in an improvised song which was supposed to carry with it the sting of contempt and of victory:

Jim, Jim, Jim,
Go and take a swim.

Jim, jealous and angry, refusing Tom's sarcastic invitation to "give in and come and see her go off," turned his back upon the party and went to swim, the most lonely boy in Jericho on that glorious day.

"Where'll you set her off, Tom?" asked one of his new party.

"In the grove," said Tom, mindful of what he told his mother.

"I'll bet it'll make the biggest noise ever heard 'round these parts," ventured one.

"Is it bigger'n Bunker Hill cannon?"

"Bunker Hill cannon!" Tom sneered with infinite contempt; "'tisn't anything to this cracker! Haven't I been to Boston?"

"Say, boys, let's set it off in front of Jim's house. That'll be fun!"

This suggestion was received with enthusiasm and carried into effect unanimously.

Jim lived at the further end of the town in a little house, with no other near. Opposite it was a sand heap. In the house was Maidie Johnson, Jim's sick sister. She was indeed very ill; in fact, the doctor despaired of saving his little patient. He called it typhoid fever.

She was a pretty, gentle girl and every one liked her. The boys did not know that Maidie

Digitized by Google

was so very ill, and Jim was not there to tell them.

As most of the North Jericho fathers had gone down to Jericho Centre, where there was a great celebration, with a speech by a prominent congressman, the boys had it all their own way.

The procession, with Tom at its head, stormed its way down toward the blacksmith's house. It gathered numbers and momentum as it surged along, until it comprised all the boys in the village—with the exception of Jim.

"I say, Tom, put it under a barrel!"

"Naw, put her under a tin can!"

"Put it under a washtub!"

"There aint none big enough!"

"Let's have a volcano! Bury it up all but the fuse!"

"I'll give you a nickel to let me set it off."

"I'll give you ten cents!"

It was finally agreed that the cracker should be passed from hand to hand with the privilege of close inspection before it was set off. Tom watched its travel with acute interest, with a word of instruction to each one.

"Say, Patsy, don't you hold her with the fuse down. It might go off and kill you. Don't you know enough, Bill, to hold her with two hands? Supposin' you drop her! Where'd you be?"

But where and how to set it off? This momentous decision was not arrived at without much excited discussion. Each boy wanted it his own way.

The boys crowded about Tom and The Cracker until he became impatient and angry.

"Here, you, get away there!" he yelled, authoritatively. "Drop that punk! You'll have it off!"

Tom slowly placed the giant cracker, end up, upon a flat stone, and the stone was placed in the road in front of the gate.

A careworn woman was watching the boys apprehensively from the house opposite. She did not dare to ask them to go away, fearing that it would arouse their contrariness and make matters worse.

She hoped at every moment that they would tire out and go away. There were so many of them crowded about that she could not tell what they were doing.

She tiptoed back to the sick-room, and closed the door softly, to shut out all the noise possible.

Maidie could bear no noise or jar. She had suffered all the long, hot night from the bursting and bellowing, the popping and ringing, which usher in the Day of Independence, but they were at a little distance.

Boys do not think what the Fourth of July means to the sick. The Glorious Fourth is to them the Terrible Fourth.

Tom put his cracker in place, amid the breathless hush that so momentous a performance demands. The cracker seemed to leer at its owner. Tom was fascinated by its appearance, and lingered over his attentions.

"Aw, hurry up! Don't be all day, Tom!" broke from an impatient admirer.

At last Tom waved his hand impressively, and the group widened and retired to a safe distance. Tom's back was to the house; thus the cracker was still hidden from the anxious woman's sight.

Twenty boys held their breath in suspense. Tom hesitated unaccountably, and then, with a sudden motion, applied the punk to the long fuse. The slight smoke curled up languidly. Tom stepped aside.

Some of the boys put their fingers in their ears. Most of them hid behind the stone wall, but one or two ran behind the blacksmith's shop. Who knew what mischief this Chinese engine would do?

At the moment that Tom moved, he revealed to the sick girl's mother this enormous cracker looming right up before her front door, and about to go off.

At the sight she rushed to the door. The explosion might be the very thing that would make a turn for the worse in her daughter's condition.

She cried out, with a voice vibrating with horror, and made terrible by the authority of maternal anxiety.

"Boys! Put that thing *out!*"

At this sound the boys took to their heels and ran a short distance away. But Tom stood in the middle of the street, rooted to the spot. The mother's frightened cry had startled him.

"Tom Hartshorn!" shrieked the mother. "*Put it out!* There's sickness here. Maidie is very sick. She can't bear a breath of noise. *Go! Run! Put it out!*"

At this command Tom suddenly came to himself. There flashed before his mind the events of the day: his pride and boast, his hollow victory, bought at a price he had not dared to think of yet. And now—to crown it all—Maidie, a girl, a little, sick girl; to kill a girl with a stolen firecracker! What was he to do?

Tom made one great dash. Only to seize it—to wrench forth the burning fuse, to put it out!

The fuse sizzled and shot forth sparks. The fire was very near the cracker, but Tom was undaunted.

The woman watched him with her hand at her heart. It seemed to her that he was just upon the thing, when there came a flash, a tremendous report that shook the house, that rattled the panes of the houses down the single street. Dirt from the street was dashed in her face.

She did not wait to see what became of Tom; with a shriek she dashed into the house to her daughter's bed.

When the boys rushed forward, they found Tom lying on his face, at the foot of the sand heap, senseless. The neighbors turned him over; his face was blackened by the powder. A bit of red tissue paper, covered with Chinese writing and blood, clung to and covered his right hand.

They laid Tom on his mother's bed at home. The outstretched hand had grasped what it could, and in its attempt had protected his face from injury; but the explosion had torn away two fingers.

"It's the luckiest escape I ever heerd on," said Mr. Cluster.

"He reminds me of Casabianca on the burnin' deck," said a member of the school-board, admiringly.

"Who'd 'a' thought he had the grit in him?"

"His mother must be greatly set up about it."

"Such heroism," concluded the schoolmaster, "reflects honor on Jericho, on the whole county, and on the day we celebrate."

That evening, when all the inhabitants of North Jericho were still extolling Tom's wonderful heroism, the wounded lad turned to his mother and said, feebly:

"I'm not a fine fellow. I'm not what they think. I'm nothing but a thief! I took a dollar and a half from your bureau drawer —" There he broke down.

For a moment she did not answer him. A dreadful silence filled the dark room. Tom, a thief! Her Tom—her son, the minister's son, had stolen money, like a common thief!

"I'd rather you'd have lost your whole hand!" said Mrs. Hartshorn, hoarsely.

"Yes," sobbed Tom.

Then his mother began to sob too, and they cried together. But before long she had kissed forgiveness into the lad's hurt soul and body, and then he slept.

But now dark rumors went about the village. "Tom'll pull through," it was said, "but the shock sent Maidie into convulsions."

Reports came thick and fast that she was dying—was dead; that the explosion had changed her disease; that she was going mad—that she had gone mad—that she would be an idiot if she lived.

A week after that Tom was out again, with his right hand in a sling. When the boys crowded about him he turned his back upon them and walked away.

Jim, the blacksmith's son, followed him, and was for fighting it out with Tom on the spot. But Tom was so pitifully penitent, and besides, who could fight a boy who had lost two fingers?

When people stopped him, patted him on the shoulder, and praised him for his heroism, Tom cast at them the look of one who had been struck in the face, and slunk away ashamed.

Now it was Tom who haunted Maidie's house, and stood sentinel those hot, miserable days, waiting for the doctor's verdict. Woe to unlucky dogs that barked, or unlucky boys that shouted, during those anxious weeks!

Tom, like a knight, utterly routed them. He had now experienced physical agony, and he began to understand, what so few boys do, the demands that suffering makes upon chivalry.

The boisterous leader of madcap boys was thoughtful, responsible and manly. It had cost two fingers—but perhaps it was worth while. And in spite of The Cracker and the rumors, the girl began to recover.

"I want to see Tom. Can't he come in for a minute?"

She was out of danger, then, and Jim ran over to bring him. Tom came in on tiptoe, and sat down trembling beside the sick girl's bed.

His prepared speeches had hopelessly evaporated. He did not know what to say, and so he said nothing at all.

"Aint you glad to see me, Tom? You might say something." Maidie spoke softly with an accent of disappointment.

This was too much for Tom. Overstrung, he broke down, and cried as if his heart would break. Maidie looked at him wonderingly.

"Don't cry! Don't you see I'm better? How's your poor hand, Tom? Jim says you're the hero of the county. Colonel Pippin says so, and Mr. Cluster."

This was the last straw. To pose as a hero before this unsuspecting girl was more than Tom could bear.

"I'm *not* a hero! I stole the money from mother's purse to buy the cracker to stump Jim, and I set it off here to hurt Jim's feelings! It was awfully mean. I didn't know you were sick then. I wasn't so mean as that! I deserved to be hurt. I'm glad I was."

Tom blurted out this simple confession, looked at the girl with quivering lips, and hid his face in his well hand.

"I had to tell you," he sobbed; "I'd *got* to."

"Well," said Maidie presently, with gentle tact, "let's talk about something else. It'll never happen *again*, you know."

Her pale face, chastened by long sickness, took on a deep confidence in her playmate. Tom looked at her, and was about to speak.

"Hullo-o, Tom!" shouted Jim, bursting in. "You jest come out an' see pa shoe Deacon Tupper's old horse. He says you can hold the halter!"

HERBERT D. WARD.

For the Companion.

THE EAST WYNDHAM EXPRESS.

The makers of the geographies have forgotten to put East Wyndham upon the map of Cape Cod; and the locomotive's scream has never aroused an echo among the scrubby cedars there, or troubled the peaceful minds of the wild ducks around Sandy Point.

A lumbering old stage-coach went there in the old times, which were as superior in East Wyndham as everywhere else, but what with much sand and few passengers it became discouraged, and now the express is the only link which connects the village with the great world.

The express ran to Wyndham and back, twice a week, in rain or shine. Its working power consisted of an ancient, one-eyed ox, John, by name, a worn-out cart, and last, but not least, 'Lisha Baker.

'Lisha felt that the express business was a great responsibility, and wished that people would not think it was necessary, because he was only a boy, to warn him to be careful of their packages.

Fifteen was a great age in 'Lisha's opinion; and a boy was none the less responsible because he happened to be small of stature.

Old Mrs. Ryder, who had had a dispute with the egg man, who "collected" twice a week, now sent her eggs to Wyndham to market; and she made 'Lisha sign an agreement to pay her three cents for every egg that was broken in transportation.

Mrs. Hepsy Nickerson expected her pension letter every day, although it came only once in two months; and she openly expressed her suspicions that 'Lisha had it secreted about his person. As the mail-carrying was only an accommodation, for which no one paid, this was somewhat trying to the disposition.

And there was old Mr. Seth Brewster, who expected 'Lisha to go half a mile out of his way to assure him that he had delivered his cranberries safely; and Mrs. Drusy Doane, who wanted him to come as far in another direction to tell her whether any news had been heard of the *Rover*.

Poor Mrs. Drusy! Her only son had sailed as mate of the *Rover*, seven years before, and the ship had never been heard from.

Of late the express business had increased largely, for, although railroads and modern improvements had not reached East Wyndham, the summer-boarder had. Mrs. Prudence Atkins had put an advertisement in a Boston newspaper. Her niece, Abby Forster, who taught school at Provincetown, had written it for her, and it described with enthusiasm the "quaintness" of East Wyndham.

Some of the East Wyndham people were not sure that they liked this, but Mrs. Prudence Atkins liked it, because it brought her a dozen boarders; and 'Lisha Baker liked it because it made the express business—well, not exactly lively, for that word is scarcely appropriate, in view of old John's peculiarities—but much more profitable than before.

There was a Mr. Gidney among Mrs. Atkins's boarders who thought much about "developing the resources of East Wyndham as a summer resort." He was back again early in June of the second year, bought some land, and devoted himself to "stirring up the town." Half of Mrs. Atkins's boarders had also returned early, and Miss Plumy Sears, who lived away over by Long Ridge, had secured five or six new ones; and there was already talk of a hotel.

But in spite of these signs of prosperity, East Wyndham was not sure that it wished to be "stirred up." When Mr. Gidney appealed to its

patriotic feelings, and declared that it was a disgrace not to have a Fourth of July celebration, no one responded very heartily. No one, that is, except the boys, and such of the girls as did not object to "things that went off."

The boys were full of enthusiasm. They circulated a petition, composed by Sol Dennis, who had been away to school. It was full of patriotism and very large words; and when people laughed at, instead of signing it, the boys held an indignation meeting in the schoolhouse field.

Now that Mr. Gidney had made them think of it they fully realized that it was a burning shame that East Wyndham had never had a Fourth of July celebration.

Some of the indignant boys talked of running away to sea. 'Lisha's tastes were less adventurous, but he planned as deep a revenge. When Baker's Boston & Cape Cod Express, the greatest business enterprise of that region, should form a network of intercommunication all over the Cape, he would leave East Wyndham out! It should be left in isolation and obscurity, only known as the town to which Baker's Express did not go.

It cost 'Lisha something to make this stern resolve. He had cherished visions of East Wyndham transformed to a centre of business activity by means of Baker's Express. But a town that was dead to both enterprise and patriotism deserved the worst that Fate, in the shape of Baker's Express, could do to it.

Teddy Grover, one of the city boarders, and a nephew of Mr. Gidney, mounted the fence and made a rousing speech, counselling what he called "revolutionary measures;" in short, having a lively celebration "in spite of the tyrant and the usurper."

"If we only had some money!" said 'Lisha Baker. It was hard to have one's pockets empty when one's country called. That was the way in which Teddy had put it.

A general melancholy settled upon the boys' faces at the mention of money. Teddy Grover caused his pockets to flap in a manner which showed their dreary emptiness.

"It's always my luck to be short," he said in an injured tone.

The truth was that Teddy accompanied the express to Wyndham on almost every trip for the purpose of indulging in candy, bananas and soda-water. "But I shall have enough before the Fourth to buy some firecrackers," he added, more hopefully.

Firecrackers certainly were better than nothing, but they were wholly inadequate as an expression

Digitized by Google

of East Wyndham patriotism, now that it was fully aroused.

"We'll make some kind of a noise, anyway," said Teddy, grandly. "I know an Indian war-whoop that'll just wake 'em up!"

Whether rumors of this accomplishment of Teddy's got about, and the "old fogies" felt that it was better to come to terms, I cannot say, but it was suddenly announced that Captain Ebenezer Atwood, the most influential man in East Wyndham, had joined Mr. Gidney, and there was to be a genuine Fourth of July celebration.

A picnic dinner in Atwood's Grove, with speeches, and the brass band from Fleetwell, the firing of a cannon at sunrise, noon and sunset, and fireworks in the evening! Now that the East Wyndham fathers were aroused, they certainly seemed disposed to show a proper degree of patriotism.

The East Wyndham express received the most important as well as the most delightful commission that had ever fallen to its lot; it was to bring, not only the fireworks, but the cannon which had been borrowed from Wyndham. At that village so much money had been spent on a new town pump that the people could not afford a Fourth of July celebration.

It was a rather small gun which they called a cannon in Wyndham, but Teddy Grover, who showed disappointment when he saw it, was assured by the other boys that it was a "roarer."

Teddy went with the express to Wyndham the day before the Fourth, and so did Wesley Freeman, the minister's son, and 'Lisha's twelve-year-old sister Persis, who was to buy a new hat at the Wyndham milliner's for the great occasion.

Teddy Grover had a dark suspicion that the Wyndham boys would try to prevent them from getting the gun. There was a perpetual feud between the boys of the two towns—"Easters" and "Westers," as they called each other. Sometimes it had gone to the disgraceful length of bruises and black eyes. The Westers had sent word to the Easters that they "had better not touch their gun."

It was 'Lisha's opinion that, since the authorities had offered to lend the gun, the boys would not dare to interfere. Nevertheless he followed Teddy's advice, and went armed with his grandfather's old rifle. But as Grandma Baker had not allowed him to take it until he had promised not to load it, it could serve no purpose except, as Wesley Freeman said, to "intimidate the enemy."

Teddy carried his uncle's pistol, subject to the same disadvantage as the rifle; for Mr. Gidney shared Grandma Baker's opinions about boys and fire-arms.

Teddy felt that it would be well to have a larger force to protect the gun; but East Wyndham boys had to work, and most of them were cutting marsh hay over at Short Ridge.

The express cart looked like a triumphal chariot, for Teddy had decked it with bunting provided by the ladies at the boarding-house, and two small American flags waved at old John's ears, much to his bewilderment and disgust.

'Lisha suggested that if they were likely to have any difficulty in getting the gun it would be as well not to go after it with quite so much display; but Teddy, who secretly longed for an adventure, declared that it was only proper to let every one know that East Wyndham, for once in its life, was going to have a Fourth of July celebration.

He blew a tin trumpet vigorously as the express cart emerged from the shade of Cedar Swamp into the long, sandy road which led into the village of Wyndham. People ran to the windows and doors to look at the boys as they passed; but beyond some cries of derision from the small boys who crowded around the cart at the station, there were no demonstrations.

Large boys seemed strangely scarce in Wyndham, that day; but Wesley Freeman was sure that he saw, through a knot-hole in a board fence, an angry eye fixed upon them, and also, just visible above the fence, the tow-colored hair of Nick Hallett, a ringleader of the Westers.

In fact there were nine irate Westers peeping through the chinks of that fence.

But 'Lisha, Teddy and Wesley secured the gun without difficulty. Old Captain Barnas Sears, whose head shook from side to side as he walked, unlocked the queer old gun-house, and delivered it up to the boys with a sigh of relief, glad, no doubt, that it was to roar in East Wyndham instead of on the common, close beside his house. 'Lisha had found a gratifyingly large number of boxes of firecrackers, torpedoes, Roman candles and rockets for East Wyndham, awaiting his conveyance at the station, and with these packed carefully around the gun, the boys set out joyfully on their return.

If Teddy felt a secret disappointment that securing the gun had been so tame an affair, he speedily forgot it in delightful anticipations of to-morrow's celebration.

Persis drove old John, with the bandbox containing her new hat beside her on the seat. Teddy, with his trumpet, sat upon the gun; and the other boys walked beside the cart, keeping a lookout for possible enemies.

Wesley had confided to 'Lisha his opinion that "Nick Hallett's eye meant something," and that it was quite likely that an attempt would be made to seize the gun. 'Lisha shared this suspicion, and walked beside the cart with a look of grave apprehension upon his face. It would be an unendurable disgrace to his express if the materials for the celebration should be lost.

It was decided to say nothing of these apprehensions to Teddy, because he might insist upon blowing his trumpet in defiance all the way, and would thereby reveal their whereabouts to the enemy. Teddy was a very brave fellow, but he lacked discretion.

Two or three times the boys had thought they saw a skulking figure behind a tree. Once 'Lisha was so sure of it that he took the rifle from the cart and carried it over his shoulder. If it had not been for Grandma Baker's prejudices against powder and shot, he could have defended the cannon to some purpose, he thought, bitterly.

There was a rustling in the bushes close beside the road, and a low whistle, so low that it might have been the wind; but 'Lisha was convinced that it was not. Teddy heard it, and turned a little pale in spite of his desire to show his prowess in a contest with the Wyndham boys.

"Those fellows are after us!" he cried, as the low whistle was repeated.

A moment later there was a wild rush of Westers from every direction. It seemed as if a boy had been hidden behind every tree and stump.

Nick Hallett had a long, stout rope in his hand.

"Shove her out, boys! Shove the gun out!" he cried, as they made a rush for the cart. "I'll tie the rope 'round her afterwards!"

For one moment the proprietor of the East Wyndham express felt his heart fail him. The next he set his teeth grimly, and aimed his rifle, with as desperate an air as if it had been loaded, at Nick Hallett's head.

Teddy, also, standing upon the cannon, with one arm folded calmly across his breast, pointed his pistol at the throng.

"Advance one step farther at your peril!" he cried, thinking of the one-armed cowboy, of whom he had read, who put a "savage horde" to rout merely by his warlike bearing.

"Pooh! I don't believe they're loaded," said Nick.

He shrank back a little, nevertheless; but Tom Briggs cried out, valiantly: "Who's afraid of that rusty old thing? Look out that it don't kick, sonny! And that little fellow with the pistol would be scared to death if it was loaded, I know by the cut of his jib. It's a little too cheeky for you to think you're going to celebrate with our old roarer! Come on, fellows!"

There was a great crash. Something, certainly, had been loaded. The air was thick with smoke and powder; something from the cart had gone skyward, in a great mass, and black and fiery fragments were descending.

With the explosion there was a swift scattering of boys. Not a Wester was to be seen. Teddy had tipped out of the cart backward. Persis never could understand how it happened that she found herself sitting in a sand heap several rods away, hugging her bandbox.

'Lisha found that the wooden boxes of rockets and Roman candles were on fire, and shouted in vain for help as he dragged them out of the cart, heedless of the danger, and of the fact that one of his hands was badly burned.

"Well, you *are* a plucky fellow!" said Nick Hallett, emerging from the shelter of a huge stump, as 'Lisha was smothering the fire with his jacket. "Say, we wouldn't have done it if we had thought it would blow up! We thought they would just go off like crackers under a tin pan."

"Crackers?" echoed Teddy, appearing with a blackened and bewildered face.

"We pried open that tin box while you were in the gun-house, you know. We had plenty of time while Captain Sears was pottering 'round. We just put in a little tarred paper and a slow match. I thought we left enough space for air. We never thought it would blow all to pieces like that."

"It was a mean, cowardly trick, anyhow," said Wesley, indignantly.

"Well, we sent you word not to try to get our gun," said Nick, sullenly.

"I say we ought to be ashamed of that!"

It was Tom Briggs who had emerged from retirement, very black in the face, and he spoke seriously. "Somebody might have got hurt."

There came another explosion at that instant, sharper, though not so loud. Something hit Tom on the head, and he fell. Old John, mad with terror, made one more effort, freed himself from the clumsy fastening of the cart, and rushed off into the swamp with more agility than his old legs had shown for many a day.

Some of the descending fiery mass had fallen, unobserved, upon a package of torpedoes, giant firecrackers and rockets, which Teddy had purchased for a little private celebration.

"Did everything go off this time?" asked Tom, sitting up and looking bewildered, while a tiny stream of blood trickled down his face. "Was anybody blown up besides me? Well, if you aint black, 'Lisha Baker! But you aint a coward if you are an Easter, I'll say that for you. I never thought popping off a few crackers would make such a piece of work as this! We only meant to astonish you a little."

Then Tom first became aware of the blood. "Say, you don't s'pose I'm killed, do you?" he faltered.

"No, but you might have been. It's a wonder that some of us weren't," said 'Lisha. "At East Wyndham we don't play tricks with powder; we use it like men."

"You needn't have meddled with our gun," growled Tom. "Say, can't somebody wind something round my head?"

The boys were all returning from the safe distances to which they had retreated, but it was Teddy who went first to Tom's relief.

"I don't know about using my best handkerchief on a Wester," he said, with a comical grimace. But he bandaged the wound carefully, and inquired solicitously after his enemy's feelings.

"The fireworks were on the other side of the cart; we never thought of what might be in that paper parcel. I'm sorry 'Lisha Baker got his hand burned. I'm glad that the rocket didn't hit anybody but me."

Tom spoke gruffly, evidently feeling a shame-faced objection to making an apology.

"I suppose I was careless to leave a paper package there," said Teddy, politely.

"Say, we fellows 'll help you find your ox, and patch up your cart, and—and we don't mind your having our gun. 'Tisn't any great of a gun, anyhow," said Tom.

"We should be very happy to have you fellows come over to our celebration," said Teddy, with great courtesy.

These amenities were interrupted by another crash; but this time it was thunder, as startling to the boys as if it had come out of a clear sky. They had been too much excited and absorbed to observe the dark clouds that had gathered.

"It's going to rain—floods!" cried Tom Briggs. "Have you got any waterproof to cover up your wooden boxes? The fireworks will be spoiled!"

"We never thought of rain, it was so pleasant," said Teddy in dismay.

"I thought they would all come in tin boxes," said 'Lisha.

Had Fate conspired against the Fourth of July celebration and the honor of the East Wyndham express? As soon as the danger by fire was over they were threatened with ruin by water!

He took off his jacket and covered one of the boxes with it as well as he could. Every boy, Westers and all, did the same.

"The sooner we find that old ox and hitch him up, the better!" said Nick Hallett. "It's getting awfully black."

'Lisha uttered a call to which old John always responded, but in vain. They searched the edge of the swamp, but no ox was to be found.

"We've got to do something, quick!" said Nick Hallett. "We'll tie the rope 'round the gun and haul it! You needn't be afraid that we won't haul it the right way this time! And the rest of us can haul the cart. There are twelve of us; we ought to be able to do it."

They all took hold with a will. Persis ran on before, her precious hat hidden under her shawl. A hole had been burnt in the bandbox, and she had thrown it away; but the hat was uninjured.

It was hard work, but only just as they reached East Wyndham did the rain begin to fall. Before even the jackets were wet the boxes were safely stored in the village hall.

"We have met the enemy and they are ours!" Teddy whispered to the Easters, who stared in astonishment.

The East Wyndham people were very indignant when they heard of the "mean trick" that had been played, but nevertheless, they agreed that since the Westers had done more to atone for it than could have been expected of them, they should be well received.

It was a rousing celebration, and the Westers entered into it with spirit and friendliness. There were no great formalities about the peace-making.

Nick Hallett said, somewhat gruffly: "Say, it's kind of foolish for us fellows to fight. If the Fleetwells try to lick you, just let *us* know!"

Then they shook hands all around, not without some embarrassment. It was Teddy who set the example, and after this ceremony, they gave three rousing cheers and a tiger for the East Wyndham express, in which all embarrassment was forgotten.

These were not the only events that came from that exciting trip. As soon as all the summer-boarders had arrived, Mr. Gidney circulated a paper which set forth the great advantages which East Wyndham had derived from the express, and offered an opportunity for every one to subscribe towards the purchase of a good horse for 'Lisha Baker. Every one responded—even old Mrs. Ryder, who had made 'Lisha pay three cents for a broken egg; and 'Lisha was soon the proud and happy owner of a good horse.

Old John, who was found peacefully chewing his cud in his own barn, does only a little plowing and carting now; his stiff joints know the long, sandy road to Wyndham no more.

'Lisha feels that Baker's great express line has made a real start.

SOPHIE SWETT.

For the Companion.

GEORGE WASHINGTON II.

My acquaintance with George Washington II. began one morning in early summer. I had called at the little post-office for my letters, and was sauntering homeward along the shady old village street, when a clattering of hoofs and a child's shrill voice made me turn hastily.

Coming toward me, at a rapid pace, was a queer little gray donkey, bearing my eight-year-old son, who was clinging to him with both hands, his brown eyes wide with terror.

Beside them ran another boy, holding the donkey's bridle. Evidently he had not the slightest control over the animal, but was resolved not to desert his frightened little comrade.

His short legs could hardly keep pace with the donkey's gait, but as he flew along he cried encouragingly:

"Don't be scared—Philly; he—knows what—he's about. He won't go—much—further!"

I was about to rush to my son's rescue when the donkey stopped with an abruptness which almost threw Philip headlong, and which landed the other boy in the dust.

By the time I reached him he had picked himself up. After one solemn glance at me, he turned to Philip, who had hastily dismounted and was now at a safe distance.

"There, Philly, I told you so!" he panted. "General Grant never does things except for some purpose. He knew the grass was better up here, and that's the reason why he came so fast. If you'd only had a little more confidence in him you'd have been all right."

I looked with some curiosity at the queer child.

He was rather small and slender, with grave blue eyes, a firm, composed little mouth, and the brightest red hair I had ever seen, cropped close to his head.

He was dressed in short blue trousers and a little white shirt, embroidered with large red stars; and he wore a sailor hat trimmed with red, white and blue ribbons.

After fully grasping the magnificence of this patriotic costume, I said:

"What is your name, my boy?"

He hesitated a moment. "Well, it's really George Otis," he answered, slowly; "but I'm generally called George Washington, because it seems more appropriate."

"How old are you?" I asked.

"I'm after seven."

"When were you seven?"

"Why, on my last birthday," said he, with a slight look of surprise.

"His birthday's on the Fourth of July, papa," volunteered Philip, "and that's why he wears such splendid clothes. He's got lots of things at home even better than these. He's got a gun and

Digitized by Google

a crocodile. Just think, papa, a live crocodile! George Washington, won't you show papa your crocodile?"

George Washington solemnly produced from his pocket a tiny, living alligator, and, proudly displaying it at arms' length, explained:

"Its name is 'Malaria.' I wanted to call it the Marquis La Fayette, but Martha gave it to me, and she wanted it named 'Malaria.' She says it came from a place where the only thing they have is malaria."

"Martha Washington?" I inquired.

"Hodgekins," he responded sadly, "only Hodgekins; but," he added, brightening, "she lets me call her Martha Washington whenever I want to; so I usually do.

"She's my nurse, you know," he continued, "and she's very good to me. She makes my clothes, and she put all these stars on my shirt. Do you see those six new ones on the collar?" he went on. "Those are for North and South Dakota, Montana, Washington, Idaho and Wyoming. That makes fourty-four in all. Just like the flag, you know."

"Say, George Washington!" begged Philip. "Can't papa go to your house and see your other things? He always likes war things."

"I should be glad to have you come, sir," said George Washington, with old-fashioned courtesy. "It's not far; we've just moved into the old Frothingham house by the river, and I've got some extremely good Revolutionary relics."

Anxious to know more of this queer child, I gladly accepted the invitation.

"Why do you call the donkey 'General Grant,' if all your other possessions are connected with the Revolution?" I asked, as we walked along, General Washington dragging the donkey after him.

"Well," he said, "you see his character is so much like General Grant's. You never know quite what he means to do, and when he makes up his mind to do a thing, no one can stop him; and you generally find he's got an object and it's best to let him accomplish it without interfering. But he's such a good donkey. And so I thought it wouldn't make much difference if I did take him out of the Revolution a little, 'cause I admire General Grant a great deal."

By this time we had reached the big, old-fashioned house by the river. George Washington led the way to a side door and knocked gently.

"Aunt Harriet lives in that part of the house," he said, pointing to some closely drawn blinds. "I don't see her very often, but I don't mind much, for she says I'm a heathenish and outlandish child, and you don't like a person who calls you names like that, do you? I stay in my own rooms with Martha most of the time. Here she comes now!"

The door opened. "Martha," he said, "this is Philly's papa, and I'm going to show him my rooms. Will you please bring us up some seed-cakes?"

He led the way up the narrow staircase to a room on the second floor, the door of which he threw open with ceremony, and stood aside while we entered.

The room was certainly as queer and unusual as its owner. A large, four-post bedstead in the corner was draped with a gay canopy of red and blue bunting, which was held in place by an imposing though somewhat dingy gilt eagle.

The little toilet table was arranged like a military tent, and on the walls were dim, old-fashioned portraits of men in Continental uniform.

The tastes of George Washington's ancestors had apparently run largely toward warfare.

The masterpiece of artistic effect was the decoration above the fireplace. A very red and frowning painting of the original George Washington was the centre-piece, and about it were fastened almost enough Revolutionary muskets and swords to furnish weapons of defence for that illustrious general's entire army.

Above these implements of war was suspended a large banner with the motto:

"Fust in war, fust in piece, fust —"

Here the sentence had been forced to end, because there was no room for more letters.

"Martha made that for me on my last birthday," he said. "It's very handsome, isn't it? Some of the words aren't spelled just right, but of course I wouldn't ask her to change them. She felt bad because there wasn't room for the whole thing; but I tell her it doesn't make a bit of difference for every one knows that the rest of it is 'First in the hearts of his countrymen.'

"You see that sword hanging there? That belonged to my great-great-grandfather. He was in the Revolution, and he knew General Washington, and he was very brave.

"If you're done looking at those things, I'll show you something which is better than anything in this room. I keep it locked up because it's more valuable than anything else I have, and I'm very proud of it."

From one of his numerous pockets the boy produced a key, which he fitted in the lock of a small chest beside the bed. Then, with great care, he lifted from it a box tied with thick cord. When this in turn was carefully opened, a parcel appeared, done up in silver foil and tied with a great many ribbons.

"I must tell you a little about this before I open it," said George Washington. "You know my great-great-grandfather, the one who was in the Revolution? Well, at the battle of Fort Sullivan the British shot the flag down, and he rushed out and put it up again, and there it stayed all through the fight; but at the end it was so torn that they said they must have a new one, and gave that to him. He cut it into strips and gave different parts to his officers; and this is the part he kept himself.

"It has always been in the family, and all we men have been very proud of it. Papa was the last one who owned it; and before he died he always kept it in this chest, and let me wear it on the Fourth of July—my birthday, you know.

"Of course I'm very careful of it, and I only wear it for a little while, and never if it rains; but it's a very nice thing to own."

With great pride he opened the parcel and displayed a blue strip from an old American flag, made up in the shape of a sash, and lined with strong red bunting.

"You see it ties about my waist, so, and it looks very well," said George Washington, lifting it with reverent care, and holding it up to his small figure.

After I had duly admired it and it had been conscientiously wrapped in its many papers and returned to the chest, Martha appeared with the seed-cakes, and soon after we took our departure.

George Washington saw us to the gate, and said, with a little sigh:

"I should think you'd enjoy each other a good deal. My papa died three years ago, but we always had such nice times together, though of course I was only a small boy then."

He watched us out of sight with a happier look on his grave little face than I had yet seen it wear.

After this George Washington, General Grant and Malaria were frequent visitors at our house. His grave way of talking and his droll little stories about his former life were very interesting to me, while his wistful longing for home life and affection drew us all to him.

Philip was deeply impressed by his Revolutionary relics and his gentle manliness; and we were glad to have him as a companion for our rather spoiled little boy.

Time went on until the long wished for morning of the Fourth of July dawned.

George Washington arrived early, resplendent in a new starred blouse and big hat, caught up with a large cockade of the national colors. Around his waist was the precious sash.

I noticed that his face was rather grave as he entered; and in a few moments he explained to us the cause by saying:

"I met Micky Flynn on my way here. I don't like Micky very much. He throws stones at General Grant and me. Somebody will be hurt sometime by those stones."

As he spoke I noticed a suspicious swelling on his forehead, but as he did not mention it I said nothing, respecting the brave little heart that could keep its wrongs a secret.

Micky Flynn was the worst boy in the village, and for some time I had noticed his persecutions of George Washington, who seemed particularly to arouse his wrath. But as, up to this date, his enmity had only reached the point of taunting my little friend with being a "walkin' paynorammer o' Bunker Hill," with other remarks intended to be equally insulting, I had thought it best not to interfere.

At about noon, however, Philip rushed into the house, much excited, and begged me to come out quick, for Micky Flynn had got George Washington.

I hurried out and found George Washington standing at bay. He had placed himself in front of General Grant to prevent him from being hurt, while about him, hooting and yelling, were at least ten of Micky's boon companions.

Micky himself, in the midst of them, was holding Malaria in a most uncomfortable position, head downward, and endeavoring to tie a string about the wriggling creature's neck.

Poor little George Washington's eyes were fixed in anguish upon his struggling pet, but he did not dare leave General Grant even to rescue Malaria. He stood there with his lips pressed close together, and a look of entreaty that ought to have touched even Micky's hardened heart.

I went straight to George Washington's rescue. Micky Flynn dropped Malaria and himself barely escaped my grasp. But encouraged by their number, the boys did not run far. From a safe distance they hurled threats and gibes at George Washington.

"Ya! look at him!" cried one. "Look at the shinin' ornimint to the Fourth! Look at Miss Goddess o' Liberty, with his hat all trimmed up like a girl!"

"Say, young feller," said another, "what'll you take for your sash? It's as handsome a piece o' millingery as I ever see."

"I'm 'stonished at yer, Jim," shouted Micky, derisively. "Don't ax him fer that. The purty boy wants to wear it to-night. He's been hired to tech off the fireworks with that red head o' hisn."

George Washington winced a little at this last shaft, for his red hair was his sensitive point; and he had once confided to me that he kept it short to show as little of it as possible.

He turned his back on his tormentors, restored Malaria to his pocket with tender care, and walked with great dignity into the house, where Philip was weeping dismally.

I determined to stay near the boy for the rest of the day, and to speak to the town authorities about Micky, who I thought had now gone as far as could be permitted.

I bade the boys take an early luncheon, and be ready to go with me to the raising of the new flag on the village green, at one o'clock.

They were on time; and here George Washington and Philip forgot their sorrows of the morning in cheering vigorously for the silken banner as it was hoisted on the slender white pole.

After this ceremony was over, every one went down to the river bank, where stood a monument commemorating one of America's first victories. The town had played a prominent part in the Revolution, and on the Fourth of July the people never failed to do honor to its dead heroes, on the spot where their first valiant stand for liberty was made.

The little rustic bridge was crowded with townspeople, and as I had a part in the duties of the celebration, I was separated from the boys. Soon I noticed that they had gone down to a little pier at some distance from the bridge, where they could hear and see very well.

I perceived with some anxiety that Micky and his friends were near them; but they were all too much absorbed in the music and speeches to pay any attention to my boys.

I had forgotten them in the impressive words that were being spoken, when a piercing shriek caused every one to turn quickly in their direction.

What had happened was soon told by one to another in the crowd. The adventurous Micky, in his desire for a prominent place on the landing, had gone too near the edge; and he had slipped and fallen into the deep water.

He could not swim, nor could any of his companions; and it seemed that the boy must drown before any one could get from the bridge and across the intervening field to rescue him.

Men were running in his direction, but he was about to sink for the second time when we saw little George Washington bending far out from the pier, with something stretched from his hand which he flung to Micky.

The drowning boy grasped it, and the other boys helped George Washington draw him toward the pier. There he clung; and at last a man reached the spot and drew Micky out, gasping and half-conscious.

I reached the landing as the crowd was moving away, and hurried out to the end; for George Washington had not joined the group about Micky, but was standing with his back turned and his hands clenched, gazing down into the water.

A suspicion of what had happened flashed across me.

"George," I exclaimed as I came to his side, "what did you throw to Micky to keep him up?"

He turned a white little face toward me.

"My sash," he answered, in a low voice. "There wasn't any other way to get him out and I had to do it! They let go of it when they got hold of his arm, and it's—gone!"

His voice trembled as he said this. He gave a despairing look into the water, but added bravely:

"I'm so glad Micky wasn't drowned, and—I—I guess Martha'll be wanting to see me now, and I'd better go home."

At this moment we heard a meek voice at our elbow.

"If yer plaze, Micky wants to speak to you, George Washington."

George Washington looked inclined not to comply with this request; but I took his hand and led him up the bank to where Micky was rapidly recovering, under a big tree.

As we approached, a cheer went up from every one, in which Micky feebly joined. George Washington was surrounded by the townspeople and boys, each one, from old Judge Greene down to Micky's youngest and wickedest ally, anxious to shake the hand of the little hero of the hour.

Micky was not an eloquent person, but a silence fell when he held out his rough hand to George Washington, and said in a broken voice:

"If it hadn't 'a' been for *you*, little chap, I shouldn't 'a' been here now. They tell me what you done for me, and Jim Maguire he says it was that sash o' yourn that you done it with, and that it's gone. There warn't no reason why you should have tried to get me out, and if you wasn't the best fellow in the world you wouldn't have done it. An' all I can say is, that if any one ever tries to bully you again, they'll have ter settle accounts fust wid me."

Micky glared at his friends, apparently forgetting that he had always been the one to start the bullying.

Poor little George Washington was beyond words now. He was aware that the only way in which he could keep back his tears was to keep silent, and that he had better get away as soon as possible.

So after a faint little smile into Micky's muddy face, he broke through the crowd to where General Grant was tied, mounted him with great haste and rode away.

Some of the boys went down to the landing to try to recover the lost sash, but did not succeed. Its glorious history was ended, but no one ever knew whether it was lost in the mud or carried out with the current.

I told the story of the sash to the people. They more than ever admired the generous spirit of the boy, who gave up his dearest possession to rescue a fallen foe.

So, when Judge Greene mounted a stump, a moment later, and called for silence, every one listened eagerly as he said:

"There isn't a man or boy here who can help admiring the sacrifice our little friend has made to-day, for it is the sort of heroism we can understand; and I know you will all agree to the proposition I am going to make, which is: that the new flag, raised to-day for the first time, be presented to George Otis.

"It cannot take the place of the brave old flag which he has lost, but it will help to show our appreciation of his manliness. Is it a unanimous vote?"

There came a deafening shout of "Aye!" which left no doubt of the people's assent.

MARJORIE RICHARDSON.

For the Companion.

A FIELD HOSPITAL AT GETTYSBURG.

By John S. Billings, Surgeon U. S. A.

All readers of *The Companion* have heard of the Battle of Gettysburg, the Pennsylvania village in the valley across which swayed to and fro for three days the opposing armies of the Union and of the Confederacy, in one of the greatest and most important battles of the Civil War.

Many of them have no doubt listened to and read stories told by those who took part in the fight, and have some idea of the appearance of a long line of soldiers making a charge, and of the opposing line behind a low wall, loading and firing as rapidly as possible; of the clouds of smoke, the roar of the cannon and musketry like that made by a railway train in a tunnel; the wounded men limping, or crawling, or being carried back to get out of the line of fire, and the bodies of the dead lying scattered as they fell.

The scene which I wish you to imagine now is not the line of battle, nor the rush of a charge, but the grounds about a Pennsylvania farm-house on the side of the high hill known as Round Top.

At the beginning of the second day's fighting, the people in this farm-house had not been disturbed, and probably thought that if there was another battle that day it would occur several miles away. As it was baking-day the women began to mix a large batch of dough, and had a good fire burning in the big kitchen stove, although it was a warm July day.

But while they were in the midst of their work the sound of cannon and musketry, which had come to their ears from far off in the forenoon, grew louder and nearer, sometimes almost ceasing for a few moments, and then bursting out with a roar and rattle that shook the house, until just as the great mass of dough had been kneaded over for the last time and pulled out into a roll, looking like a bolster on the big pine table, and the tin baking-pans had been set out and greased to receive the loaves for which the hot oven was ready—just then came a louder crash; a round shot fell in the yard, a shell exploded in the road in front, and half a dozen musket-shots came from the corner of the house, aimed at a small body of blue-coated soldiers who were rapidly approaching across a field.

The women dropped everything and fled, leaving the doors wide open.

Ten minutes later a Union surgeon, with three men, came up the road to the gate. He had been sent by the Medical Director to find a place for a hospital, to which could be brought the wounded from the fight then going on in the fields at the foot of Round Top, about a thousand yards away; and when he saw the house, with its broad, grassy yard, partly shaded by trees, a big barn at one side and an orchard in the rear, he decided that this was just the place he was looking for.

Establishing the Hospital.

He hung a yellow hospital flag at the gate, sent a man back to tell the Director and the ambulance officers where the wounded were to be sent, and went into the house, where it was easy to see what had happened.

He set one man to filling the pans with the dough and placing them in the oven; told the other to bring water to fill the tubs, which were on a bench by the kitchen door, and himself proceeded to get the big tin washboiler and all the kettles he could find filled with water and placed on the stove.

By the time this was done, men wounded in the hands and arms began to straggle up the road toward the yellow flag, and in a few moments half a dozen ambulances bearing badly injured soldiers arrived.

In the boxes under the drivers' seats in these ambulances there had been packed cans of beef extract, of roasted and ground coffee, and of condensed milk, with boxes of crackers. One of the assistants, with these materials, proceeded to make hot beef-tea in the washboiler and hot coffee in the kettles. The stream of wounded continued, and as they came they were placed on straw covered with blankets in the house, in the barn, on the grass, and finally in the orchard, until about a thousand men were thus collected.

Meantime, half a dozen more surgeons and a number of stretcher-men and attendants had arrived, and set at work, each being assigned a particular duty by the first surgeon, who was the Surgeon-in-charge. They rapidly examined the wounded, selected the cases requiring immediate care or an operation, sent them to the operating-tables, and applied simple dressings of wetted lint and bandages to those who could wait.

There were two operating-tables, each under the shade of a tree. A man with a shattered limb, or a wounded artery restrained temporarily by a strap or handkerchief twisted tightly around the limb, would be laid on the table; a surgeon would hold a sponge wet with chloroform before his face, and tell him to draw ten long breaths.

At the fifth breath his pain would cease, and the noises around would become a faint murmur. At the eighth breath he felt as if he were floating in the air, and forgot to count; at the tenth breath he slept.

Then the chief surgeon made a rapid examination, to see if the operation was necessary which the doctor who had first seen him thought desirable; and if he found it so, the ball was removed, the splinters of broken bone taken out, and the artery tied; or, if nothing else could be done, the limb was removed.

The attendants applied the dressings, and the chief surgeon went to the other table, where he found another patient in the chloroform sleep, ready for his inspection.

So the work went on steadily. Each wounded man got a cup of hot beef-tea, or of coffee, or of both; had his wounds temporarily looked after, and waited for what was to come next.

Preparing for Night.

The sound of firing grew scattering and distant, and finally ceased; the sun went down, and in the twilight came officers and men from the front to see their injured comrades, and do what they could for them. There were last messages to be given, a ring and a watch and an army badge to be sent to mother or wife, sister or sweetheart, with good-by; and there were notes scrawled

A Field Hospital.

with pencils to be sent to the anxious ones at home, telling them that "John was hurt in the right arm, but not seriously, and the surgeon says he can go home in a week."

Candles were produced from the ambulance boxes, and by their aid the surgeons went on with their work through the night.

About four o'clock in the morning the chief surgeon had tied the last artery in nearly the last case which had been selected as urgent, and as he turned away from the table he came face to face with the Medical Director of the Army of the Potomac, Doctor Letterman, who had been silently watching him at work.

"Good morning, Doctor," said the Director; "how are you getting on?"

"We are just done with the first rush," was the answer. "I shall not try to do any more operating until full daylight. What is the news at headquarters? More fighting this morning, I suppose?"

A Change of Location.

"Yes, and near this place, I am sorry to say," said Doctor Letterman. "General Meade has just told me that a part of Lee's artillery fire will be directed on or near this spot this morning, and that you had better go to work at once to get your wounded to a safer place."

"It will be cruel to some of these poor fellows to move them just now," said the surgeon, "but it is the fortune of war. Have you picked out a place to go to? Yesterday I noticed a grove on the bank of the creek about a mile to the rear from here that will do, if it is far enough back."

"Yes," said the Director, "I think that will do. We are not going to repeat our Chancellorsville experience. If we get beaten this morning I won't ask you to move again, but I will come and stay with you and we will all be captured together. I don't think there is much chance of that, however."

"Very well," said the surgeon; "send me all the ambulances and wagons you can, and I will begin to move as soon as possible. Will you have a cracker and a tin cup of black coffee?"

The doctor was obliged to decline even the simple refreshments offered. The two men shook hands and parted.

The surgeon turned and picked his way through the men scattered about on the grass. Most of them were asleep; a few were moaning slightly, and by the side of these attendants were kneeling, moistening the bandages with cool water or offering a dose of opium which had been ordered. But for the most part there was silence.

Daylight was rapidly approaching. There was a heavy dew on the exposed grass, and the air was moist and chill.

It was such a pity to wake them! But there was no help for it. The necessary directions were given; a fresh lot of hot coffee was prepared, and by the time the ambulances came, all except a few dying men knew what was to be done.

The Removal.

It was a melancholy procession that filed down the road—the slightly injured on foot, and those hard hit in the wagons, of which several trips were necessary to bring all away. It was done at last; but not before several shells had fallen in the yard. A shell passed through an ambulance, which was, fortunately, empty.

Shelter for the worst cases was provided on the new site by stretching rubber blankets or pieces of shelter-tent over sticks driven into the ground. Several wagon-loads of hard crackers, bacon, coffee and other supplies soon arrived, together with several oxen, to be slaughtered to make beef-tea for the wounded.

Log fires were built and kettles swung over them, and every one who could help, even if one of his arms was in a sling, did something for the comfort of those who were helpless. Meanwhile, the surgeons went steadily on with their work, cutting out balls imbedded in the flesh, putting splints on the broken limbs, and only half-conscious of the roar of artillery and musketry which rose and fell beyond the ridge above.

After the Battle.

At last the roar ceased. The shadows began to grow long. Presently a messenger came from the Medical Director to the chief surgeon to tell him that the battle was over; that Longstreet had failed to break through the line of the Second Corps, and that the surgeon might be sure that his wounded would not have to be moved again that night.

The next day after the battle it rained. It almost always does rain immediately after a great battle; and this rain continued for five days and nights.

After three or four days tents were procured, rough bedsteads were constructed by laying poles on forked sticks driven into the ground, and covering these with brush or pieces of cracker boxes; and after ten days small iron bedsteads were obtained.

For several days there was nothing to eat but beef, bacon, hard bread and coffee; and as the wounded began to grow feverish, this was not what they could eat. After a while, however, the wagons of the Sanitary Commission and other relief associations came up, bringing some fresh vegetables and soft bread, with boxes of oranges.

Not one of the boys who read this can have an idea how good an orange tastes to a man with a sore, stiff leg and some fever, who has had nothing but tough beef, salt bacon and hard crackers to eat for nearly a month.

Perhaps you may know a man who was in that hospital that I have told of; possibly, even, your father may have been there. If so, he can tell you how things seemed to him as he lay there for the first day or two on the ground, looking out from under his rubber blanket at the pouring rain—and wishing that he had a piece of soft bread and a tomato, or young onion, or something that was fresh and green to eat.

I think he will tell you that although he had a good deal of trouble for a time, the result of the war was worth it, and that upon the whole he is not sorry that he was a soldier.

Perhaps you will see, too, that the army surgeon at such times has many things to do besides dressing wounds, and that his anxiety for the wounded of which he has charge extends to food, shelter and many other things besides splints and bandages, which he must do his best to provide for his patients.

For the Companion.

A HOME MUSEUM.

The subject of home education is likely to receive much attention in the future as an essential outgrowth of the Chautauquan circles. The families who make a school in the home both rightly direct the mind and affections of young people, and educate those tastes that form superior character.

It would be well for our nation if every household had its little schoolroom, with its own library, apparatus for scientific experiment, and museum.

A home museum may be made a playhouse of useful study and experiment. Such museums have usually consisted of minerals, coins, shells, stuffed birds and fishes, fossils, postage-stamps and autographs.

These are all interesting collections, and follow the English methods of making a cabinet of curiosities, but in our country an enlargement of the plan would be appropriate, with articles peculiar to our soil and history.

The case or cabinet of such a museum may be very simple and inexpensive. It may consist merely of shelves and curtains, though it would be better to have a case with glass doors, or boxes with glass covers. A plaster bust of some representative man, a stuffed eagle or owl, buffalo horns or some curious fossil may be used to ornament the top of the cabinet, if a case instead of boxes be used.

Indian Relics.

The passing away of the Indian tribes makes the collection of Indian relics an interesting matter of history. These relics are to be found in all parts of our country. Arrow-heads and wampum are almost everywhere to be found embedded in the soil. Indian axes and flints, and mills where corn was ground by being beaten with a pestle or rolled under a pestle, are common curiosities, and pottery is exhumed in many places in the Southwest.

Indian beads and pipes are common to all parts of the country.

In order to make interesting such relics as these, they should be associated with traditions and local wonder-tales, and their associations explained. Nearly every town in America has its Indian stories, and the collection of the romances of primitive life is a most poetic and picturesque study.

An artist friend recently visited the old Indian Reservation at Lakeville, Massachusetts, painted a portrait of one of the last of the Wampanoag tribe, and made sketches of the ancient Indian burying-ground and other scenes of traditions about the lake. He was impelled only by the motive to preserve the historical associations of the few descendants of Massasoit and King Philip.

An Attic Museum.

In the thirteen original States of the Union are many fine oak houses, with great chimneys and fireplaces, broad halls with facing doors, winding stairs and cavernous garrets. In these garrets are often stored away the old cradles, sticks, clocks, settles, looms, wheels, fire-dogs, guns, pictures, samplers, warming-pans, and other antique articles of former generations.

Many families in New England have sold such relics for old brass, iron, or rags; the planters of Virginia and the Carolinas have, as a rule, entertained a larger sentiment of respect for such things, as have the families of Pennsylvania.

It is an easy matter to change a garret, which still contains such relics as have been mentioned, into an antiquarian museum, and to associate many of the articles with heroic, romantic, amusing or pathetic traditions of the family.

Those who have visited the antique rooms of the Colonial house of the late Major Ben: Perley Poore have had an illustration of how interesting such a room may be made. The Major's rambling chambers and attics are full of articles associated with stories, and he learned to relate these traditions in a very vivid way. In his home old New England lived again, as the days of Washington still live in the upper rooms at Mount Vernon.

Conchology.

The collection of shells, by the sea and on the land, is one of the simplest ways of training the eye to see beauty in common things. When a collection of shells has been made, sea-ferns and plants and flowers become wonderfully interesting to the museum-maker.

The salt-water shells, fresh-water shells and land shells may be so arranged as to present

Digitized by Google

many curious points of comparison; and the beginner may well open his museum with these. The simple study will be likely to lead him on into the wide field of fossils and zoölogy.

Farm Collections.

Taxidermy requires training and skill beyond the ability of beginners in museum-making, and coin-collecting, to be representative, demands a considerable outlay in money. But each farmer's boy could make a museum of the curiosities to be found on his own home place. Thoreau says:

> If with fancy unfurled
> You leave your abode,
> You may go round the world
> By the old Marlboro' road.

The great number of curiosities that may be gathered from a single farmstead will greatly surprise a visitor, who will not be unlikely to regard the locality as one of the most curious in the country.

"Some persons," said wise Doctor Johnson, "will see more things in a single ride in a Hempstead stage-coach than others would see in a tour of the world."

The number of flowers that could be collected on one hundred-acre farm would in most parts of the country be a revelation to any but a practical botanist. A book of these pressed flowers is a treasure for the farm museum. So also with the different kinds of woods that may be collected on a farm, and again feathers.

The minerals that may be collected on a single farm are usually numerous. It might be well for a school or a boys' club to offer premiums for the largest collections of pressed flowers and of minerals to be found on any one farm in a township. The search would become a study; the study a taste and habit, and the habit develop a studious character.

Humorous Collections.

Among the curiosities in the Philadelphia Mint is a "coin made in Philadelphia two thousand years ago." This pleasant use of an Asian name leads more people to examine this coin than the thousands of others in the wonderful cabinets. It is often annoying to a serious collector to see his friends turn away from curiosities of worth, to talk over what is merely quaint and humorous.

The young collector will no doubt have many oddities. Old toys, pictures, riddles, sports and games, masks; curious growths of parts of trees, and animal-shaped roots may claim his attention. He must not have a dull museum.

He should have a place for all the Christmas cards that he has ever received, a book for autographs, and a book of correspondence for exchanges with other collectors.

H. BUTTERWORTH.

For the Companion.

NATURE'S PIONEERS.

We know that to be a successful pioneer requires exceptional sturdiness, close economy of resources, and contentment with the bare necessities of life.

If a pioneer meets these conditions, he will probably succeed, not only in maintaining himself despite adverse surroundings, but will make

Fig. 1.

it easier for others who come after him to live where he has toiled.

Now, in the plant world this power of living on in spite of hardship is, in a high degree, characteristic of the lichens, and they owe this power to much the same qualities that make other pioneers successful.

First let us get a clear idea of what is meant by a lichen. Most often they are called "mosses," but this name belongs, strictly speaking, to little plants having regular stem and leaves, which lichens have not.

Fig. 2.

Certain kinds of lichens form a thin crust upon rocks, bark, or dead wood.

Many people look upon these as mere weather-stains, and are surprised when they are told that this thin crust consists of living plants. A good example of this sort is the pale yellow Geography-Lichen (*Ruellia geographica*, Fig. 1), which grows on rocks in northern regions, and is named from its map-like appearance.

Other lichens form thin mats, rather loosely attached to the surface on which they grow. Such a one is the gray Rock Parmelia (*Parmelia saxatilis*, Fig. 2).

Others, again, are shrubby, more or less branched, and attached only by a small base, as is our common pale green Ramalina (*Ramalina calicaris*, Fig. 3).

Finally, there are the coral-like forms which grow commonly on barren earth and dead wood. These include the so-called Cup-Moss (*Cladonia pyxidata*, Fig. 4), and the Reindeer-Moss (*Cladonia rangiferina*, Fig. 5).

In point of sturdiness, some of these little plants are a marvel. Situated as they often are on the most exposed parts of ledges and boulders, neither sun nor wind seems to harm them. The severest drought merely stops their growth while it lasts. Immediately upon being moistened again by rain or dew, the humble activities of their life are resumed as if nothing had happened.

Extreme cold is equally powerless to injure them, and travellers find them growing luxuriantly at higher altitudes, and much nearer the North and the South Pole than other plants are able to live. Nor can the most violent winds tear the firmer ones from their place.

Fig. 3.

They are, in short, well nigh indestructible by rigors of climate. But they differ considerably in point of toughness; some are almost as tough as leather, while others become so brittle that a touch breaks them; but this brittleness is no great disadvantage, since each fragment will live and grow quite as well as before.

Indeed, lichens very often propagate by spontaneously detaching small bits of themselves, which are carried like seeds by the wind to other spots, where they may begin to grow on their own account.

In the fewness of their wants, lichens are quite as pioneer-like as in their indifference to hardship. Given a somewhat enduring surface to which they may cling, where daylight may reach them and occasionally some moisture, and they will get all their food from the air, and thrive on it. Evidently such modest requirements imply unusual economy of resources.

Fig. 4.

When a landslide or similar catastrophe has laid bare the ledges on a mountain-side, lichens are the first plants to appear on the exposed rocks, and begin the long process of reclothing them with vegetation.

Before the higher plants can return, a considerable amount of soil must be accumulated.

Fig. 5.

This is accomplished for the most part as follows: Wherever the lichens gain a foothold—especially the mat-like or coralline forms—they arrest earth particles which are blown or washed against them, and so in time there are gathered little patches of soil sufficient to support certain of the true mosses.

These, in turn, spread and serve also as soil-makers in a small way, until, after a while, it becomes possible for the hardier kinds of mountain ferns and small herbs to take root. Then follow shrubs, and finally such trees as lived there before.

Thus the lichens, though appearing at first sight feeble and unimportant, are as truly pioneers in redeeming these rocky wastes as are those hardy men and women who prepare the way for civilization in a newly discovered country.

How is it that lichens are able to act as pioneers so much better than other plants? Until recent years this was an unsolved problem; but now we know that each lichen is a sort of coöperative community, and not a single individual.

That is to say, individual plants of two kinds, by living in close connection and helping each other, form a compound organism, which has the appearance of being an individual, and is able to grow where each copartner, by itself, would be likely to perish.

Let us see what may be learned by examining these individuals with a microscope. If a thin slice cut from a Ramalina, for example, is viewed through a glass with a magnifying power of about three or four hundred diameters, it will be seen that the lichen consists of the parts shown in Fig. 6.

The chief bulk is formed by a network of delicate tubular threads, more or less swollen, and crowded together compactly at the surface of the lichen, but loosely disposed within. Scattered through the outer portion of this loose network are a number of tiny green spheres having a transparent envelope.

These are algæ of a very simple kind, the same that form the green stain so common on tree-trunks and stone work.

Whenever there is a tolerably good supply of moisture and moderate sunlight these little plants will thrive on what they get from the air. The vivid greenness of many lichens, when wet, arises from the fact that moisture makes the outer layer of matted threads more translucent, and so allows the color of the algæ within to shine through.

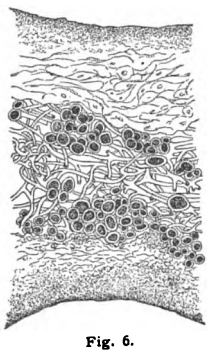

Fig. 6.

That part of the community which consists of interwoven threads is a fungus, which is quite unable to live by itself, and so must get all its food from the host of little algæ which its threads surround. Although it is thus a parasite, it is not one which takes all and gives nothing in return; for it contributes to the welfare of the algæ in several important ways.

In the first place the network of enveloping threads absorbs moisture from the air and retains it like a sponge, thus enabling the algæ to continue their work of food-making much longer after a rain than they could otherwise do.

Furthermore, protection against mechanical injury is afforded by the compact layer overlying the algæ; and finally, this same layer serves as a translucent screen, which shields them from the evil effects of direct sunlight, in much the same way as the white paint put on the glass of a hothouse protects the plants within.

FRED. LEROY SARGENT.

ONE NATION.

> A song for our banner! the watchword recall
> Which gave the Republic her station;
> "United we stand—divided we fall!"

For the Companion.

TRACKED BY BLUE-JAYS.

My story is of the tariff, having said which perhaps I ought frankly to add that I am merely a humble member of that generally disliked and sometimes greatly abused corps of men, the Customs officers, whose duty, often disagreeable, is to collect the United States revenues.

Customs officers are popularly supposed to be lazy fellows, who lead an easy life and draw fat salaries. This may be true of some of them; but as a junior member of the corps, stationed now for some years on the Canadian frontier, between New England and the Provinces of Quebec and New Brunswick, I can truthfully declare that I have been kept busy and made to earn my wages; and I know of many others who, I think, can say as much.

There is, and always has been, a great deal of smuggling along the Dominion border. Many of our citizens are not merely Free Traders in theory, but also in practice, despite their country's laws to the contrary. A considerable number of persons derive a livelihood from smuggling goods and liquors across the boundary. Not a few of them have developed a cunning in deception which the father of all deceit might envy.

One of the veteran smugglers is a character well known along this frontier as "Stumpy Bill." His name is William Henchman, and his specialty is the smuggling of cheap Dominion liquors across the border into Maine, where intoxicants are not easily obtained.

It has been Stumpy Bill's life-work, apparently, to relieve this scarcity, and meet the wants of the habitually thirsty—at a good profit to himself. The old transgressor has probably brought liquor enough over the boundary, first and last, to make the Umbagog Lake into fairly strong punch.

It need not be said that he is a man quite devoid either of principle, or of respect for his country's laws; yet he is a jolly old rascal, possessing the natural "cuteness" of the Yankee, sharpened abnormally by the kind of life he has led.

I am quite well acquainted with him; we have often met, sometimes casually, sometimes at the end of a hard chase on my part; but he always, whatever the circumstances, wears the same sardonic grin, and greets me with good-natured chaff.

I can never lead him to regard me otherwise than as a well-meaning boy, whose knowledge of the world is as yet very limited.

The penalty for smuggling is so heavy that it is always good policy for a man engaged in the business to have as little visible property as possible. Stumpy Bill knew the value of this system, and accordingly carried on his operations with an old horse and buckboard, worth altogether not more than ten or fifteen dollars.

But the horse aforesaid, seedy as he was, had seen better and speedier days, and could be roused up for a mile or two and cover the ground at a very creditable pace. There was where the joke came in.

I spent the greater part of two months on the lookout for Stumpy Bill, and never fairly trapped him.

His route from three or four of the French-Canadian parishes, just north of the Vermont and New Hampshire line, was generally southeasterly for twenty or thirty miles, by devious country roads. Then he would leave New Hampshire by way of a certain "Notch," well known in that locality as a thoroughfare, and enter Maine.

There he had several confederates, who hid his wares and afterward sold them, probably sharing the profits.

All these roads led for the most part through forest lands. Bill knew every rod of the way, and had a hundred different devices for outwitting the officers.

In his choice of roads, too, he seemed possessed of a kind of prescience. He divined in advance the one that his pursuers would take, and took another himself. Most of his trips were made by night, or in the evening, and were prolonged occasionally into the early morning hours.

In short, Stumpy Bill had made this sort of smuggling a study for many years, and I began to think that the officer who caught him would be obliged likewise to devote his life to the task. I grew quite ashamed of my many bootless chases after him. At length one of Stumpy Bill's cronies near the line quarrelled with him, and lodged information against him.

I took steps in accordance with the information he gave. At midnight I set off from Colebrook, a town eleven miles from the Notch, with a good horse and wagon, and a man to drive who was said to know the country well; but when we came to a log camp where Bill was to be, I found that he had already gone, but not long before.

We hastened back to the road, and gave chase down through the Notch. It was a clear, cool September morning, and very still. Our wagon seemed to make a great deal of noise as we rattled along the descending road between the lofty crags of the gorge.

Presently, as we doubled one of the crooks in the road, I saw a buckboard some two hundred yards ahead.

"That's old Bill, sure!" the man who was driving me exclaimed. Indeed, I at once recognized his familiar face, for he looked around and saw us just as we came in sight of him. He was jogging slowly along, but a crook of the road hid him immediately from our view.

I was not a little elated; for I was sure that he had contraband liquor aboard.

We whipped up smartly, thinking to overtake him in a few moments; but one bend of the road followed another, and though we could hear the rattle of the buckboard, we could not catch a sight of Bill until we had gone about a mile and a half. Then we sighted him, his old horse being now apparently winded.

"Aha, Bill!" I shouted, as we closed up behind him, "no use whipping your old horse. I've got you, at last."

"Got me? Wal, yass, ye've overtuk me. I see," he replied, with his usual sardonic grin. "But what ye want of me 's what I'd like to know."

"None of your nonsense, Henchman," said I. "Let's see what you've got here."

Bill slowly stepped off the buckboard, and I threw back the seat covering the capacious box underneath, confident of finding jugs or a keg containing not less than twenty gallons of liquor.

The box was empty, though the loose straw in it smelled of whiskey. Bill stood by and shook with laughter. Even my driver smiled, and if I did not look foolish, I certainly felt so.

"Look here, men!" chuckled the old fellow. "I kinder took ye for highwaymen. Ye kinder scairt me. Real glad it's only you. Neouw ye kinder thought I was a-smugglin' somethin', didn't ye? Beats natur' how many lies gits a-goin' 'bout a man, sometimes."

I was obliged to let him go, for I had no evidence against him.

As we drove back through the Notch, we looked beside the highway, but saw nothing. I was sure that the man had brought liquor across the boundary, and had concealed it. Possibly he had got wind of our approach, and had hidden it somewhere about the lumber camp.

We drove back to this place and searched diligently for an hour, but found nothing.

If the old rogue had hidden the liquor, I guessed that he would return for it, as soon as he thought that I had left the vicinity. With some faint hope, therefore, of trapping him, I sent my team and man back to a tavern on the road, with directions to return for me during the afternoon, and then went through the Notch, on foot, to a point near where we had overtaken Bill.

Here I secreted myself amidst the bushes, on a little knoll overlooking the road.

The sun had now risen—the bright sun of a lovely autumn morning. It was a road where there was little travel. No one was astir; but the red squirrels were chattering merrily in the woods, and presently, as I sat there, I heard two or three blue-jays crying out, first with the sharp, querulous squall which is commonly their opening note, then the minor cry, *pirrup, pirrup, pirrup, pirrup!*

After the manner of these handsome but thievish birds, they flew along from tree to tree and bush to bush, on the lookout for a tidbit, or a good chance to harass some belated owl or raccoon.

At length they came to the road and crossed it, at a point three hundred yards, perhaps, from where I sat. Instead of soon moving on, however, as is their wont, I presently noted that they appeared to have business there near the road. Their cries rose quite sharp for some moments, followed by a minor chorus of *pirrups*.

As jays rarely linger long in one spot, unless it is the scene of a woodland fracas or abundant food, I strolled through the woods on that side of the road to see what was going on with them.

Beside the road, close up to the wheel-ruts, near a bend, there was a patch of thick blackberry briers, weeds and brakes. One jay was sitting on a branch over the briers, with one eye turned down, crying out occasionally; another was in the briers, hopping about; and still another was in the act of taking flight for a neighboring beech.

I came out from the forest and looked among the briers, parting them with a stick, when lo! about the first objects which I saw there were three large stone jugs in a snug little group among the dry weeds!

The jay, which had been peeping at them, flew out with a sharp squall, and all three made off.

The jugs contained about twenty-four gallons of whiskey, altogether; and it was now evident that, after sighting us, Henchman had whipped up

smartly to gain enough time, after rounding this bend, to set the jugs out into the briers before we came in sight.

We had glanced into this thicket as we rode back, yet the cleverly hidden jugs had escaped our notice. But for the jays I should scarcely have found them; for although I watched till afternoon, the crafty old law-breaker did not return.

Henchman absented himself from that part of the country for a year or more. Probably he came back during the following night, and finding the jugs had been captured, knew that their discovery would be damaging evidence against him.

Of course I destroyed the contraband liquor.

H. C. MERCER.

THE CAPTAIN OF THE "KITTIEWINK."

In Seven Chapters.—Chapter V.

The Wonderful Happens.

Mr. and Mrs. Maynot sat at their silent breakfast. Home had seemed dull to them since Hal had been away. New lines of care had sprung to Mrs. Maynot's face during the last few weeks.

The troubled mother, who seldom mentioned Hal without a sigh, had hidden from her husband many tears of anxiety, and had repressed many words of worry and fear. She felt, now that the boat was purchased, and the boys were in it, and Hal was growing strong, that she must make the best of a bad business.

Mrs. Maynot had an intuition that her husband concealed beneath a bluff manner a solicitude as keen as her own; that he, too, looked any moment for the letter or telegram that should announce disaster.

This morning Mr. Maynot's face was concealed by the morning paper. He was reading the account of the yacht-race of the preceding day. The American love of coming in ahead had got the better of his anger toward the boys, and the story of the rescues they had effected was really thrilling. He was proud of the *Kittiewink*'s performance.

It was plain that it had been a most perilous one, but the night message he had sent to Marblehead would prevent all future racing. Meantime he thought it would merely increase his wife's distress if he read her the account of the boys' adventures.

Mrs. Maynot glanced furtively at her husband. She knew he was reading about the yacht-race, and she felt that he was not showing the disapprobation of this dangerous sport that a father should show.

"Henry!" she began at last. "Will you eat your breakfast?"

"Presently, my dear. They did magnificently! I am proud of Phin and the *Kittiewink*."

"Do you think, my husband,"—this was the method of address which Mrs. Maynot adopted when she was especially severe,—"do you think that you will see your son alive again if you continue to approve of this wicked recklessness? I am surprised!"

Mr. Maynot's defence was cut short by a stamping of feet in the hall, and without ceremony Doctor Parkhurst rushed in, his face broad with smiles.

"Good morning! What glorious news! How proud you must be of your son, Mrs. Maynot! I see the papers call him the Captain, and pay high tributes to his seamanship and courage. They're well deserved, too, that's plain. My prescription works like a charm, you see! I'm proud of the boys! They're chips of the old Pilgrim stump!"

How long the exuberant Doctor would have gone on in praise of the boat, the skipper, the captain and his own son no one can say; but a violent ring at the doorbell interrupted him.

Mr. Maynot left the room to answer the summons. Very soon he came back, his face ashy pale.

Mrs. Maynot gave one look, and then a scream.

"Has it come? Tell me everything! Tell me the worst!"

Without a word he handed her the telegram he had just received. It read as follows:

"Boys and dory disappeared. Oars found ashore. A hundred men are searching rocks. Five nets are dragging harbor. Marblehead yachtsmen have organized a search under Gresham. Come or telegraph immediately.

PHINEAS SCROD."

When Hal and Non had been told by the Captain of the Grand Banks fisherman that they were bound on a trip to the Banks, they did not at once grasp the full meaning of the words. They looked from face to face in the group upon the deck.

How far away were the Grand Banks? How long did "a trip" last? Why did not the men simply turn the schooner about, and take the boys back to their own harbor and the *Kittiewink*?

"But aren't you going to take us back, Captain?" Hal's tone expressed great surprise.

Some of the men said that the Captain ought to take them back. There was a good deal of talk about it on deck. One good-natured fellow pleaded with the Captain.

"We might land 'em in Gloucester, sir. 'Twon't lose us a great many hours."

But the Captain of the *Samuel T. Woodburn* was also three-quarters owner of this one-hundred-and-twenty-ton Banker, and a few hours might mean to him a two days' slant of favorable wind, a quicker trip, and better shares. When a fisherman once starts on a trip, he allows nothing to interfere with it or him.

The Captain shook his head.

"Here, young 'uns! Go down in the cud. You're safer here than ye be on shore. It's enough I've saved your bones from bein' picked by dog-fish. You'll have to go with us until we meet something that'll take you back, or until we fetch up to Newfoundland for bait. We'll treat you first-rate, an' your mother won't know ye when ye get back."

The Captain meant well. He could hardly understand what agony he was inflicting upon the parents of these reckless and luckless lads. As long as they were alive, he reasoned, where was the harm?

Lantern in hand, one of the crew led the way below. The sickening odor of fish, bilge-water and stale salt smote the boys as they approached the companionway.

Hal had begun to waver between the desire to get home and the fascination of a new adventure; but this unbearable odor instantly dispelled the romance.

Non broke his silence. He stopped and whispered a word to his companion. Hal nodded.

"Look here," said Hal, "we don't want to go down there! We want to go home! You've got to take us! My father will pay you for the time you lose—if you're mean enough for that."

The vessel was headed out toward the wide sea. Behind them Marblehead light blinked farewell. The men gathered around the boys. One of them ventured to urge the case.

"I guess he's good for it, Cap'n. Eastern P'int aint more'n ten knot to go. You could land 'em on the rocks there."

"Land us anywhere! Please do!" said Non. But the Captain looked doubtfully at the lad.

"Will your dad pay me for my hull trip if I go out of my way to land you two?"

Scrod shows his orders.

Hal, not knowing that a successful trip of fish was sometimes worth ten thousand dollars, answered emphatically:

"Of course he will!"

"Will your dad pay me three thousand dollars for my share to set you on shore?"

The men grinned. Hal was silent.

"I guess you'd better go below then, and make yourself to home."

"I won't go!" Hal's anger was roused. He felt that the Captain was deeply, perhaps criminally, wronging them. Non came to Hal's side and took his hand. The Captain scowled.

"We won't go down in that dirty hole!" Hal exclaimed. "You ought to take us ashore. You know you ought! My father will have you arrested for kidnapping us. Oh, *put us ashore!*"

The Captain laughed aloud and turned away.

"You'd better turn in," said the man who had interceded for them. "Perhaps we'll meet a boat to-morrow a-runnin' in with a full fare, an' we'll put you aboard. You're all right. It's no use to look so white about the gills."

"Oh, thank you!" said Hal, tremulously.

The boys went below, and took what cheerless comfort they could. A wide bunk had been prepared for them, where they could sleep together. As they left the deck a head-wind sprang up; a foggy Northeaster had set in, to hinder the passage of the *Woodburn*. It was as if the elements entered their protest against this cruel proceeding.

Hal and Non turned in sadly. Of what use was further appeal? Like the crew, they threw themselves into their hard bunk, and tried to sleep.

It was impossible. The cabin light bobbed here and there, smoking, flaring and rattling. The beams creaked; the wind moaned above them. The nightmare was capped by the blasts of the fog-horn, blown at irregular intervals above during this first long night. The sails flapped, men tramped the decks, and muffled oaths penetrated below.
